Mr. RANKIN. Doesn't he advocate taking over all the land, just as they do in Russia, together with all the factories and all other means of production and distribution?

Mr. BULLITT. So far as I know—and I may be entirely wrong, he may have written a new book which I haven't read, but so far as I know, what is advocated by the present labor government of Great Britain is the nationalization of certain very large industries. They have taken over the coal industry. They intend to take over, I belive, the production of electricity, the railroads, and various other large units. They do not intend to abolish private property. They do not intend to take over small businesses or small manufacturing units.

Mr. RANKIN. That is the information I wanted. They do not propose to take over the land?

Mr. BULLITT. No; I do not think so.

Mr. RANKIN. And to make slaves out of the tillers of the soil?

Mr. BULLITT. No; emphatically not. There is no government in the world that stands more firmly today for all the rights in our Bill of Rights than the present British labor government.

Mr. RANKIN. That is all.

The CHAIRMAN. Mr. BONNER.

Mr. BONNER. Mr. Bullitt, your statement today, considering the great background you have, startles me and would startle thou-

sands and thousands of other people in America could they be here to hear you.

The thing that interests me is what is the delusion that attracts American citizens to the Communist Party and movement?

Mr. BULLITT. I think it is largely that they have swallowed the propaganda which has been poured on this country in very, very large quantity.

There are a great many more true believers in the Communist paradise outside the Soviet Union than there are inside, because inside they have to live with the facts. They have to live with the NKVD, that is, the secret police. They have to live under absolute tyranny. Over here, people can read propaganda tracts written by Communists and imagine this beautiful world, this beautiful Utopia. Well, people have been writing books about Utopia ever since Plato's Republic and much later Thomas Moore's Utopia, and so on. It is wonderfully nice to read about. It has no relation whatsoever to the truth.

I think that a great many perfectly good Americans have simply been taken in by extremely brilliantly conceived and written propaganda.

The Communists have never hesitated to spend a great deal of money over here, to send lecturers of all kinds, to send agents. There are a great many intelligent men in the American Communist Party. Their bread and butter is in it, and they have a vested interest in maintaining it.

Mr. BONNER. My first keen interest in this subject was brought about by a gentleman who appeared before this committee, who comes from one of the oldest families in America. When he first appeared before the committee, I thought the committee had made a serious mistake. On his second appearance, I knew the committee hadn't made a mistake. He is a highly intelligent man. I observe that a lot of men this committee calls before it are highly intelligent men.

Now, why do these people, who are an intelligent group, fall for this? I can understand just the run of the mine reading these stories on utopia and falling for it, but these other people are able to read and are able to understand beyond that and read between the lines, and they contact men like you and other people who have traveled abroad and know. What is it that attracts these highly intelligent people?

Mr. BULLITT. I think, in the first place, they are men who are attracted by the ultimate idea. There is an enormous philosophy behind this thing. The theory behind it is that if you can abolish private property and establish communism everywhere, then finally the state will wither away, that there will be no state and everybody can live in sort of happy anarchy. [Laughter.] This is a fact. If it interests you, I can give you a couple of quotations on the subject.

Mr. BONNER. I would like to hear it. That is the most interesting part of this to me.

Mr. BULLITT. I hope I can find these readily, and not keep you waiting.

I am quoting my own book. I suppose it is justifiable to quote yourself:

"The Soviet Government believes in a Communist creed, which it teaches to all its children, for which it prepares them to live, and, if need be, to die. That is the Marx-Lenin-Stalin creed which denies God and claims to be based on scientific fact; but is based on the improbable assumption that the establishment of Communist dictatorship throughout the earth and the abolition of private ownership of the means of production will end all war, civil and international, and so improve the nature of all men in all nations that, in Lenin's phrase, 'the state will wither away' and all men will live without a state in perfect freedom and happiness. As Engels, the collaborator of Marx, envisioning a Communist world, wrote, "The machine of the state is put into the museum of antiquities, alongside of the spinning wheel and the bronze ax.'

"Lenin * * * believed that the state, whether in his hands or in the hands of a 'bourgeois government' was an instrument of violence; but that, while living under Communist dictatorship, men could be prepared for perfect freedom."

And here is another quotation from Lenin:

" 'While there is a state,' he said, 'there is no freedom.'

" 'When there is freedom there will be no state.' "

And then here is perhaps the explanation that you are looking for:

"The mysticism of this belief is perhaps the reason why it has evoked as great devotion and self-sacrifice as many religious creeds. The Communist true believer offers his life as gallantly as an early Christian. He believes that he is fighting for the emancipation of all humanity from all evil. He thinks he serves eternal truth. The Communist Party, to him, is a union of the faithful. His old testament is the books of Marx and Engels; his new testament the works of Lenin and Stalin. In his idolatry he is profoundly religious. The Soviet Union is to him the Church Militant."

Is that sufficient?

Mr. BONNER. Yes; then they are going to lead us back to the Garden of Eden?

Mr. BULLITT. A very, very heavily and evilly populated Garden of Eden.

Mr. BONNER. I want to ask you one more question, and I am through. In certain substantial and reliable papers I see editorials that this committee witchhunts. Of course, I haven't got the time to do any witchhunting. From your observation of this committee, are we proceeding along the right line, in your opinion?

Mr. BULLITT. I hope so.

Mr. BONNER. You don't hope so. I am asking you.

Mr. BULLITT. Yes. I think you ought to go into this just as far as you can go into it. I think you ought to make the recommendations.

I do not believe, as I said previously, that the time is now ripe to make it a crime to belong to the——

Mr. BONNER. You wouldn't sponsor this legislation?

Mr. BULLITT. No; I should say not. I don't think the time is ripe.

Mr. BONNER. Then am I right from what you said, that the greatest good that this committee can do is just pour light on this whole subject, all over the country?

Mr. BULLITT. Mr. Congressman, I have made certain specific suggestions. I think you were here when I made them.

Mr. BONNER. Yes.

Mr. BULLITT. I made certain specific suggestions. If this committee can use its influence to go into the things which I suggested, I think it would be wise. I think, further, it would be very wise to attempt to work out legislation which at some later date, when the emergency is more acute and more felt by the country so that you could be certain of great national support, and that moment will come——

Mr. BONNER. But what you have said leads me to fear that we haven't got much time.

Mr. RANKIN. We are at war now.

Mr. BULLITT. Mr. Congressman, we do have time, in this sense——

Mr. BONNER. You know, I listened very carefully to what you said about the downfall of France, and that it happened in about 4 or 5 years.

Mr. BULLITT. Yes.

Mr. BONNER. And you compared the two periods.

Mr. BULLITT. Yes.

Mr. BONNER. Which were very similar, and it threw the fear of God into me, when I heard you say what you said.

Mr. BULLITT. May I finish this, sir?

In my belief, the Soviet Union will not dare to attack the United States until the Soviet Union has manufactured the atomic bomb in quantity and until it feels that it has an air force superior to the air force of the United States.

That gives us a certain period in which we will definitely remain stronger than the Soviet Union and during which, when we say "Stop" to Stalin, and mean it, he will stop.

But the fundamental thing which we have to realize is that Stalin, like Hitler, will not stop of his own accord. He can only be stopped.

Mr. BONNER. Yes. We are tearing down our national defense, and according to your testimony, they are building up theirs.

Mr. BULLITT. Very much so.

Mr. BONNER. I was in France during the last war, in an infantry company, and I went back there in 1937 and visited a lot of people that I knew. I saw what was going on, and it surprised me, and it shocked me that they didn't believe Germany meant anything but a big parade.

Mr. BULLITT. Yes, sir.

Mr. BONNER. Your statement of the short time within which France fell and your observation of what is going on today leads me to believe that we haven't got much more time.

Mr. BULLITT. Well, I think this, that it is utterly vital for us to support the policy of President Truman, to stop the Soviet Union where she is and not to permit her to take over a series of new peoples. The whole strategy of conquest of Stalin is to lull powerful peoples into a sense of false security, while he is securing strategic areas and additional strength with which to attack them. It is precisely the Hitler strategy all over again.

Mr. BONNER. According to your testimony, they have already got the French Government. Now, what can we do——

Mr. BULLITT. No; they haven't already got the French Government. They already are extremely powerful in it and may be able, by a general strike, to produce a revolutionary situation, but the French Parliament is an absolutely democratically elected parliament, just as democratically elected as our own Government. And 72 percent of the French deputies, that is to say representatives, today are anti-Communist. Only 28 percent are Communist. The power of the Communists in France lies in their control of the trade-unions and their infiltration through economic life.

Mr. BONNER. Isn't that rapidly developing here?

Mr. BULLITT. I trust it isn't, and I don't believe it is.

Mr. BONNER. According to the testimony we have had before this committee as to the mode which is followed in selecting the officers of certain unions, it is rapidly developing.

Mr. BULLITT. I think it is extraordinarily dangerous to have any Communist union leaders anywhere in this country.

Mr. BONNER. Since we are thinking about helping Turkey and Greece, what could we do to help France? They are so close to this borderline now. What must be done to help them?

Mr. BULLITT. A great many things. In the first place, President Truman's action the other day points the line, I think.

Mr. BONNER. You refer to the Greece situation?

Mr. BULLITT. You see, although he hooked this policy onto the action for Greece and Turkey, it had a world-wide significance, much greater than the problems of the Near East. What he said was—and I wish I had the text of his remarks here——

Mr. BONNER. I think we have already heard so much about that we know it by memory.

Mr. BULLITT. I read it enough and I ought to remember it exactly, but I am afraid I can't quote him accurately. However, what he said was, virtually, that we must support nations which were resisting conquest by outside totalitarian regimes or their inside agents. That is virtually what it amounted to.

Now, that applies to France as well as to Greece and to Turkey, and I believe we ought to do everything we can to aid the anti-Communist Parties of France to eliminate the Communists from their present threatening position and to help France get back on her feet as a great democratic nation.

Mr. BONNER. What do you think Russia would do with the atomic bomb?

Mr. BULLITT. If she had it and we did not, it would already have been dropped on the United States.

Mr. RANKIN. If she had and we didn't.

Mr. BULLITT. If she had it and we didn't.

Mr. BONNER. Your testimony frightens me. I am glad to have heard you, and I think you have told the American people something—if the newspapers would carry it—that would open up their eyes and maybe make them realize what a dangerous threat we have now before us, notwithstanding all that certain papers say about this committee and those who are interested in the preservation of this country.

Mr. RANKIN. Mr. BONNER, will you yield there for a question?

Mr. BONNER. That is all.

The CHAIRMAN. Mr. MUNDT has another question.

Mr. MUNDT. Speaking further about these restraints which possibly we could apply and stay within our constitutional confines and not take the step of outlawing the party now, it has occurred to me that we look a little bit foolish by granting passports to fellows like Foster which enable them to travel around overseas and contact directly their sources of information and direction, and then come back.

Mr. BULLITT. Yes.

Mr. MUNDT. You are a former member of the State Department?

Mr. BULLITT. Yes.

Mr. MUNDT. Would there be a way in which we could somehow circumscribe the right—it isn't right, but it is a privilege—to get a passport.

Mr. BULLITT. It is a privilege.

Mr. MUNDT. To get those passports.

Mr. BULLITT. All that has to be done is for the order to be given to the Passport Division of the Department of State to give no more passports to Communists, and that ends the matter.

Mr. MUNDT. That would be a strictly constitutional matter?

Mr. BULLITT. Strictly constitutional and within the right of the Government. No one has the right to have a passport. The passport is a privilege.

Mr. BONNER. Mr. Chairman, just one short question.

The CHAIRMAN. Will the gentleman yield?

Mr. MUNDT. When you were in Moscow, you said that you knew about this revolutionary school which they have over there, to which nationals are brought in from all over the world. I just wondered, as a matter of getting the thing specifically for the record, whether it has a name.

Mr. BULLITT. I am sorry to say, I have forgotten what the name is.

Mr. MUNDT. When I was in Moscow, about a year ago, several members of our Embassy staff—not the Ambassador, but some of the staff members—said in viewing this change in the attitude toward the church which you have described——

Mr. BULLITT. Yes.

Mr. MUNDT. That that might be a device by which the Soviets were attempting to supply a new emotional urge for communism, because the old promises, 5 years apart, have begun to work kind of thin, and perhaps they were utilizing the Russian Orthodox Church to supply that urge. Would you think that might be a possibility?

Mr. BULLITT. I think they will use the Orthodox Church to the greatest possible extent and they certainly have the leaders in hand now, but how far they will be able to go in really using the church for such purposes I don't know because any Christian church teaches the Gospel and it teaches God, and Christ crucified and believed in, which is contrary to every basic belief of the Communists and of the Soviet Government. If they try to use that too far, they are likely to find themselves blown up by their own bomb.

Mr. MUNDT. I like your statement in your book which, like your memory of President Truman's statement, isn't perfect, but in which you bring out the point that if they let God get his foot in the door he may shoulder himself all the way in. I think there is that danger, from their standpoint.

Now one other statement. It is not a question. The last time I heard you before a congressional committee, you were testifying before the House Committee on Foreign Affairs, on the lend-lease issue, and I just want to say to my colleagues that I think we have a very far-sighted witness before us today, because at that time, as I recall his testimony, he suggested that in the event lend-lease was extended to Russia, we should set up certain quid pro quo, such as he described today, which would compel her to let us have something to say about the direction of that part of the world afterward. Unfortunately that was not written into the bill, but you were certainly very prophetic in your pronouncements at that time.

Mr. BULLITT. Thank you, sir.

The CHAIRMAN. Mr. Bonner, you had another question?

Mr. BONNER. You interested me, in that part of your talk that Russia was refusing to permit the entry of persons we desired to deport.

Mr. BULLITT. Yes.

Mr. BONNER. Yet we are still permitting them to come into this country.

Mr. BULLITT. Yes.

Mr. BONNER. Their Embassies, and other Government functions, in this country are highly staffed, and overstaffed, apparently, compared to any other nation.

Mr. BULLITT. Yes.

Mr. BONNER. You would advocate, then, putting a limit on those we permit to come into this country?

Mr. BULLITT. Oh, emphatically. I think we ought to, insofar as it is in our national interest to do so, run our relations with the Soviet Union on a complete basis of reciprocity.

Mr. BONNER. In other words——

Mr. BULLITT. May I finish?

Mr. BONNER. Yes; excuse me.

Mr. BULLITT. For example: They will not permit us to put a consulate in Kiev. There is no earthly reason why we should permit them, then, to put a consulate, say, in Chicago. They will not permit us to have a consulate here, there, or elsewhere. There is no earthly reason why we should permit them to have any more people in the United States than they permit us to have in the Soviet Union. I think that throughout we should treat the Soviet Government on a basis of reciprocity.

The CHAIRMAN. Will the gentleman yield to me at that point?

Mr. BONNER. If they won't permit the reentry of the people that we desire to deport, then we should stop the entry of their citizens into this country. I gather that from your statement.

Mr. BULLITT. No. I think there is a very interesting question which you have raised there, but I wouldn't quite agree with the sentence in which you expressed it.

You see if you let in persons born in what is now the territory of the Soviet Union, you can deport them only to the territory of the Soviet Union, and since the Soviet Union will not permit them to come back—I am not talking about diplomatic officials, I am talking about ordinary immigrants to the United States, and not officials—you have them permanently on your hands, whether you like it or not, because there isn't any place you can send them. I think it is one of the questions that you may very well consider, one of the questions that might very well be considered by this committee, whether we should permit immigration from countries which refuse to take back their citizens if, under the law of the United States, they are condemned to be deported.

Mr. BONNER. That is the very question I asked you.

Mr. BULLITT. That is precisely it. I didn't understand you.

Mr. BONNER. Then, where a person has lost his country, by the fact that Russia has taken it over, the same rule would apply, wouldn't it?

Mr. BULLITT. Well, I should say that under no circumstances should we send back any anti-Communist Pole, Estonian, Latvian, Lithuanian, or Rumanian.

Mr. BONNER. Though we wish to deport him?

Mr. BULLITT. I said anti-Communist.

Mr. BONNER. Oh, oh.

Mr. BULLITT. I would not send back any man to certain death at the hands of the Soviet Government, and that is what it means if you send those people back. I would not deport them, either, to the Soviet Union from our zone of occupation in Germany.

Mr. BONNER. That is all.

The CHAIRMAN. Mr. Ambassador, you mentioned reciprocity. You probably read in the papers in the last 2 weeks, the reciprocity on the question of patents. I just happened to make a statement on the subject on the floor of the House, and General Marshall brought up in his conference with Mr. Molotov. I made the statement how we had given Russia all of our patents, at prices ranging from 10 cents to 25 cents apiece, and one day we gave them 60,000 patents, and how Russia hasn't given us a single patent since 1927.

The reciprocity that would apply in these other cases should also apply on the question of patents, don't you think?

Mr. BULLITT. I think it should apply throughout. There is no reason why we should permit any nation to treat us in a manner which is not that generally accepted as denoting good neighborliness in the world, without treating them in precisely the same way.

I will give you a very simple example of it. In the Soviet Union all ambassadors are spied on constantly.

Mr. BONNER. What was that?

Mr. BULLITT. In the Soviet Union, all ambassadors are spied on constantly by the Soviet secret police. They are followed everywhere they go, wherever they go, by an automobile containing the chauffeur and three additional members of the NKVD, even if they go to the country for a picnic, or anything else. They are followed every place they go, so their movements are recorded. Everyone they speak to is recorded on the books of the NKVD.

Well, the Polish Ambassador, when I was there, got a little bit angry at this, and he, five times, asked the Soviet Foreign Office to stop it. Then he asked his government to apply reciprocity. So the next time that the Soviet Ambassador in Warsaw walked out of his house, there was an automobile behind

his car containing four Poles, in medieval costumes, with swords and plumes, and every place he went he was followed by these people. When he protested, they said, "This is just for your protection, the way you protect our Ambassador in Moscow."

Well, 3 days later there was no more NKVD following the Polish Ambassador in Moscow.

Now, that was a very simple and rather comic little episode of reciprocity, but the Russians understand that. If they choose to kick you, all right they must expect one back. They simply think you are no good and soft, if when they kick you you simply hand out everything they want.

So, I believe very much in reciprocity in dealing with the Soviet Union.

Mr. RANKIN. Just one question——

The CHAIRMAN. Now, gentlemen, we have been on this a long time. Make your question short, because the Ambassador is tired.

Mr. RANKIN. I will make them short.

The CHAIRMAN. I understand you have two or three questions

Mr. RANKIN. Yes; I will make them short.

Mr. Bullitt, according to your statement, Russian communism is already making war on the United States?

Mr. BULLITT. No, sir.

Mr. RANKIN. On the people of the United States.

Mr. BULLITT. I didn't say that, sir.

Mr. RANKIN. They are virtually in a state of war with us, so far as attempting to destroy our system of government.

Mr. BULLITT. They are engaged in an effort to seize strategic positions throughout the world, for eventual use in an attack on the United States.

Mr. RANKIN. All right. Then you would say they are preparing for war.

Now, the most important military object on earth today is the atomic bomb. You said a moment ago, in response to Mr. Bonner's question, that if Russia had the atomic bomb and we did not she would already have blown our cities to pieces. Was that your statement?

Mr. BULLITT. I said she would already have dropped it on us, which I believe sincerely.

Mr. RANKIN. Yes. In other words, if they had the atomic bomb and we did not she would already have blown our cities to pieces and blown our people into submission, or into eternity.

Now, do you not think, under those circumstances, that we should not only keep the atomic bomb but keep an ample supply of them on hand, and keep planes equipped to distribute them and aviators trained for that purpose?

Mr. BULLITT. I do.

Mr. RANKIN. So as to keep one step ahead of any other country in the world that would attempt to develop the atomic bomb with the intention of using it on us or on any other nation.

Mr. BULLITT. I do; emphatically.

Mr. RANKIN. I think that is our duty, for our own safety.

You have made a great statement, and I want you to know I am grateful, indeed.

Mr. BULLITT. Thank you.

The CHAIRMAN. Mr. Ambassador, the committee deeply appreciates your coming here today, and we hope that we were not too long and that you feel absolutely all right.

The Chair wants to announce that tomorrow we will have Mr. William Green at 10:30 and Mr. Ray Sawyer, national commander of the American Vets, World War II, at 2:30.

Mr. Ambassador, I again want to thank you, and we hope you will be with us and that we will be seeing you soon again.

Mr. BULLITT. Thank you very much, sir.

The CHAIRMAN. The meeting stands adjourned.

(Whereupon, at 5:40 p. m., the committee adjourned.)

Western Frontiers of Poland

EXTENSION OF REMARKS
OF
HON. THOMAS S. GORDON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 1, 1947

Mr. GORDON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter that was sent to the Honorable George C. Marshall, Secretary of State, by the Polish-American Congress, Inc., of Chicago, Ill., voicing a strong protest against the plans to revise the present western frontiers of Poland:

Hon. GEORGE C. MARSHALL,
Secretary of State, State Department,
Washington, D. C.:

On behalf of the Polish-American Congress, representing 6,000,000 Americans of Polish descent, we file with you a strong protest, on the eve of your departure for the Moscow Conference, against any plans to revise the present western frontiers of Poland, as outlined at Potsdam, for the benefit of Germany, an enemy, and to the detriment of Poland, an ally.

These recovered areas were not only once an integral part of Poland but their return to their original owners constitutes at least a partial compensation for the irreparable damage caused by Germany's aggressive war against Poland.

Furthermore, the Oder-Neisse line is the only one which gives Poland some guaranty of security against future German aggression.

Even with the return of these western lands to their rightful owners, postwar Poland possesses only 80 percent of its prewar area and two-thirds of its prewar population.

While that section of East Prussia, assigned permanently to the Soviets at Potsdam, never belonged at any time to Russia, the whole of East Prussia was a Polish fief until 1657, the whole of Silesia was an integral part of Poland until 1335, and the whole of Pomerania had been in early centuries within the boundaries of Poland, extending even beyond the Oder-Neisse line. Stettin, annexed by Prussia in 1720, and Silesia, in 1742, in spite of a long process of Germanization, have kept until today many traces of their originally Polish character.

If the United States and England had considered the Oder-Neisse boundaries as temporary and not final they would never have authorized Poland to occupy this recovered area, to establish a Polish administration there, and to provide for the gradual transfer of population, with the result that 4,000,000 Poles have now settled there. Therefore, any revision of the western boundaries would result only in more suffering of the Polish people.

From the American point of view it would be highly regrettable to create the impression that it is precisely our own Government, which participated in the infamous Yalta agreement, that now advocates additional punishment for allied Poland.

Those who are at present illegally in power in Poland would thus be given an excellent argument in support of their policy, based upon subservience to the Soviet Union and opposition to the western democracies. So far such a policy has not had the support of the Polish people, but through fear of new territorial losses it could become a reality, thus depriving the United States of a natural ally while at the same time strengthening Russian influence in the most crucial parts of Europe.

Let us not try to defy history. To restore Germany, the perpetual disturber of the peace of Europe for countless centuries, within its prewar boundaries would be a stupid and tragic diplomatic blunder.

Peace won't come by the resurrection of a strong Germany but only by the rejection of the Yalta pact and the speedy withdrawal of Russian troops from Poland and other Soviet-occupied countries of Europe and Asia.

For the Polish-American Congress:
CHARLES ROZMAREK,
President.

The Wallace Affair

EXTENSION OF REMARKS
OF
HON. WILLIS W. BRADLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 1, 1947

Mr. BRADLEY of California. Mr. Speaker, many labor leaders are very clear thinkers and upright Americans. I have been proud of the labor leaders of my home city, Long Beach, Calif., for some time, but I have never been more happy to live in the same city with such gentlemen than when I read the editorial from the April 25, 1947, issue of the Labor News, Long Beach, Calif., which I present herewith. The editor of the Labor News is the Honorable Carl Fletcher, long a leader of labor in southern California, and now assemblyman from the seventy-first district in the Assembly of the State of California. His views as expressed in the following editorial are worthy of a permanent place in the archives of this Government:

THE WALLACE AFFAIR

One shudders to think how close Henry Wallace came to being President. For 4 years he was only one step from it. Then, within 12 weeks after he was out of the Vice Presidency, his successor stepped into the White House.

Undoubtedly Mr. Wallace felt keenly disappointed at the turn of fate—and politics—which deprived him of the Nation's highest office. Maybe his increasingly bitter attacks on the administration's foreign policy in the past 6 months have been prompted more by this frustration of his political ambitions than by his apparent fervor for world peace.

Time was when a good many Americans thought he was a misunderstood crusader. But as a crusader—if that's what he is—he had gone completely off the beam. His speeches abroad have made that clear.

No one questions his right as a citizen to oppose the policies of the Government when he is here at home. But when he carries his quarrel into a friendly foreign country and tries to drive a wedge between that country and ours he is indulging in dangerous mischief.

Now, he has chosen another crucial time to assault the program for aid to Greece and Turkey. And now, by that assault and the manner of making it, he has buried himself deeper than ever in the political graveyard.

But the American people don't care about Mr. Wallace's political future. What they do care about is the future of their country. And Mr. Wallace is not making it brighter. The greatest service he could render to the Nation at this time would be to hold his tongue—at least until he can get over his tendency toward rash, irresponsible talk. That might silence him for life.

Palestine

EXTENSION OF REMARKS
OF
HON. JOHN McDOWELL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 1, 1947

Mr. McDOWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter including a resolution:

PITTSBURGH CHAPTER HADASSAH,
WOMEN'S ZIONIST ORGANIZATION
OF AMERICA, INC.,
April 22, 1947.

Hon. JOHN McDOWELL,
House of Representatives,
Washington, D. C.

DEAR SIR: On Sunday, April 20, the board of the Pittsburgh Chapter of Hadassah, which represents over 3,200 Jewish women in this community, met and passed the following resolution:

"Whereas the British Government's action in submitting the Palestine question to the General Assembly of the United Nations has been revealed as an empty gesture since, by its own admission, the British Government will not be bound to execute recommendations that may be forthcoming from that body; and

"Whereas the British Government has repeatedly violated its obligations as the mandatory of Palestine by repudiating the solemn pledges expressed in the Balfour Declaration and the Palestine mandate with regard to the facilitation of Jewish immigration into Palestine and the continued development of the Jewish National Home; and

"Whereas the British Government has imposed totalitarian measures of repression on the entire Jewish community of Palestine; and

"Whereas the plight of the Jewish survivors in Europe is steadily worsening, making it imperative that they leave that hostile continent at the earliest moment; and

"Whereas, the seizure and mass deportation to Cyprus of so-called illegal Jewish immigrants constitute a brutal campaign against helpless men, women and children, completely inconsistent with the principles of the Atlantic Charter; and

"Whereas such immigrants embark for the Holy Land as of their legal right, since the white paper of 1939, which bars their entry, was repudiated by the Permanent Mandates Commission of the League of Nations as inconsistent with the Palestine mandate—thus making illegal the policy pursued by the British administration; and

"Whereas the Government of the United States of America, through the passage of resolutions in both Houses of Congress, and through planks in the platforms of both major political parties, is pledged to free Jewish immigration into the Holy Land and the establishment in Palestine of a free and democratic Jewish Commonwealth: Therefore be it

"Resolved, That we respectfully call upon the Government of the United States to take the initiative during the forthcoming special meeting of the General Assembly of the United Nations, in vigorously championing the program for Palestine which it has repeatedly reaffirmed, thereby defeating the British Government's attempt to employ the United Nations session as a maneuver to retain its present Palestine policy; and be it further

"Resolved, That pending a final settlement of this question by the United Nations the great weight of the United States Government should be brought to bear on the mandatory government to the end that an interim policy based upon the existing mandate to set into motion at once providing for immediate large-scale Jewish immigration into Palestine and the removal forthwith of the discriminatory land restrictions in the Jewish National Home."

Very sincerely yours,
SARA JEAN MUNTER,
President.

Our Foreign Policy

EXTENSION OF REMARKS
OF
HON. PETE JARMAN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 1, 1947

Mr. JARMAN. Mr. Speaker, pursuant to permission heretofore granted, I wish to insert the following editorial from yesterday's Washington Star relative to the fiasco which occurred in the House in connection with our foreign policy:

WHILE THE PATIENT SINKS

The House could hardly have chosen a more inopportune time than the present to vote a drastic slash in the proposed $350,000,000 fund for relief of war-stricken peoples in Europe and China. Its tentative decision to make a meat-ax cut of $150,000,000 in the relief appropriation, coming so soon after Secretary of State Marshall's urgent radio plea for "unity of action on the part of the American people," is certain to be interpreted abroad as a sign of disunity. It may even be viewed in Moscow as a symptom of the type of exhausted patience which Premier Stalin says may lead to compromises. But, as Secretary Marshall stressed in his address, there can be no compromise with principle.

Countering the House move, fortunately, was the action of the Senate Foreign Relations Committee in unanimously approving the $350,000,000 relief appropriation. But the forthright vote of the Senate committee was quickly overshadowed by the short-sighted stand taken by the House.

The stand is short-sighted because it seeks to economize at the expense of one of the keystones of our foreign policy—the rendering of financial and other aid to nations now struggling against the postwar specters of hunger, unemployment and general unrest. Representative JUDD, Republican, of Minnesota, a member of the House Foreign Affairs Committee, stated the case succinctly when he warned his colleagues that millions of people in Europe who hate communism and who were given a ray of hope by Secretary Marshall's message will be disappointed and bewildered if the House makes its action of yesterday final.

Does the House intend to economize similarly when the $400,000,000 Greco-Turkish aid bill comes to the floor? That bill, already approved by the Senate, was shunted aside yesterday by the House Rules Committee to give priority to rent-control legislation. Both funds—the special one earmarked for Greece and Turkey and the relief appropriation for Italy, Trieste, Hungary, Austria, Poland, Greece, and China—are regarded by the State Department as minimum amounts needed to help forestall economic collapse and worse troubles in the areas concerned. In Secretary Marshall's words, disintegrating forces are becoming evident—the patient is sinking while the doctors deliberate. False economy, quibbling and endless debate now could have serious repercussions later not only for the patient but for the doctors.

I also insert an excerpt from this morning's Washington Post:

The House yesterday dealt its first blow to a war-tested bipartisan foreign policy by confirming a $150,000,000 cut in foreign relief funds.

The slash, only tentatively voted the day before, was approved by a near-party-line count of 225 to 165.

* * * * *

It was the first symptom in the House of what one world-minded House Republican described as "a recrudescence to isolationism."

It might be appropriate to also quote from the front page of yesterday's Star:

For the cut—Republicans, 190; and Democrats, 35.

Against the cut—128 Democrats, 36 Republicans, and 1 American Laborite.

Russian Policy

EXTENSION OF REMARKS
OF
HON. DEWEY SHORT
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 1, 1947

Mr. SHORT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by George E. Sokolsky from the Washington Times-Herald of May 1, 1947:

THESE DAYS

(By George E. Sokolsky)

The sum total of George Marshall's speech amounts to this: The Russians like the European situation as it is and seek to delay change. They have been able at Teheran, Yalta, and Potsdam to achieve major advantages which they do not wish to change. Marshall says, at one point: "All efforts to find a compromise solution were unavailing."

The fact is that every compromise would free some people now enslaved. Why should the slaveholder wish to compromise his holdings?

Diplomacy is the art of achieving the minutest results by means of the widest compromises. When a country chooses not to compromise at all, it gives evidence, one, that it is satisfied with the status quo or, two, that it anticipates an inevitable war and prefers not to delay it.

The second alternative is not within the realm of reason. Soviet Russia cannot afford a war today. But Soviet Russia believes that we also cannot afford a war today. The Russian, in such a war, would have no major allies, but the Russian is convinced that our major allies, Great Britain and France, have lost their vitality.

The Russians are physically incapable of making war on a modern basis unaided by a great industrial power.

After all, it was $11,000,000,000 of lend-lease from the United States to Soviet Russia that threw the balance against industrialized Germany.

In a war against the United States today, no nation exists that can assist Russia with an industrial product of dimensions sufficient to matter. That may not be true 10, 15, or 20 years from now. It is true today.

The Russians, therefore, are not uncompromising because they seek to provoke a war immediately. They do not expect a war immediately. They discount its occurrence. They assume that public opinion in this country would not tolerate it.

They feel that the reason that our Government has agreed to their most outrageous demands was because American public opinion favors Soviet Russia and not the Government of the United States.

Gromyko said as much to Bernard Baruch during the atom-bomb debates at the United Nations. Gromyko insisted that Baruch did not have American public opinion behind him.

They are uncompromising because they anticipate a series of disasters in the United States which will so reduce the might of this country as to make the United States a negligible factor in world affairs.

In these assumptions, the Russians have been supported by the Wallace hybrids, who have preached disaster since VJ-day.

It was Henry Wallace who released phony figures through his Department of Commerce that sent this country into its first round of postwar strikes that nearly did produce disaster.

This school of verbiage has been month by month prophesying recessions and depressions with the apparent hope that disaster would come that they might be proved right. Not only the Russians but all Europeans have noted their statements but have not been able to gage how much of American opinion they represent.

In accordance with Marxian economics, no capitalist country should be able to survive in this era. The economic downfall of Great Britain has encouraged the Marxists to assume that their postulate of inevitability will ultimately send the United States tobogganing.

The Russians are, of course, not averse to using whatever means are available to assist the inevitable process.

In the United States they have maintained a legalized fifth column, the Communist Party, and a disguised mass force, the front movements, to achieve their ends. The leadership of this amalgam of wreckers has fallen to Henry Wallace, who, to encompass one world, encourages every force in American life whose goal is the destruction of American life. It is amazing how strong in him is the instinct for national suicide.

And so the Russians expecting this country to suffer 10,000,000 unemployed in short order, to be accompanied by a plague of strikes and riots and disorders, resulting in our productivity falling short and our standard of life down to the European level, saw no need for coming to terms with George Marshall. They prefer to wait until hell pops.

Hoover Dam

EXTENSION OF REMARKS
OF
HON. JACK Z. ANDERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1947

Mr. ANDERSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Daily News:

HOOVER DAM

President Truman has done a fine and gracious thing by signing the bill passed by a Republican Congress to change the name of Boulder Dam back to Hoover Dam.

Herbert Hoover may not go down in history as one of the most successful Presidents. He has, however, plentifully earned the right to be considered a useful, devoted, and great American. His services to his country and the world have been many, and Mr. Truman has been wise enough to make use of them without regard to political considerations.

Cheap politics took Mr. Hoover's name off the great structure on the Colorado River. Almost all Americans, we think, will applaud its restoration. Of course, Harold Ickes won't like it—but there are so many things Mr. Ickes doesn't like that one more won't make much difference.

Polish National Holiday

EXTENSION OF REMARKS
OF
HON. THOMAS S. GORDON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1947

Mr. GORDON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article sent to me by the Polish-American Congress, Inc., of Chicago, Ill., relating to May 3, the Polish national holiday:

MAY 3, THE POLISH NATIONAL HOLIDAY

On May 3, Poles everywhere and citizens of Polish origin in many countries celebrate a Polish national holiday—the Polish Third of May Constitution Day.

In the United States, wherever Americans of Polish descent live, in cities and towns from coast to coast, this holiday is observed with appropriate exercises throughout the month of May, to pay tribute to the Polish nation and to remind fellow Americans that Poland was one of the first pioneers in liberalism in Europe.

It was on May 3 in 1791, barely 2 years after the adoption of its Constitution by the United States in 1789, that Poland without a bloody revolution or even without a disorder succeeded in reforming her public life and in eradicating her internal decline. But this great rebirth and assertion of democracy came to the Poles too late, and did not forestall the third partition of Poland in 1795 by Russia, Prussia, and Austria.

POLAND PIONEERED LIBERALISM IN EUROPE

The greatness of the May Third Polish Constitution consisted in the fact that it eliminated with one stroke the most fundamental weaknesses of the Polish parliamentary and social system. The Poles raised this great moment in their history to the forefront of their tradition rather than any one of their anniversaries of glorious victories or heroic revolutions.

We Americans who have been reared in the principle given us as a birthright by the founders of our great Republic, the principle of the sovereignty of the people in the State, which is the primary postulate in the 1791 Polish Constitution, can see how this truism cut off the Poles and the Polish political tradition completely from both the Germans and the Russians, who have been reared in the principle of state, and not national sovereignty.

The light of liberalism coming from Poland was then as it has been throughout the years that followed and even onto today, a threat to tyranny and absolutism in Russia and Germany. In 1795, Russian and Prussian soldiers were sent to Poland to partition and rape her. In 1939, Russian and Prussian soldiers met again on Polish soil, as the absolute totalitarianism systems of nazism and communism again felt the danger of true liberalism coming from Poland just as in 1791.

In the Polish Third of May Constitution this liberalism was formulated in these words:

"All power in civil society should be derived from the will of the people, its end and object being the preservation and integrity of the state, the civil liberty and the good order of society, on an equal scale and on a lasting foundation."

AMERICAN AND POLISH CONSTITUTIONS SIMILARLY INSPIRED

The philosophy of government discernible throughout the Third of May Polish constitution leads one to believe that the American people and the Polish people had each drawn inspiration for their respective constitutions from the same source.

Meditation on the anniversary of May the Third deepens the faith and heightens the courage of every Pole and of every American of Polish origin. It reminds all Americans of Poland's destiny in the history of mankind, and prophesies the ultimate triumph of justice, even though, Poland once more has been deprived of her independence, sovereignty, and her territory by one of our victorious allies, Soviet Russia, with the consent of other United Nations.

Housing and Rent Controls

EXTENSION OF REMARKS
OF
HON. JOHN A. BLATNIK
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1947

Mr. BLATNIK. Mr. Speaker, it is most unfortunate that the House Committee on Banking and Currency did not see fit to report out a bill which would be strong enough to control rents in an effective manner. It is obvious that this bill, H. R. 3203, will neither control rents nor aid in checking inflation. It is so full of loopholes through which rents may rise that it makes it mockery and a farce of rent control.

Title I of this bill would repeal the Veterans' Emergency Housing Act in its entirety with the exception of the loan-guaranty provisions, which are a minor part of the protection offered veterans under this law. As has been mentioned before, veterans' organizations unanimously opposed this action before the committee, and I wish to go on record as wholly opposed to this section of the bill. As has been stated, the combination of two unrelated issues in one bill is indefensible, and can only be interpreted as a device to mislead the general public and the veterans.

I wish to go on record as completely opposed to title I of the bill, and to address the remainder of my remarks to some of the jokers in the rent-control section, title II.

This section contains several major weaknesses, each of which will tend to undermine the rent-control structure. The provision in the bill which extends rent controls until December 31, 1947, or until March 31, 1948, in case the President proclaims it so, is most objectionable. It is most unrealistic to assume that the necessity of rent controls will cease by that time, for by no stretch of the imagination will the present housing shortage be alleviated by March 31, 1948. According to the Bureau of the Census, there are some 3,125,000 families in the United States who are living doubled up with other families; in other words, there is today a shortage of over 3,000,000 housing units.

It will be impossible to build enough housing units between now and March 31, 1947, whereby the supply of homes will catch up with demand. The all-time record for house construction was set in 1946 when about 1,000,000 homes were started under the Veterans' Emergency Housing program. Assuming that this rate of construction can be maintained, we will still be short of housing units until sometime during the year of 1950.

To decontrol rents prior to 1950 means rapidly rising rent levels. The strong demand for and weak supply of housing units make this inevitable. The only logical solution of this problem is to extend the original rent-control law without amendment until sometime in 1950.

My second major objection to this bill is found in its provision which would allow a landlord and tenant to enter into a written lease which is to expire on or after December 31, 1948, whereby the rent fixed in the lease may be increased 15 percent above the present maximum rent. This provision is undesirable for several reasons. It will make it possible for landlords to force a tenant to either sign a lease permitting the 15-percent-rent increase or face the possibility of eviction on the least possible excuse. Furthermore, any landlord can refuse to rent to a new tenant unless said tenant agrees to sign a lease with the 15-percent clause in it. Thus we find that this provision provides a loophole which will allow a 15-percent-rent hike for a great many housing units in America.

Such a rent increase cannot be justified at the present time. Most certainly the landlords do not need such an increase. According to a survey conducted by the OPA accounting office, landlords are making more profits today than ever before. For the year ending June 30, 1946, rental income on apartment houses was 28 percent above the 1939 level, and income from smaller structures was 43 percent above 1939 returns. In 1946 upkeep and repair expenditures were only slightly above 1939 levels, and the vacancy loss today is almost nil.

To allow rents to go up by 15 percent will have a serious effect upon the living standards of millions of consumers. It is estimated that a general rent increase of 15 percent will add $750,000,000 to the Nation's rent bill, which means that $750,000,000 must be used to pay the rent instead of for food, clothing, and other necessities. The inflationary rise in the cost of living—the cost of living has increased 50 percent during the last 8 months—has reduced the real wages of most wage earners, and cut into their savings to the extent that there is just not enough money in the average family budget to meet an increase in rent. If such a rent increase takes place, the tenant must absorb this increase by reducing his standard of living.

A rent increase will make inroads in the purchasing power of the 50,000,000 people who live in rented structures. It is an economic truth that business prosperity depends upon the maintenance of adequate purchasing power in the hands of the consumers. To permit a portion of existing purchasing power to be dissipated by a rent hike is bound to increase the danger of business depression.

Furthermore, to allow rents to go up means that the veteran and his family will not get a square deal. It is agreed that the average veteran cannot afford to pay more than $40 per month in rent; a rent hike will mean that decent housing will be placed out of reach of the average veteran's pocketbook.

I have several other objections to the bill. I do not believe that newly constructed and converted housing units should be exempted from rent control. Neither do I believe that the relaxation of eviction control can be justified; this is bound to bring on many abuses on the part of landlords and impose great hardships upon many people.

I want to go on record right now as favoring the extension of the rent-control law which was in effect during the entire war. The only way to control rents is to pass a law which is airtight and give the enforcing agency the authority and the funds to administer it. I am in favor of amending this bill in such way as to strengthen it and plug its many loopholes. Unless these amendments are accepted, the bill should be sent back to the committee for further study, and strengthening.

I also want to go on record as protesting the irresponsible action of the House Committee on Banking and Currency in reporting out this watered-down rent-control bill which they know full well will not really hold the line on rents. The 50,000,000 people in America who are living in rented homes are depending upon rent controls to protect their pocketbooks and living standards, and they deserve better treatment than this bill affords.

Housing and Rent Controls

EXTENSION OF REMARKS
OF
HON. FREDERICK C. SMITH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 1, 1947

Mr. SMITH of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following minority views submitted by me to accompany H. R. 3203, the housing and rent-control bill:

HOUSING AND RENT CONTROLS
MINORITY VIEWS OF MR. SMITH OF OHIO
(To accompany H. R. 3203)

It should be recalled that it was an aroused public that forced the administration last year to generally decontrol prices of commodities. The history of the legislation relating to the OPA in 1946 shows that the President was violently opposed to abandoning any control over prices and precisely on the alleged ground that the removal of rent control is now being opposed—namely, short supply. As a matter of simple fairness and justice rents should have been decontrolled along with other commodities.

Let no one delude himself in believing that the discrimination involved in retaining rent control can possibly have any enduring value for renters. Group discrimination such as this must inevitably have the effect of hurting all, including renters. I earnestly believe that the citizens of the Nation wanted Congress to terminate rent control and not extend it as this measure provides. The vast majority of renters expected this. They are fair about the matter and do not wish any special favors. They know that in general other costs have greatly risen while rents have remained practically stationary.

One can prove or disprove almost anything by statistics. There is a saying that "As the statist thinks, so the bell clinks." All sorts of figures have been brought forward to prove, on the one hand, that there is a shortage of housing and that if rent controls were removed rents would unduly rise. On the other hand, a great deal of data has been presented to disprove this.

I shall refrain from quoting figures and statistics and state that after having gone into this matter as thoroughly as I could, I became convinced that there is no ground for the claim that anything like a substantial shortage of housing will exist in the United States if rent controls are completely removed. In saying this I am taking into consideration the dwellings that are being held out of the rental market, and the living quarters that would be made available for rental purposes in homes that have not heretofore been rented. I am also taking into consideration the fact that since 1940 there has been a great increase in the number of occupied rooms per family. An enormous number of additional dwelling units would be made available for rental purposes from these categories if rent controls were abolished.

I take the position that the rent-control law should be permitted to expire June 30 so as to end all political controls over rents on that date.

The pending bill provides for continuing rent control until December 31, 1947, but authorizes the President to extend the control until March 31, 1948, if he believes that to be necessary. Why should the present Congress vest in this administration such legislative power? If the incumbent Congress is willing to freely and voluntarily delegate this power to the Executive, what good reason can be given for not further relying upon his judgment as to the need of rent control beyond March 31 1948?

I did not find in the testimony given before the committee evidence indicating anything other than that the forces responsible for the present proposed extension will be back with the same arguments for continuance of rent controls beyond March 1948. The grave danger in all these extensions of wartime controls is that succeeding extensions cause such controls to further entrench themselves and make their removal more difficult.

The bill also provides that landlords and tenants may by voluntary agreement enter into a lease increasing rents not to exceed 15 percent above the OPA ceiling prices, such lease to be effective until December 1948. One can do no more than speculate on the implications of this provision. Certain it is, however, that it sets up a special category of renters and landlords.

An extraordinary provision in the bill provides for Treasury financing of manufacturers of prefabricated houses and FHA loans on the finished product. This, of course, is tantamount to a Government-guaranteed market for prefabricated houses. Does the sitting Congress propose to put the Government further in business? Proponents of this particular provision claim it would have the effect of revolutionizing housing. I understand that the houses that would be built under this provision would not be of the conventional type. Well there is nothing particularly wrong about revolutionizing housing construction by whatsoever process so long as it is done in the natural, competitive way;

that is, with private money and not with funds wrung from the public, especially an exsanguinated one. Why should this particular Congress lend itself to promoting a scheme like this? What constitutional or moral right does the Congress have to destroy industries engaged in the construction of conventional type houses?

The bill further provides for the removal of ceiling prices on new homes and also on residences which have not been occupied between February 1, 1945, and January 31, 1947. Price ceilings are to remain on old homes. Surely this is rank discrimination. It is class legislation. The claim which some make that it is only temporary in nowise mitigates the unfairness involved in this arrangement.

The bill provides for the creation of an emergency and predicates the need for the extension of rent control on such arbitrarily constituted emergency. It has been explained that this has been done to make the act constitutional. George Washington, in his Farewell Address, warned future generations to beware of schemes to destroy the Constitution by usurpation. Surely, here is an instance where we might well heed his advice. I am of the opinion that if the mentality of Congress has become so distorted as to cause it to resort to the tactic of overriding the Constitution by the simple device of declaring an emergency, then we have just about reached the end of all constitutional government.

There are a few good provisions in the bill. Title I would remove practically all remaining controls over materials that go into the construction of housing, but these provisions should have been presented to the Congress by themselves and not made a part of the other provisions of this bill.

Full production of housing cannot be expected until rent and all other controls relating thereto are completely abolished. So long as there remains any shadow of such controls hanging over the heads of manufacturers and suppliers of home building materials there will be hesitation and doubt in their minds as to what the future may have in store for them.

FREDERICK C. SMITH.

Waging World Peace: America's New Role—Address by Walter Lippmann at the Thirty-fifth Annual Meeting, Chamber of Commerce of the United States, Washington, D. C.

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1947

Mr. CASE of South Dakota. Mr. Speaker, the need of these times is clear thinking based upon accurate information and good historical perspective. A writer who seems to me to be doing some of the best thinking, these days, on America's new role in the world is Walter Lippmann. Under permission heretofore granted, I offer for the RECORD, Mr. Lippmann's address delivered to the thirty-fifth annual meeting of the Chamber of Commerce of the United States, meeting in Washington, April 29, 1947:

Mr. LIPPMANN. I am sure you would have me come directly to the crux of the matter—that is to say, to our relations with the Soviet Union.

We can best see where we are today by recalling how the situation has developed since the Allies were able to plan for a complete victory over Germany, Japan, and the satellites. That was in the autumn of 1943, when the Big Three met at Teheran. Then, for the first time, they were able to think not about how to hold on in the British Isles, at Stalingrad, at Alamein, and in New Guinea and to avoid being defeated, but how the war was to be won, and what the postwar world was to be.

Before that the differences which were to divide the Allies were submerged by their common danger and the sheer struggle to survive. But from then on, with ultimate victory in sight, it was clear that there could be no peace until and unless there was a settlement among the victorious Allies. The Allies had to make peace with each other before they could make peace with their enemies.

In the work of attempting to make a settlement among the Big Three, we may say that there have been two periods, and that we are now at the beginning of a third. For the sake of clarity and brevity I shall call them the Roosevelt-Churchill-Stalin period, the Byrnes-Bevin-Molotov period, and the Marshall period.

THE BIG THREE LINES

Reduced to its permanent elements, stripped of all secondary matters, the net result of the Roosevelt-Churchill-Stalin period was an agreement on the military boundary line where the British-American and the Russian forces were to meet as the fighting ended, and were then to stand still and to advance no farther.

That military boundary ran through Europe from Stettin on the Baltic Sea to the suburbs of Trieste on the Adriatic, then along the northern frontier of Greece, north of Turkey in the Black Sea, along the northern boundary of Iran for the Russians and along the southern boundary of Iran for the British.

In the Far East it ran through Korea at the eightieth parallel.

In China the line was not clear because, though theoretically under the agreement the national government of Chiang Kai-shek was supposed to recover the whole of China, including Manchuria, in fact Chiang Kai-shek was unable to do that. For China was divided by a civil war, one side deriving support from the Russians and the other from the United States. Nevertheless, though there was no agreed boundary line within China, as there was in Europe, between the Soviets and ourselves, there was and is a de facto boundary along the line which separates Red China from Nationalist China. For neither side in China has been strong enough to win the civil war.

The military frontier established during the Roosevelt-Churchill-Stalin period has endured. It still stands virtually unchanged since it was agreed to with Stalin during the war. It has endured not because it satisfies any of the Big Three but because it registers the actual line where their armed forces met at the end of the war. None of them could cross that line without opening up a battle. None of them has crossed it with military forces. This line, which registered the military situation, became also the political frontier between the Soviet orbit or sphere of influence, and that of the western nations.

The Byrnes-Bevin-Molotov period, which began with the London Conference of September 1945, lasted until the beginning of this winter. During this period each side worked to consolidate its own sphere of influence, and at the same time to push forward into the other sphere of influence.

ATTEMPTS TO CROSS LINE

The Russians tried to cross the line by fomenting a revolution in the Iranian province of Azerbaijan, by pressure on Turkey, by infiltration into Greece, by supporting Tito's effort to obtain Trieste, by laying claim to an Italian colony in Africa, by supplying the Chinese Communists with the Japanese weapons captured in Manchuria. Yet all these attempts to advance beyond the old Roosevelt-Churchill-Stalin line were repulsed.

We, too, have tried to cross the line, and to advance our influence into the Russian orbit. With the British we waged a diplomatic campaign for free elections in Poland, Rumania, Hungary, and other satellites, and gave our moral support to non-Communist and anti-Communist parties which, if they came into power, would no longer take their orders from Moscow.

This campaign was unsuccessful, and in the long tedious negotiations by Messrs. Byrnes, Bevin, and Molotov over the satellite countries ended in treaties which register the stalemate at the old military line.

One side or the other, or both, tried to change the boundaries of the spheres of influence by infiltration, by propaganda, by economic pressure, by political intervention and by diplomatic negotiation. But the striking thing about the Byrnes-Bevin-Molotov period has been that all our attempts and all the Russian attempts to change the boundaries of the two great spheres of influence have failed.

In China the result has been the same. The dividing line between Red China and Nationalist China stands approximately where it was at the end of the war. It has not been possible to unify China by a Nationalist victory with our support, or by a Red victory with Russian support, or by the agreement which General Marshall tried to bring about.

The status quo is essentially unchanged, and the upshot of General Marshall's mission to China was a decision to accept this fact, and to limit our intervention in China for the present to supporting Chiang Kai-shek enough to maintain the status quo, but not enough to enable him to win the civil war.

Thus far the Soviet Union has limited its intervention to supporting Red China enough to hold what it has, but not enough to overrun the rest of China.

This decision, which marks what I have called the beginning of the Marshall period, was to limit our intervention to the status quo. It was taken just before General Marshall became Secretary of State.

BRITAIN'S WITHDRAWAL

The China decision was followed by an event which had been foreseen for some time, and could not be postponed much longer. This was the decision of the British Government that they no longer had the military and economic resources to hold all their sectors on the old Roosevelt-Churchill-Stalin boundary line.

The reasons which have compelled the British to retire from the front line of the Middle East are, of course, well known to you, and I shall not discuss them at length. They are in brief that the Empire, of which India was the great central asset, is liquidating itself, and that the United Kingdom is so gravely weakened by the two wars of this century that it no longer has the manpower, the military strength, the productive capacity, and the financial resources to hold and to use all the strategic positions of the old empire.

Among these strategic positions none was more important than the eastern Mediterranean and the Middle East. Greece and, above all, Turkey are like a door which can swing open both ways. Through that door Russia can come down to the great oil regions of

the Middle East and also into the Mediterranean, and can act against the soft underbelly of Europe. But through this same Turkish door, if it is swung open the other way, it is possible for a great sea and air power to pass up into the Black Sea, and to act against the soft underbelly of Russia.

For these reasons the decision of the British Government that they could no longer hold the Turkish door was an event of transcendent importance. It was the greatest event of the postwar era. For it meant that unless the United States intervened to replace the British, the old Roosevelt-Churchill-Stalin boundary line, which at least fixed the limits of Soviet expansion, would no longer hold.

That, of course, is why President Truman went to Congress last March to ask not only for money, but in fact for authorization to have the United States replace Britain and confront directly the Soviet Union in the Middle East.

Though the situation compelled the President to act, though American intervention in the Middle East became unavoidable once the British were compelled to retire, there is no disguising the difficulties, the costs, and the risks of our position today.

WHERE WE NOW STAND

In the first place, though we are not without friends and moral supporters, we now stand virtually alone as respects military power and money confronting the Soviet Union in Asia and in Europe. The weakness which has compelled Britain to withdraw in the Middle East will almost certainly compel her to turn over to us her main responsibilities and commitments in Germany as well. Thus our burdens are immensely extended while the risks of conflict have been sharpened because everywhere the issue is a direct one between Russia and ourselves.

In the second place, as the issue is sharpened there is of course no peace in the world and no recovery and reconstruction, but only a steady economic deterioration which, if it continues, if it is not arrested, and reversed, must inexorably lead, and at no distant date, to the economic collapse of western Europe, including Britain, France, Italy, and western Germany. Moreover, within all the countries of Europe and elsewhere the great struggle between Russia and America—combined with economic misery and hopelessness—has become an internal domestic struggle.

The result will be, can only be, that the more we drift toward the supreme crisis of our relations with the Soviet Union and to the possibility of war, the greater becomes the probability that the countries which we should have to count upon as allies would be incapable because they were divided, and unwilling because they cannot face another war, to help us.

In the third place, as things are developing now, both Moscow and Washington are in the gravest danger of losing control over the choice between war and peace, of losing their power to decide whether they will settle by negotiation or will fight to the bitter end. We are both playing the most dangerous game in the world, which is to deal with one another through satellites and puppets and weak clients. We are dealing through agents, and it is never certain that an agent will follow instructions, that he will not through stupidity or some sinister reason act on his own, and force your hand, and then leave you in a position where you have to back him up.

WHERE DANGER LIES

There, I believe, lies the greatest danger of war. There are desperadoes, gangsters, conspirators in both camps; there are hotheads who are trigger happy, there are fanatics, and there are speculators who have lost power and position and hope to recoup in a war.

The balance of power which was fairly stable in the Roosevelt-Churchill-Stalin period has now become extremely and dangerously unstable.

The United States stands virtually alone, holding in check the military power of the Soviet Union without effective allies and obligated also to maintain the economic life of western Europe and of a considerable part of the world. There is still a balance. But we can no longer count on it. For we cannot hold defensively such an immense part of the world against the slow pressure and infiltration of the Soviet Union.

If the present position continues much longer, we shall be at the mercy of incidents which could lead to war. The fact that the attempt to hold the line is so exhausting, so expensive, and so dangerous, will increase to a dangerous degree the tension in this country and in the world. This will bring with it the idea of a crusade and of preventive war to end the anxiety and uneasiness.

The position may be compared to the situation during a war when neither side is willing to state the terms on which it is ready to settle, and when, therefore, the prevailing view is that the war must be fought to the bitter end and must terminate in unconditional surrender. We must not let things drift that far. In my view the world cannot stand another war now, and if war comes, it will be a kind of war which will spread everywhere and be not an international war that could end in a peace treaty, but a general civil war which would end in universal anarchy.

Our national interest requires that in resisting the expansion of Russia and even in attempting to reduce the expansion that has already occurred, we should not drift into the position where we and the Russians believe that the conflict can end only with the unconditional surrender of one or the other.

In our dealings with Russia we must take our stand firmly. But we must take it clearly for a negotiated settlement and for a modus vivendi.

We must refuse to appease the Russians and to surrender Europe and Asia to them. But we must refuse also to enlarge and embitter the conflict by asking of them unconditional surrender.

We must, in other words, proceed at once to state the terms on which we believe a settlement should be made, the terms for which we are maintaining and deploying our military forces, the terms on which we are prepared to make our economic contribution to the reconstruction of the world.

LET US STATE TERMS FOR PEACE

These terms, I believe, should be the following:

1. We should say to the Soviet Union that in the Far East we propose that the status quo be maintained in China; that neither Red China nor Nationalist China shall be supported by either of us to the point where it can conquer the other.

2. In the Middle East we should state that our special guaranties of assistance and support to Turkey and Greece are for the object of achieving a treaty which concludes the disputes over the Dardanelles, the boundaries of Turkey and the boundaries of Greece. We should say that in the terms of that treaty we are prepared to acknowledge the special interest of the Soviet Union in the security of the Dardanelles, and in the freedom of passage in time of peace, and of military operations sanctioned by the United Nations. In denying her right to physical possession of the Straits, we should be prepared to consider any proposal which involves international civilian control and guaranties.

3. In Europe we should demand—without compromise—agreement on the political decentralization of Germany and we should be prepared if necessary to federate the three western zones of Germany even if the Soviet Union refuses to permit the Germans of its zone to enter such a German federation. But the constitution of the new Germany which we set up in the western zones should be clearly designed to admit the German states in the Russian zone on equal terms whenever the Russians are ready to permit it.

4. We should also say to the Russians that as far as continental Europe up to their frontiers is concerned, we propose that they, the British and ourselves evacuate all of Europe—leaving only token forces in Germany. We should then ask them to join us in sponsoring the formation of a European economic union. We should ask them to permit the countries of their orbit to enter this economic union, and to instruct the Communist Parties in the rest of Europe not to oppose the formation of such a union.

5. We should say, then, that when such a union is formed, we shall be prepared on terms equivalent to lend-lease to provide it with the working capital required to start the economic life of Europe on a productive basis. We should then say that on the basis of such a general world agreement, we are prepared to consider assistance to Russia in her reconstruction—in the form both of current reparations from Germany, which would then be able to work productively, and also of credits from the United States.

My thesis, in short, is that we must resist the expansion of the Soviet Empire, that we must press for the withdrawal of the Red army within its own borders, but that we must accompany this pressure—which is dangerous, expensive, and difficult—with clear and realizable terms of peace.

The statement of these terms of peace will not please the Russians. Nevertheless, the knowledge of what concretely we want, and that we want no more than that, will make their own resistance weaker. They will know the price on which they can have a peaceable settlement.

The statement of these terms of peace, which are reasonable and constructive, will assure the support to our side of the great masses of the people of continental Europe and of the British Isles. This is vitally important. For these masses will not support us in an unlimited crusade against the Soviet Union. They will, on the contrary, turn increasingly toward neutrality and toward distrust of our motives, and to resistance to our intervention in Europe and the world.

The statement of our terms, moreover, will unify the American people in support of our foreign policy. This support exists, but it is on the surface. It is not so deep and so well founded as it needs to be, if our people are to remain united and strong in the difficult and dangerous days to come.

Portal to Portal

EXTENSION OF REMARKS
OF

HON. EDWARD J. DEVITT

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 1, 1947

Mr. DEVITT. Mr. Speaker, under leave to extend my remarks, I wish to make the following statement:

It is my intention to vote for the adoption of the conference report.

As many of the Members of the House know, I was concerned, when this bill was originally considered, about its effect upon the rights of employees where conflicts existed in interpretations of the Fair Labor Standards Act by govern-

mental agencies. I am now convinced that under the "good faith" provision of the bill as it has come from conference, that it would not adversely affect the rights of the workers in the cases which were brought to my attention.

I have followed the progress of this bill through its original passage and through conference. I believe that the "good faith" defense will not be available where an employer had notice of probable invalidity of a ruling and that this defense will not apply where an employer has not relied upon a ruling and has not been injured by such reliance.

This defense, as I understand it, is intended to be available only where the employer innocently and to his detriment in good faith followed rulings or interpretations given to him by governmental agencies without notice that such interpretations were in conflict with rulings of the Wage and Hour Administrator or were claimed to be erroneous.

It is not intended that this defense shall apply where an employer had knowledge of conflicting rules and chose to act in accordance with the one most favorable to him. Certainly it is clear that an employer cannot claim reliance in good faith when legal actions contesting the regulation, interpretation, or practice were threatened or pending when the act or omission in question took place.

Chicago City Council Urges Passage of Taft-Wagner-Ellender General Housing Bill

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 30, 1947

Mr. SABATH. Mr. Speaker, under consent to extend my remarks, I include a resolution of the City Council of Chicago urging prompt enactment of the General Housing Act introduced in the Senate under joint sponsorship of Senators TAFT, ELLENDER, and WAGNER, and in the House by Representative JAVITS.

Mr. Speaker, my city of Chicago is the second largest in the United States and one of the largest cities in the world. Under the impact of World War II our population has expanded beyond all comprehension. Under the wise Democratic administration of the last 15 years the city's finances have been brought to a sound basis; we have a clean, honest, efficient city government.

But we do have a critical housing problem, which neither private enterprise nor the city of Chicago with all the willingness in the world, have been able to solve.

The bill now before the Congress, which was filibustered to death last year by the Republican minority of the Committee on Banking and Currency, can and will aid in the solution of that problem.

It is nonsense and political quackery to pretend that this bill is socialistic or will hurt free enterprise.

Actually, this bill, if enacted, and it should be enacted, merely helps free enterprise to be free and to effectively attack the baffling problem of providing low-cost housing, which is low-profit housing, to people of relatively low incomes.

This bill is to help people help themselves.

The text of the resolution follows:

RESOLUTION ADOPTED BY THE CITY COUNCIL OF THE CITY OF CHICAGO ENDORSING WAGNER-ELLENDER-TAFT GENERAL HOUSING BILL AND URGING PROMPT ENACTMENT BY THE CONGRESS

Whereas the Wagner-Ellender-Taft general housing bill, recently reintroduced in the Congress, provides for a unified national housing agency and a coordinated national attack on the housing problem through adequate research, active local planning, a liberal home-loan plan, the construction of homes for low-, medium-, and high-income families and authorizes assistance to localities for public and private slum clearance and housing projects; and

Whereas the city council heretofore on November 19, 1945, endorsed the Wagner-Ellender-Taft general housing bill, when said bill was pending before the last Congress; and

Whereas said Wagner-Ellender-Taft general housing bill has recently been reintroduced and is pending before the present Congress: Now, therefore, be it

Resolved, That the City Council of the City of Chicago hereby endorses and supports the Wagner-Ellender-Taft general housing bill and urges its prompt enactment by the Congress; and be it further

Resolved, That copies of this resolution be directed to all Members of the Congress from Chicago and to the Senators from Illinois, and to any other persons who may be helpful in effectuating its execution.

STATE OF ILLINOIS,
County of Cook, ss:

I, Ludwig D. Schreiber, city clerk of the city of Chicago, do hereby certify that the above and foregoing is a true and correct copy of the certain resolution adopted by the City Council of the City of Chicago at a regular meeting held Friday, the 25th day of April A. D. 1947.

Witness my hand and the corporate seal of the said city of Chicago this 29th day of April A. D. 1947.

LUDWIG D. SCHREIBER,
City Clerk.

Presentation of Award to Senator Wagner by Sheil School of Social Studies

EXTENSION OF REMARKS
OF
HON. ROBERT F. WAGNER
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Friday, May 2 (legislative day of Monday, April 21), 1947

Mr. WAGNER. Mr. President, on April 17 in the city of Chicago I was very highly honored by having conferred upon me by the Right Reverend Bernard J. Sheil, auxiliary bishop of that great metropolis, the Pope Leo XIII award. This high award is conferred annually for "outstanding contribution to Christian social education."

I think it is significant at this time, when the act which bears my name is the subject of so much criticism and abuse, that Bishop Sheil in asking me to accept the award referred to the Wagner Labor Relations Act as an example of what he characterized as an "inestimable service to this Nation and the world."

Mr. President, I ask unanimous consent to have included in the Appendix of the RECORD following these remarks the citation accompanying the presentation of the award and my speech accepting it.

There being no objection, the citation and speech were ordered to be printed in the RECORD, as follows:

CITATION ACCOMPANYING THE PRESENTATION OF THE LEO XIII AWARD OF SHEIL SCHOOL OF SOCIAL STUDIES TO SENATOR ROBERT F. WAGNER

(Read by John Yancey, secretary-treasurer, United Transport Service Employees of America (CIO))

"Worthy of all praise are those who, understanding what the times require, have, by various enterprises and experiments, endeavored to better the conditions of the working people without any sacrifice of principle. They have taken up the cause of the workingman, and have striven to make both families and individuals better off; to infuse the spirit of justice into the mutual relations of employers and employed; to keep before the eyes of both classes the precepts of duty and the laws of the Gospel."

With these words of the great pontiff for whom its Leo XIII award is named, Sheil School of Social Studies is proud to salute the fourth winner of this award, the Honorable ROBERT F. WAGNER, United States Senator from New York State. It is eminently fitting that this award, given annually for outstanding contribution to Christian social education, should be presented to the distinguished Senator whose long career of service and sacrifice has been dedicated to the principles enunciated in the social encyclicals of Leo XIII and his successors to the throne of Peter.

Although far eclipsed by his subsequent service in the United States Senate, it is in his investigation of the abuses leading to the infamous Triangle Fire in 1911 that perhaps the best crystallization of the brilliant life of Senator WAGNER is to be found. When largely due to his efforts, a code of labor laws protecting the lives and rights of working people in New York was passed, the principle that a people's government must act to remedy the shortcomings of individual initiative whenever the common good was in jeopardy, received new vindication. "Whenever the general interest of any particular class suffers, or is threatened with, evils which can in no other way be met, the public authority must step in to meet them," Leo XIII had written in 1890.

In the United States Senate, Senator WAGNER has become the foremost authority in the field of industrial relations and his Labor Relations Act, which became a law in 1935, is today such an epic milestone in the struggle of workingmen to organize into labor unions for their mutual benefit that it has become known as the magna carta of labor. In conferring the Leo XIII award upon Senator WAGNER, we of Sheil School of Social Studies are fully cognizant of the concerted campaign being conducted today to emasculate this great law which has stood as a bulwark in the defense of those precious rights which have been so deeply the concern of the sovereign pontiffs.

Senator WAGNER participated actively in the creation of the Reconstruction Finance Corporation. In 1933 he sponsored the National Industrial Recovery Act, and was a cosponsor of the laws setting up the Civilian Conservation Corps. In the past decade, Senator WAGNER has been the sponsor and champion of the Social Security Act, under which 66,000,000 men and women receive the protection of old-age and survivors insurance.

Senator WAGNER'S efforts to assure adequate housing for the American people are well known. He sponsored the United States Housing Act of 1937, which initiated a long-term slum clearance and low-rent housing program, and the National Housing Act of 1938 which greatly enlarged the powers of the Federal Housing Administration. He was one of the chief sponsors of the Home Owners' Loan Corporation, which afforded protection to millions of distressed home owners.

For many years, Senator WAGNER has been fighting actively for legislation to protect the rights of minority groups, including a Federal antilynching bill, the abolition of the poll tax, and the establishment of a permanent Fair Employment Practices Committee.

For his dedication to the cause of working people and for his selfless devotion to the task of reconstructing the social order in the interest of the common good, Shell School of Social Studies is honored to present its fourth Leo XIII award to Senator ROBERT F. WAGNER.

ADDRESS OF UNITED STATES SENATOR ROBERT F. WAGNER, DELIVERED AT CHICAGO, ILL., ON APRIL 17, 1947, IN ACCEPTANCE OF THE POPE LEO XIII AWARD OF THE CATHOLIC YOUTH ORGANIZATION

My friends, the very title of the Pope Leo XIII award endows it with a grandeur which is more than temporal; with a sanctity that is timeless. It is, therefore, with a sense of deep humility that I accept it. I am moved to the very depth of my being with gratitude for your generous judgment. I recognize this tribute as not so much a mark of honor for my small efforts in the field of social legislation in the past, as a souvenir of my responsibility for the work that remains to be done. Indeed, we have only begun our labor to improve the condition of life of those who toil, to mitigate the effects upon them of economic instability, and to remove the causes of civil conflict.

We are midway along the twentieth century. The retrospect of the past decades of this century gives cause for deep concern. Two wars of world-wide magnitude have brought death and suffering to untold millions and devastation to many lands. Today countless humans are grubbing amid rubble for the barest essentials of life. Revolution has followed war, tearing apart the social fabric of many nations. Great powers have died and are dying, leaving disaster and despair as their legacies.

Military warfare has ended but pacific conditions do not prevail. Each day brings its new alarms and each night its terrors. Science has conquered nature and discovered a potent new force that can be used to lift the level of human life to soaring new heights or to debase it below that of animal existence, if not to destroy mankind entirely. Humanity trembles at the future.

The basic reason for the prevailing black mood of cynicism and despair is not hard to find. The divine message of the Prince of Peace is being drowned out by the clamor of contending materialistic forces. Causes that have but a moral appeal to the conscience of mankind are being sacrificed on the altars of greed and power. The progress of physical science has been accompanied by a decay of the ethical standards of men and nations, by a decline in basic human decency. Man has mastered nature, but he has not yet mastered himself. He is indeed at war with his God and his own immortal spirit. On the threshold of a new age, humanity is faced with a burning question: Whether it can or will undergo the fundamental moral regeneration without which all of its labors will not avail.

In this hour of crisis we turn for guidance to God and to His eternal principles of human conduct which the Catholic Church has ever propagated and asserted. In our soul-searching we examine our past conduct to find in it some measure of hope that we do possess the capacity to respond to moral considerations.

Those who have labored to achieve a measure of social justice in our national economy can find just cause for hope. In the past years far-reaching legislation has been enacted to ameliorate the conditions of life of the wage earners of the Nation and to secure to them the benefits to which they, as dignified members of the community, are justly entitled.

His Holiness Pope Leo XIII, whose memory we revere tonight, enjoined the state to protect the poor and helpless. In his great encyclical on the Condition of Labor, he said:

"Still, when there is a question of protecting the rights of individuals, the poor and helpless have a claim to special consideration. The richer population have many ways of protecting themselves and stand less in need of help from the state; those who are badly off have no resources of their own to fall back upon and must chiefly rely upon the assistance of the state. And it is for this reason that wage earners, who are undoubtedly among the weak and necessitous, should be specially cared for and protected by the commonwealth."

This prudent and holy Pontiff, with a vision far beyond his own times, recognized the natural right of workingmen to organize for themselves associations devoted to the betterment of the conditions of labor. He indicated the need for the regulation of the hours of employment that men might not be ground down with excessive toil. The necessity for the elimination of child labor occupied his attention. He recognized that the worker required aid in time of misfortune, in case of accident, sickness, and old age.

Leo XIII was a champion of what has come to be known as the living wage. In his own incomparable language, he said:

"Let it be granted then that as a rule workman and employer should make free agreements, and in particular should freely agree as to wages; nevertheless, there is a dictate of nature more imperious and more ancient than any bargain between man and man, that the remuneration must be enough to support the wage earner in reasonable and frugal comfort. If, through necessity or fear of a worse evil, the workman accepts harder conditions because an employer or contractor will give him no better he is the victim of force and injustice."

Leo XIII did not advocate the abolition of the right to strike, the right to cease from labor when other measures to correct inequity had failed. His was the larger view: That wise legislation be framed to remove the causes of conflict between employer and employee so that the need for strikes would not arise.

Many of the social objectives envisaged by Leo XIII have been achieved. In this we may take satisfaction. Founded as those objectives are on fundamental principles of Christian morality, their achievement is proof that we are still susceptible to moral suasion.

But in this field, as in so many others, we are still being put to the test. There is no warrant for smug contentment.

Millions of our citizens who stand in need of the benefits of social security have yet to have them granted. The worker has not yet been adequately protected against the effects of cyclical depressions that have in the past proved so devastating to him. Measures to mitigate the disastrous consequences to the individual of sudden misfortune necessitating medical care are only in the early stages of legislative debate. In a land rich in resources and at a time of unparalleled prosperity, it is unpardonable that decent housing is still unavailable to large numbers of our people. Racial and religious intolerance, coupled with economic and political discrimination continue to defy the spirit of the true faith. These are but a few of the problems calling for action.

At the same time we see many of our social gains threatened. Selfish forces have seized upon this time of confusion to increase their power and wealth at the expense of the laborer. Under the guise of correcting inequities in existing law, they strike at the very heart of the protections against social and economic injustice that have been so laboriously created over the years. Though they plead that they wield the scalpel, they in fact are swinging the sledgehammer. Decapitation is not an approved remedy for a headache. The physician does not resort to it.

If we permit ourselves to be deluded by the false prophets who foresee ruin unless our free workers are once again shackled and bound in economic thralldom, then the small flower of hope growing in the vineyard of social justice will wither and die. Rather should we turn for inspiration to the lofty ideals of Leo XIII and predicate our position on that human dignity which, as that great Pontiff pointed out, "God Himself treats with reverence."

With inspired insight he perceived that liberty and social justice were both corollaries derived from the same fundamental truth; that we strive for one and suppress the other led only to confusion. In this twentieth century, some have pretended to split this unity. They thought they could achieve social justice by sacrificing human liberty. What a ghastly failure they have produced. If only they would learn at the feet of Pope Leo XIII they would realize the futility of their effort.

Then would they discover that social justice is derived from the brotherhood of man in the Fatherhood of God.

They would come to realize that where liberty is banished, social justice cannot abide, for the absence of liberty is tyranny and tyranny is the negation of justice. No, my friends, we cannot choose between them; human liberty and social justice are one and inseparable. They are the twin faces of the same true coin.

For ages we prayed to be relieved of want; and Providence has endowed us with capacity to produce in overflowing abundance. Why then is poverty still the lot of the average man and starvation the portion of many?

We prayed to be relieved of drudgery; and a kindly Father has provided the power and the tools. He lifted the yoke from mankind's neck; but we promptly saddled it with the fear of unemployment. Pride in our industry waxed ever greater; our esteem for man waned. The worker became a lowly and replaceable creature whose desolate fate was to serve the glorified machine.

Is it any wonder that the God-given dignity of man is now in a ferment of rebellion? At every meridian round the globe the laborer is spurning this mechanical idolatry. He reminds us that he and not the machine was created in the image of the Divine.

We have no cause to fear this renascence of the human spirit unless we repress it. Our task, as I read the great Encyclicals, is to lift the banner of social justice and human liberty. Round it let us rally—all those who would build a kingdom of man fit for candidates for the Kingdom of God.

People Want Liberties Restored

EXTENSION OF REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Friday, May 2, 1947

Mr. RANKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Inglewood (Calif.) Daily News of April 14, 1947:

WE, THE PEOPLE, WANT OUR LIBERTIES RESTORED

To the Eightieth Congress:

Gentlemen of the Congress, the vote which elected you last November was an explicit protest against interference with the lives, liberties, and affairs of the American people.

That vote was the insistent—not-to-be-disregarded—call for you, the supreme law-making body of this Nation, to curb usurped powers of irresponsible and lawless men which, unrestrained, will destroy us.

These recurring obstructions to our getting the necessaries of life—industry-wide strikes in communications and transportation, coal and other fuels, power and light, and other basic sources of supplies, including food—are abuses and excesses not longer to be borne.

Why should Americans constantly be made to fear that our cities, factories, farms, and homes will be plunged into darkness?

Why must we be continually in dread of shortages and famines in a land of plenty?

The Congress knows as well as we do that most of the socio-economic ills now afflicting us spring from three groups who jeer at constituted authority.

These public enemies are:

1. The politico-economic de facto dictatorship of irresponsible and insolent labor union bosses who, too long, have been exempt from laws to which the rest of us must conform.

2. The vast nonelective, self-perpetuating bureaucracy of the essence of totalitarianism—carpetbaggers—impudently domineering over us, mocking the dignity and constitutional prerogatives of the Congress.

3. The Communists, taking orders from the Kremlin, with avowed purpose to overthrow by violence the United States Government, and conquer America as another vassal province of the Soviet Union.

Standing on the solid ground of the Bill of Rights—"to petition the Government for a redress of grievances"—we, the people, make known to the Eightieth Congress our wants.

We want you to return to us our historic Government of organic law—so that we may regain our vanishing liberties.

We want all the people—the working people, the business and professional people, the farmers and the housewives, our children and our children's children—to have all the safeguards and freedoms promised by our Constitution.

I

We petition you to enact legislation that will—

Outlaw closed shop, in all its variations of honeyed aliases. Closed shop is the spawning bed of unionized rackets and thuggery, extortion, and bribery. Without closed shop, unioneering exploiters of the workingman could not set up and maintain job monopolies denying the right to work to citizens who refuse to pay tribute. No American should have to split his pay check with anyone to "buy" his constitutional right to hold a job. Slavery was supposed to have been abolished 84 years ago.

Outlaw hot cargo, secondary boycott, and secondary picketing as criminal conspiracies; declaring it a felony to hinder or prevent by any form of coercion and force deliveries of materials, supplies, merchandise, or services to any person or establishment conducting lawful business.

Outlaw jurisdictional, organizational, and sympathetic strikes; willful slow-downs of production; industry-wide collective bargaining, out of which come those vicious "master contracts" that put Nation-wide essential industries wholly in the power of one man—example: Coal and John L. Lewis.

Forbid Government employees, anywhere, in any classification, to go on strike.

Repeal that portion of the Clayton Act giving preferential position to labor unions over other associated citizens by permitting unionized monopolies in restraint of trade; amend the Sherman antitrust law to apply to unions as well as to business; repeal the Norris-LaGuardia Act exempting unions from court injunctions.

Revamp the Wagner Act (in lieu of repeal) so as to equalize responsibility and rights of labor and management; hold unions legally and financially responsible for contracts; make reality instead of farce of employees' rights to bargain "through representatives of their own choosing."

And so protect us from predatory labor unionism and its agents that every person may go about his or her lawful pursuits without molestation—free of fear of intimidation, coercion, force, or reprisals.

II

We want to get the cloven hoof of bureaucracy off our neck.

We want you to slash appropriations on which useless bureaucrats suckle. Stop all wastes in Government. Balance the budget. Make progressive reduction in Federal debt. Cut oppressive taxation to the bone. It is a stupid or corrupt government that destroys the value of the people's money. Stop deficit financing and get back to the ways of common honesty.

Take the Government out of business in subsidized tax-exempt competition with its own taxpaying citizens.

Encourage and protect the free-enterprise system, which built this country from 13 weak colonies into the greatest nation of all time, and which still is the only mechanism that can produce more men with courage and vision who can create pay checks, more pay checks, bigger pay checks.

III

We want communism stamped out in America.

We want all alien Reds deported. We want all Communists, fellow travelers, and other subversives weeded out of Government positions, both high and low. We want Communists barred from running for or holding any public office of any kind, infiltrating into labor-union officialdom, spreading their poisonous propaganda in our schools and through the medium of moving pictures.

We also want this Eightieth Congress to abolish the despotism of big government, big unionism, big business. Again make every person equal before the law, in fact as well as theory. Keep the doors of free opportunity open to every boy and girl, whether born in hovel or mansion.

That is part of our Constitution and Bill of Rights.

That is America.

Gentlemen of the Congress, quit mumbling and bumbling. Get down to brass tacks; matters of immediate practical importance. Bluntly—less meaningless talk, more meaningful action.

The American people—and, for that matter, all the world—know that our country is in jeopardy, partly as a result of your vacillation and inertia.

Wake up, and get to work.

The hour is late; later, maybe, than you think. If "Government of the people, by the people, for the people, shall not perish from the earth," the Congress must reassert and fully exercise its constitutional duties and responsibilities.

Gentlemen of the Congress: You are the trustees of American liberty, the guardians of American prosperity. As you face these responsibilities, act upon what you know to be right, not upon political expediency. Ever bear in mind that the United States is the last great citadel of a free people anywhere on the globe.

Legislate for America.

Do this, and you will keep faith with our founding fathers and generations of Americans yet unborn.

We, the people, trust you. Do not fail us.

Respectfully,

WOMEN OF THE PACIFIC.

Amendment of Federal-Aid Highway Act

EXTENSION OF REMARKS
OF
HON. JOHN C. BROPHY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, May 2, 1947

Mr. BROPHY. Mr. Speaker, the Federal-Aid Highway Act of 1944 authorized the apportionment of certain funds to the various States for each of the first three successive postwar fiscal years for Federal-aid highways, for Federal-aid secondary roads, and for projects on the Federal-aid highway system in urban areas.

Section 4 (d) of said act provides that any sum so apportioned shall be available for expenditure in such State for only 1 year after the close of the fiscal year for which it is apportioned, and that any sum so apportioned that remains unexpended at the end of such period shall lapse.

The aforesaid provisions of section 4 (d) of this act will operate to cause each State to lose any portion of such funds apportioned to it for the first postwar fiscal year that may not be expended by June 30, 1947; for the second postwar fiscal year not expended by June 30, 1948; and for the third postwar fiscal year not expended by June 30, 1949.

The elements of inflation and the acute shortages of labor and engineering personnel, materials, and equipment that are known to exist will make it impossible to have these funds expended within the time now prescribed by said act.

The bill submitted extends the periods of availability of such funds for one additional year after June 30 of each of the years 1947, 1948, and 1949. I refer to bill H. R. 3264.

International Trade Organization

EXTENSION OF REMARKS
OF
HON. HERMAN P. EBERHARTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 2, 1947

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the

RECORD, I include the following editorial from the Christian Science Monitor of April 14, 1947:

ITO—UN'S VANGUARD

UN—most of us know what those letters stand for. ITO—what do they mean? Success for UN is, as most of us think, synonymous with peace. How many can give a synonym for ITO success?

These questions are more than rhetorical. The United Nations' contribution to peace can be great, because popular support of the UN is great. The ITO—International Trade Organization—may have to make its contribution without such popular support. The conference which aims to set up an ITO has convened at Geneva with next to none of the fanfare of the San Francisco Conference.

But the aims of the two organizations are similar. Their methods are related. Their ultimate resources are identical. Aims, methods, resources, all are dependent on public understanding.

Enlistment of popular interest in the UN was relatively easy. The UN, for the most part is the direct and visible, sometimes spectacular, approach.

But the ITO—and this is assuming that the 18 nations now conferring at Geneva get the agreements needed to under-pin an international trade agency—the ITO will tackle the causes of war before they get really interesting to many of us. It will, like a vanguard, go out to meet them while they are in the dollars-and-pounds, francs-and-lire stage. It will seek them out where they may be hidden behind files of acceptances, bills of lading, and the tangle that these make with import quotas, tariffs, and so forth.

The aims of the Geneva Conference are these: (1) To write a charter for the ITO. (2) To arrive at trade agreements tying the member nations into many-sided trade relationships with one another.

But these two major divisions of effort fall into numerous subdivisions. There will be rules to write, codes of fair play. The conferees must seek out price levels at which countries can supply other countries with wanted products. Experts must canvass possibility of sellers also being dependable buyers. This will apply especially to the United States, a creditor nation. For buying and selling must be balanced in a way to keep money moving all around. It is essential that no country shall suddenly find itself unable to obtain cash in whatever national currency it needs.

This relation of goods and moneys in foreign trade makes the Geneva conference a first cousin to the famous Bretton Woods meeting of 1944. In that year the World Bank and the Monetary Fund were designed. When the ITO emerges it will have to operate in close cooperation with these two world credit agencies. All three will, of course, operate together under their young granddaddy, the United Nations.

This tie-in between the UN and the ITO should dramatize the importance of the trade organization in the business of keeping peace. Many people, to be sure, do not have time to grapple with expert explanations of the relation of trade to peace, and of trade restriction to war. But they find themselves enlisted to support economic as well as political cooperation as the UN and connected agencies move into the field of world trade.

All can understand the UN as a world effort to beat war to the punch if it threatens us. Economic agencies like the ITO represent a world effort to create the positive conditions of peace in which the war menace can never become strong enough to lift its fist.

Fair Play on Palestine

EXTENSION OF REMARKS

OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, May 2, 1947

Mr. KLEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from PM for April 30, 1947:

FAIR PLAY ON PALESTINE—DON'T THROW THE JEWS TO THE ARABS

If you don't want to go wholly berserk in trying to make sense out of the bewildering UN debate on Palestine, you have to hold fast to a number of guiding-lines as first principles. Here are several of them:

Don't discount the tenacity of the British in holding on to their power in Palestine. To be sure, Cadogan has been very much on the defensive in the UN debate. He has had to parry the Indian-Arab-Russian demand for a guarantee that Britain will accept the UN recommendations in the end. He has also had to meet the clamor of Arab spokesman Jamali for an immediate end to the British mandate and for an independent Palestine—i. e. under Arab rule.

Nevertheless the UN session is not wholly distasteful to the British. The idea was Bevin's to start with, and in one sense it will yield returns to the British. For up to now the issue has been between the British and the Jews—a straight issue of whether the British would live up to their historic promises and to their mandate. But now in the UN the issue has been shifted to one between the Jews and the Arabs, which is just where the British want it. They can now plead before the world how complex and insoluble the whole problem of Palestine is, how stubborn the Jews are, how dangerous the prospect of an Arab-Russian alliance, how necessary a policy of appeasing the Arabs. What Bevin counted on was that the whole UN show would so bewilder Americans and so frighten them with the specter of Russian power that they would surrender their judgment.

Don't pay too much attention to the apparent hostility between the Arabs and the British. Both of them know perfectly well that the real target of both is the Jewish homeland in Palestine, the prevention of further Jewish immigration, the crippling of present Jewish strength. The Arabs do hate the British (no amount of appeasement will stifle that hate), and the British do fear the Arabs: but neither of them regards the other as the real obstacle to his Middle East plans. Up to now the British have borne the brunt of the attack on the Jews: the UN session changes this in the sense that in the UN the Arab states will have to bear the brunt of the same attack.

Don't be misled by the loud Arab talk of majority rule and self-determination and democracy in Palestine. It is curious to listen to talk about democracy from the Arab leaders like the Mufti of Jerusalem who were the closest supporters of Hitler. It is interesting to get assurances that Jewish rights will be respected from men who helped Hitler plot the mass-extermination of 6,000,000 European Jews. The fact is that a Jew has as little chance of freedom in the Arab states as he ever had in Germany, and his chances for life itself depend only on how far the Arabs dare go.

In this connection it is doubly interesting to note the new line of the American Communists on the Palestine issue. The current Daily Worker position is that the Jews have been foolish to trust the British imperialists and are equally foolish now to rely on the American imperialists. What then should they do? Trust themselves to the honor, fairness, and mercy of the Arab masses and even the Arab states—that is, the Grand Mufti and the desperadoes of the Arab league? Here is the latest of the sorry record of contemptible twists and turns made by the Communists in the interests of Russian policy.

Yet it would be foolish to believe that the Russians and the Arabs can strike up anything but the most temporary alliance. The Moslem religious leaders fear communism far more than the Vatican does, far more than the Protestant leaders. The Moslems are still sunk in feudalism, and whatever else may be said of Russia it is an enemy of feudal power. The Russians will try to use the Arabs as a weapon against Britain and America, and the Arabs will try to use the Russians to frighten Britain and America. The common action won't last long—but it may last long enough to frighten the gullible Americans into the arms of the Bevin-Mufti entente, long enough to snuff out any hope of fair play for the Palestine Jews.

What chances are there of insuring fair play? None, unless the American Government and American public opinion remain unscared and firm on several crucial propositions:

That the problem of the UN is not to throw the Jews to the Arab wolves, but to find a working solution for both.

That the parties at interest—including British and Arabs alike—should be excluded from membership on the UN Inquiry Commission.

That within the Assembly itself the Jewish agency be given the chance to take part in debate, and answer the unanswered and reckless statements of the Arabs and their allies.

That, once the inquiry is decided upon, the British Government commit itself to carrying out its share of the decision. Obviously this does not mean that the British alone should (to use Cadogan's precious phrase) spend their blood and treasure carrying out a UN decision. The Jews have had enough of British rule by barbed wire and noose, and so has the world. But if the British agree to live up to the UN inquiry, the rest of the UN members can take on the job of making sure that the solution stays solved.

How about the Russians themselves? I should say: Take the Russian position for what it is—don't underestimate its cynicism; don't over stimate its chances of success. Up to now in the UN debate on Palestine the Russians have consistently backed up the Arabs. Gromyko says he is backing them only on procedures, and reserves the questions of substance. Which is to say: The Russians are holding out to the Arabs a tempting offer to help them, both against the British and against the Jews, but are warning that they will not sell their help cheap.

On one score it is hard to blame the Russians. The British have been ruthless and cynical in using every weapon against them, and the Americans have their Truman doctrine. So the Russians are hitting back, and their hitting back takes the form of causing as much trouble as possible for British and American interests in the Middle East. If in the process this means helping to crush the remnants of the Jews, that is just too bad.

That the only solution which will now work in Palestine is a partition into a Jewish and an Arab state, each of them representing a majority rule and each of them required

to respect the minority rights of the other group.

Actually the argument about the present Arab majority in Palestine is a hollow one: the British mandate was set up for the express purpose of helping the Jews create a homeland which would eventually become a state, and of admitting enough immigration so that they would become a majority. But by now their hope seems idealistic: it has been shattered by the British white paper, and by Arab-Jewish bitterness.

What remains now is partition as a working solution. This would mean that in the Jewish state there would be an overwhelming majority of Jews, and in the Arab state an overwhelming majority of Arabs. It would mean that each could determine its own immigration policies and carve out its own destinies. To compel each of these states to respect the rights of the minority groups, and to keep both at peace the UN would have to continue supervision with the weapons of inspection, publicity, and (if required) force.

MAX LERNER.

War Excise Taxes

EXTENSION OF REMARKS
OF
HON. JOHN C. BROPHY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, May 2, 1947

Mr. BROPHY. Mr. Speaker, April 29, 1947, I introduced a bill, H. R. 3248, to discontinue in effect the war excise tax of 10 percent on electric, gas, or oil appliances of the type used for cooking, warming, or keeping warm food or beverages for consumption on the premises imposed by the Revenue Act of 1941.

The excise tax on the items eliminated by this amendment was imposed primarily to restrict consumption of essential materials needed for national defense. The need for such restriction no longer exists.

The present tax schedule is discriminatory because it places a tax on certain household appliances while exempting others less essential. For example, floor coverings and furniture may be purchased tax free. Likewise, washing machines were never subject to the excise tax, and vacuum cleaners which originally bore a 10-percent tax were removed by an amendment in 1943. Yet, the cooking range or stove which a returning veteran must have for his family's health are subject to the 10-percent tax. It seems illogical to tax a veteran 10 percent on the purchase of a necessary cooking stove at a time when the Government is reducing the cost of his housing through subsidies.

The excise tax on stoves is not borne by the manufacturer but is passed on to the buyer. It is a tax which bears hardest on the low-income groups.

Cooking stoves are essential home appliances, absolutely necessary to the health of the entire population. They are not luxuries and should not be classed for tax purposes with such luxury items as jewelry, furs, and amusements. On the range three meals a day are cooked, and it is used even more frequently when there are babies or invalids in the family.

Development of Waterways

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, May 2, 1947

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me before the National Rivers and Harbors Congress:

Mr. Chairman and gentlemen, I appreciate the invitation to discuss with you some of the problems facing our Nation having to do with the development and use of our national waterways. The United States is particularly blessed with an abundance of natural resources. The value of our great deposits of coal, oil, and minerals is impossible to estimate. We do know, however, that these enormous deposits of coal and oil are not inexhaustible, and the inroads we have made upon them during the war years have given us much concern as to adequate supplies of these essentials of modern civilization in the centuries ahead. However, among our great natural assets, our rivers and other water resources are practically inexhaustible under proper controls for preservation and use. We in the West appreciate, perhaps, more than others, the great value of our water resources. Without them much of the West would still be a barren waste. The enormous pool of hydroelectric power locked up in the great waterways of the West is an inexhaustible supply of energy to take the place of coal and oil. Fortunately, in the development of these great waterways for reclamation, navigation, flood control, mechanical and industrial uses, we, at the same time, make available this invaluable power resource. Many do not realize that approximately half of the potential hydroelectric power in the United States is contained in the Columbia River and its tributaries.

I hold the view that while we should, as a nation, exercise economy in the cost of government, we should not overlook the fact that it is false economy not to develop and put into full use the water resources throughout the Nation. It was by reason of our foresight in the development of these great projects that we were able to carry the late war to a successful conclusion and, at the same time, supply much of the food and war materials needed by our allies in that great contest. I sincerely hope that in our enthusiasm for economy, the ending of deficit spending, and balancing the national budget, we will not fail to make adequate provision for the development of our great rivers and harbors projects which are the backbone of our economy, and which are only investments in worth-while enterprises which return to the Federal Government, manyfold, the funds invested. It would be a serious mistake for our Government not to embrace the opportunity to make full use of these great resources which a divine providence has bestowed upon us.

As a member of the Public Works Committee, I am also acquainted with, and directly interested in, flood control and related river-basin development, as well as public works in general. I was brought up on the banks of the Columbia River and have watched the continuing development of that great river and its tributaries for navigation, power, flood control, and irrigation. I impose upon your indulgence to outline, as far as my time will permit, some of the major developments which come under the jurisdiction of the Subcommittee on Rivers and Harbors, of which I have the privilege to be chairman:

BONNEVILLE AND GRAND COULEE

The comprehensive plan for the development of the Columbia River Basin is one of tremendous scope. It consists of a series of major projects, the first two of the series to be completed being the Bonneville Dam, built by the Corps of Engineers, and the Grand Coulee Dam, constructed by the Bureau of Reclamation. These two great dams played important roles in helping this country and her allies to win the war. Power from them welded our ships, helped perform chemical and metallurgical miracles, and contributed to the creation of the literally world-shaking atomic bomb. The Bonneville Dam, with its ship lock, has made possible the navigation of ocean-going vessels as far inland as The Dalles. Gigantic and beneficial as each of these dams is, they are but the beginning of a long-range program of development. And although their worth has already been fully demonstrated, they are not nearly sufficient to take care of the growing needs of the Pacific Northwest. Bonneville's installation of half a million kilowatts represents about one-fifth of the total present production capacity in the Washington-Oregon area. Eventually the entire Columbia River system must be harnessed if complete beneficial water utilization and control throughout the basin is to be achieved. It is interesting to note that the Bonneville Dam has not been detrimental to the migrations of the Columbia River salmonoid fish. On the contrary, the fish count last year shows that more Chinook salmon ascended above Bonneville than during any previous year since counting started in 1938 with the single exception of 1941. Comparison of the spring run of 1946 showed 11 percent more fish than in 1942, ordinarily considered as the parent stock for the 1946 run. I am told that the experience at Bonneville points to the conclusion that dams which drown out swift turbulent rapids are helpful to migrating adult fish. The fact is that before the construction of Bonneville Dam, it took salmon runs appearing at Bradford Island—site of Bonneville Dam—about 1 week to reach The Dalles, whereas at the present time it takes only about half of this time for them to reach The Dalles from the time they appear at Bonneville Dam.

M'NARY

The next step—and actual construction has now been started—is the McNary Dam project at Umatilla, Oreg., about 290 miles from the ocean. It is imperative that work on this multiple-purpose project be carried along at a steady and substantial rate to an early completion, for, as an integral part of the coordinated program of development of the Columbia Basin, the McNary Dam is vital to the growth of this vast region. And its early completion is essential if the power, navigation, and irrigation requirements of the section are to be met.

Many of you are undoubtedly aware of the impending power shortage in the Pacific Northwest. Estimated power loads for the next few years show conclusively the great need. Bonneville Dam's entire capacity is being used at the present time, and figures of the Bonneville Power Administration show that by 1955 the load will be more than twice that of 1947. Therefore, unless more power

is made available as soon as possible, the development of this region will be severely handicapped.

Besides supplying power from an installed capacity of nearly a million kilowatts, the McNary Dam project will provide a slack-water channel extending some 65 miles up the Columbia and making much-needed low-cost transportation available; it will increase shipping by millions of tons; and it will expedite the movement of vital petroleum, agricultural, and mineral products now seriously hampered by swift, shallow water. Also, inasmuch as the McNary Dam will back water up about 10 miles above the mouth of the Snake, this dam is the key unit on which the authorized navigation project for the Snake River depends, and will benefit more than 200,000 acres of irrigable land as well.

SNAKE RIVER

The authorized project for the Snake River, on which planning is well advanced, consists of a series of dams on that river to provide slack-water navigation from the McNary Dam pool to Lewiston, Idaho, a distance of 140 miles. This waterway for modern barge navigation will facilitate the development of the immense agricultural, mining, and lumber resources of the Snake River Basin and at the same time the dams will make possible the production of a large block of power to feed the insatiable appetite of young and growing industries. Much irrigable land, too, will be benefited.

Other major developments in the Columbia River Basin, which have either been approved by the Congress or are under consideration, and portions of which are now in process of construction, are the Foster Creek Dam, 545 miles above the mouth of the Columbia, which is a great source of hydroelectric power; Willamette River Basin project for flood control, channel improvement and power development, containing 7 dams, two of which have been completed and two of which are under construction; The Dalles Dam, which is one step in the improvement of the main stem of the Columbia River for navigation and power, is under consideration at this time.

NAVIGATION

The works of improvement so far accomplished have made the Columbia River navigable for ocean-going vessels for 183 miles from the ocean to The Dalles, Oreg. The magnificent deep-water channel from Portland to the sea is, of course, world-renowned. Above The Dalles, even at this time, shallow draft barges can ascend the Columbia and Snake Rivers to Lewiston, Idaho, 273 miles above the mouth.

FUTURE OF THE NORTHWEST

It is generally recognized that the Columbia River is one of the great rivers of the world and that this expansive northwest region, rich in natural resources, is a potentially great industrial empire. At present, more than 40,000,000 acres of land in the Columbia River Basin are devoted to agricultural uses. Famous for its minerals, forests and fertile valleys, for its frozen fruits and vegetables, for its apples, honey, and livestock, for its lumber, salmon, and scenery, the Pacific Northwest is truly an "inland empire."

Vigorous prosecution of projects such as the McNary Dam is vitally important not only to this region but to the Nation as a whole. The entire country will benefit by the development and exploitation of the vast resources of the Columbia Basin. Cheap water transportation and cheap power are the basic ingredients for successful industrial enterprises and prosperous agricultural pursuits. As units of the comprehensive development of the water resources of the Columbia basin, the McNary Dam project now underway, the authorized Snake River dams and barge channel to Lewiston, Idaho, the approved Foster Creek Dam, the proposed dam at The Dalles and others, should be carried to completion as speedily as the economic status of the Nation will allow. Such public works need not wait until we have unemployment. They should proceed on a sound schedule to meet the increased needs of all enterprises dependent on water transportation, power, and irrigation.

NATION-WIDE

The prosecution of a continuing and coordinated program of public improvement of our water resources applies not only to the Columbia River Basin but to all other regions of the United States—the Atlantic seaboard, the Gulf Coastal States, the midcontinent region and the Southwest.

Completion of work on all river and harbor developments, and proper maintenance thereof, is not only highly desirable, but also absolutely imperative to the future of the Southwest. Short-sighted curtailment of operations masquerading in the guise of economy should not be allowed to prevail. I do not say this to indicate that a policy of economy is not justified at this time, but only to bring out the fact that waste from failure to develop our vast natural resources is not now nor ever was true economy.

GULF STATES

Along the Gulf coastal area many river and harbor improvements have been completed which have materially contributed and will continue to contribute to the advancement of this section. Included among the more outstanding of these improvements is the Gulf Intracoastal Waterway. This waterway served as a protected route for coastwise water transportation at a time early in the war when the security of our oceangoing vessels was jeopardized by enemy submarine activities in the Gulf of Mexico. It has materially aided in the development of industry and the natural resources in that region, and its extension below Corpus Christi should be effected without undue delay.

The feeder channels of the Gulf Intracoastal Waterway, although serving many of the smaller communities and ports, are, nevertheless, of great benefit to our national economy in the development of the vast oil fields, in benefiting the fishing industry, and in aiding many other important industries.

ATLANTIC COAST

On the Atlantic coast, where the need for the improvement of our rivers and the natural harbors was first realized and undertaken, much has been accomplished. The great ports of New York, Boston, Philadelphia, Baltimore, Norfolk, Savannah, and Jacksonville are well known to all.

The protected inland waterway routes along this coast include the Cape Cod Canal, which affords a short route for coastwise shipping, and the Delaware and Chesapeake Ship Canal, which provides a direct route between Chesapeake Bay and the Delaware River and shortens the distance between Baltimore and Philadelphia by more than 300 miles.

The Atlantic Intracoastal Waterway, extending from New England to Florida, eventually to connect with the Gulf Intracoastal Waterway via the proposed cross-Florida barge canal, also served a vital purpose during the war, and will continue to serve large numbers of commercial and recreational craft.

In addition to these improvements many other river and harbor projects have been authorized and completed along our eastern seaboard. All of these projects and various flood-control works have contributed to the growth and production of our country and the welfare of the people.

INTERIOR REGIONS

In the interior regions the development of the Mississippi River waterway system and the Great Lakes harbors and connecting channels has been of great stimulus to the growth of midcontinental United States. The total water-borne commerce on the Mississippi system alone aggregates some 124,000,000 tons annually.

The Mississippi River has a channel for oceangoing vessels to Baton Rouge, La., and thence a channel for modern barge navigation to Minneapolis, Minn. In addition, canalization on the tributaries has provided a 9-foot waterway to Pittsburgh on the Ohio River and to Lake Michigan via the Illinois River. This vast waterway network also contributed importantly to our war effort by providing an outlet to the Gulf for war materials and vessels produced in the interior manufacturing centers.

The improvement of the Missouri River from its mouth to Sioux City, Iowa, to provide a 9-foot navigation depth for barge traffic has been nearly completed. The Fort Peck Dam on the Missouri River in Montana for navigation, power, flood control, and other purposes is one of the largest earth dams ever constructed, forming a lake 185 miles long with a total water surface area of over 380 square miles. The further development of the Missouri River Basin, as now authorized, should proceed, for in this vast region some areas are barren because of insufficient rainfall, while other highly fertile areas are unproductive due to annual flooding.

The Great Lakes connecting channels and lake harbors have been progressively improved over the years. Generally, the harbor improvements have consisted of the construction of entrance breakwaters and dredged harbor areas and inner channels.

The development of our water resources, as I have briefly outlined, has been planned and prosecuted in the years gone by as a long-range program to meet the needs of our industrial and machine age. It may not be too great a boast to say that without Federal participation in such improvements to assure their availability when and as needed, this Nation might not now be the No. 1 world power, economically and industrially.

The National Rivers and Harbors Congress has, in the past, done much to further the development of this country's water resources. The policie enunciated at its various meetings have pointed the way to those who have been responsible for the planning, authorization, construction, and operation of such projects. By continuing your fine work of advocating and supporting a sound, long-range program for this development, your efforts will be rewarded in the knowledge that this Nation has grown and will continue to grow and prosper in no small measure by public improvements for the utilization and control of its natural resources.

International Transport

EXTENSION OF REMARKS

OF

HON. HERBERT R. O'CONOR

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Friday, May 2 (legislative day of Monday, April 21), 1947

Mr. O'CONOR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a splendid address delivered on Wednesday before the thirty-fifth annual meeting of the Chamber of Commerce of the United States, in Washington, by Charles P. McCormick, president, McCormick & Co., Inc., Baltimore, Md., and chairman, International Transport Committee of National Chamber of Commerce.

Mr. McCormick, a nationally known industrial leader and for years a most

active and valuable figure in the civic life of Baltimore and of Maryland, has, I believe, made a valuable contribution in this address to the future of international transport.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

After serving on the chamber's international transport committee for a number of years under my illustrious predecessor, William K. Jackson, he passed the chairmanship on to me when he became president of the chamber. Under his guidance the committee was made truly representative of those interested in international transport. It includes steamship and air-line operators, shipbuilders and aircraft manufacturers, export and import shippers, international bankers, and specialists in maritime and aviation law. Its work has covered a wide range of subjects, utilizing the abilities and specialized knowledge and experience of its membership.

Our committee is an offshoot from the chamber's transportation and communication committee which is so ably presided over by the chairman of our meeting here today, Mr. Groner. While the two committees divide the field of transportation into two parts, the international and domestic, respectively, we do have a considerable number of problems in common and it is a pleasure to report that in all cases we have found our opinions completely in harmony.

The committee on international transport was organized in 1943 to consider the manifold problems in both our merchant marine and international air transport which would obviously have to be met after the end of the war. The committee in the early fall of 1943 issued its first report, which was adopted by the chamber's membership in a statement of policy on international transport. In this report particular emphasis was laid on the importance of an adequate American merchant marine, a practical plan for disposal of the Government-owned merchant fleet, a continued shipbuilding program, and rapid expansion of air transport as necessary to communications with all regions of the world. The report disapproved of monopolistic control of international air services and urged that opportunity should be given for competition under Government regulation and support.

A large part of the immediate postwar program recommended in 1943 has since been carried out through legislation and otherwise. In the following years our committee took up a number of more detailed matters such as the ship sales bill, the proposals of the Chicago International Civil Aviation Conference, the problem of blocked currencies and hindrances to international trade and travel. Appropriate recommendations were made and there has been progress on these items.

Coming to this year's work, the committee has prepared a report on international transport policies on which are based the proposed declaration of the chamber's policy committee on merchant marine and international air transport, which are before the annual meeting for action.

The committee in this report points out the importance of America's ocean shipping and international air services, together with the ship and airplane building industries. This is emphasized by the greater international commitments and responsibilities thrust upon the United States by the war.

Advocating a strong and consistent national policy with respect to the American merchant marine, implemented by vigorous administration of that policy, the committee holds that recent war experience clearly demonstrates that the United States must have a higher degree of security and independence in the field of ocean transportation. It urges broad public understanding of the fact that subsidies provided under the Merchant Marine Act do not give advantage to American shipping over that of other nations but only seek to equalize American with lower foreign construction and operating costs where they exist.

Pointing out that foreign competition has rapidly mobilized itself in the first full year of peace, the report stresses the urgent need for passenger vessels and other special types of vessels suitable for conversion to troop transports and naval service in time of emergency. It commends the recent appointment by the President of a special board to study shipping and shipbuilding needs.

In the field of air transport, our committee holds that, as one of the greatest generators of international air traffic, the United States has a legitimate interest in developing and maintaining American-flag services on a corresponding scale. Such a development, in the committe's view, will give the United States a reasonable participation in the international air network, provide an essential minimum of experienced air transport personnel as well as aircraft suited to international service, and contribute to the maintenance of the necessary aircraft manufacturing industry. Provisions for the operation of United States and foreign flag airlines to and from our territory should, it is recommended, be consistent with this policy.

In developing our international air services, the committee commends the Government for wisely following the characteristic American method of enlisting private initiative and enterprise, under suitable public regulation with financial support where necessary.

The committee also discusses at considerable length the policy adopted by the national chamber last year in favor of relying on the conference system of rate making for international air services rather than extending governmental rate-fixing powers to the international field or establishing rate regulation by an international authority. It recommends that, until more need is evident for extension of Government control over international air rates, such extension should not be authorized.

These recommendations form the basis of proposed policy declarations by the chamber to be voted upon at this annual meeting and it is perfectly proper that they be discussed at the conclusion of the addresses this afternoon and we should welcome any such discussion.

Futures Markets

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Friday, May 2 (legislative day of Monday, April 21), 1947

Mr. MORSE. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD an article entitled "Several Pertinent Questions Regarding Futures Markets," quoting a letter from Ernest D. MacDougall, published in the February-March 1947 issue of the Farmers' Guild News.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SEVERAL PERTINENT QUESTIONS REGARDING FUTURES MARKETS

The readers of the Farmers' Guild News are invited to study the following letter written by Mr. Ernest D. MacDougall to a professor in one of the leading midwestern universities. If anyone has been in doubt concerning the moral, legal, or economic merits of futures trading, this letter of self-answering questions will clear his thinking and enable him to see the monstrosity in its true light.

The letter follows:

"Dr. ——— ———,

"Professor of Christian Ethics,

"University of ———,

"United States of America.

"DEAR DOCTOR: I thank you for your letter of the 13th in reply to my letter of December 25, 1946, written to you on recommendation of the chancelor of your university.

"I regret, however, that you decline to enter into correspondence with me on the subject of futures trading, which is important not alone from legal and economic points of view, but also from the ethical point of view.

"I note that you are inclined to minimize the importance of the subject of futures trading, and that you are inclined to view it as an isolated problem rather than as an outstanding symptom of a grave malady of our present social order. May it not be that an outstanding symptom may point the way to a cure? Or do you prefer the death of the present social order to its restoration to health and sanity? Do not our troublous times call for plain speaking?

"Notwithstanding your refusal to correspond with me on this subject—nothing personal, of course—I assume that you will not deny me the moral right to comment by way of questions which have arisen in my mind on reading your letter, as follows:

"1. Do you not know that our agricultural economy is basic to our national economy, providing raw materials of food and fiber for industrial processing?

"2. Do you not know that a crooked system of pricing agricultural commodities has ethical and economic ramifications throughout our entire national economy?

"3. Do you not know that no social order can safely be built upon a gambling basis?

"4. Do you not know that no ideological system that is not basically honest can endure?

"5. Do you not know that a solid foundation is more essential to society than any superstructure, however beautiful it may appear to be on paper?

"6. Do you not know that the people have looked in vain in the universities for leadership, and have found only ideological camp followers?

"7. Do you not know that the teachings of Jesus as to brotherly love, honesty, courage, etc., as such, should have as important a place in the university curriculum as any human ideological philosophy?

"8. Do you not know that no ideological system, however perfect it may seem to be on paper, is self-executing, but that it depends for its success upon the character of its administrators?

"9. Do you not know that, in these smug, degenerate days, this country has become a nation of gamblers?

"10. Do you not know that organized 'gambling under the forms of trade' has promoted and encouraged all other forms of gambling in order to build up strong public sentiment, even in your State, in favor of the idea of gambling generally in opposition to the idea of quid pro quo and blur over defining lines of honesty?

"11. Do you not know that the defenders of the status quo regard the continuance of the practice of futures trading as essential to its maintenance?

"12. Do you not know that commodity gambling, otherwise known as trading in futures, runs in this country anywhere from ten to fifty billion dollars per annum of paper transactions?

"13. Do you not know that the definition of 'futures contract' which is found in university textbooks on economics is factually false in several important particulars?

"14. Do you not know that it does matter whether definitions of important terms used in university textbooks are, in fact, true or false?

"15. Do you not know that there is not one single essential element of contract in any so-called futures contract?

"16. Do you not know that there is not one penny of assets back of any futures contract?

"17. Do you not know that Dr. James Monro Smith, former president of Louisiana State University, spent a term in the penitentiary because, as he explained, he did not know the difference between a wheat-futures contract and a security?

"18. Do you not know that all sales of futures contracts are short sales?

"19. Do you not know that the resemblances between stock exchanges and futures markets are but superficial?

"20. Do you not know that there is a fundamental distinction between speculation and gambling—that these terms are not synonymous, as proponents of futures trading would have us believe?

"21. Do you not know that all transactions in futures markets are gambling transactions, in the exact meaning of that term?

"22. Do you not know that no deliveries of commodities are made or are intended to be made in futures markets?

"23. Do you not know that no futures market has any facilities for making deliveries and has no commodities to deliver?

"24. Do you not know that whenever, on rare occasions, delivery of a commodity results from trading in futures, the futures contract must be converted into a cash or spot contract and that delivery must be made, if at all, in the cash or spot market?

"25. Do you not know that any economic practice that is ethically unsound is likely also to be found to be legally unsound and economically unsound?

"You will note from the implications of the foregoing questions that it seems to me that this important subject requires the earnest consideration of professors of Christian ethics, of law, of economics, and of sociology—a project which our universities, with their highly specialized curricula, seem incapable of attempting, to the great detriment of society at large.

"Sincerely,

"ERNEST D. MACDOUGALL.

"WASHINGTON, D. C."

Portrait of Hon. Hatton W. Sumners, of Texas

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 2, 1947

Mr. SPRINGER. Mr. Speaker, on May 1, the good people of Dallas, Tex., presented to the Judiciary Committee of the House of Representatives an excellent portrait of the Honorable Hatton W. Sumners, who for some 15 years served as chairman of the Judiciary Committee of the House of Representatives. Judge Sumners, as we have ever affectionately called him, has rendered outstanding service as a great statesman during his entire service as a Member of Congress from his congressional district. This great man will be long remembered for the fine contributions he made to constitutional government in our Nation.

Hon. ED GOSSETT, a Member of Congress from Texas, who is a member of the Judiciary Committee, was in charge of the ceremony. Hon. SAM HOBBS, of Alabama, made the very excellent address of acceptance of this most gracious gift, and because Judge HOBBS is a distinguished member of the Judiciary Committee, and because of his excellent address delivered in accepting the portrait of Judge Sumners, I extend my own remarks in the Appendix of the RECORD and include the excellent address delivered by our colleague, a distinguished member of the Judiciary Committee of the House, and the friend of every Member in this great law-making body, Hon. SAM HOBBS, which address is as follows:

Mr. Chairman, Mr. Nathan Adams, Mr. D. A. Hulsey, Mr. Ben Critz, and Mr. Waverly Briggs, representing the people of Dallas in this presentation of the portrait of Hon. Hatton W. Sumners to the Committee on the Judiciary of the House of Representatives, it is my happy privilege as the designated spokesman of our committee to accept this princely gift from his friends and former constituents.

Before I proceed, I cannot refrain from expressing my own and my party's deep appreciation of the gracious insistence of the chairman and the majority members of our committee that I as a member of the minority should represent the committee in accepting the portrait.

Having been born in Dallas County (though in Alabama, not Texas), and having begun the practice of law in his native Tennessee, and having had the priceless privilege of sitting for 12 years at the feet of this Gamaliel, at least partially qualifies me to accept your gracious gift and attempt to voice the thanks of this committee to you men of Dallas.

There is one amendment to the statement just made which I must concede. None of us who served on this committee under the leadership of Judge Sumners ever had a chance to do much sitting. Particularly is this true of me, for from the outset, because of my peculiar qualification, I was chosen as errand boy. I was in Alabama when I was elected by the House as one of the managers on the part of the House to present the evidence substantiating the articles of impeachment against Judge Halsted Ritter. Upon my return, realizing that the House had acted upon the recommendation of Chairman Sumners, I called on him to express my thanks. When I had done so, he said: "Now, boy, don't you get the big-head. Randolph and I talked it over. We knew that we had all the brains necessary to do this job. But we decided that we needed an errand boy and that you had the biggest feet in the committee, so we put you on to run errands."

Isn't it true that some of the genius of any executive manifests itself in putting others to work? We worked our hearts out for him, and, in doing so, learned to love him fervently. Isn't that the way of life? Isn't the only way we really learn to love, by serving?

That was certainly true of him. He loved you all from the beginning, but that love deepened into a consuming passion by serving you. You put him to work. You kept him at work for half a century—glorifying Dallas. Not only in the mores of the Chamber of Commerce, but also as your representative, your minister plenipotentiary, and your envoy extraordinary. "Birds of a feather flock together," is just as true of congressional representation as in the choice of personal friends. The Nation knows and loves your district because you were the kind of people represented by Hatton Sumners. We know you not, but know you well. We love you, because we first loved him. And from the depths of that fervent devotion we know how to appreciate this new representation of your Representative, who, at the height of his power and glory, relinquished the official authority you had given him, to wear the crown of private citizen—the only king this Nation knows. In that appreciation our words are weighted with unique significance when we say we thank you.

PROUD OF OUR CHAIRMAN

We of this committee are proud of each of the 40 men who have led us as chairman. Thanks to our distinguished colleague, Hon. LOUIS E. GRAHAM, who has done prodiguous research and written a history of this committee, we have the facts. Beginning with Charles J. Ingersoll, whose brother, Joseph R. Ingersoll, later became chairman (the two Ingersoll brothers being the only two members of the same family who have had this distinction), Hugh Nelson, John Sergeant, Daniel Webster, Philip P. Barbour, and James Buchanan and running through the list to Hatton W. Sumners, who served longest, and the distinguished gentleman who now adorns the chair, Hon. EARL C. MICHENER, each has exercised the office with becoming dignity and honor.

PROUD OF OUR COMMITTEE

This committee is also proud of its membership. Three, Franklin H. Pierce, James Buchanan, and William McKinley, have been President. Three other members have been candidates for that high office, John Bell, Stephen A. Douglas, and John W. Davis. James S. Sherman became Vice President, while three others were candidates for that office, George H. Pendleton, Allen G. Thurman, and John Sergeant. Seven were Speakers of the House, Philip P. Barbour, John Bell, John W. Jones, Michael C. Kerr, Thomas B. Reed, David B. Henderson, and Frederick C. Gillette. Three were candidates for that office, Timothy Pitkin, Samuel S. Marshall, and Joseph W. Bailey. Armistead Burt served as Speaker during the absence of Speaker Winthrop. Three served as President pro tempore of the Senate, Allen G. Thurman, Isham G. Harris, and William P. Frye. Fifteen have been Cabinet members, Daniel Webster, James Buchanan, Edward Livingston, Charles Toucy, John C. Spencer, John Bell, William Wilkins, George W. McCrary, George S. Boutwell, Thomas Corwin, Hilary A. Herbert, Edwin Denby, Charles A. Wickliffe, Nathan K. Hall, William L. Wilson. Two served as Solicitor General of the United States, John W. Davis and James M. Beck. Twenty-two served in the diplomatic service, one as an Associate Justice of the Supreme Court, Philip P. Barbour. Three were circuit court judges, 12 as district court judges, 4 as judges of Territorial courts. One became Chief Justice of the Supreme Court of the District of Columbia, and one chief justice of the United States Court of Claims. One became Judge Advocate General of the Union Army, John A. Bingham, who also served as special judge advocate in the trial of the conspirators against the life of President Lincoln. Several were Assistant Attorneys General of the United States. Thirty-four were United States attorneys, 49 United States Senators, 37 State governors, while Romulus Saunders was defeated by one vote for the office of Governor of North Carolina. Twenty-five have served as State attorneys general. Ten have served as chief justice of their State supreme courts. Twenty-two became justices of their State supreme courts. Four became presidents of colleges or universities, and many were professors of note. More than 300 of the total number of 588 filled, with honor and distinction, various minor offices.

Judge Sumners gave expression to our self-satisfaction. It was in the lengthy hearings some years ago on his resolution giving the residents of the District of Columbia the vote and a measure of self-government. We had been holding these hearings

for 3 weeks, frequently running into the night. The leading proponents including practically every president of dozens of local civic clubs, predominantly feminine, had read to us their testimony. Almost without exception, each statement had begun, like Paul before King Agrippa, eulogizing us and stressing the fortunate lot of the witnesses in having the privilege of appearing before such an able and distinguished group of legislators. Finally the representative of the CIO appeared, late at night, and with the "Harvard accent" usually characterizing such chosen spokesmen, began, "Mr. Chairman and gentlemen of this great committee, during the weary sessions of these long hearings, I have been thoroughly sympathetic with you gentlemen, as witness after witness piled eulogy on eulogy and read page after page of unctuous flattery. But I know that you gentlemen are far too astute and discerning to be swayed in the slightest degree from your high sense of duty by any compliments paid you." At this point, Chairman Sumners broke in, "Buddy, if you have any papers to sell, you'd better sell 'em, for we take judicial knowledge of the fact that we are pretty damn smart." This effectively cleared the atmosphere and sped the hearings after a gale of laughter had swept this crowded chamber, relieving the tension.

This portrait will be cherished here as it hangs in this historic room, for we love the judge and you! It will always serve us as an inspiration; challenging us to remember the Sumners leadership, acclaimed through the years by his colleagues in the Congress, by Chief Justice Taft, who referred to him as "the best lawyer in Congress" and "the only man who ever overruled the Supreme Court"; by Senator William E. Borah, who wrote: "You had a delicate and difficult task to perform, and you did it with fine judgment, good taste, and inspiring patriotism." And again, "Your State will be proud of you for what you did and your country will always be indebted to you. Congratulations, from your friend." By Secretary of State Cordell Hull: "Let me take this occasion to express my deepest appreciation to you for your intelligent interest in and exceedingly helpful attitude toward many of the most important phases of our foreign affairs. This cooperation on your part has been of the greatest help and service to the State Department and to me personally." By Attorney General Francis Biddle, in an article in Collier's in 1942: "As a result of a suggestion from Congressman Hatton W. Sumners, of Texas, chairman of the House Judiciary Committee, who was very much concerned with our experiences in the last war (he became a Member of Congress in 1913), I set up a War Frauds Unit in the Department of Justice in February, 1942." And in a personal letter, later: "The signing by the President of the antitrust legislation to speed the war effort leads me to take this opportunity of telling you how much we appreciate your assistance on this legislation. Your expert and wise handling of such war measures as the First and Second War Powers Acts and the Foreign Agents Registration Act will, I am sure, in the perspective of history, be found to be a marked contribution to our prosecution of this war."

By Secretary of War Robert P. Patterson, who, when Under Secretary, wrote: "I wish to express to you the warm appreciation of the War Department for the constructive work you have done recently in carrying the small-business bill to a successful conclusion in Congress. Your assistance in this matter, as in many others, has been of great value to the war effort. I am also mindful of the good work you have done over the past 2 years, in Congress and out of Congress, to arouse the Nation to an awareness of the perils forced upon us by the ambitions of the dictators who control the Axis Powers"; by the award of the American Bar Association medal for distinguished service to American jurisprudence—an unprecedented award; by Washington correspondents, who called him "the ablest and most potent advocate in Congress," "wisest as well as smartest."

Not only was he held in such high esteem by these eminent gentlemen, but also he won national approbation gained by few.

On the occasion of the informal celebration in the House of the completion of a quarter century of service in Congress of Hon. Hatton W. Sumners—CONGRESSIONAL RECORD of April 7, 1938, pages 4982-4986—several of his colleagues made heartfelt remarks concerning his career. There may be found fuller treatment than propriety permits today.

Again, on the day of the death of the Seventy-eighth Congress, the honor that had come to our committee and to Congress by the award of the American Bar Association Medal to Judge Sumners, was called to the attention of the House and the speech of presentation quoted. (CONGRESSIONAL RECORD, December 19, 1944, pp. 9801-9802.)

Judge Sumners, when it had to be done, could criticize. And he could be stern. But he always tempered his criticism with humor—that oil that keeps machinery running. The philosophy, both of his private and public life, was that of the "God-fan," as he loves to call himself. He knows beyond cavil or question that God is the "Big Boss" and that neither life nor law can be good unless in consonance with His will and plan. As a pound of example is worth a ton of talk, his life and leadership will always be revered above all other emphasis because he lived and lives his philosophy.

Army and Navy Construction and the Davis-Bacon Law

REMARKS
OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, May 2, 1947

Mr. FOGARTY. Mr. Speaker, during the war the building trades of this country and the construction trades unceasingly put all their efforts into the building of our war installations. They cooperated 100 percent with the Army and Navy.

Now that the war is over we find that the Army and Navy Departments are making their own wage rates regardless of the Davis-Bacon law and are forcing men to sign contracts in order to gain employment outside the continental limits of the United States. It is about time the Navy especially recognized the past cooperation and took steps to cooperate now with the building trades of this country.

The letters referred to are as follows:

BUILDING AND CONSTRUCTION TRADES DEPARTMENT,
AMERICAN FEDERATION OF LABOR,
Washington, D. C., April 21, 1947.

Hon. JOHN FOGARTY,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN FOGARTY: Confirming my telephone conversation with you on Saturday, April 19, 1947, please find enclosed copy of station order No. 29-47, issued by the United States Naval Air Station, Barber's Point, Oahu, T. H., signed by Capt. R. L. Bowman, commanding officer, dated February 13, 1947.

It would appear that while our Government has a committee conferring in Russia trying to arrive at the establishment of some type of permanent peace in which they appear to be meeting the obstacle of a dictatorial government we find one growing in this country among naval and Army officials.

Nobody can question the fact that the building and construction trades department rendered every possible aid to both the war and Navy Departments during the war effort and there are letters in our file from the Secretary of the Navy and Secretary of War testifying to this fact. However, we found that just as soon as the war is over certain Army and Navy officials are a law unto themselves, and even though we have what is known as the Davis-Bacon law on the statute books, this does not deter them from arbitrarily setting up their own wage rates and demanding that skilled workmen from the United States sign dictated contracts in order to secure employment on outlying bases such as Guam.

I am reliably informed they are placed in competition with Japanese and Filipino labor employed at slave wage rates.

If there is anything you can do in Congress relative to this enclosed order on the part of the Navy, I would appreciate it greatly, as it is useless for us to take it up with the Navy Department, because the usual procedure is to refer us from one office to the other in order to try our patience without obtaining any results.

Respectfully yours,

RICHARD J. GRAY,
President.

UNITED STATES NAVAL AIR STATION,
Barber's Point, Oahu, T. H.,
February 13, 1947.

STATION ORDER 29-47

Subject: Group IVB and IVA supervisors—participation of in union organizations.

Reference: (a) NCPI 60 dated June 23, 1945, as amended.

1. Under the provisions of section 4 of reference (a), no supervisor employed by this naval station may actively participate in the conduct of labor organizations and their business.

2. The policy of the Navy Department is that supervisors are representatives of management and the satisfactory exercise of the duties of such positions is incompatible with activity in labor organizations of their subordinates. The Department does not object to supervisors' membership in such organizations or attendance at meetings, but they are required to refrain from active participation in the conduct of union business. Active participation is defined specifically as holding an office in or serving on a board or committee of a labor organization in which their subordinates also are members. In other words, supervisors must so completely detach themselves as to insure strict objectivity and an absolutely unbiased attitude with respect to all official acts devolving upon them in their capacity as representatives of the management.

3. For the purpose of this order, a supervisor is defined as one held responsible by his superiors for the work assignments and work results of a group of assigned subordinates, and who participates officially in any matters of efficiency ratings, discipline, discharge, pay, or promotions of these subordinates. In the ungraded service (i. e., positions other than IVB) the supervisory positions referred to herein are considered to include positions comparable to that of leading man and above.

4. A supervisor who is active in a labor organization shall desist from such activity or resign his supervisory position. Supervisors holding office in or serving on a committee of a labor organization at the present time must resign their office or committee membership as soon as that office has been filled by election of a substitute, but in any

case not to extend beyond the period of 3 months.

5. The appointment or promotion to a supervisory position of an employee holding an office in a labor organization or serving on a labor organization committee shall be contingent upon his prior resignation from such activity.

6. For the purpose of this order, master mechanics and foremen associations, quartermen and leadingmen associations, and other comparable associations as presently constituted are not to be considered labor organizations.

R. L. BOWMAN,
Captain, United States Navy,
Commanding Officer.

Office of International Information and Cultural Affairs

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Friday, May 2, 1947

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein quotations in reference to the operations of the Office of International Information and Cultural Affairs.

Ralph McGill, in Atlanta Constitution, April 1, 1947:

Through the years the British, French, and Russians have carried on a vast and constant information program. Other nations have followed suit. It has paid dividends. * * * This country has an information program which is in jeopardy. * * * It tries to show that we are a nation which seeks to give milk to children; that we build dams; that we have a great railway system now being modernized; that we lead the world in air transport and production; that we have a vast country growing cotton, wheat, corn, and vegetables; that our steel mills produce most of the world's steel; that we have writers; poets; good plain people who live for their churches, families, and who believe in God. It reveals the fact that we have artists, singers, composers, musicians, orchestras, and a definite American culture; it shows that we are a nation of homes; it informs people of our court procedures; it does all this, not as propaganda, but factually, out of our abundant supply of illustrative matter. Newspapers, dealing with the daily unfolding of news, cannot do an adequate job, and should not be expected to do so; nor can, or should, a news agency. * * * Newspaper people—all people—have a right to have their country known to the world for what it is—a country of earnest people, interested in peace and the pursuits of peace—not war, murder, lynchings, lust, divorce, and violence.

Malvina Lindsay, in the Washington Post, April 9, 1947:

This is a moment of strategic opportunity for the United States to press its short-wave broadcasting. It built a reputation for truth and fairness with its wartime radio programs. Confused peoples throughout the world are looking to the Voice of America for facts. * * * Strangely, the importance of these new intangible weapons of defense is not yet recognized by the public or by Congress. Billions can be appropriated for weapons of steel, which quickly become obsolete, while the use of words and ideas—in whose manipulation Hitler pioneered so effectively—is neglected, even dismissed as boondoggling. Yet, it is inconceivable that America should try to assume its new role of world leadership without such modern armor.

New Dealers and Propaganda

EXTENSION OF REMARKS
OF
HON. HERBERT A. MEYER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, May 2, 1947

Mr. MEYER. Mr. Speaker, propaganda machines of the New Dealers and the bureaucrats are grinding away in an effort to becloud the issues as the Republican majority in Congress slashes the budget, cuts out wasteful and nonessential spending, reduces income taxes, and in other respects grimly follows through on its determination to restore the Nation's economy to a sound financial basis. The wails of protest from these propaganda machines are not, however, deceiving the people. In confirmation of this, I quote, under leave to extend my remarks in the RECORD, the following editorial by Rolla Clymer, forthright and clear-thinking editor of the El Dorado (Kans.) Times, whose voice and whose pen reflect the sentiments of the people at the grass roots:

NEW DEALERS FEAR INFLATION

One of the least impressive arguments of the New Deal lieutenants in Congress put forward by those seeking to prevent the Republicans from lowering income taxes is that an income-tax reduction at this time will increase the danger of inflation. They say that if taxes are reduced the taxpayer, and this includes the average worker, will have more money in his take-home pay envelope. Having more money he will spend more, and this will cause inflation.

It is true, of course, that higher taxes during war times are a deterrent to inflation. But it is also true that by the time the proposed new tax cut shows its full effect the greatest danger of inflation will be over, especially if government spending is reduced in the meantime. Then the average man can use the extra money to purchase goods at lower prices than at present.

But the New Deal Members of Congress are not concerned with the dangers of inflation. The same statesmen who want to avoid a tax cut to lessen the danger of inflation are the same statesmen who are in favor of greater Government spending, which is one of the prime factors in creating inflation. They are the same persons who want President Truman's swollen thirty-seven and a half billion budget to be passed without trimming, and they are the same politicians who decry all efforts to reduce the Government spending. Swollen budgets pouring out of money to pay useless bureaucrats who produce nothing are two of the most important factors in creating inflation.

The fact is, of course, that when these New Dealers in Congress seek to block tax cuts they do so not to prevent inflation but to keep the Republicans from getting any political advantage next year out of tax reduction. What they fear is not inflation in the realms of finance but inflation in GOP political prospects.

The Taft Bill

EXTENSION OF REMARKS
OF
HON. GEORGE W. GILLIE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 2, 1947

Mr. GILLIE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I would like to include the following article by Clifford B. Ward, editor of the Fort Wayne (Ind.) News-Sentinel:

GOOD EVENING
(By Clifford B. Ward)

Labor leaders, who insist upon being unfair, will not like Senator TAFT'S labor bill, but the Taft bill is not antilabor. It merely represents an intelligent attempt to endow unions with a responsibility matching the new powers which they have received in recent years. It is very unfortunate that most persons do not bother to acquaint themselves thoroughly with the things which they condemn.

Senator TAFT'S law would ban the closed shop, but it would not ban the union shop and there are a great many persons, even in labor, who do not know the difference between the two. They do not amount to the same thing and there is much more than a technical difference between them. The favorite argument on behalf of a closed shop is that it prevents an employee in a shop from taking a free ride on the past gains of the union by staying out of a union and not paying dues to it. Mr. TAFT'S law accepts that argument and meets it.

But before getting to that, maybe the difference between a closed shop and a union shop should be set forth. A closed shop is where a person cannot get a job unless he is already a member of the union there recognized. The employer has his labor provided him by a union hiring hall or what amounts to the same thing. No matter how badly the employer needs additional help and no matter how badly eligible union members need a job, both are at the mercy of the membership policies of the union.

A union shop, however, is one in which a new employee may be hired without belonging to a union but is under obligation to join the union within the usual period of 30 days. A union shop permits an employer to have control over his hiring, permits an employee to break through the monopoly set up by a closed shop, and at the same time prevents a new employee from taking a so-called free ride at the expense of the union. If a new employee in a union shop does not join the union in 30 days and pay his union dues, the employer must discharge him. Under the Taft bill, however, if an employer hires a new employee qualified to join the union and the union refuses to accept him as a member for reasons of monopolistic practices on the part of the union the employer does not have to discharge the man.

Most shops in this country are union shops, not closed shops.

Among other provisions of the Taft bill are: Ones requiring the filing of nonpublic financial reports by the unions with the United States Secretary of Labor; ones for making the unions suable as corporations are suable; and requirements for unions to deal with the representatives whom employers choose to represent them. Banned are organizational strikes and secondary boycotts. Industry-wide bargaining is not dealt with anywhere in the bill, except as the bill re-

quires unions to deal with the representatives that employers designate.

A very important feature of the bill is that dealing with strikes which endanger the national economy such as the recent coal strikes. If a national emergency strike threatens, the United States Secretary of Labor may go into court and ask an injunction staying the strike for 60 days, during which a board of inquiry is named to study the issues involved and to report back to the Secretary of Labor. If the issues between the employer and employees are not resolved in the 60-day period, an additional 30 days is asked of the court for the Government to attempt to mediate the dispute and bring the employers and employees into agreement. If this mediation, but not an arbitration attempt, fails, then the union goes out on strike, but TAFT proposes that when such a strike occurs the Congress should step into the breach with an emergency law exactly covering each such situation and dealing with it. It does not propose taking away the right to strike except as the right to strike interferes with the operation of the entire economy.

The Taft bill amounts to a rewriting of the Wagner Labor Act to the end that rights of labor and capital are equalized justly. In the end by endowing the unions with more responsibility it may prevent them from acts of injustice which are a national hostility toward them.

The Taft bill does not outlaw shops in which only union men are employed. It does not destroy the right to strike. It does not ban industry-wide bargaining. It only brings unions in out of the jungle atmosphere where they now operate to a realm where they, like employers, are under the influence of the laws of the land.

Ilya Ehrenburg's Propaganda

EXTENSION OF REMARKS
OF
HON. PRINCE H. PRESTON
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 2, 1947

Mr. PRESTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial written by the Honorable Ralph McGill, editor of the Atlanta Constitution:

YEARNS FOR A MALLET
(By Ralph McGill)

Spencer J. McCallie, when he had a bit of truth which he believed important, used to say to the young dolts lolling on the benches before him:

"I wish I had this engraved on a mallet so that I might hit each of you on the head with it and really impress you with it."

I have just finished, somewhat belatedly, reading European Crossroads, the same being the report by Ilya Ehrenburg of his journey through the Balkans.

I wish I had it engraved upon a generous mallet and might hit squarely and firmly upon the head each Member of Congress who does not see the importance of the American information program to Europe and South America.

The book is a masterpiece of propaganda.

I mean it is propaganda in its real meaning. We have, unfortunately, watered down or so narrowed and changed the meaning of some excellent words until they are cripples peddling pencils along the streets of truth.

A dismaying number of Americans think of propaganda as meaning lies.

It doesn't.

The real sense of the word is the propagation or putting over, in more or less subtle or emotional manner, an idea, a faith, a truth—as the negative of faith or truth.

SUPERB

Ehrenburg is the Soviet Union's best known and most able journalist. He is one of the world's most skillful propagandists. He is a cosmopolitan figure, conversant in several languages, a superb writer.

I was able to find no lies in his Balkan report. A year ago he toured the Southern part of the United States. I was able to find no lies in that report.

But in both of them there was a skillful exploitation of one phase of a truth and an utter neglect of the remainder of it.

There also was a complete avoidance of some pertinent facts. This was less true in the American articles, for obvious reasons, than in those concerning the Balkans.

I must hasten to say that many American correspondents have been equally guilty in writing of the Balkans or of Russia. But, I am sure, none has done it so well as Ehrenburg.

OMISSIONS

Nowhere in the book does Ehrenburg mention, or even casually allude to, the great flood of lend-lease goods from this country, and smaller amounts from Britain, which made possible the advance of the Red army into the Balkans.

He speaks of our guns, our tanks, our rifles, our planes, when many thousands of them were made in America and shipped in American ships, at great loss of American life, to the Soviets. Nor does he mention the enormous contribution of the Americans who opened, and supplied the Persian Gulf ports and railways * * * all going to Russia.

Through it all runs the persistent theme—Russia did the fighting, Russia did the dying, Russia supplied the tanks, guns, rifles, planes—Russia liberated Europe. Russia gave the world the new hope and the new faith.

TRIALS

He attends the Nuremberg trials. Yet, there is no mention of Eisenhower, Bradley, Patton, Montgomery, the American bombers and escorting fighters; no mention of the American landings and bitter fighting and dying as they fought through France and into Berlin.

He speaks only of Russia freeing Germany. The war was a Russian war in which only Russians suffered and died for liberty.

There is no mention of the United Nations.

He writes of Yugoslavia, Romania, Bulgaria, Albania, and Czechoslovakia after the war, and it is superbly done.

The book is, essentially, a collection of pamphlets of propaganda. They were widely published in the Soviet Union. They have been widely distributed, and are still being made easily available, to the peoples of the Balkan countries. These same peoples are hearing very little about this country. They will continue to hear very little about it.

It is fair to ask "why?"

ANSWER

The answer is that we have so deluded ourselves with the erroneous meaning of propaganda that we are not willing to spend what is, relatively, a pittance on an information program of news, including news about our culture and our part in the war and peace. We could present our own story in pamphlets and books and by radio. We could let the world know of our aims; of the fact that we are not a race of gum chewers, lynchers, and divorcees.

We whine about the success of the Soviets in spreading their own story.

Yet we are on the verge of killing off, in the name of economy, an information program which costs less per year than 19 bombing planes.

The dawn coming to the new Europe is a very red dawn, according to Ehrenburg's book, which is a boon broadcast like sown wheat in the Balkans.

And we are not permitting any other tint to be added to it.

I wish every American would write his or her Congressman to support an American program of information. General Marshall, General Eisenhower, and Admiral Nimitz, plus all the personalities of our State Department, consider it vital.

I wish it were possible to hit on the head with Ehrenburg's book all those who do not think so.

Budget for Grand Coulee Irrigation and Reclamation

EXTENSION OF REMARKS
OF
HON. HOMER R. JONES
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Friday, May 2, 1947

Mr. JONES of Washington. Mr. Speaker, under permission to extend my remarks in the RECORD, I include the following resolutions adopted April 28, 1947, by the City Council of the City of Seattle, Wash.:

Resolution 14689

A resolution protesting the House Appropriations Committee's recommendation that the Bureau of Reclamation's budget for Grand Coulee reclamation be cut

Whereas the full and speedy development of the Grand Coulee reservoir for irrigation is vital to the development of the Pacific Northwest and will contribute to the national prosperity and well being; and

Whereas this project will be largely self-liquidating; and

Whereas the recommendations of the House Appropriations Committee that the Bureau of Reclamation's budget for Grand Coulee irrigation be cut will, if adopted, be disastrous to the Pacific Northwest and damaging to the Nation as a whole: Now, therefore, be it

Resolved by the City Council of the City of Seattle, That for the reasons above stated, the city of Seattle most vigorously protests the House Appropriations Committee's recommendation to the Congress that the Bureau of Reclamation's budget for Grand Coulee irrigation and reclamation be cut; and be it further

Resolved, That a copy of this resolution be transmitted by the city clerk to each of the Members of the House and to both of the Senators from the State of Washington.

Passed the city council the 28th day of April, 1947, and signed by me in open session in authentication of its passage this 28th day of April, 1947.

M. B. MITCHELL,
President of the City Council.

Filed by me this 28th day of April, 1947.
Attest:

W. C. THOMAS,
City Comptroller and ex Officio City Clerk.

By C. G. ERLANDSON,
Deputy.

Resolution 14690

A resolution protesting the House Appropriations Committee's recommendation that the Bonneville Power Administration budget of $20,278,000 be cut to $6,907,000

Whereas the full use of water power is vital to full resource development in the Pacific

Northwest, and contributes to the Nation's prosperity and well being, and to the national defense; and

Whereas this region lacks coal in industrial quantity and does not have oil or natural gas and water is the only reliable present and future source of power, the Federal Government has wisely developed the Columbia River for power in the interest of the Nation's welfare, and for the national defense; and

Whereas this development has proved not only a wise but a profitable venture in a field too large for private investment to undertake to develop economically; and

Whereas the demand for this power has increased by leaps and bounds and there is now a shortage which threatens the present and forecloses the future development of industry in the Pacific Northwest, and threatens the national defense; and

Whereas the shortage can only be remedied by utilizing the power available to the Bonneville Power Administration through the building of additional transmission lines, substations, etc., contemplated by said Administration's budget of $20,278,000; and

Whereas the city of Seattle is building as rapidly as it can its own power supply but is unable to build it fast enough to keep up with its load, which is constantly increasing, and it therefore now buys and in the future will buy considerable power from Bonneville; and

Whereas the city of Tacoma is in a similar position; and

Whereas the recommendation of the House Appropriations Committee that Bonneville's budget be cut nearly $14,000,000 dollars will, if adopted, preclude the building of additional transmission lines, substations, etc., which are so vitally necessary for the reasons above stated, will be disastrous to the Pacific Northwest and damaging to the Nation as a whole: Now, therefore, be it

Resolved by the City Council of the city of Seattle, That for the reasons above stated, the city of Seattle most vigorously protests the House Appropriations Committee's recommendation to the Congress that the Bonneville Power Administration's budget of $20,278,000 be cut to $6,907,000; and be it further

Resolved, That a copy of this resolution be transmitted by the city clerk to each of the Members of the House and to both of the Senators from the State of Washington.

Passed the city council the 28th day of April 1947, and signed by me in open session in authentication of its passage this 28th day of April 1947.

M. B. MITCHELL,
President of the City Council.

Filed by me this 28th day of April 1947.

The Great Heart of New York City

EXTENSION OF REMARKS
OF

HON. HENRY J. LATHAM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, May 2, 1947

Mr. LATHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by United States Senator IRVING M. IVES at the opening dinner of the Greater New York Fund, tenth annual campaign, Hotel Astor, New York City, Tuesday, April 29, 1947:

Mr. Chairman, distinguished guests, this is the sort of occasion in which I am proud to have a part. New York City, because of its size and its importance in the Nation's economy, has been given many legendary characters. The infinite variety of the lives and the activities carried on in its five boroughs has sometimes made it a sort of fabulous metropolis, glittering and unreal. Some people call it cold, and there was an author who proclaimed that New York is not America.

But you know and I know that it is these characterizations themselves that are false. On an occasion like this New York reveals itself in its true light. It is a community of neighbors, not so very different from any other community in these United States.

It is bigger, to be sure. You number your population in millions rather than in hundreds. The balance sheet of your annual business adds up in billions rather than in thousands. But the heart is just the same. It is laid bare here tonight in the dinner which launches the campaign for the greater New York fund of 1947.

I like this occasion. It springs from neighborliness and the spirit of cooperation that quality always implies. You know, I come from Norwich, in Chenango County, which all of us up there think is quite a metropolis, too. The population is 9,000. We have drives like this one, dedicated to a similar purpose. Sitting here at the head table I have found the same enthusiasm, the same devotion to the community, the same sense of dedication to the neighbors in New York City that a small community feels. It's only a question of widening the base.

Those qualities burrow deep to the foundation of our Nation. The Greater New York Fund is directed toward supporting the hospitals, the health and welfare agencies which care for citizens at those tragic times when personal disaster strikes. By bridging the gap between the income of 433 separate agencies engaged in these humanitarian services and their estimated expenses it insures that they will maintain and develop the aid which they have undertaken to provide. It is as simple as that.

This is the sort of initiative and responsibility which Americans have always been glad to take—and accept. It is part of our national character. As the Nation has matured, we have grown in our constant concern for improving the condition of less fortunate citizens—giving them the aid and strength to come back into the economic struggle, caring for the old and infirm, exercising broadly the humanitarianism which is merely an extension of the neighborliness of an American town.

I like the sense of community responsibility which the Greater New York Fund implies. I think it is right. I think it is sound. I know it is American. There is a false tendency in this country to have Government support everything. In the end, that would do away with such drives as this. Instead of the pride of contributing directly to the welfare of your community you would simply pay more on your taxes—and I might add, as a practical matter, the item would not be deductible. I don't like that sort of philosophy. I don't believe most Americans like it. But I think its implications are worth analyzing at such a time as this.

Leave aside what such a policy would do in blunting the sensibility of citizens to their neighbors' needs. What it really means is this: As local government takes over more and more aid to individuals, the layers of government nearer home become less and less able to swing the expense. Their sources of taxation—and the funds can come only from taxation—are exhausted. If local government cannot supply the deficiency, then the Federal Government must take over the financing. Then we are off on such a spiral of bureaucracy as you and I would rather not contemplate.

No, I think the Greater New York Fund is not only the more appealing idea but it is an expression of policy which will guarantee that the management of these community services remains where it economically belongs—at home. The fund which this city's people are asked to provide is not out of proportion to their wealth. It is no insupportable burden. It is small compared to the alternative of a break-down in this system of voluntary support.

I have spent many years in the service of New York's State government and for eight of them, before I went to Washington, I was in the closest touch with some of the State's machinery for dealing with the welfare of our citizens. As chairman of the New York State Joint Legislative Committee on Industrial and Labor Conditions it was my responsibility to make a continuing survey, not only of the administration of our own agencies but of those in other States. That service gave me the most direct insight into the areas where State government should leave off and the community take up its responsibility.

There are some fields—social security and unemployment insurance are examples—where there is no alternative to the States' assuming collective responsibility for the welfare of individuals. The problem is too complex for the community to provide adequate care. But the State—and I am referring now both to State and Federal Government—likewise finds the problems of individual specialized care too complex for the broad measures which the State can supply. For the State must deal with its citizens without the direct personal case-by-case care which they may need in time of trouble. It is not enough to satisfy the neighborly feeling which Americans hold for each other.

These hospitals and health and welfare agencies which participate in the Greater New York fund provide services which, in my opinion, the State can never properly provide and should not provide. They are the local guarantee of communities that those in need shall not suffer. Put on a more selfish—or let me say on a more practical—basis, they provide certain insurance that any citizen of a community will not suffer if he is in need of special care.

This drive is being launched at a very critical time in history. I can assure you that from my rampart in the Senate, the grave nature of our problems is borne in upon me constantly. The shrinkage of old barriers in the atomic age provides a nervousness which a man cannot help feeling in Washington. You and I cannot know what the future has in store. The prophets speak their pieces but we know they are guessing—guessing. In this world of uncertainty, there is only one truth for Americans. It is that the shining spirit of democracy is a mirror to peoples, even behind an iron curtain, of a Utopia which they regard as still a dream of reflected glory.

I do not intend tonight to discuss foreign policy. It would be out of place in such a meeting as this. But let me say that there could be no more direct expression of democracy than the campaign which you are launching here. I do not suppose its news will penetrate the curtain, except dimly. But somewhere, somehow, it is such endeavors as this, filtering through, which will remain the convincing proof that America is still a land of promise. Still a better place than all the totalitarian regimes that were ever dreamed of in the crooked philosophies of the dictators.

So you see, your drive has greater objectives than appear on its horizon. You want contributions, but it is what they buy in

human comfort and human happiness that you are giving. You are offering treatment for the sick, care for the aged and infirm, a broader horizon for the young. You are offering sunshine and health. But still those are the symbols of our democracy—of our America. They are the guarantee that the great humanity of the community is a thousand* times better than the cold comfort of the State.

I am a rather historic kind of American. I have been up and down the development of this great Nation through the history books and I have never found that its basic ideals have changed. I find the old virtues most appealing because they represent ideals we have always cherished. Yes, we have advanced—enormously—in our acceptance of human responsibilities. I am proud of it. But that is a development in social consciousness, an awareness of how we could apply more perfectly a community sense. It has not been a change in philosophy. It is a progressive correction of old errors.

I know that there are those who feel that the errors which still exist in our system are symptoms of its decay. I look upon them rather as a challenge. This Greater New York Fund campaign which we are launching tonight is the recognition of such a challenge. It recognizes a community responsibility to provide for those who are temporarily, or through the ill turn of fortune, unable without help to carry through a crisis in their lives. It recognizes that these individuals shall not be allowed to become destitute or to perish. It guarantees that the community will see them through their troubles, not as a charity, but as a rallying-round of the neighbors. It confirms a spirit which maintains self-respect. In this spirit it stimulates self-reliance the moment the crisis is past.

More than that, it stimulates the development of community sense in people, which is the spirit of this Nation. I am a deep and fervent believer in America. In the Senate of the United States, where tempers seem occasionally to grow thin, I have sharpened that belief. The Senate has been called the greatest deliberative body in the world. I believe it is. Certainly there is no council where a man may more readily and frankly express his views. There is no body where the democratic spirit of America and the world breathes more freely. But the Senate is simply an expansion of what a man says anywhere, with the added great responsibility that his opinion and his vote may become the policy of this Nation. In the Senate the community of America has its voice.

With all the tensions, it is a neighborly voice. Idaho contends with Michigan, and California with Maine. Minnesota argues with Mississippi and North Dakota with Texas. But it is neighbors talking. It is a community spirit, talking with the many voices of America.

I mention it tonight, because it seems to me the community spirit of America may be stretched broad across the continent or caught in the local pride of a city. All of you who are dedicating your service through the period of this campaign are simply expressing what in a larger way is the spirit of the Nation. You are dedicating yourselves to the self-reliance which is our national heritage. You are expressing once more your faith in the ancient beliefs.

Your services can never be computed in facts and figures on a balance sheet. You are preserving the way of life that our forefathers laid down 300 years ago and that has been reaffirmed by their successive generations. You have broadened immensely the conception of humanity which has always been a glowing thing in our midst. You are making more perfect our steady march toward the realization of great objectives which all of us understand as the very purpose of democracy, and of America.

Turkey Censures Foreign Newsmen

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, May 2, 1947

Mr. BENDER. Mr. Speaker, the House should note that today on May 2, we have another report from Turkey of their slapping a censorship on our newspapermen. As I have stated twice before the House, a ruthless dictatorship exists in Turkey. This latest censorship appearing in the New York Times demonstrates this fact. I include this article as a part of my remarks:

TURKEY CENSURES FOREIGN NEWSMEN—ATTACKS DANIELL, FORREST AS SPREADING ERRONEOUS DATA—DEFENDS SUSPENSIONS

ISTANBUL, TURKEY, April 30.—Vice Premier Mumtaz Okmen charged tonight that erroneous news on Turkey was spread "by certain foreign correspondents in our country who very often cannot grasp the thoroughly essential laws of Turkey's administration or whose views are unable to reach the depths of the political currents within the country."

Mr. Okmen's accusations were made in an interview with the semiofficial Anatolia news agency in commenting on press dispatches to the New York Times from Turkey and a survey of international freedom of the press by Wilbur Forrest, of the New York Herald Tribune, past president of the American Society of Newspaper Editors.

The Anatolian agency correspondent reported that the New York Times dispatches, signed by Raymond Daniell, dealt with the recent indefinite suspension of two more opposition newspapers in Istanbul and conditions under which the general elections took place in this country.

Mr. Daniell was criticized twice this week by the semiofficial Tanis.

UNDER SIEGE COMMAND

Giving the Government's attitude on the suspensions, Mr. Okmen, who also is Minister of State, said the newspapers—Democrasi and Tasvir—were suspended by a state of siege command for publishing news of a kind that had been officially forbidden and that was considered criminal by the Turkish Penal Code.

"Otherwise, the newspapers were not suspended by the Government because they published a declaration of an opposition deputy, as the New York Times correspondent, Mr. Daniell, reported," Mr. Okmen said.

"The strategic importance of the Istanbul region, due to the world political situation, is known to everybody," he continued. "During the Second World War, the Government decided to institute martial law in this important region, with the aim of establishing security. The order and decision were approved by the Turkish Grand National Assembly.

"The military administration was authorized to establish and execute extraordinary measures in the regions under martial law. The suspension of newspapers was among these measures."

The Vice Premier, asserted that the elections in Turkey took place according to law and that no observers of a party participating in the polling were prevented from carrying out their jobs.

He advanced the New York Times dispatches and the distribution of Mr. Forrest's statement by the Anatolian agency as evidence of freedom of information here. He said correspondents were free to cable without restriction.

FOREIGN CORRESPONDENTS CALLED IN

Two days ago, however, a group of foreign correspondents at a conference in the Turkish Press Department, told Sever Iskit, press director for Istanbul, that they did not agree with the Department's view that Mr. Forrest's statement including Turkey among the 23 countries where information was chained up was inaccurate.

The 12 correspondents, most of them American, were invited to the Department, Mr. Iskit said, "to be notified that the Turkish Press Department disagrees with the part of Mr. Forrest's statement concerning Turkey."

"We have also called upon you," Mr. Iskit declared, "to remind you of something you already know: That Turkey is enjoying press freedom."

War Assets Administration Scores Knock-Out in First Round—Veteran, Small Businessman, Socked in Solar Plexus

EXTENSION OF REMARKS
OF
HON. PAUL CUNNINGHAM
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 2, 1947

Mr. CUNNINGHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from a World War II veteran, who is also a small businessman, in which he gives a blow-by-blow account of his bout with the War Assets Administration:

PERRY, IOWA, *April 22, 1947.*

Mr. PAUL CUNNINGHAM,
House Office Building,
Washington, D. C.

DEAR SIR: I started this letter shortly before the first of the year, and should have mailed it long ago, but somehow or another, I kept thinking things would improve. Instead, they have become steadily worse. This letter contains my gripes against the War Assets Administration. I think they are legitimate.

I am a veteran of World War II. I had 44 months of "it." I am a Republican and always have been. Most important of all, I am an American, a citizen of these United States, and I am discouraged, disgusted, and mad, over trying to deal with the Government in surplus property.

I had to fight to get certified. WAA in Des Moines was reluctant to certify me for $25,000 because there was only a limited amount of surplus, and many veterans wanted to start businesses. When I went to buy surplus to stock my business, I found that minimum lots were generally so large that only wholesalers dare buy. For weeks and weeks after I was certified, I received no information on sales. It was not until after I had written dozens of letters that I received any information. After 6 months I found that in general, WAA prefers not to mess with small purchasers. I was practically told that, when I visited the Omaha office of WAA several weeks ago. The paper work involved in processing a purchase through WAA is so voluminous that the officials want as little as possible to do with small orders.

The surplus sale which opened at Ankeny around January 5, 1947, was advertised as being for veterans who wished to buy for their own consumption. When the veterans arrived at the sale, they were required to buy a minimum of 5 pair of overshoes, or 4 pair of 16-inch boots, or 12 winter caps, or 4 pair of hip boots, etc. If the veteran did buy 4 pair of boots, he had to wait around from 2 to 4 hours before he could pick up the boots. Generally, the small purchaser left in disgust. How many men are going to buy 4 pair of boots at a cost of $3 each in order to obtain 1 pair for his own use, when he can buy a new pair for $5? There were more employees at the sale than there were customers, and not one had the authority to change the size of the lots or the procedure for making purchases.

I purchased 60 heavy leather coats in Philadelphia while my certification was still being processed. I was assured that the certificate would be honored when presented. Later, when I tried to exercise my rights as a veteran, WAA said they were sorry but the sale had been processed, and I was required to pay $24 per coat instead of $19.20 which a veteran was entitled to. Only a matter of $288. The papers had been processed, and WAA did not want to be bothered making any changes. These coats were purchased November 22, 1946, with the idea of having them in time for the Christmas market. Five weeks later the coats arrived. I am out $1,440 as far as this year is concerned. Storage and care of the coats over the summer means additional expense. On the other hand, a veteran I know obtained the inside dope on 4,000 sleeping bags, arranged to sell them to one of our big chain outfits, and then bought them and received delivery in 1 week. Right now I would sell all of the leather coats for $1,000.

That brings me to the subject of twenty-five- and fifty-thousand-dollar certifications. I understand that the original intent of WAA was to enable every veteran interested in establishing a business to obtain an initial stock of goods. Thousands of vets like myself have yet to buy on certification. We get what the smart, fast operators don't want, or are already loaded with. How are these brokers or wholesalers operating with a big financial backing able to buy $25,000 worth of a single item such as the very popular B–15 flight jacket, or the Navy N–1 foul-weather jacket, or the beautiful B–11 parka? I can take you out to Omaha and show you 10 places that have purchased from $100,000 to $500,000 worth of choice items alone. I have been trying to buy 500 N–1 jackets for the last 4 months, and all I have received are very polite, I-am-sorry-nonavailable letters; then along comes a catalog from Omaha with a fine selection of items offered for sale January 27 and 28. I received the catalog January 29. Nevertheless, I placed an order and received a very polite letter about how the sale was over, and thanking me for my interest in surplus property.

I happen to know that WAA files are loaded with letters from veterans like myself. I don't want a bonus. I don't want a soft job with the Veterans' Administration. I would dig ditches before I would join the infamous 52–20 Club. I want efficient Government agencies. To date, the vast majority of industrious veterans seeking to buy surplus property in good faith have received a rotten deal from WAA.

Every contract, every offer to buy, is written up so that the small buyer who buys at a distance in good faith doesn't have a chance. I submitted a bid to Charleston, S. C., Navy Yard on used surplus offered by the Navy. The bids were opened January 2, 1947. When I had received no word by January 8, I wired requesting that my bid be withdrawn. On January 11 I received a notification that I had been awarded three lots totaling $1,827. All of this merchandise was winter wearing apparel. By the time they had completed all of their involved paper work and had taken their time shipping the merchandise, it would have been April 1 before I could possibly have received this property. My withdrawal of the bid meant that I must forfeit my $556 deposit. No small businessman can survive if he has to buy, sell, and supervise shipment himself. At the present time I stand to lose $2,500 out of the $3,800 I saved while in the service. Remember, I would not have minded taking these losses if I could have obtained some of the choice surplus which the big operators became rich on. There are risks in any business, but dealing with WAA is a hopeless gamble.

I learned from a former employee of the Ankeny ordinance plant that the employees were directed to pile new lumber on top of new electric motors and set the entire pile afire. He estimated that there were hundreds of new motors and enough lumber to build several new houses all burned. Electric motors are still one of the most difficult items to obtain.

I have talked to many veterans. Every one of them is disgusted with WAA. Most businessmen who have dealt with WAA are disgusted. Thousands of legitimate dealers throughout the country will have nothing to do with surplus property because they have found from personal experience that WAA as an organization is disorganized, inefficient, unreliable, and apparently staffed with men completely lacking in business acumen. The Government is going to end up selling all of its war surplus to the speculators at 1 cent on the dollar. There are billions of dollars in war surplus, yet WAA will list $1,000 worth of an item. They will receive $10,000 to $100,000 worth of orders for that item, and instead of attempting to locate sufficient merchandise to fill all of these orders, they write letters, return checks, and "fiddle around" until the cost of selling the $1,000 worth is more than the value of the goods. Then they turn around and offer thousands and thousands of dollars' worth of the very same item a month or so later. Here is WAA, an organization receiving billions of dollars worth of merchandise from the United States Government free, so to speak, and they can't even do business in a sensible enough manner to break even, so I understand. The Government would be better off and the taxpayer would be billions ahead if all war assets were pooled and used as a reservoir from which to draw for the reconstruction of foreign countries.

It is my opinion that the entire surplus-property program should be overhauled. I would like to know what steps to take to procure my $288 from WAA in Philadelphia. I would like to see something done about a situation that appears to me to be a detriment to the entire country, because I believe sound business in Government is a must if we are to win through the next few years.

Very truly yours,

CLARENCE WILTON MILLER.

American Merchant Marine

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, May 2, 1947

Mr. KEATING. Mr. Speaker, last week I had the pleasure of introducing at the annual dinner of the Rochester Consistory in my district, our distinguished colleague from California, Hon. WILLIS W. BRADLEY, who delivered an address on the merchant marine. Because of the fact that Congressman BRADLEY knows the sea as, perhaps, no other man in Congress, having served for many years in the Navy and, as the holder of the Congressional Medal of Honor, with a record for heroism rarely matched in naval annals, and because he is now continuing his service to the people of this country and to his district with such marked ability as a member of the Committee on Merchant Marine and Fisheries I have asked leave to extend my remarks to include the address which he delivered in Rochester, N. Y.:

Mr. Chairman and brother Masons, of the many grave problems which demand solution in the next few months if this Nation is to build a new and satisfactory way of life upon its historic foundations, the question of what to do about our merchant marine is one of the most pressing and challenging. It is a question which is occupying a large share of the attention of Congress and the administration in Washington, and one to which every American might well give his best and most constructive thought now and in the immediate future.

The question of the merchant marine is important, because its answer will influence to a very great degree the shape of things to come, with respect not only to our domestic economy but our international relations and our national security as well. It is so urgent that the Merchant Marine and Fisheries Committee of the House of Representatives was one of the first committee of the present Congress to get down to work on a subject of major national importance as it undertook immediate study of the Nation's maritime situation. For several months now, the committee has been investigating the postwar status of American shipping, particularly from the standpoint of existing passenger facilities, as a nucleus from which to build to meet our future needs for travel and trade. The President has also seen fit to appoint a group of citizens as an advisory committee on the merchant marine, to survey the situation of the shipping and shipbuilding industries and make recommendations as to their requirements.

It is apparent, at this stage of our postwar experience, that the world faces the early prospect of a new alinement of power among nations. From a war which impoverished its allies the United States has emerged as a tower of strength, both industrially and politically, among the western democracies. If, therefore, we are to enlarge our international commitments due to the force of circumstances we must recognize that the building and operating of ships in international trade will be an increasingly important factor in our relations with the rest of the world as time goes on.

The importance of an adequate merchant marine to our national security was too well illustrated in the recent war to leave any doubt in the mind of anyone. Without the bridge of ships that kept men and supplies moving to battle fronts scattered throughout the world the war could not have been won. From Japan's first blow at Pearl Harbor in 1941 until her capitulation in 1945 the total cargo lift of materials from the United States to the various theaters of the war was 268,252,000 long tons, including 64,730,000 tons of petroleum products and other bulk liquids carried in tankers, exclusive of liquid cargoes carried for the Army and Navy. Between December 7, 1941, and November 30, 1945, merchant ships transported the great majority of the 7,129,907 Army personnel and

141,537 civilians moving overseas and the 4,060,883 Army personnel and 169,626 civilians returning to the United States.

The miracle of this achievement is not alone in the fact that our ships carried such staggering totals of men and matériel, but in the mighty industrial effort which produced the ships that did the job. The American merchant marine was in sorry condition after a decline of 15 years following World War I. Around 1935 we were fourth among the six leading maritime nations in tonnage, sixth in vessels 10 years of age or less, and fifth in vessels with speeds of 12 knots or over. Dry cargo shipbuilding was at a standstill and our ships were rapidly reaching the stage of obsolescence.

The Merchant Marine Act of 1936 was designed to provide the United States with a merchant marine adequate for both trade and defense. A Presidential message to Congress in 1935, recommending its enactment, gave three reasons why the bill should become law: (1) To provide Government subsidies to enable the industry to meet the competition of low-cost foreign construction and operation of ships, (2) to insure adequate tonnage for American commerce in the event of war not involving this country but withdrawing foreign tonnage from normal trade, and (3) to insure an adequate merchant marine as an arm of the national defense.

The United States Maritime Commission, which was established by the Merchant Marine Act of 1936, began, in 1937, a program for the building of 50 large, modern, ocean-going vessels a year for 10 years. It was due to the fact that this program was fairly under way that we were supplied with a small nucleus of new ships as we entered the period of national emergency preceding our participation in World War II.

At that time there were but 1,379 ocean-going merchant vessels of all types under the American flag. We were especially short of passenger liners and combination passenger-cargo ships which could be converted as troop ships. Vessels of this type totaled 162 on September 30, 1939, with an aggregate passenger capacity of only 56,516.

The building of nearly 6,000 ships during the war was the greatest achievement in the maritime history of the world. We virtually lifted ourselves by our bootstraps to do it. Shipyards were built from nothing along our coasts. Modern mass-production methods were utilized as whole sections of ships were prefabricated inland and shipped to the yards to be assembled on the ways. We standardized on a few types and pushed for speed to get them built. Vessels were launched in a matter of days and quickly delivered into service after rapid outfitting. The race was against time and the German submarine service in the most critical months of the war, but the resources of American industry proved equal to the task.

After the war we were left with the largest merchant fleet that ever sailed under one flag, a total of approximately 4,800 vessels aggregating more than 50,000,000 dead-weight tons. For a long period after the cessation of hostilities the war-connected work of the merchant marine went right on, however. Tons of food and other relief supplies had to be shipped overseas to war-devastated countries. Nine out of every ten servicemen returning from the war traveled in merchant ships. Vessels specially fitted out for the purpose transported thousands of war brides and their children to this country. Many other ships were kept busy carrying official travelers and displaced persons to ports all over the world.

The present problem of what to do about our merchant marine really dates from the end of the war. Although left with the largest merchant tonnage in the world's history, we were in possession of a fleet of ships composed principally of a few standardized types mass produced to meet the needs of war. It was a fleet completely unbalanced for normal, peacetime competitive trade. Our first task was to dispose of this fleet, since, because of its numbers and composition, it could not be absorbed by private operators in normal trade. The answer was to dispose of the ships through sale, charter, and laying up in a reserve fleet for future emergency or need.

Under the Ship Sales Act of 1946, the Maritime Commission had approved the sale of 950 war-built ships as of March 1, 1947. These sales will bring the Government revenue totaling $850,000,000. Of the sales approved, 330 ships went to American operators and 620 were sold abroad. Because of their priority under the Ship Sales Act, American operators bought 193 of the desirable C-type ships, 68 Liberty ships, 53 tankers, 3 Victory ships, and 13 coastal vessels. Foreign governments and operators received approval to purchase 47 C-types, 363 Liberty ships, 85 Victorys, 50 tankers, and 75 coastal vessels.

At the present time the Maritime Commission is reexamining its whole policy of foreign sales of ships under the Ship Sales Act, on the basis of both sales to foreign purchasers compared to those to United States purchasers, and a comprehensive review of the foreign ship-construction program. The Commission is in process of reporting its findings in this matter to Congress. It is also undertaking a review of its policy with respect to chartering vessels to American operators, since under the terms of the Ship Sales Act chartering, as well as sales, must end by December 31, 1947.

Although a record high number of 1,742 ships of the war fleet had been consigned to the reserve fleet in December 1946, only 1,418 vessels were in the fleet as of March 15 this year. The reduction was due to withdrawal of vessels for sale and chartering. The Ship Sales Act provides that vessels not disposed of under its provisions by December 31, 1947, shall be held in reserve, and it is expected that some 3,750 ships will ultimately comprise the reserve fleet.

Due to the gradual completion of its war-connected obligations, the Maritime Commission is now operating less than 10 percent of the fleet of merchant ships which were under Government control at the end of the war. With a few possible exceptions, if Congress grants any extension, the Government will be out of the shipping business by June 30 of this year.

This brings us once more, then, to the basic purpose for which the Merchant Marine Act of 1936 was adopted—to foster the development and maintenance of a merchant marine, privately owned and operated so far as practicable, adequate to carry our domestic water-borne commerce and a reasonable portion of our foreign commerce, and adequate to serve as an auxiliary of the armed services in time of war.

The situation in which we find ourselves, in setting about now to apply the principles of the 1936 act in the rehabilitation of our merchant marine, is far more complicated than when the Maritime Commission launched its 10-year program in 1937. In appointing his advisory committee to study the matter, President Truman said: "As an aftermath of the war, the United States faces critical problems in connection with the construction, modernization, and maintenance of an adequate fleet of passenger and freight vessels. With no passenger liners and few cargo vessels scheduled to be built in the immediate future, the Nation is not assured of the existence of a balanced and modern merchant fleet. This is a matter that concerns not only our commerce and trade, but our national security as well."

The President also pointed out that: "Although our present need is primarily for passenger ships, our ship-construction program as a whole merits careful consideration. As an important element of national security in connection with preparation for expansion in case of emergency, it is essential that shipbuilding skills be maintained by shipbuilders through an orderly replacement program of all types of vessels. Latest technological developments must be incorporated into our future cargo and combination cargo-and-passenger vessels, as well as into passenger liners, if the United States is to maintain a well-balanced modern merchant fleet to meet trade as well as security requirements."

With the close of the war, foreign nations, particularly Great Britain, have been rushing ahead with programs for the reestablishment of strong and modern merchant services. They have been doing this by building fast, new ships of all types, while supplementing their tonnage through the purchase of cargo vessels from the surplus tonnage of the United States. We, however, have failed thus far to do very much of anything to insure a sound position for the American merchant marine in the field of international trade.

At present we have only one first-class passenger liner, the steamship *America*, in service on the all-important North Atlantic run. Passenger service on other established trade routes is also woefully inadequate. The Maritime Commission reports that only 19 vessels, with total passenger capacity of 1,666, are building or under contract for construction under its program at the present time. These include two American President liners, which will handle 550 passengers each on a trans-Pacific route. A combination passenger and cargo liner for operation to the east coast of South America by the Mississippi Shipping Co. will accommodate 119. Three Alcoa Steamship Co. vessels will carry 97 each. The rest are principally cargo vessels which will carry only 12 passengers each.

Under its proposed 1948 budget, as approved by the President, the Maritime Commission's program calls for the building of six modified C3 cargo vessels, and three passenger vessels for the Mediterranean trade. In the light of review of the maritime situation by Congress, the President, and the Maritime Commission, however, this program is probably due to undergo some modification.

In the face of our meager shipbuilding program, other nations are making a much better showing in their determination to recover supremacy on the various trade routes of the world. Lloyd's Register reports that merchant vessels of 100 tons gross and over under construction throughout the world at the end of 1946 (exclusive of wood, composite, sail, and barge vessels) totaled 996 ships aggregating 3,659,335 gross tons. Figures for Japan and Russia were not available, but of the world's total reported, about 53 percent was being built in Great Britain and Ireland, while less than 10 percent was being built in the United States.

Recent newspaper reports state that the Cunard-White Star Line's passenger-carrying facilities for its New York-England service will compare favorably by the end of this year with its accommodations in the early summer of 1939. This report states that the company hopes to have six liners in operation by the end of the year, five of them by the end of the summer. Their schedule calls for return of the 35,000-ton *Mauretania* this spring, the 27,000-ton *Brittanic* by late spring, and the 81,000-ton *Queen Mary* by midsummer. Two new 14,000-ton combination cargo-passenger liners, the *Media* and *Parthia*, are scheduled to make their first voyages before 1948, and the line is building a new ship of the *Mauretania* class, the *Caronia*, which will be completed before the middle of 1948.

We also learn through the press that the Holland-American Line has refloated the liner *Zuiderdam*, which was bombed and sunk

during the war, and will have her ready for trans-Atlantic service in a year. This will give Holland-American four passenger ships on the trans-Atlantic route. The Klaveness Steamship Line, of Norway, has a construction program for nine new motorships and one tanker scheduled for delivery within 2 years.

The question for Americans to decide, especially in view of the new role of this country as leader of the western democracies, is whether we intend to let foreign-flag lines carry our people and our goods in international trade, or whether we intend to build and maintain a strong merchant marine under our own flag. The Department of Commerce has estimated that the United States will furnish about $16,200,000,000 in goods and services to other nations this year, an increase of $900,000,000 over last year. Other countries, in turn, will provide about $9,000,000,000 in goods and services to this country. How much of this great preponderance of export trade will be carried in American-flag ships? What does it mean to our national economy, to our shipping and shipbuilding industries, to the men who build and sail the ships? Those are the questions that Americans must study, and the answers will give us our decision on what to do about the American merchant marine.

In urging passage of the Merchant Marine Act of 1936, the President said: "An American merchant marine is one of our most firmly established traditions. It was, during the first half of our national existence, a great and growing asset. Since then it has declined in value and importance. The time has come to square this traditional ideal with effective performance.

"Free competition among the nations in the building of modern shipping facilities is a manifestation of wholly desirable and wholesome national ambition. In such free competition the American people want us to be properly represented. The American people want to use American ships. Their Government owes it to them to make certain that such ships are in keeping with our national pride and national needs."

The whole aspect of international relations has changed since 1936, but the spirit of the act is even more applicable today. President Truman has stated that the future peace of the world depends largely upon the willingness of nations to remove from international trade the restrictions which tend to produce economic struggles which, in turn, can lead to war. He has urged that the United States should take the leadership in removing those restrictions. We cannot accomplish this without full participation in international shipping by maintaining a modern and adequate merchant marine under the American flag. As an instrument of international relations, the merchant marine will carry our flag into every port in the world as a symbol of what this Nation stands for in a world striving to find peace and security. It will also assist us in exercising the industrial strength and political power we hold, as a positive force in protecting the interests of freedom-loving peoples the world over.

From the standpoint of national security alone, the United States cannot afford to take chances in the future, as it has in the past, with its merchant shipping. In World War I we had to depend upon tonnage supplied by our allies to carry our troops and our goods of war to Europe. Most of the ships we built then for the emergency were not even delivered until the war was over. In World War II we performed an almost superhuman feat in building the ships we needed for victory. If another war occurs, we may not have that chance. It may be a very short war, accomplishing within a few weeks the destruction that took years of combat to bring about the last time. If we do not have shipping tonnage ready to go when the attack comes, we may not have the opportunity to build it. As the Army and Navy stand ready for the Nation's defense, so should the merchant marine be ready with ships and men. An adequate merchant marine, kept strong and modern, is the answer to the future of the United States in international trade, international relations, and national security.

The House Should Defeat the Greek-Turkish Military Bill

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, May 2, 1947

Mr. BENDER. Mr. Speaker, the Rules Committee of the House has decided to grant an open rule to the Members of the House in the discussion of the infamous Turkish-Greek bill, which an arrogant State Department has sent up to us under the false assumption that this Congress is a rubber stamp.

Mr. Speaker, those of us in the House who are unalterably opposed to this legislation are grateful to the Rules Committee of the House for the proper and democratic manner in which they have handled this piece of legislation.

Mr. Speaker, I wish in my discussion this afternoon to present a series of six amendments which I ask be printed and laid on the desk of every Member. These amendments are to the bill which has been proposed by the State Department.

Mr. Speaker, the first amendment which I wish to propose reads as follows:

H. R. 2616—AMENDMENT

At the end of the bill insert the following new section:

"SEC. —. (a) Nothing in this act shall be construed to imply that the Government of the United States has adopted as its policy in international affairs (1) intervention in civil strife, civil war, or political conflicts in foreign countries; or (2) unilateral action, either now or in the future, in disregard of its obligations to the United Nations.

"(b) The Congress hereby reaffirms the basic policy of the United States to bring before the United Nations all economic, political, or military conditions which may endanger the peace of the world."

Mr. Speaker, this amendment, as is evident, point-blank denies that the Members of this House agree with Mr. Truman, that our basic foreign policy has to be changed. This amendment denies the Truman doctrine. It denies that we intend to intervene in every civil war throughout the world and it reaffirms our commitments to the United Nations.

Mr. Speaker, as any candid Member of the House will acknowledge, Mr. Truman has stabbed the United Nations in the back. This act bypasses, subverts, rides over, ignores, and violates our commitments to that one hope of mankind for peace.

I do not believe that the House agrees with him in this willful, deliberate, and flagrant violation of our sworn commitment to the United Nations, and I have offered this amendment in the belief that the House of Representatives wishes to make clear that it does not support the Truman doctrine—that we are determined to carry through our commitments to the United Nations.

Mr. Speaker, as a second amendment to the Turkish-Greek military alliance bill, I wish to present the following amendment:

H. R. 2616—AMENDMENT

At the end of the bill insert the following new section:

"SEC. —. As a condition precedent to the receipt of any assistance pursuant to this act, the government requesting such assistance shall agree (a) to abolish within 90 days all hereditary offices and titles under such government; (b) to hold within 90 days free and democratic elections for the purpose of determining the chief executive officer of such government and the membership of its legislative body and to grant prior to such election universal suffrage for all persons over the age of 21; (c) to afford to all political parties full opportunities to participate and engage in election activities prior to the holding of such elections; and (d) to grant immediate amnesty to all political opponents of the persons or parties in control of the government requesting such assistance."

Mr. Speaker, this amendment makes absolutely clear that the Members of this House want nothing whatsoever to do with a vicious, corrupt, and venal monarchy which has been imposed upon the Greek people for over a hundred years by the London bankers. One Greek king died peacefully on his throne in the past hundred years. He died from the bite of his pet monkey. One Greek king was assassinated. Three were driven from the throne. The Greek people hate monarchy—and Mr. Truman proposes to keep a hated monarch on his throne by force of American arms. I do not believe that anybody in the House wants anything to do with a corrupt and degenerate institution of this kind. We are for democracy. We are for free suffrage. We are against dictatorial, terroristic, suppression of people who want civil liberties. Greece needs political democracy—it needs political democracy if any government is ever to have the support of the Greek people. Today that condition does not exist, and everybody knows that it does not exist. I am confident that this House wishes to cast its vote for the creation of a genuine democracy free from monarchy in Greece. Therefore, I have presented this amendment for the consideration of the Members.

Mr. Speaker, the third amendment which I wish to present and which I now offer for the RECORD knocks all military aid out of the present bill. It inserts the word "nonmilitary" after the word "furnish" on page 1, line 5, and it strikes out all clauses of the bill which refer to military aid:

H. R. 2616—AMENDMENT

On page 1, line 5, after the word "furnish" insert "nonmilitary."

On page 1, line 9, after the semicolon, insert "and."

On page 2, line 8, strike out the semicolon and insert in lieu thereof a period.

Beginning on page 2, line 9, strike out all down to and including line 22 on page 4.

On page 4, line 23, strike out "3" and insert in lieu thereof "2."

On page 6, line 1, strike out "4" and insert in lieu thereof "3."

On page 6, line 14, strike out "5" and insert in lieu thereof "4."

On page 7, line 15, strike out "6" and insert in lieu thereof "5."

On page 7, line 18, strike out "7" and insert in lieu thereof "6."

Amend the title so as to read: "A bill to provide for nonmilitary assistance to Greece and Turkey."

Mr. Speaker, I believe that the State Department, in a condition of self-induced hypocrisy, has assumed that any bill which it pretends gives relief will be taken as a relief bill by this House. As all of us know, relief is desperately needed by the Greek people, and for my own part I am willing to vote the funds necessary for clothes, for food, and for shelter for a heroic Greek people. But the State Department intends to send American men, American armed forces, American weapons, American munitions, and our State Department intends to form a military alliance with a dictatorship in Turkey. I do not believe that the House wants to intervene in a military way in the civil war in Greece. I do not believe that we intend to take the responsibility for the actions of the Greek Army. Mr. Paul Porter, in a report just released, has indicated that it will take roughly $500,000,000 for the next 5 years without any regard for military expenditure to put the Greek economy back on its feet. Where in God's name does this business end when we undertake to intervene in every armed conflict everywhere in the world?

Mr. Speaker, I am convinced that we want no part of this doctrine of military intervention everywhere in the world. Such a policy means financial bankruptcy for America. It means higher prices and higher taxes. It means a third world war. Sons and daughters of American citizens from coast to coast will die on battlefields in Asia and Europe if this type of military bill is enacted into law by this Congress.

Mr. Speaker, I earnestly hope that every Member will be willing and ready to cast his recorded vote on this amendment. The President is determined to embark us on a new policy whose ends and objectives no man can see. His policy will end in disaster and it will end in war. Let the House adopt this amendment. Let us not become a rubber stamp for the insane and frantic desires of impatient men to solve the domestic problems of the world with the blood and wealth of the American people.

Mr. Speaker, I wish to introduce a fourth amendment, which I now present for the RECORD:

H. R. 2616—AMENDMENT

On page 1, lines 5 and 6, strike out "and Turkey."

On page 1, line 6, strike out "their governments" and insert in lieu thereof "its government."

On page 1, line 9, strike out "those countries" and insert in lieu thereof "such country."

On page 2, line 6, strike out "or Turkey."

On page 2, lines 10 and 11, strike out "those countries" and insert in lieu thereof "such country."

On page 2, line 18, strike out "those countries" and insert in lieu thereof "such country."

On page 2, line 20, strike out "countries" and insert in lieu thereof "country."

On page 3, line 12, strike out "or of Turkey."

On page 3, line 13, strike out "countries" and insert in lieu thereof "country."

On page 3, line 16, strike out "countries" and insert in lieu thereof "country."

On page 4, line 11, strike out "or of Turkey."

On page 4, lines 19 and 20, strike out "either Greece or Turkey" and insert in lieu thereof "Greece."

On page 6, lines 23 and 24, strike out "or Turkey, respectively."

On page 7, line 20, strike out "governments" and insert in lieu thereof "government."

Amend the title so as to read: "A bill to provide for assistance to Greece."

This amendment strikes all reference to Turkey out of this present bill. Mr. Speaker, our State Department, without any request from Turkey, has decided that we should form a military alliance with that corrupt and military dictatorship. For a thousand years they have persecuted Christians and Jews. The record of Turkey is unparalleled in history in deliberate double-cross. The rulers of Turkey are supreme masters of the art of double-cross. During the war Turkey deliberately sold out the Allies—she reneged on every promise—on every commitment. On the record, the Turkish Government is completely unreliable. In God's name, what fevered mind gave birth to the frantic conception of the military alliance with a nation led by traitors and international bandits?

Mr. Speaker, Turkey is well-fed, well-financed, well-armed, and well-heeled. Her financial condition is better than ours, her national debt is very, very small. It is the part of common sense to put before the United Nations any condition which endangers the peace. It is a part of common sense to present the problem of the Dardanelles before the United Nations. It is plain foolishness to embark on a military alliance with a dishonorable government—to obtain objectives for which no citizen in the entire United States has ever cast a vote.

Mr. Speaker, I wish to present a fifth amendment, which I herewith read:

H. R. 2616—AMENDMENT

At the end of the bill insert the following new section:

"SEC. —. As a condition precedent to the receipt of any loan pursuant to this act, the government requesting such loan shall (a) register with the United States Treasury Department all holdings of gold held by such government, and by the nationals of such government, both at home and abroad; (b) register with the United States Treasury Department all foreign assets, stocks, bonds, or other holdings, of such government and of the nationals of such government; (c) make public the full foreign and domestic indebtedness of such government; and (d) relegate all foreign indebtedness of such government to a subordinate position to the indebtedness incurred pursuant to this act."

Mr. Speaker, I wish the Members of the House will note that clause (d) of this amendment states that all present foreign indebtedness of Greece and Turkey shall be relegated to a subordinate position to any indebtedness pursuant to this act. Mr. Speaker, for 15 years we have put that clause into every loan made by the RFC to our own people. How in God's name after we have pursued a sound financial policy in the lending of money to our own banks and our own people, how can we now undertake to develop an international foreign policy without such financial safeguards? Do we give to the Turkish and Greek Governments in order that they can repay ancient debts made to London banks? Does anybody on this floor think that Uncle Sam is Santa Claus? Imagine what my constituents would think if I were to vote for a measure without knowing what the money is to be used for. Suppose that we vote this money and the Greek Government takes it and begins to pay back the Hambro Bank in London with it, and suppose the Hambro Bank is able to increase its dividends to the Churchill family, and suppose Winston Churchill is able to buy himself a new silk hat and a beautiful Rolls-Royce with the tax money of some family from the beautiful fields of Ohio. How do you suppose that I can conscientiously answer the questions of my constituents?

No, Mr. Speaker, I want to know, and the people of Ohio want to know what is going to be done with the money. We want to know how much gold these governments have got. We are asking them to tell us—to register with the Treasury Department their foreign assets and, Mr. Speaker, we want to know what their present foreign and domestic indebtedness is and we want airtight guaranties that our money is not going to pay back debts made by corrupt monarchies for the past hundred years in behalf of the aristocracy of England. As a matter of plain, ordinary horse sense, ordinary business practice—as a matter of plain common sense which every person in America will understand, I urge the House to adopt this amendment.

Mr. Speaker, I wish to introduce a sixth amendment which reads as follows:

H. R. 2616—AMENDMENT

At the end of the bill insert the following new section:

"SEC. —. Nothing in this act shall be construed to imply that the Government of the United States shall be bound to support private agreements made between American oil companies and foreign governments or between American oil companies and nationals of foreign governments."

Great and powerful oil companies are sitting down in some quiet place in London and there in their quiet, secluded, peaceful conference room they will decide what shall be done with three-fourths of all the known oil reserves in the world. Naturally, Mr. President, I do not object to the activities of oil companies in the pursuit of their legitimate business, but I do object to any agreements that they may make which are binding on me as a Member of Congress.

There have been times in American history when American boys were sent overseas to protect the ill-gotten gains of supposedly reputable business. I, for one, trust that this will never happen again. I am opposed to American arms following the American dollar. I am opposed to American imperialism, just as I am opposed to imperialism by any other large nation anywhere in the world. Mr. Speaker, the Congress of the United States is not a rubber stamp for an arrogant and ruthless State Department. It

is not a rubber stamp for anyone but the ordinary American citizen whose votes alone elect its Members. Thank God, Mr. Speaker, that we have a democracy in America; that we live under a Constitution with a Bill of Rights which guarantees to every citizen the inalienable rights of free religion, free speech, free assembly, and free association. Thank God that in our democracy all power derives from a sovereign people. Never yet have the American people submitted to the oppression and the tyranny of dictatorship. Our Government exists to better the common life of the millions of citizens who live in America. Abraham Lincoln said, Mr. Speaker, that this country belongs to the people who inhabit it. Nothing except the needs of the American people and the genuine national security of America should be permitted to influence the Congress of the United States in its deliberations on this bill.

Mr. Speaker, I trust that every Member considers well the candid statement of Mr. Truman—that he is asking us to embark upon unknown seas; that every Member, Mr. Speaker, will weigh carefully the consequences of this tremendous change proposed in our Nation's foreign policy.

Harold Ickes Deplores Tie-Up of Truman Administration With Big City Political Bosses—Attacks "Quack Liberalism" of Democratic Party

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 2, 1947

Mr. MUNDT. Mr. Speaker, in Wednesday night's Evening Star, Harold L. Ickes, long a beneficiary of the New Deal and its largess, reveals a session with his conscience which compels him to deplore in public the unabashed working arrangements which have developed between the Truman administration and the unsavory big city political machines of this country. "Honest Harold" also provides additional evidence to the rapid collection now available which exposes for what it actually is the "quack liberalism" by which the New Dealers have endeavored to ingratiate themselves to a credulous and unsuspecting American public.

I herewith incorporate with these remarks the interesting and significant observations of the former Secretary of the Interior:

GAEL SULLIVAN "BROUGHT UP BY BOTTLE" BY FORMER MAYOR KELLY, OF CHICAGO

(By Harold L. Ickes)

Former Mayor Edward J. Kelly, of Chicago, at last has reluctantly bowed himself out of the city hall, but by no means has he yielded political power. Nor does he intend to. Mr. Kelly wanted to run again for mayor this month, but some of his political friends, plus the Republican landslide the preceding November, caused him voluntarily to decide not to be a candidate.

Then he was persuaded to support Martin H. Kennelly, the present mayor. So Mr. Kennelly, who had been a private citizen of fine standing, ran instead, and won by approximately 275,000 votes, whereas Boss Kelly, 4 years earlier, had been reelected by only 114,000 votes.

It was thought that Mayor Kelly, who is a very rich man after a lifetime spent in active politics and who is well over 73 years old, would also surrender his scepter as boss of the Democratic Party. But he had different views.

Although Mayor Kennelly was to be responsible for the governance of Chicago for 4 years, Mayor Kelly would not even let him organize the city council, a majority of which were Democrats. Mr. Kelly was like a divorced wife, insisting on continuing to hire the help and make out the menus. And, of course, besides the city council, Mayor Kelly controls important county patronage offices. He also continues as the Illinois member of the Democratic National Committee.

TOO GENEROUS AND NAIVE

Mayor Kennelly was so decent a man that he expected the Kelly people also to be decent. Consequently, he was too generous in his attitude toward the holdovers from the Kelly administration and too naive in believing that Mr. Kelly and all of his aldermen would see the impropriety of continuing to take orders from Mr. Kelly. On one point, however, he did stand up. The Kelly aldermen wanted to organize the Council for a full 4-year term. Mayor Kennelly was successful in restricting this control to 1 year.

But this is only part of the story. Mayor Kelly was successful in having his protégé, Gael Sullivan, appointed Second Assistant Postmaster General. Mr. Sullivan accompanied Postmaster General Hannegan around the world, with Senator TYDINGS of Maryland acting as chaperon, at Government expense, to "inspect" postal systems. Returning, Mr. Sullivan resigned as Mr. Hannegan's right-hand man in the Democratic National Committee. His title now is executive director and his salary is considerably above what he received as Second Assistant Postmaster General.

Mr. Hannegan's health has not been good. He, too, has done well in politics and he wants to resign. But he has conditioned his resignation upon the selection of Mr. Sullivan, a second-string ward politician from Chicago as his successor. He has no intention of leaving either his flank or his rear exposed to those who might seek political reprisals.

BROUGHT UP BY BOTTLE

It is a strange circumstance, this rapid rise in political power of Mr. Gael Sullivan, who possesses none in his own right. He has been brought up by bottle by that cunning politician, the ex-mayor of Chicago. When Mr. Kelly, at the beginning, alined himself with Boss Hague, of New Jersey, to try to defeat Mr. Roosevelt for the nomination for President in 1932, Mr. Gael Sullivan was against Mr. Roosevelt. When the mayor, changing his battle cry to "Roosevelt and Humanity," clung desperately to the Roosevelt bandwagon, Mr. Sullivan hung on with him. At Chicago, in 1944, when Boss Kelly and the other city bosses who were running the Democratic National Convention swung to Mr. Truman for Vice President, Mr. Gael Sullivan was at hand within beckoning distance of Mayor Kelly. Mr. Sullivan is a versatile young man. Mr. Sullivan carries his own protective coloration with him. He can be as hard-boiled a politician as Mayor Kelly, but he can also be as liberal as Boss Kelly.

If Gael Sullivan should be selected chairman of the Democratic national committee, Edward J. Kelly could and would be expected to tell him what to do. Thus the Democratic committee would have had as chairman three successive city machine bosses—Edward J. Flynn, of the Bronx, Robert E. Hannegan, of St. Louis, and Edward J. Kelly, disguised as Gael Sullivan, of Chicago. These were the men who, with the aid of Boss Hague and roving boss-at-large Edwin W. Pauley, nominated Mr. Truman for Vice President at Chicago.

QUACK "LIBERALISM"

Perhaps it is natural that President Truman should feel comfortable under the dexterous hands of these expert "liberals." After all, he is, himself, a product of the notoriously "liberal" Pendergast machine of Kansas City.

Work of Production and Marketing Administration

EXTENSION OF REMARKS
OF
HON. JAMES W. TRIMBLE
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, May 2, 1947

Mr. TRIMBLE. Mr. Speaker, the Production and Marketing Administration, formerly the triple A, is doing one of the greatest pieces of work in agriculture in this country today. They are especially active in the district which I am greatly honored to represent. It has been my pleasure from time to time to insert their reports from the various counties in order to show the Congress just what work is being done, and, under leave to extend my remarks in the RECORD, I wish to insert a letter from the officers of the Benton County association and their report. This is another indication of the great work done by this organization and I trust may be an example to the Congress that to cut down these funds would be against the best interest of the country:

UNITED STATES
DEPARTMENT OF AGRICULTURE,
PRODUCTION AND MARKETING ADMINISTRATION,
FIELD SERVICE BRANCH,
Bentonville, Ark., April 28, 1947.

Hon. J. W. TRIMBLE,
Representative of Arkansas,
Third Arkansas Congressional District,
House Office Building,
Washington, D. C.

DEAR SIR: We are enclosing for your information a copy of Form 46–SR–16, the summary of our conservation practices carried out under the 1946 agricultural conservation program. It is thought that this data might be of value in presenting facts pertaining to some of the pending bills introduced in Congress relative to this program.

We would like to point out the fact that farmers in Benton County earned a total of $134,704.71 in practices carried out under the 1946 PMA (AAA) program. This amount is only about 50 percent of the actual cost to the farmer of carrying out the practices. The benefits derived from these practices not only are an advantage to the farmer, but, if continued, will mean a higher standard of living to the future farmers of this Nation as well as food with a higher nutritive value to the folks who are living off the farm. In our opinion, since only 17 percent of the population of the Nation are classified as farmers who produce food for the other 83 percent, it can be readily seen that agricultural programs making soil-conservation payments cannot be rightfully called a subsidy to the farmer, since we, as taxpayers, are only making our contribution to the future welfare of the Nation and are receiving in return a much better quality of food and a better, more stable agriculture.

It is an undisputed fact that the welfare of a nation depends upon the fertility of the soil and its ability to produce the crops necessary to the livelihood of man. We think this statement was proven during World War II when the farmers of this Nation were required not only to feed our armed forces in addition to the civilian population, but were required to feed other countries as well. We wonder what would have been the outcome if our farmers had been called on to do this in the early thirties when our soil was in a low state of fertility as compared with today. Even at this time, we have only scratched the surface of soil and water conservation when compared with that which needs to be done. We know that building the soil is a long-time operation, even by using the best known practices, and cannot be accomplished in any short period of time.

In a recent letter addressed to you by a committee consisting of county committeemen from various counties in the congressional district, it was pointed out the amount of each of these practices carried out to date in this district, and the amount of conservation needs which should be carried out in order to produce lasting results.

In our particular contribution to this report, it is noted that in our estimation 15,000,000 pounds of phosphate should be applied annually to land in this county in order to bring it up to the point where the plants grown on this land would have the maximum phosphate needed. An estimate of 53,000 tons of ground limestone would be needed annually to supply the minerals for the various plants grown. It is a well-known fact that a deficiency of calcium in the diet of this Nation has existed for some time. With the application of limestone, this deficiency can be corrected over a period of time.

We will not go into detail further on various practices which have been listed in our Arkansas State AAA handbook that are of major importance to the general farming area of this State and to the people off the farm, but we are thoroughly convinced that practices carried out with the cooperation of the Federal Government and its present farm program have done and can do more toward building up the fertility of the soil in this area than any other known means. We do know that larger farmers are more or less financially able to carry out practices of this sort on their own, while the smaller farmers, who comprise about 60 percent of the farm population, are not able to carry out practices of this sort without financial assistance from other sources, due to the fact that the land has been allowed to run down very much in the past, leaving them a mere portion of the fertility originally in the soil, from which they are making a very low standard of living.

We are aware of the fact that the Congress is economically minded and are attempting to reduce Government expenses. To this we have no objection if the reduction is made in proportion to the service rendered by other agencies, taking into consideration the percentage of farmers reached in the county and the administrative cost of those agencies.

We have followed with much interest the action you have taken in regard to this program, and are glad to be represented in Congress by a man so interested in the welfare of agriculture. We will appreciate anything you can do to help continue the Production and Marketing Administration program, which includes the Federal crop insurance, school-lunch program, and agricultural-conservation program.

Very truly yours,

C. R. BROADHURST,

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. ELBERT D. THOMAS
OF UTAH
IN THE SENATE OF THE UNITED STATES

Friday, May 2 (legislative day of Monday, April 21), 1947

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a statement on Federal aid to education, prepared by the senior Senator from West Virginia [Mr. KILGORE].

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

America has slowly awakened to the fact that it faces a crisis in its educational system.

Letters I have received from educators and parents throughout the Nation clearly indicate that, at long last, the Nation realizes that all is not well with our educational system.

Unfortunately, it has taken a series of shocking, unpleasant events to focus Nation-wide attention on the inequities of our school system.

People throughout the Nation are beginning to listen to the educators and legislators who have repeatedly warned that our school system is not measuring up to our ideal democratic standards.

Comparatively recent events have clearly borne out the warnings uttered by many of us during the past. The case of the vanishing teacher, more than anything else, has emphasized the seriousness of the school problem.

Hundreds of teachers are leaving the educational profession each year because of low pay, ill-equipped schools, and unpleasant working conditions.

Today we have far less teachers in the Nation's schools than during a normal year in the 1930's. In addition, more than one out of every eight teachers lack the educational or personal qualifications normally required of teachers. School boards have been forced to grant emergency teaching certificates to high-school graduates, and they have urged teachers out of retirement, and still there are about 75,000 vacancies in the teaching force.

This means that schools have been forced to close or to operate split shifts. Courses have been dropped. Classes have been thrown together until teachers face 40 to 60 pupils instead of the desirable 20 to 25. State school superintendents estimated last fall that nearly 62,000 children were being deprived of schooling because there were not enough teachers or classrooms and the number is now estimated to be nearly 75,000.

The New York Times recently warned:

"Confronted by the most acute teacher shortage in the history of American education, the Nation's public-school system faces a serious break-down."

Meanwhile, a leading educator, Dr. Harold F. Clark, of Teachers College, Columbia University, declared that if the present shortage continues disastrous educational and social conditions will prevail in a few years.

The exodus from the teaching profession began when wartime industrial wages tempted the low-paid teachers into other work. Many have not returned to the classrooms because they can earn much more money today in other professions.

However, this is by no means an entirely new problem.

For many years our schools have been poorly financed. Of course, some States have good schools, but many other States, with comparatively low incomes, have been unable to properly support public schools. And still others have adopted an attitude almost bordering on indifference.

As a result, the Nation's educational level is far below what any reasonable person could consider an adequate standard.

Before we consider expenditures for public schools, let's examine a few other facts.

For example, 2,000,000 adults in the United States—the richest nation on earth—have never attended any kind of school. By any kind of school, I mean they have never spent as much as 1 day on classroom work.

It may also come as a shocking surprise, but 10,000,000 adults cannot read and write well enough to meet the ordinary demands of modern life.

The Nation also should be ashamed of the fact that more than 10,000,000 children between the ages of 6 and 15—school age, mind you—were not in any kind of school in 1940, and the number is even higher today.

Another equally shocking revelation is that during World War II, Selective Service had to reject, because of illiteracy and other educational deficiencies, enough men for 20 combat divisions. Yes, I said 20 combat divisions.

These are cold, hard facts that we cannot afford to overlook any longer. This does not mean that the individual States are not interested in improving their schools, but incomes vary in the various States; thus the standards range from good to bad.

West Virginia, for example, spent approximately 2.5 percent of its income for schools during the 1943–44 period, and the amount is even higher today, yet our State was thirty-ninth in the Nation in the amount of average expenditures per child. Our expenditures average less than $94 per child in average daily attendance, while other States, with higher incomes, spent a much smaller percent of total income on schools, yet they were able to spend far more per pupil.

This simply boils down to the fact that our State government takes in far less money per capita than many other States. And, as a result, we are the second State in the Nation in the amount of effort—or percentage of income spent on schools—but thirty-ninth in results—or the amount spent per child.

In contrast, New Jersey and New York each spend more than $190 per child, yet this takes only 1.74 percent and 1.54 percent, respectively, of their total incomes.

They rank first and second in the Nation in the amount of money spent per child. But, they are seventeenth and twenty-ninth, respectively, among the States, in the percentage of total income expended on schools.

Many States, including West Virginia, are in the unfortunate position of being unable to increase expenditures without drastic new taxes. Many of our leading industries are owned by people who live in other States, and our State receives comparatively little or no income from many sources that normally would help support our State government. The money goes to support schools in other States.

West Virginia is not the only State in this position.

It is quite evident that one of the chief difficulties in financing education is the tax base on which it rests. According to the exhaustive study by the President's Advisory Committee on Education, State and local governments furnished 99.4 percent of tax revenues devoted to public schools in 1936. And three-quarters of the school expenditures came from property taxes, largely those on real estate, which also had to bear the brunt of most other local expenditures.

These proportions have not changed greatly in the last decade. In addition to having a limited tax base, school taxes often are limited in amount. By that I mean many States restrict by constitutional provision or by statute the amount of taxes which may be levied on real property. Of course, new tax sources have been utilized in some States in recent months to meet additional school needs. But, generally speaking, the situation has not improved very much.

The solution, in my opinion, lies in Federal aid to education. In making this statement I am well aware that some people picture this proposal as a new bureaucratic idea. Nothing could be further from the truth. The facts are that since Civil War days the Federal Government has aided higher education through land-grant colleges, and since 1917 Federal funds have been available for teaching vocations to high-school students.

The first general Federal aid to education program was proposed that same year. Draft rejections for illiteracy in World War I brought out the inadequate school systems in many States.

Immediately the American Federation of Labor launched a campaign for Federal aid to education, and it has been in the forefront of this battle ever since. During the ensuing years, many educators and public offi-

cials joined this worthy drive. Widespread interest was stimulated in 1938 by the report of the President's Advisory Committee on Education which showed the varying ability of the States to finance schools. Unfortunately, legislation was not passed by the Congress. In this respect, the fight has been rather discouraging.

Lengthy hearings have been held in every session of Congress for a decade, but only once—in 1943—did a Federal aid bill reach the floor, and then after 6 days of debate it was sent back to committee. The opposition claimed that allocation of Federal funds would inevitably involve Federal control of local schools.

During the Seventy-ninth Congress sentiment for Federal aid lined up behind two major bills. One was favorably reported in 1946, but it was lost in the closing-day rush.

Several new measures are now pending in both the House and the Senate. Educators, generally speaking, are supporting S. 472, a clearly drawn measure that would offer Federal funds to provide a minimum floor under our educational system. The State schools would have sole jurisdiction over how the Federal funds would be spent. As many educators have pointed out this measure clearly provides good insurance against undesirable Federal control of the schools.

I am informed that this measure starts with an appropriation of $150,000,000 in 1948, and it reaches $250,000,000 dollars in 1950. Other measures, now pending, provide varying sums to be allocated to the States and all are worthy of serious consideration. I specifically referred to S. 472 because I am more familiar with it than I am with S. 199 and the other Federal aid to education measures now pending before this committee.

One big question, of course, is: Can we afford this additional expense? The answer, in my opinion, is that we have never spent enough money to make our school system function properly. It is an undisputable fact that the better the education in a State or city the higher the standard of living. Education makes people good producers and good consumers. Rather than ask, can we afford this additional expense, I believe we should ask ourselves: Can we afford not to make this additional effort to improve our schools?

In closing, I wish to add that if a democratic society such as ours is to endure and prosper, one luxury we can least afford is a static or declining educational system.

I sincerely hope the Congress will do everything possible to place our schools on a standard commensurate with our high democratic goals, for education presents a new frontier for prosperity in America.

I also wish to call the Senate's attention to the following comprehensive study of West Virginia's educational picture, which was prepared by Mr. Phares E. Reeder, executive secretary of the West Virginia State Education Association. This study clearly reveals the need for Federal aid to education:

STATEMENT BY MR. PHARES E. REEDER

During the past 20 years, West Virginia has put forth great effort to improve its public-school system. We know that we have made progress, but the facts provide conclusive evidence which shows that far greater effort must be exerted if we are to rise above our relatively low educational rank.

WEST VIRGINIA'S EDUCATIONAL RANK

The study of education made by the United States Chamber of Commerce and based on the census data of 1940 shows that West Virginia adults rank low educationally. The following rankings high light our status in education:

West Virginia ranked thirty-ninth in the circulation of 18 nationally known magazines.

West Virginia ranked thirty-eighth in the median years of school (8.4) based on population 20 years of age or over.

West Virginia ranked forty-first in percent of population 25 years of age and over that had completed 4 years of college or more.

West Virginia ranked forty-second in percent of population 25 years of age and over that had completed 4 years of high school.

West Virginia ranked forty-seventh in the percent of adults who completed as much as 1 year of high school.

WEST VIRGINIA'S EDUCATIONAL OBLIGATION

The number of children that a State has to educate constitutes to a large extent the educational obligation of that State. According to the most recent information, West Virginia stands first among the 48 States in the number of school-age children, 5 to 17 years old, per 1,000 persons. In 1943, for each 1,000 people in the country as a whole there were estimated to be 216 children in this age bracket. West Virginia heads the list with 281 school-age children in each 1,000 of the population. California stands at the foot of the list, having only 172 children of school age in each 1,000 of the population. West Virginia is forced to provide a school program for its 281 children per 1,000 population out of a per capita income of $790 (based on 1944 data) while California is called upon to support 172 school-age children per 1,000 population out of a per capita income of $1,539.

In considering the extent of the burden of educational responsibility and the per capita financial ability to carry that burden, we wish to emphasize the fact that the West Virginia wage earner is only one-third as able as the California wage earner to support an educational program of equal quality.

WEST VIRGINIA'S FINANCIAL EFFORT

According to information provided by the United States Office of Education and by the National Education Association, West Virginia in 1943–44 ranked second among the 48 States in an effort to support its public elementary and secondary schools. Effort as measured for the States was based upon the percentage which the total current expenditures for education was of the total income payments. At that time, New Mexico, which was spending 2.61 percent of its total income payments for education, ranked first among the States in effort to support education. West Virginia, spending 2.47 percent of its total income payments for education, ranked second. Over the Nation as a whole the percentage was 1.53. The least effort was put forth in Maryland where the percentage was 1.08.

In other words, West Virginia's effort to support education at that time was over 1½ times the average effort put forth throughout the United States and approximately 2½ times the effort put forth in Maryland. Even with this high degree of effort in financial support, West Virginia lagged far behind the United States average and the State of Maryland. In 1944–45, West Virginia's expenditures for education amounted to $93.18 per pupil as compared to a national average of $125.41 and a Maryland average of $113.98. The same year West Virginia's average teacher's salary was $1,526 as compared to a national average of $1,846 and a Maryland average of $2,080.

In 1933, by an act of the legislature, West Virginia brought about a reorganization of school districts for the administration of the public-school system. The new plan of organization provided for a county unit of administration. Today we have only 55 county school administrative units as against 404 units prior to the reorganization. This fact is pointed out in order to show that all nonessential administrative costs have been done away with.

After the establishment of the county-unit system, it was found that many of our rural counties were not able to finance the minimum program of education. There developed within the State the realization that all West Virginia youth must have more nearly equal educational opportunities. As a result of this philosophy and belief and through successive legislative acts, a reasonable equalization of educational opportunities has resulted—limited only by the financial inability of our people to enrich further the minimum program of education.

In order to high light the growth of State aid to our county-school districts, aid necessary for building a more nearly equalized program of education, we submit the following table:

State aid to county school districts

Biennium	State aid	Biennial increase
1931–33	$2,455,518	
1933–35	21,797,478	[1] $19,341,960
1935–37	26,311,838	4,514,360
1937–39	28,334,265	2,022,427
1939–41	28,320,703	13,562
1941–43	30,919,419	2,598,716
1943–45	37,094,214	6,174,795
1945–47	42,292,166	5,197,952
1947–49 (appropriation plus estimated balance from general school fund)	70,043,936	[2] 27,751,770

[1] This large increase in State aid to county school districts came as a result of the organization of the county unit system and in support of the philosophy of equal educational opportunities.

[2] An increase of 66 percent over the preceding biennium.

INCREASED EFFORT FOR NEXT BIENNIUM

The 1947 legislature enacted into law a general-fund budget for the next biennium amounting to $118,732,381. Of this amount more than $87,000,000 were appropriated for all educational purposes, a figure higher than the entire 1945–47 budget of $86,572,908. Of the $87,000,000 set aside for education $70,043,936 represent State aid to be distributed to the respective counties for the support of the public schools during the next biennium.

Extra tax levies voted by the counties during the present year plus the legislative appropriations referred to above will bring public-school expenditures next year to an estimated $53,500,000, an increase of 80 percent over the $29,743,512 spent in 1943–44.

It is estimated that in 1947–48 West Virginia will be spending for education 3.24 percent of our estimated total income payments. In comparing this percentage with our effort in 1943–44, it seems quite probable that West Virginia in 1947–48 will rank first among the States in effort to support education. Even with this greatly increased effort, it is not likely that West Virginia will exceed the national average in school support.

In spite of the strong financial effort that is being exerted, there is much evidence that West Virginia has not provided and, on the basis of her economic ability, cannot provide a thorough and efficient system of free schools. According to 1940 census data, West Virginia adults rank low educationally. The average adult did not finish the seventh grade. As pointed out, the State ranks forty-seventh in the percent of adults who completed 1 year of high school. The erosion of West Virginia's human resources continues. Today, out of every three boys and girls who enter the first grade, one quits before reaching high school and another quits before finishing high school.

Why do we not have better schools—schools that will hold our boys and girls? The No. 1 reason lies in West Virginia's economic inability to provide sufficient money to buy the better schools. We can have better schools only when we solve these problems: (1) better teachers, (2) modern

buildings, (3) adequate program of maintenance and operation, (4) additional supervisory services, (5) improved colleges. None of these problems can be solved unless a much greater investment in education is forthcoming. We are convinced that West Virginia cannot do the job without Federal assistance.

PROBLEM 1. BETTER TEACHERS

How well trained are West Virginia teachers? Of the 15,000 teachers employed for the 1946–47 school year, 308 did not finish high school, 662 more have never gone to college, 500 more have less than 1 year's college training, 2,000 in all have less than 2 years' college training. One out of every seven boys and girls in this State has a teacher with substandard training—a teacher who could not qualify according to 1940 training requirements.

How many teachers are leaving their jobs? Since July 1, 1941, 8,509 teachers have resigned—a 56 percent turn-over in the entire teaching force. Within the current year, if resignations continue at the present rate, 2,548 teachers will have quit the profession. The resignation rate for this year is up 43 percent over last year.

What will keep teachers from leaving their jobs? It is apparent that the answer calls for adequate salaries. In 1945–46 the average earning of West Virginia laborers, exclusive of agricultural and domestic help, amounted to $2,115. For the same year, the average salary for teachers and principals was $1,672. Please note the following average earnings of industrial workers:

Industry:	*Average earnings*
Chemicals and allied products	$2,950
Coal mining and coke manufacturing	2,611
Glass and glassware manufacturing	2,231
Iron, steel, and metals	2,455
Oil and gas production	2,168
Printing and publishing	2,010

The 1947 legislature enacted into law a new minimum-salary schedule without a dissenting vote. This salary schedule was worked out by the State Education Association and was written into law without a single change. The association built the salary schedule on the basis of what it believed to be the financial ability of the State to support the schedule. The salary increases provided by the legislature call for approximately $5,000,000 per year in additional State aid.

The teachers of West Virginia are highly pleased with the response of the public and legislature in providing for the new salary schedule. But even with this important salary advance 6,745 West Virginia teachers having less than 4 years of college training will be paid salaries ranging from $1,305 to $1,917, or an average salary of $1,572. Slightly more than 50 percent having 4 or more years of college training will earn $1,800 to $2,889 per year. Although the new $1,800 minimum for teachers with 4 years of college training provides an increase of $450, this minimum salary is far short of the $2,400 minimum that is recommended by the National Education Association and the many State education associations throughout the country. Only through Federal aid to education will West Virginia be able to finance a minimum salary of $2,400.

PROBLEM 2. MODERN BUILDINGS

Most of West Virginia's school buildings are of wood-frame construction. An estimated 100,000 boys and girls are housed in substandard school buildings. Many of these are a constant threat to the health and safety of our children. West Virginia ranks thirty-sixth in its investments in school property. On the basis of a school-building survey, it is estimated that $50,000,000 would be necessary to provide for the needed school-building construction program. Practically all money made available for educational purposes must be turned into the current school program rather than into permanent improvement. Only through Federal aid can the pressure for current school needs be released so that a reasonable school-building construction program can be got under way.

PROBLEM 3. ADEQUATE PROGRAM OF MAINTENANCE AND OPERATION

The need of paint, the leaky roofs, broken windows, and general run-down condition of many of our school buildings is evidence of the effect of a starvation diet in maintenance and operation funds. The cost of maintaining and operating our schools has increased as much as the cost of living. Salaries of nonteaching personnel are also miserably low—too low to maintain efficient service. The only solution to this problem is that of additional money.

PROBLEM 4. ADDITIONAL SUPERVISORY SERVICES

Although adequate training is the foundation for good teaching, it is true that teachers learn to teach while teaching. The guidance and assistance of a staff of supervisory experts is a wise investment. The average supervisor of instruction in West Virginia has the impossible task of guiding and helping 250 or more teachers. To a large extent this problem can be solved with adequate financial aid.

PROBLEM 5. IMPROVED COLLEGES

An effective system of higher education is essential to the intellectual, social, cultural, and economic welfare of a State. We already have called to your atention the fact that West Virginia in 1940 ranked 41st in the percent of adults who had completed 4 or more years of college. Our full and overflowing colleges and universities face a crisis. They too must have help. But in helping them the State must of necessity take money away from the public schools, for there is just so much cloth and it must be cut to fit the pattern. Federal aid to the public schools in effect also will make possible the improvement of our colleges in that it will relieve future pressure upon the State to exert an even greater effort to support its public schools.

WEST VIRGINIA'S INVESTMENT IN EDUCATION

West Virginia is short $32.23 per child in current school expenditures. As previously pointed out, the Nation spent an average of $125.41 per pupil in 1944–45. We were spending $93.18 per pupil. West Virginia's unit for school administration is the county. Out of our 55 county districts, 51 counties with 95 percent of West Virginia's 400,000 school children provide below national average investments in education.

Eric A. Johnson, speaking in Chicago, March 1946, stated: "Business needs trained workers which only education can supply, and education must have operating funds which business can provide." There is set forth herein conclusive evidence that West Virginia, through its local and State effort, has recognized its responsibility for providing a thorough and efficient system of free schools. The evidence also pointed conclusively to the fact that West Virginia is making an effort to financially support her schools that is second only to one other State. Again it should be pointed out that in spite of this effort we are not providing the kind of educational opportunities that must be provided if America is to continue her greatness as an example of democracy at work. It is hoped that the 80th Congress will write into the law the principles of equal educational opportunities as set forth in H. R. 2953.

The Sort of Pacifism We Need

EXTENSION OF REMARKS
OF
HON. PRINCE H. PRESTON
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES

Friday, May 2, 1947

Mr. PRESTON. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include therein the following editorial from the Atlanta Constitution:

THE SORT OF PACIFISM WE NEED

Three bills on universal military training have been introduced into Congress.

They are supported by many persons, opposed by a few. The Reserve Officers' Association, composed of officers, mostly combat officers who saw service in the recent World War, are among those who support them.

As Gen. Dwight Eisenhower said a few days ago, "The Army officers are the real pacifists. No man who has seen war, or been a part of it, wants another war. The men who spent 3 to 5 years in service and now are in civil life do not urge military training because they want war."

As Secretary of War Robert Patterson has said, "This is a day of the quick aggressor assault. Once attacked, it requires 4 years to create a formidable force. We all know that when the war ended the United States had just attained its full striking force. If we maintain a good force we are not likely to be attacked."

Many other well-known, peace-loving Americans have had something to say. A few of them are:

Bernard M. Baruch: "I favor universal military training so that everyone will have physical training and knowledge of the use of arms, so that he can carry out his moral obligation as a citizen. When we stand up for our rights, we want to be ready."

James F. Byrnes, former Secretary of State: "In the interest of peace, we cannot allow our Military Establishment to be reduced below the point required to maintain a position commensurate with our responsibility, and that is why we must have some form of universal military training."

Warren Austin, United States representative to the United Nations: "The basis of our whole security, under our free democratic government, must be universal military training."

Mrs. La Fell Dickinson, president, General Federation of Women's Clubs: "I personally believe in universal military training as essential to the security of the United States and to the success of the United Nations. Moreover, I believe such training will benefit the young men of our country, and certainly it will save lives if we are drawn into another war."

Representative JAMES W. WADSWORTH, Republican, New York: "George Washington and his immediate successors urged upon the Congress of their day the establishment of a system of universal training. Our failure to heed their advice has cost us thousands of lives and billions of dollars. We must come to grips with this problem and adopt a sound system of universal military training now. By doing so, we shall be safe and better able to lead the world in peaceful paths."

Senator HARRY P. CAIN, Republican, Washington, who was promoted to the rank of colonel on the Ardennes battlefield: "We learned two things from World War II: One, that modern wars come suddenly. The other (lesson we learned) is that nations which are poorly prepared pay the highest price.

Universal military training is the best solution in sight for our own problem. While my mind will remain open on this subject, I shall solidly support Secretary Patterson's recommendation until its opponents offer something better."

Think it over. Write your Congressman. The Senators are WALTER F. GEORGE and RICHARD B. RUSSELL, Senate Office Building, Washington. The Representatives are CARL VINSON, EUGENE COX, JOHN S. WOOD, PRINCE PRESTON, HENDERSON LANHAM, SIDNEY CAMP, STEPHEN PACE, PAUL BROWN, WILLIAM WHEELER, and JAMES C. DAVIS. Write them calmly, asking them to support some sort of bill to make this Nation safer against aggressor attack.

Universal Military Training

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Friday, May 2, 1947

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Hanson W. Baldwin from the New York Times of May 1, 1947:

UMT, A HOT POTATO—MILITARY NECESSITY LEADS ARGUMENTS FOR A LAW TO ESTABLISH UNITED STATES TRAINING

(By Hanson W. Baldwin)

UMT, or universal military training, is the next hot potato that will be handed to Congress.

The President's Commission on Universal Training, which has been sitting in Washington since last December, has explored many aspects of the problem and is now approaching the end of its studies. Its report, when published, will again focus public attention on this controversial problem.

Anticipatory judgments are never final, but it is possible, nevertheless, to outline a number of arguments that undoubtedly have been put to the Commission and which will influence the congressional verdict.

Most of these arguments apply broadly to the general question of peacetime conscription, but many are specifically applicable to the War Department's 6-month training plan or the 4-month plan favored by the American Legion and some other veterans' organizations.

The specific plans under study propose a compulsory period of 4 or 6 months' military training by the Army and Navy for all youths between 18 and 20. In lieu of another 6 months of training, the trainees would be permitted to take any one of the alternatives—enlistment in the regular forces, enlistment in the National Guard or Reserves, entrance to West Point or Annapolis, etc. The program would be limited to training; none of the youths could serve in occupation forces or outside the United States or in military duties in this country.

WAR DEPARTMENT CONTENTIONS

The War Department has held that this measure is essential to support our foreign policy, is vital to our national security, and is the only way of providing an adequate number of trained Reserves to build up the civilian components of the Army, the National Guard, and the Organized Reserves.

The opponents of peacetime compulsory training point out that the legislation represents a fundamental break with all past American concepts. They hold, contrary to the War Department's assertions, that compulsory peacetime training is not, and, per se, cannot, be democratic in that it involves compulsion to military command, the very principle which so many of our emigrants fled Europe to avoid. Moreover, no military organization can be democratic and still be military.

The byproducts of compulsory military training may be both good and bad. There is no doubt that the forced induction of 1,000,000 or more youths each year will greatly increase the power and influence of the military in American life—always a dangerous trend, if carried too far, in a democracy.

On the other hand, the training will probably benefit the health of many of the trainees, though its effect upon the national health will certainly be far less spectacular than War Department estimates indicate—since serious physical and emotional defects often are irremediably formed before a youth reaches 18.

PROGRAM'S COST ESTIMATED

Economically and educationally, the removal of 1,000,000 youths from schools, colleges and work for 6 months each year, and the addition of a very large item, perhaps as much as $3,000,000,000 to $5,000,000,000 to the defense budget represents a backward step. Morally and ethically the training might strengthen the moral fiber of some and weaken that of others, though if military training is to accomplish what the term implies—train for war—it must be tough and realistic and in many ways it must tend to harden and not to refine.

In any case, it is clear that the military services must not—and if they are to be efficient militarily cannot—become educational institutions, Sunday schools or health clinics. The home, the school, and the church must bear this responsibility. Labor unions see an added danger in UMT in that they fear it may tend gradually to restrict the rights of labor.

On the international level, Secretaries Byrnes and Marshall have favored UMT as contributing to a strong military posture, but its critics point out that it has never tended to promote international understanding and peace.

They view the international results of UMT as negative; it might impress those nations that don't matter, but Russia would probably feel neither provocation nor fear because the men in the Kremlin are impressed, not by American mass manpower which they can outmatch, but by American industrial strength, technical skill, and air, and naval power.

Opponents of peacetime training have answered in the negative therefore (and probably to the satisfaction of many influential Congressmen) three of the ancillary questions concerning conscription. Despite Army refutation, it seems clear that peacetime training: (a) will not necessarily promote the domestic welfare of the Nation; (b) will not promote international understanding and peace; (c) is not a progressive democratic force.

Despite these negative aspects of peacetime training, many of its opponents feel—and the Army agrees—that it must be judged primarily upon the basis of its military necessity. Is military training in peacetime an essential, or highly important part of, a sound military policy? Is it a cornerstone—as the War Department claims—of national security? The answer to this fundamental question must determine "UMT's" legislative fate.

Behind the Iron Curtain

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Friday, May 2, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address made by me over Station WMEX on Thursday, May 1, 1947:

Ladies and gentlemen of the radio audience, a great and historic change is taking place in the foreign policy of the United States all because of one nation—Russia.

With an area and a population both larger than our own, Russia is truly the biggest secret on earth.

At the moment she is pursuing an expansionist policy which is viewed with alarm not only by her neighbors but by every nation on earth.

For Russia is the birthplace of communism, which is not only a form of government but a materialistic faith which intends to overwhelm all other beliefs, by fair means or foul.

We know that Communist agents are active in our own country trying to confuse and divide the people as the first step toward undermining our constitutional government.

We also know that their clever line of propaganda might mislead some Americans.

Therefore, for our own protection, it is time for us to look behind the iron curtain and see what communism is and not what it preaches.

Communism is barely 30 years old, that is, as an operating system.

With the collapse of the Czarist Empire, the Bolsheviks seized power on November 7, 1917. Yet, the Union of Soviet Socialist Republics emerged from World War II, as one of the two great powers.

In this connection we must never lose sight of the fact that communism is a world revolutionary movement and is antagonistic to everything that we believe and cherish.

As knowledge is the strength of a democracy, it is our job to find out what life is like under communism, so that we shall not be misled by its unscrupulous propaganda.

In the first place the American and Russian systems are rival economies.

In our country, production is organized on the basis of the private ownership and operation of factories, machines, and otner facilities; a relatively free market for goods, services, and labor; prices determined by the interchange of willing buyers and sellers, the whole economy stimulated by the wants of the people and their productive power.

Business responds to these wants in its endeavor to produce the goods desired at a profit.

The search for profits results in the growth of competing units of production.

Discriminating buyers trade with the lower-cost firms. Mistakes by producers regarding the volume of demand for particular products are borne as losses by producers who have not met market favor.

New balances are continually created at higher or lower levels of production, prices, employment, wages, and profits, as the public expresses its wants and as its buying power changes.

In normal times, these are the factors at work in our American economy.

There is some regulation of business by the Government through such means as licensing, rate regulation, the establishment of parity prices, and the interference with

free consumer choices in articles or services believed to be injurious to health or welfare.

The Soviet economy permits no such freedom of consumers' choice, private property, freedom of enterprise, general competition, and private profit or loss.

Private enterprise is restricted to undertakings which can be managed by the owner-producer without any hired labor such as handicrafts.

In addition, farmers are allowed to cultivate their own very small plots of land and sell this produce on the open market after they meet the standards of production on collective farms.

With these minor exceptions, and some of the enterprises of the cooperatives, everything is owned and managed by the state.

In comparing the two systems, the vital question is, Which provides the highest standard of living for the people?

The few reporters who have had a chance to see what goes on inside Russia, agree that the conveniences which the average American home takes for granted, would be considered as luxuries by the Russians.

It is ironic that communism, which promises to free the workers of the world, should be guilty of the most repressive measures against labor.

By contrast, our American labor unions enjoy the right to deal on equal terms with employers on all matters of mutual interest.

Our industries are privately owned, and collective bargaining is encouraged in recognition of both the common and opposing interests of workers and management.

In different industries and trades, union representatives bring up and negotiate and bargain about those matters which are of greatest moment to them.

These include not only wages, hours, overtime, holidays, shift differentials, standard work loads, methods of remuneration, transfers or changes in work assignment, but also such matters as seniority, the control of hiring and lay-off, the training of apprentices and learners, union participation and agreement in job evaluation, the handling of grievances, and shop discipline.

Many employers have not been happy about the aggressive independence and increased power of unions and are trying to limit their power.

It is a fact, however, that trade unions in the United States are independent, fighting representatives of the workers, interested in the success of the enterprise which employs them, to be sure, but primarily interested in protecting the human and democratic rights of the workers against the indifference, the convenience, or the self-interest of the employer.

In Russia, which boasts of being a paradise for the worker, unions are puppets of the state.

Most American unionists will probably agree with the Russian father who, in spite of the fact that his son was a member of the Soviet hierarchy, exclaimed:

"The worker doesn't much care who exploits him, a private owner or the state.

"When he's dragged off to prison or exiled, it's small consolation to him that it's being done in his own name.

"After all, when the capitalist boss didn't pay me enough, or failed to give me decent working conditions, I could change my job.

"I could propagandize my fellow workers, call protest meetings, pull strikes, join political parties, publish opposition literature. Try any of it today and you'll end up in a prison camp or worse.

"Believe me, we had more chance dealing with a hundred thousand capitalist employers than we have now with one employer, the state. Why? Because the state has an army and secret police and unlimited power.

"There was a time when labor organizations were really spokesmen for the workers.

"There were political schools in which we learned to demand our rights and to fight for them. Who dares protest against anything today?

"The press, which poses as a mouthpiece of public opinion, is now the property of the party and the state.

"It reflects only their opinion."

Such is the disillusionment of one Russian in the revolution which brought him slavery instead of freedom.

Which brings us to the matter of forced labor.

Although the Soviet Government publishes no figures regarding the camps in which prisoners are concentrated, and thus confuses and throws out of line all its other employment figures, there can be no doubt that several million workers are employed under police discipline and receive only miserable keep for their labor.

No foreigner or correspondent is ever permitted to see them.

One Canadian newspaperwoman who succeeded in gaining entrance to a concentration camp was quickly expelled from Russia.

Our information comes from those who escaped, from Russian writers now living abroad, from Americans who have worked in Russia, and from American correspondents who were able to write about the institution of forced labor after they left the Soviet Union.

The camps grew rapidly in the 1930's, when it was decided to keep most of the "liquidated" alive and working for the state, rather than to kill them.

The men and women—for there are large numbers of women among them—work on railways, highways, and canals, cut timber, mine metals and minerals, fill swamplands, help on large construction projects, and open up new areas for settlement.

The population of these camps was drawn from political offenders, nonconforming engineers and intellectuals, recalcitrant peasants, former industrial and other officials, and deviating Communists of the right and of the left. They are exiles who are sent thousands of miles from the towns or villages of their birth.

Let those few Americans who believe that communism is leading the world in improving the conditions of those who toil and labor face this terrible fact.

Conditions, discipline, death rates, etc., are appalling and cannot be described over the radio.

Suffice to say that millions in Russia who have been sentenced to these slave camps, work for years or for life like animals, until their sentences run out or they find a blessed relief in death.

You and I and an overwhelming majority of Americans deplore this callous regimentation of the body, spirit, and mind of man. We, with our freedoms and rights and our standard of living which is not a promise but a fact, would never willingly bow our heads to tyranny.

We have no intention of telling the Russians how they should govern their own country, but we are definitely opposed to the spread of this fanatical faith because we know it is directed against us.

We have seen how some gullible people, deceived by its propaganda, would have the United States sacrifice its security to communism in the name of appeasement. Such a policy not only failed to stop the Nazis but actually encouraged their aggression.

It will just as surely fail with communism unless the American people, informed of the facts, realize that communism has no conscience and will use every trick in the book to weaken us.

Foreigners who try to understand Soviet policy, usually come up with a lot of contradictions.

They fail to see that the Communists believe in "two truths"—one for the people and the world at large and another for the insiders.

Their propaganda is as supple as their ballot.

During the war, the boring-from-within tactics in the countries who were their allies were temporarily suspended.

The morale values of old-fashioned patriotism were suddenly revived.

So-called backward elements at home and abroad had to be pacified with a seeming restoration of religion.

All this was done for expedience.

Some people have fallen for this and have accepted it as proof that the Soviet leaders have experienced a change of heart. In doing so, they are cruelly deceiving themselves.

Until the whole world has been transformed into a single Soviet Union, Moscow will have to maneuver, now attacking, now lying low, sometimes retreating, always spreading the confusion on which it depends.

Let us never forget that their fundamental belief is that the two worlds of capitalism and communism cannot forever exist side by side.

By arming ourselves with the facts of life as lived behind the iron curtain, we shall not be misled by Communist propaganda.

For the protection of our freedoms, our homes, and our developing institutions, it is our job to speak the truth whenever and wherever communism seeks to divide us.

Knowledge is the foundation of our strength, and the evil forces of Communist propaganda shall beat in vain against it.

America in the Postwar World

EXTENSION OF REMARKS
OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1947

Mrs. DOUGLAS. Mr. Speaker, under permission to revise and extend my remarks, I include an article by Mr. Paul Hutchinson appearing in the Christian Century for March 12, 1947. Mr. Hutchinson is the managing editor of this undenominational magazine of the Protestant churches. I read this article, Mr. Speaker, with great interest and I call it to the attention of the Members of the House.

The article follows:

AMERICA IN THE POSTWAR WORLD

HONOLULU, February 18.—This, I realize, is the subject for a book, not for a single letter in a publication whose space limitations have been all too painfully clear to me for, lo, these many years. Nevertheless, it is a subject which cannot be left out of any attempt to estimate the prospects for world peace. I am constrained, therefore, to deal with it, but in order to hold my reflections within governable limits I will try to concentrate on aspects of the topic which many Americans are in danger of ignoring. In what follows it will be understood, I trust, that I am trying to stand outside America and report how the part the United States is playing in world affairs looks from that vantage point.

The first reminder most Americans need is that, to the other peoples, when the prospect of future peace is under discussion the United States is regarded as the big question mark. I am sure that most of my countrymen do not realize this, and nothing that can be said will make them believe it. To them, Russia is the big problem. Their

press, their politicians, their radio, their generals and admirals, the discussions in their clubs and the informal conversations in their commuters' cars and country stores all make it appear that if any nation constitutes a particularly thorny international problem, Russia is that nation. In the eyes of the rest of mankind, however, this is not so. Russia is a problem, and a big problem, for the other nations. I tried to show why this is so in my previous letter. But the big problem is the United States of America.

A second reminder, which likewise may shock many Americans, is that our country is regarded elsewhere as the great champion of conservatism, and on occasion even of reaction, in international affairs. We have become so accustomed to think of ourselves as leading the van, and of most other nations as saddled with old, outworn, tradition-encrusted systems which presently they will cast off to follow our pioneering example, that it is difficult to readjust our minds to the fact that others now view us as stalwarts of the status quo. Yet brief reflection should show us that they do and why they do.

The rest of the world is going left. It is going collectivist. This is as true of Great Britain, France, Scandinavia, the British dominions, India, and China as of nations in the Russian orbit. (The collectivism of many of these may not be communism, but it will be collectivism just the same.) The United States is going right. At home, it has a Congress which has had enough of the mild collectivist tendencies of the New Deal. Abroad, ever since we began the process of liquidating the war, from Darlan to Chiang Kai-shek, we have backed conservative forces. Understand, I am not making a blanket charge of error in so doing. In certain instances I believe that, in view of all the circumstances, we did the wisest thing. But that does not alter the fact that our record, from the time when Mr. Roosevelt started parceling out the postwar world in diplomatic poker sessions with Mr. Churchill and Mr. Stalin, has uniformly been one of trying to put or keep conservative governments in power.

A searching question for future American policy arises at this point. If the United States remains a bourgeois stronghold, is it possible for it to play any other role in world affairs than that of the champion of conservatism? Can it be a torch of promise to the world's exploited masses while it is devoted to the preservation of the capitalist order? It is time to examine that "torch of promise" idea which the sentimental view of America held by most Americans has so cherished. The GI's were shocked by some of the discoveries they made about the way in which the peoples of other countries regard the United States. Anti-American riots in China are dealing another blow to the romantics. Behind the bitter words to which the GI's listened, behind the riots, there is hunger and envy. The envy, the bitterness, will persist while the hunger persists. And a wealthy, abundantly fed, bourgeois America, which naturally wants to keep the apple cart as undisturbed as possible, will find it no easy matter to command the confidence of desperate, revolution-intent peoples.

For the fact is that the masses of the rest of the world, however limited their information on issues of government and social organization, have at last got one simple idea through their heads. They believe that the conditions under which they have lived can be changed, and they mean to change them. They mean to have a better livelihood for themselves and better opportunities for their children. Their political and economic ideas do not go much beyond that. They don't have to. That is enough to make this a revolutionary age. As General Smuts—who is for liberalism everywhere except at home—put it, "Humanity has struck its tents and is on the march." Marching toward what? I have already answered: Collectivism. Even the Roman Catholic Church has discovered this; the Catholic parties which are attempting to ride the European maelstrom are, most of them, Christian Socialist parties.

I have frequently doubted during these months while I have been observing the international policies of my own country from abroad whether even the White House and the State Department grasp the nature of the difficulties which must be overcome before the United States can gain this sort of world leadership. True, President Roosevelt thought he had gained it and dramatized his claim all the way from Casablanca to Yalta. But all he had really proved, as time has shown, was that while American funds continued to gush forth from the lend-lease spring, America's popularity knew no bounds. Even crafty old Ibn Saud was ready in those halcyon days to whoop it up for a ride on the American bandwagon.

The lend-lease spring has gone dry, and America's world leadership is sagging. The Christian Century says, rightly, that a "democratic offensive" is needed to restore it. But the primary requirements for a successful democratic offensive are two: First, that we shall see that the people in the countries we wish to keep in the democratic orbit are well enough fed, clothed, housed, and employed, and provided with enough opportunity to lift them out of misery; second, that we shall support the local democrats who offer the most honest promise of providing what the Christian Century calls "peace, bread, and freedom." What chance is there for adoption of the first costly policy in a Congress that is having conniption fits over so minor a matter as the renewal of the reciprocal trade agreements or of the second in a Congress that thinks David E. Lilienthal is a dangerous Red?

But I must get back to the main line of this letter. A third thing many Americans do not yet realize is the extent to which the United States is feared by the rest of the world. It is not only Russia that fears us; they all fear us. They fear our power and our purposes. And sometimes they fear our weaknesses as much as our strength.

The nations on which we count for friendship fear absorption in a growing American sphere. I doubt whether many Americans suspect how general this fear is in England, in the British dominions, in Latin America, in Scandinavia, in China. Even in Japan, where many industrialists look in this direction as the best hope for a revival of Japanese economy, their hope is accompanied by fear of the exposed position in relation to Russia in which, as an American satellite, their country will be left. Once in the American orbit, these nations fear that the United States will deal with them on terms which condemn them to restricted levels of industry and low living standards.

I

Because of their fear of Russia or of internal Communist revolt, such nations feel that they have no choice but to play along with us. But they do not love us, and they do not trust us. They fear us. They fear us as much as they fear Russia, although in ways less immediately divisive. Listen to the talk in London or Paris or Stockholm or Shanghai for a few days, and you will quickly discover how pervasive is this feeling. Opinion there holds that the United States will offer support as long as it can use these other states to its own short-envisoned advantage, but that the minute anything they do may threaten our profits, we will cast them adrift.

This fear in which even our "friends" hold us has also its negative aspects. They fear a coming collapse in America and what it will do to them. A feature review in the New York Times of a current economic study begins: "The United States is proceeding headlong toward the worst economic crisis of all time." That is exactly what most of them believe, and what such nations as England and Sweden are desperately trying to hedge against with their nationalization of basic industries and the Swedish trade agreement with the Soviet Union. Other nations in the democratic camp are in such an economically helpless position that all they can do is cross their fingers, try to get as much help from us as possible as quickly as possible, and hope for the best. In occupied Germany and Japan, the democrats can only hope that an economic debacle in the United States does not cause us to pull out and leave them to face the Communist challenge alone before we ever arrive at a constructive policy, much less carry it to completion.

II

This fear with which the United States is regarded takes many forms and is fostered by many factors. One of these is our military policy. To the rest of the nations, our cries of insecurity sound like the rankest hypocrisy. For with our possession of the atom bomb and our demonstrated gigantic industrial potential we seem more secure than anyone else. Agitation regarding our insecurity is therefore interpreted as simply a device to induce the American people to approve a huge navy and naval base system, backed by a mass conscript army. And that, in the eyes of others, is held to mean preparation for other overseas occupations, since a mass army has no other purpose, in days of atomic and rocket warfare, unless it is needed to hold down a revolting population at home. No one believes that the United States stands in danger of that sort. Moreover, the rapid increase of military participation in our administrative and diplomatic processes has not escaped notice abroad. All these things create fear.

Our diplomacy is likewise a source of apprehension. What is our policy in Germany? The kind of naked military rule in which we are now involved is leading nowhere, unless it be to prolonged confusion. We have discarded the outrageous Potsdam policy, and that is to the good. But what policy have we to take its place? Perhaps the Moscow conference will show. So far, however, we seem to others to have no affirmative policy in this key spot. Mr. Dulles' proposal for an economic federation in the parts of the Rhine Valley where we have a free hand has awakened no response from the American public. Seemingly, Americans are not interested? Then what are we going to do in western Europe? Because no one knows, everyone is afraid.

What is our policy with regard to Great Britain? How far will we back the interests of that beleaguered empire? And how long? Are we entering into secret commitments with the British General Staff and with the British Foreign Office? To other nations, it is amazing that the American people should not be any more interested in these questions than they appear to be. What is our policy toward Russia? Is it quarantine, or isn't it? What is our policy toward China? For the moment this has been partially cleared up by General Marshall's statement and by the American withdrawal. But what if Chiang Kai-shek's Nationalist government falls, especially if it falls to a Communist uprising? What will we do then? The accumulation of such uncertainties adds up to fear.

Our industrial drive creates fear. We now have a war-expanded productive machine which, largely bereft of Government buying, must find markets for approximately 50 percent more goods than we were turning out in 1938—or else. That or else puts a terrific impulse behind our attempt to penetrate export markets. But it is not yet clear that we do not intend to return to our high tariff policy. The result, insofar as we are able to bring it off, will be that American economic imperialism which is already being denounced all around the globe. Economic imperialism, when it runs into trouble,

has a way of demanding support from political imperialism. The result? Fear.

Limitations of space compel me to crowd into a few concluding words what is in some respects the most important fact concerning America's relations with other nations and our service to lasting peace. Are the American people sufficiently taking into account the tension being generated by our exclusive possession of the atom bomb? I doubt it. Yet all our protestations of devotion to world organization, all our expressed hopes of peace through the United Nations, are discounted by Russia because of this. Russia thinks what we really mean is that we are for peace and a world organization if the other nations (in especial, Russia) accept our blueprints. Otherwise, we fall back on our possession of the bomb.

III

No international confidence, no honest cooperation and so no lasting peace can be built on this foundation. The thing that will come out of it is what is already coming out of it—an atomic arms race. And that will end, when the Communist world gets the atomic and biological weapons it is after, in a show-down. The American people will first be stunned and then enraged by the catastrophic nature of that eventuality.

How is that catastrophe to be escaped? By giving Russia the bomb now? Henry Wallace and those who follow his leadership, as well as Communist Party members and fellow travelers in the United States, say yes. I find it impossible, after seeing Russian expansionist policy in action in so many parts of Europe and Asia, to say anything but no. I do not believe that the men in the Kremlin can be trusted with such a weapon. (I am not now arguing the question whether the men in Washington can be trusted with the bomb. The fact is that we have it, and the pursuit of lasting peace must go on from there.)

But if we do not give Russia the bomb, and the result is an atomic arms race, what then is the hope of peace? At this point I must confess to seeing only a very narrow and flickering ray of light. Perhaps readers of the Christian Century will not regard it as a ray of light at all; they may dismiss it as a will-o'-the-wisp. This ray of light which I think I see is the possibility of a sufficiently rapid development of the constructive, peaceful uses of atomic fission to raise living standards everywhere to a degree sufficient to make senseless a military outcome. The scientists tell us this can be done. Of course, we should keep working for the universal adoption of the Lilienthal plan—or something equally promising—for inspection and control of atomic plants. Yet if we fail to achieve this we might still, by pouring our resources of science and materials into raising the standards of living of all peoples, resolve most of the tensions of this desperate world. However, if that is what we mean to try to do, it is terribly late to start.

PAUL HUTCHINSON.

The Palestine Problem

EXTENSION OF REMARKS

OF

HON. T. MILLET HAND

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, May 2, 1947

Mr. HAND. Mr. Speaker, since my first day in Congress and before, I have been greatly concerned with the Palestine problem. I have done everything that I know how to do to be of assistance. Now that the problem is on the calendar of the United Nations, I have expressed my views to the Hon. Warren R. Austin, our chief delegate, with the hope that he will urge a solution in accordance with the expressed policy of the Congress.

Under leave to extend my remarks, I insert a copy of my letter to him dated April 19 1947, together with his prompt reply:

HOUSE OF REPRESENTATIVES,
Washington, D. C., April 19, 1947.

Hon. WARREN R. AUSTIN,
Chief United States Delegate,
United Nations Organization,
Lake Success, N. Y.

MY DEAR SENATOR AUSTIN: I am, and have been for a long time, very gravely concerned with the Palestine problem, which seems to worsen rather than approach a solution.

It is needless to point out in detail the bitterly disappointing conduct of Great Britain in repudiating the solemn and official pledges made by His Majesty's Government regarding free immigration to Palestine, and the ultimate establishment of a Jewish National Home. I am taking the liberty, however, of enclosing a statement I made on the subject to the Congress on July 12, 1946, which, I think, points out very clearly the wholly unjustified breach of covenant.

The disappointment with which I have watched the tragic and time-wasting maneuvers of Great Britain has been intensified by the unconscionable and insulting statement made by the British Foreign Minister, Mr. Bevin, in London last February, in which, in an amazing piece of political chicanery he attempts to escape the blame, which is properly his, by complaining about American pressure in behalf of Jewish rights in Palestine.

Notwithstanding Mr. Bevin's speech, I sincerely trust that American pressure will continue and increase until a humanitarian solution is found, which will alleviate the tragic suffering of the remnants of the Jewish people in Europe.

The American Zionist Conference held in Washington January 17, 1947, in dealing with the new hope that the United Nations might solve this problem, said this:

"Great Britain's announced decision to refer the Palestine question to the United Nations affords an historic opportunity to the members of that international body. A generation has passed since the nations of the world resolved to end Jewish national homelessness and to reestablish Jewish nationhood. They entrusted the British Government with this great task, but the guardian proved unfaithful to its trust and sought to frustrate its fulfillment.

"Once again the international community, represented by the United Nations, can reaffirm the decision made following the first World War. To that end, the main elements of the solution—freedom of Jewish immigration to Palestine and the establishment of the Jewish state—should be spelled out in clear and precise terms.

"It is only reasonable to expect the United Nations, in dealing with this problem, to be faithful to its role as the guardian of international law by issuing an interim order that pending the final decision, the mandate for Palestine—the only internationally valid instrument governing that country—be fully applied, free from all restrictive enactments imposed by the mandatory government in violation of that fundamental document."

It is this statement that I want to call most particularly to your attention with the hope, and with the confidence, that you will do your full part in the deliberations of the United Nations on Palestine on April 28.

The American people are deeply sympathetic to the appeal of the Jewish people for a place of refuge. The American Congress has formally expressed its policy in this regard. I pray that you will do what you can.

Cordially,

MILLET HAND,
Member of Congress.

APRIL 23, 1947.

Hon. T. MILLET HAND,
Second District of New Jersey,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN HAND: Thank you for your letter of April 19, enclosing copy of the extension of remarks made by you on July 12, 1946, Bevin breaks Palestine pledge.

I greatly appreciate your courtesy in making your views known to me in this way. I assure you that I will consider them carefully in connection with all of the evidence available to the United Nations on this subject.

With cordial regards, I am,

Sincerely yours,

WARREN R. AUSTIN,
United States Representative
to the United Nations.

Human Stakes at Geneva

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1947

Mrs. DOUGLAS. Mr. Speaker, we cannot have political peace without economic peace.

The International Trade Conference being held at Geneva is of paramount importance to every man, woman, and child in the United States.

Under permission to revise and extend my remarks, I include the following article by Malvina Lindsay entitled "Human Stakes at Geneva," which appeared in the Washington Post on April 3, 1947:

HUMAN STAKES AT GENEVA

(By Malvina Lindsay)

PEACE AND PRICES

The average family is probably not aware of how a meeting next week in far-away Geneva, Switzerland, may affect its pocketbook and even its safety. But the International Trade Conference—whose name suggests merely a group of experts about a big table bandying statistics—will be jockeying behind its dry figures with the future budgets, pay checks, jobs, ambitions, and security of billions of human beings.

While the Nation watched eagerly the San Francisco Conference, where the latest political attempt at world cooperation was born, it is not likely there will be comparable breathless waiting to see if Geneva can produce the infant of economic peace. Yet whatever is done at Moscow or Lake Success will be largely a loss if Geneva fails.

Also, oddly, the average citizen repeatedly reads or talks of a predicted depression of 1952 or 1955, wonders idly why somebody doesn't do something about it, yet fails to recognize that the men in Geneva may have that opportunity in their grasp—if their governments will back them up.

A few national women's groups that worked for the Dumbarton Oaks proposals are trying to arouse their membership to what is at stake at Geneva. Yet comparatively few of the masses of women who are the buyers of the Nation recognize that future costs and quality of goods—as well as their husbands' jobs and the avoidance

of World War III—may depend on whether the 18 nations in the conference are able to write an International Trade Organization charter and draw up trade agreements with each other.

Also at stake is whether the average family will be freed from the constant toll it pays to business monopolies known as cartels. One of the American proposals for the Trade Organization charter is that cartels be prevented by national and international action from restricting the commerce of the world.

If this were done it would mean that prices of hundreds of products used daily, as cooking ingredients and utensils, cosmetics, apparel, household devices, medicines, foods could not be maintained by secret agreements among industries and by planned scarcity, but would be determined by democratic free competition. It would mean, as Darel McConkey points out in his recent study of cartels, Out of Your Pocket, that the housewife would not be constantly contributing "a few mills into the cartel turnstile."

If tariff agreements are worked out satisfactorily at Geneva, it will mean that many high-class products from abroad, as woolens, linens, pottery, handicraft, foods, will be available to the average American at less cost, and that American cotton, wheat, apples, tobacco, farm machinery, trucks, motion pictures, other goods, will find freer and larger markets abroad.

Thus the expected—and feared—excess production in this country could find a market, industries expand instead of contract, new jobs be created, mass unemployment prevented. History might even be stopped from repeating itself with another world economic slump, and the attendant trade wars which preface the shooting.

Since lessons of the 1930's taught that world trade cannot be a one-way arrangement, that this country cannot export goods profitably without also importing them, so that its customers abroad will have something to pay with, American consumers as well as their Government face the trade problem.

The Government will need to offer tariff concessions on products that can best be produced abroad and on which foreign nations' economic life depends, and ask concessions from other countries on goods this country is best equipped to produce. Consumers will need to become world conscious in their buying, recognize that their use of products of potential customers now trying to beat back economically is not only good business but the main road to peace.

Henry A. Wallace

EXTENSION OF REMARKS
OF
HON. ELLSWORTH B. FOOTE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Friday, May 2, 1947

Mr. FOOTE. Mr. Speaker, I ask unanimous consent to have inserted in the Appendix of the RECORD a United Press article of April 24, 1947, setting forth the views of my British namesake relative to the latest escapade of Henry Wallace:

FOOT GIVES HENRY THE OLD BOOT

BOURNEMOUTH, ENGLAND, April 24.—Henry Wallace was censured for criticizing his own Government today by Dingle M. Foot, one of the top leaders of the British Liberty Party.

"We should make it quite clear that we have no sympathy with Mr. Wallace's criticism of his Government," Foot declared at the opening of the Liberal Party's annual conference.

Foot, who is the son of Isaac Foot, newly elected president of the Liberals, said his party always had admired and respected Wallace, but that now it appeared some distinction must be made between Wallace's policies and his economics.

"We welcome President Truman's action with regard to aid for Turkey and Greece," he said. "No one should make the mistake of supposing that Mr. Wallace speaks for the whole or even for the majority of American liberal opinion."

"The picture which he draws of a reactionary United States wantonly seeking a quarrel with a demure U. S. S. R. is a picture which I do not recognize," Foot said.

The remarks came as Foot moved adoption of the Liberal Party's 1,000-word policy statement on world affairs. Earlier, his father called on the party to declare its complete independence of other British political groups.

Opportunity Implies Responsibility

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Friday, May 2, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, one of the forward-looking industrial organizations in my district is the Young Radiator Co. at Racine, Wis. Mr. Fred Young, president, is a progressive and outstanding industrial engineer. The firm that bears his name is one of the leaders in its chosen field, and it has at all times endeavored to maintain harmonious relationships with its employee group. From time to time Mr. Young brings home to his workers thought-provoking articles. As a part of my remarks, I am including the most recent, entitled "Responsibility":

STEADY WORK

Week in and week out, the Young Radiator Co. has provided steady employment for those who want to work. Never has the work week been less than 40 hours. There is an ever-increasing demand for our product, and our production curve is forward and upward. With more than a quarter of a century of engineering skill and reputation in the field of heat transferring equipment back of Young Radiator products, it is with confidence and pride that we look to the future for business which will provide you—our workers—with steady work and income.

STEADY PAY

Opportunities to advance—with steady work comes steady pay. You have reasonable assurance of a steady income here that few companies have. For unskilled labor for 40 hours per week your earnings per week for the first month will be $36.40, second month $37.40 per week, third month $39.10 per week. From then on, if you are industrious and your aptitude and interest increases, you can make application for a production job. The average wage for production workers is $60 per week; some men are making $100 per week.

YOUR RESPONSIBILITY TO YOUR FELLOW WORKER AND THE COMPANY

You and your family, too, all have an interest in our business—so here is where you come in.

All of you are important in our organization and program. Each of you is important to our success as a whole. Everything you do, either good or bad, affects your fellow worker and your department, too. When you are absent, unless you are quickly replaced, production goes down. If ever you should decide to leave us—cooperate with us and your fellow workers, giving us a week or two notice in order that we might replace you and not disrupt the work in your and other departments. Every job is dependent on every other job because of continuous flow of work from department to department.

COMPANY RESPONSIBILITY TO YOU

Our responsibility to our workers: To keep sufficient market and work in varied products so you can be assurred, with reasonable conditions, a weekly and monthly pay return. Your company has never lacked in this and we pledge ourselves in your and our mutual behalf to providing jobs and work and within these precepts, viewing our responsibilities, we ask you to respect your part in return.

AS WE WORK TOGETHER

Because so much of our time is spent at work, we like to work with friendly, agreeable people. Each member of the force can help to make it a more pleasant place to work by your own attitude and conduct on the job. Young's is noted for its friendliness and character of its personnel, and, therefore, is a good place to work.

Let us all work together for the future of our company—for as it progresses, we will all progress. Our company's reputation is your future.

Message by the President and Address by Senator McClellan to National Rivers and Harbors Congress

EXTENSION OF REMARKS
OF
HON. JOHN L. McCLELLAN
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES

Monday, May 5 (legislative day of Monday, April 21), 1947

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a copy of the message sent by President Truman to the thirty-seventh annual convention of the National Rivers and Harbors Congress, held in Washington, D. C., May 2 and 3, 1947, and a copy of the remarks I made at the opening of the congress.

There being no objection, the message and address were ordered to be printed in the RECORD, as follows:

THE WHITE HOUSE,
Washington, April 25, 1947.

DEAR SENATOR MCCLELLAN: I am glad to convey to the members of the National Rivers and Harbors Congress my deep appreciation of the public service rendered by this organization.

The need to protect and improve our natural resources has become acute as a result of the war, and we must plan and carry out an adequate program to this end at all times if we are to avoid waste. We canont risk retarding our growth by lack of the necessary instruments of progress. Navigation, flood control, conservation, and reclamation are among the important activities upon which our prosperity as a nation depends.

I therefore take pleasure in commending the National Rivers and Harbors Congress

on its untiring efforts to foster and guide the development of our water and land resources, and in extending my sincere wishes for a highly successful meeting.

Very sincerely yours,

HARRY S. TRUMAN.

ADDRESS OF HON. JOHN L. M'CLELLAN, OF ARKANSAS, PRESIDENT OF THE NATIONAL RIVERS AND HARBORS CONGRESS, AT THE OPENING OF ITS THIRTY-SEVENTH ANNUAL CONVENTION, WASHINGTON, D. C., MAY 2, 1947

Distinguished guests, delegates of the convention, ladies, and gentlemen. It is indeed a high privilege and an esteemed pleasure to greet you at this opening assembly of the thirty-seventh convention of the Congress. It is most gratifying to all of us that our organization is now able to resume its long-established custom of holding annual conventions for the discussion of important problems associated with our natural waterways resources and their future development, and for the transaction of such business as may come before the congress. Your presence here today—this excellent attendance—is a strong manifestation of the progressive spirit that abides with our people and gives reassurance that our Nation is determined and destined to continue setting the pace in the future march of world progress and civilization.

Due to the war, we were compelled to suspend holding our annual conventions, but now that we are in the midst of the postwar era, in the period of readjustment, in the shift back to a peacetime enterprise and economy, we have the opportunity of further service to our country by making substantial contributions to its future growth and progress as we have contributed in the past 45 years since the National Rivers and Harbors Congress first came into being.

It became necessary during the war to restrict Federal public works to only those projects that were essential to the prosecution of the war and to our national defense. Worthy and needed improvements in our river development and conservation programs, which normally would have been constructed during the past 5 or 6 years, had to be deferred, but during that time Congress continued to promote the general program by enacting authorization legislation that has created a large backlog of approved reclamation, flood control, and rivers and harbors projects. They can now go forward as soon as the Congress can advisedly, taking into account other economic factors incident to Government expenditures, provide the necessary funds for their construction.

We have today some 434 flood-control projects, with an estimated cost of $2,122,000,000, authorized. Of these projects, 165 are now in course of construction. Work has not yet been started on 269, for the majority of which no appropriations have yet been made. We have 280 rivers and harbors projects, with an estimated cost of $3,051,000,000, authorized, with 56 now in course of construction and 224 not yet started.

While there are many other worth-while improvements yet to be developed and submitted for congressional action, still we have this large reservoir of public improvements on rivers and harbors ready to go when the money for construction can be made available.

Experiences we gained during the war, conditions that now prevail in the aftermath of war, and the exactions the war made in heavy drains on our natural resources, emphasize as never before the wisdom and necessity of our employing all prudent measures for the conservation of our natural resources and the extensive development of them for their fullest utilization and benefit to our people and the Nation.

In the past, many who had not caught the vision of natural resource development condemned our rivers and harbors and flood-control projects as being of the "pork barrel" quality, and charged that legislation and appropriations of this character were wasteful expenditures of public funds. Such charges have long since been refuted by benefits that have accrued as a result of such improvements already constructed. The American people are no longer deceived or confused by such attempts to discredit and condemn our program, the worth and value of which has been demonstrated beyond successful challenge and which has become irrevocably established as a sound national policy. Instead, our people expect the Congress, and the Congress has the responsibility, by appropriate legislation, to continue and expand, as economic conditions may warrant, the policy and program of developing our natural strength and wealth.

Notwithstanding the increasing need for the advancing of our waterways program and the general favor and popular approval which has been accorded to it, we are confronted with a problem of serious magnitude in attempting to carry on construction in this postwar period due to the economic burden occasioned by our national debt, the current operating expenses of Government, and the highest tax rate in the history of the Nation. Under these circumstances, we can hardly hope to go forward with the full speed we should like to make and which would be possible and warranted under normal conditions. All these factors must be weighed and taken into account. But, when viewed in their proper light and with a correct perspective, though our national debt is tremendously high, our current cost of Government and our present tax rate burdensome, the Congress and the Nation will not be justified in pursuing a policy of extreme conservatism that would place this program in jeopardy, and stop or seriously retard the development and utilization of the bountiful water resources with which our Nation is so fortunately endowed.

While we are all stanch advocates of economy in government, there are degrees of economy and conservatism that are wise but when carried to extremes become unwise and improvident. The continuation of a reasonable construction program of these essential improvements is imperative and indispenable to progress, to the increasing of our national strength, and to the welfare of our people. To stop construction and lose all of the momentum that has been gained by years of intelligent effort would be the height of national folly.

Expenditures of government can properly be placed in different categories. There are expenditures for many functions that, although they are essential functions of government, do not yield dividends in terms of tangible material values. There are other expenses of government that properly come within the category of capital investments, just as business interests and private enterprise make investments in plants, equipment, and expansion for greater efficiency and increased production. Flood control, reclamation, and rivers and harbors projects clearly fall within the category of Government investments. Many of them yield substantial returns to the Government on the investments made and, in fact, are self-liquidating in the course of a very few years. Many, many others enhance our national wealth and increase the annual income and thus greatly broaden our tax base. This contributes to a higher national income and standard of living for the individual citizen and to increased tax revenues for the Nation, and municipal, county, and State governments.

It would therefore, be highly reactionary and injurious to the country for the Congress to deny reasonable appropriations to keep this program active and progressing.

I sincerely hope the Congress will not commit such a grave error but that we will have the sound judgment, good wisdom, and the courage to carry on in the fine traditions of the progress and development that have made our country preeminent and supreme among the nations of the earth.

Soil Conservation

EXTENSION OF REMARKS

OF

HON. CARL A. HATCH

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Monday, May 5 (legislative day of Monday, April 21), 1947

Mr. HATCH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the column appearing in a recent edition of the Washington Post, by Mr. Marquis Childs, discussing the subject of soil conservation and certain relations between our country and the Republic of Mexico.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WASHINGTON CALLING

(By Marquis Childs)

SOIL CONSERVATION

Behind the warm-hearted greeting for President Miguel Aleman, of Mexico, is a serious objective. The hope is to link the two countries as equal partners in a working relationship.

President Aleman and his Secretary of Finance, Ramon Beteta, want loans to promote Mexico's industrial and farm production. They realize that greater production, and quickly, is the only cure for Mexico's threatening inflation. In both Washington and New York, they are discussing loans from the United States, from the World Bank, and from private banking sources.

It so hapens that there is one kind of aid which President Truman can offer to President Aleman without any fear of what Congress may do or say. In fact, it is Congress that seems determined to make this form of aid possible.

The suggestion originally came from Secretary of Agriculture Clinton Anderson. Shortly before Aleman's visit, he reminded the President that an economy-minded Congress seemed determined to pare down the reclamation and soil-conservation work being done by our Government. This, said Anderson, would release a number of top technicians and experts who understand how to work with soil and water to make the earth give forth in abundance. The United States today has the greatest body of such experts in the world. What is more, they have a high scarcity value. Nations all over the world want to use their technical skill to build up basic natural resources.

If a number of these experts could be encouraged to go to Mexico, they could at least be kept in this hemisphere, where they would help to build the productivity of a good neighbor. President Truman thought well of the suggestion and passed it on to his friend President Aleman.

Mexico already has an extensive program of dam building and irrigation, with her own corps of technicians. Expansion of this program would mean an immediate demand for more men with the proper know-how, and such men do not grow on trees.

Particularly in Mexico's border States, development of irrigated land has gone on at a pace more rapid than in the United States of America. That was one reason for the Mexican-United States of America water treaty which was ratified by the Senate in April 1945. Mexico was beginning to use water from the Colorado River at a rate of increase greater than in this country.

India, Iran, Iraq, Palestine, and many other countries with a water-land-use problem are looking to the United States for

technical help. Private engineering firms are sending experts out on private contract. But there is a ceiling on this kind of help, since the number of Americans with the proper skills and knowledge is definitely limited.

One of the most striking examples is that of Afghanistan, a little known country which lies across the Khyber Pass between India and Iran. Some years ago, a visitor from Afghanistan came to this country to learn about our irrigation and conservation projects. The visitor, Mohammed Kabir Ludin, talked with officials here in Washington and inspected projects in the Western States.

Now commissioner of public works in Afghanistan, Mohammed Kabir Ludin is putting into practice what he learned in the United States. Using money which his government has on deposit in New York, he signed a contract with a United States engineering firm to initiate a sizable irrigation project.

In this is a contrast that is very funny. At least, it is funny in one sense of the word. Afghanistan, a small country in the highlands of the Himalayas, can afford what the greatest power in the world says, through its Congress, that it cannot afford.

It should, of course, be put another way. The richest country in the world can hardly afford not to conserve its soils and to develop new soil and water resources. Economy that shuts off such projects is tragically short-sighted.

That is obviously something our neighbors south of the border have learned. They will borrow money and they will borrow technicians to restore and replenish the good earth of Mexico. We seem to be determined to go in just the opposite direction, chasing an economy wholly false in terms of the basic wealth and the basic needs of our own people.

The Faith of the Fathers

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, May 5 (legislative day of Monday, April 21), 1947

Mr. ROBERTSON of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "The Faith of the Fathers," which I delivered at the Cape Henry Day program, commemorative service, Cape Henry, Va., on April 27, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

At this season of the year, when the rebirth of nature confirms our faith in immortality and the beauty and fragrance of spring flowers "glide into our darker musings with a mild and healing sympathy," it is meet and proper for us to gather at this historic spot and honor the memory of those who founded a new empire dedicated to freedom, equality and justice.

The fact that 340 years later and in the foremost file of time we, their heirs, are privileged to live in the most-favored Nation of the world is no accident. "Without the shedding of blood," said St. Paul, "there is no remittance." The blessings of democracy we now enjoy were bought with a price and that rich heritage will not be passed on to succeeding generations if this day and generation adopts as its philosophy of life "enjoy thyself."

The philosophy of ancient Greece was "know thyself;" of ancient Rome "discipline thyself." But the philosophy of the Christian religion, upon which a new experiment in self-government was to be founded, was symbolized by the cross erected on this spot by the first settlers—"give thyself."

In 1607, while the mother country had made notable progress since Runnymede in combatting the injustices of feudalism and the divine right of kings and its common law had declared a man's home to be his castle, the fact remained that the castles were the property of the privileged few. The masses had to be content with shelter they did not own and to rely, to a large degree, upon the kindheartedness of an overlord for the essential needs of food and clothing..

The first settlers came to this virgin land to secure homes of their own and the personal and economic freedom implicit in their ownership. As compared with the architecture of a mature civilization those homes of hewn logs in the wilderness were crude. But in their building the founders of our Republic experienced the inspiration of freedom of action, reacted to the stimulating influence of a system of private enterprise and learned, by stern necessity, that the foundation of democracy is personal responsibility.

The practical and successful application of that fundamental principle attracted the attention of freedom-loving people throughout the world. In the brief span of a half century weak and struggling settlements at Jamestown and Plymouth had developed into Thirteen Colonies, with a population of 6,000,000 people. Then it was that faith in their institutions and the courage of their convictions was challenged by the mother country. Oh, how proud we in Virginia can be of the fact that in the ensuing struggle for the preservation of the inalienable rights of life, liberty, and the pursuit of happiness Virginia furnished the leadership. When representatives of the Thirteen States met in the first Continental Congress in Philadelphia it was that immortal Virginia orator—Patrick Henry—who sounded the keynote for independent action when he said: "I speak, now, no longer as a Virginian. I now and henceforth shall speak as an American."

The ashes of Patrick Henry were buried in Charlotte County but the spirit of Patrick Henry lived on. "For the whole earth," said Pericles, "is the sepulchre of famous men; and their story is not graven only on stone over their native earth, but lives on, far away, without visible symbol, woven into the stuff of other men's lives."

In two global wars we have fought to preserve the principles of our founding fathers, and yet the world peace for which we sacrificed blood and treasure eludes our grasp. Instead of the world being made safe for democracy we find today the totalitarian and anti-God ideology of communism feeding on the measureless misery of war-torn countries in Europe, while many of our own people have so lost faith in the fact that God governs in the affairs of men they think another armed conflict is inevitable.

After the atomic bomb tests at Bikini Admiral Blandy said: "Civilization faces the choice of living under God or of living underground."

I rejoice in the leadership of the noble, Christian, and patriotic women of this community who, in organizing annual pilgrimages to this sacred spot, have kept us and the Nation reminded of the faith of our fathers.

Another war, in which civilization, as we know it, would undoubtedly perish, is not inevitable. In war we have always recognized our fundamental principle of individual responsibility. In winning the peace a distressed and war-torn world looks to us for leadership.

If we are to meet that challenge there is a job for all of us to do. We must rededicate ourselves to the faith of our fathers and renew our allegiance to the fundamental principle of individual responsibility.

Criticisms of Pending Labor Bill by Brotherhood of Railroad Trainmen

EXTENSION OF REMARKS
OF
HON. ELBERT D. THOMAS
OF UTAH

IN THE SENATE OF THE UNITED STATES

Monday, May 5 (legislative day of Monday, April 21), 1947

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement issued by the Brotherhood of Railroad Trainmen, with headquarters at Cleveland, Ohio, entitled "Major Defects in the Taft-Ball Bill, S. 1126." In its criticism of the pending measure, the Brotherhood of Railroad Trainmen objects particularly to title II of the bill, which would abolish the present United States Conciliation Service in the Department of Labor and establish an independent Federal Mediation Service outside the Department of Labor. I am inserting this statement in the RECORD, because I believe that Members of this body should be familiar with the position of one of the major labor organizations of the country while we are considering the proposal to amend the labor laws.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

MAJOR DEFECTS IN THE TAFT-BALL BILL, S. 1126

1. Page 41, section 202: It will be noted that this section abolishes the Conciliation Service, as such, and establishes in its stead a Federal Mediation Service beyond the jurisdiction or authority of the Secretary of Labor or any other official or division of the Department of Labor—it is not responsible to any department, to any Cabinet officer, or to any authority beyond the Director of the Service.

It will be noted that the Director of the Service—at $12,000 a year—is to be appointed by the President, and the bill does not provide any requisite qualifications, experience, or fitness. The President may appoint anyone he cares to appoint and this man, under the provisions of section 202, will have at his disposal funds appropriated for the operation of the Conciliation Service (perhaps $2,500,000) and he will be empowered by the provisions of this bill to appoint, without regard to civil-service provisions, conciliators and mediators (without regard as to number) and fix their compensation (without limit). It will be noted that the Director may establish regional offices (no limit) anywhere and that he may establish the procedure to be followed in contact with any State or local mediation agency.

Note particularly page 43, commencing with line 18, "The Director shall not be subject in any way to the jurisdiction or authority of the Secretary of Labor or any official or division of the Department of Labor." This simply means that he will be a free agent with perhaps $2,500,000 at his disposal and responsible to no one. It means that he will be empowered to recruit and build a Nation-wide organization, with branch offices everywhere, that he will have several hundred appointments at his disposal, at not less than $5,000 per year and expenses.

This is a very dangerous set-up. It places far too much power—far too much money and far too much organization—under the control of one man, and the man under

the control of no one. Some of the President's appointments to date have not been too hot and no one can at this time tell who might be appointed to head the Federal Mediation Service and what his attitude might be toward labor or toward business, or toward our form of government, toward our President, or toward any Presidential candidate in the year just ahead.

The above defect in the bill disturbed Senator TAFT when it was brought to his attention, and we think it should disturb anyone who is interested in good government and in an efficient nonpartisan Conciliation Service.

2. Page 45: It will be noted that whenever the parties to a labor dispute consent to submit the same to arbitration that this bill authorizes the Government to pay the cost of arbitration up to $500 per case. Last year the Conciliation Service handled in excess of 1,000 arbitration cases, and in the vast majority of these cases the parties absorbed the expense of the arbitration. This proposal to have the Government pay the cost of arbitration will provide a field day for broken-down lawyers and politicians who are always eager for fees. It will greatly increase the number of grievances and labor disputes submitted to arbitration and it will completely offset the fine educational work which the United States Conciliation Service and the Department of Labor have done for several years in requiring the parties to stand the expense of arbitration so as to discourage submitting grievances and labor disputes to arbitration, which can better be settled around the conference table with a conciliator or by the parties through direct negotiation.

Now note that commencing with line 12, the bill provides that in any case where the suggestion of arbitration is refused by one or both parties that the director of the service shall notify the President to that effect in writing. This is wholly impractical and completely unworkable. It makes of the President of the United States a labor conciliator and places on his desk thousands of cases in which one or two of the parties will not go along with the suggestion that the matter be arbitrated. Anyone who knows anything at all about management-labor relations knows that the mere fact that one or both parties have refused to go along with the suggestion that the dispute be arbitrated does not conclude mediation effort and everyone is in agreement that in no case should a labor dispute be taken to the White House for settlement.

Time and time again the President has told newspapermen that the oil dispute or the telephone dispute or some other dispute is being handled by the Department of Labor and he has respectfully pushed the subject away from his desk by referring reporters to the Secretary of Labor.

3. Page 47, section 205: The bill here establishes a national labor-management panel, composed of 12 members, who will serve at $25 a day for a period of 3 years, "to advise in the avoidance of industrial controversies." This is silly and is simply another opportunity for the Director of the Mediation Service to provide jobs for his pals or cronies, to enter and mess up the field of labor-management relations.

4. Page 48, section 206. This is perhaps one of the most vicious provisions of the bill. For the first time in American history, it injects the Attorney General (a prosecuting attorney) into labor disputes whenever in his opinion a controversy threatens to disturb national health or safety. Management and labor alike should resist and resent this provision. Reading the section through, it would be noted that it provides an opportunity for the Attorney General to appoint a board of inquiry composed of a director and such other members as the Attorney General shall determine, at $50 per day and expenses, for an undetermined period of time. What an opportunity for the Attorney General to remember the boys and provide places for broken-down post office lawyers and for his pals, and what a temptation it will be to provide an opportunity for anyone to tip the Attorney General that a labor dispute exists, with the suggestion that he appoint a panel.

Under section 208 the Attorney General may petition any court of the United States having jurisdiction to enjoin the threatened strike until such time as the Attorney General finds it convenient to reconvene his panel, which will then conduct the second investigation (presumably at $50 a day and expenses for each member of the panel) and for a period of 60 days.

Page 51, commencing with line 9, empowers the Attorney General to require the National Labor Relations Board to take a secret ballot of the employees (behind the backs of the union's negotiating committee) to present to the members of the union the company's offer of settlement. Under the Smith-Connally Act the National Labor Relations Board was required to conduct, at Government expense, a secret ballot vote of employees and in a short time the National Labor Relations Board was busted. It is said that the cost of conducting the United Mine Workers' poll cost in excess of $160,000 and made it necessary for the Board to petition the Congress to excuse them from conducting any more polls. The Board is now hopelessly behind in its regular work, with more than 5,000 cases on the docket, and to throw this added responsibility on the Board would sink it for sure.

It will be noted also that the proposal is unjust and unfair, in that it does not require the Board to submit any union proposal to the shareholders of a corporation for their consideration. We know of numerous instances where the union has made a proposal which was so reasonable and so fair that if it had been submitted to the shareholders it would have been approved, yet it was blocked by an obstinate vice president or some lawyer representing the corporation who was employed to say "No."

Section 210: It will be noted that after the ballot has been taken, regardless of how the employees vote, the Attorney General is then directed to petition the court to dissolve the injunction and the strike may then take place. It will be noted that, after much delay by the Attorney General, after the expenditure of much money for a panel and for court action, the unsettled dispute is then referred to the President of the United States. This again makes a labor conciliator of the President and requires him to pass the unsettled matter to the Congress for appropriate action. What the Congress will do or can do is not specified nor what will happen in the event the Congress is in recess for 4 or 5 months, or is actively engaged in major legislation, as it has been for several months during the present session.

Time and time again Frances Perkins, former Secretary of Labor, has told the world in general and parties to a labor dispute in particular not to carry their troubles to the White House—that it was not the function of the President of the United States to act as a labor conciliator, or mediator, or arbitrator.

5. Page 55, title IV, section 402, paragraph (3) empowers the joint committee on labor-management relations, composed of seven Congressmen and seven Senators, to go on a fishing expedition into the internal affairs of any labor union. This is particularly objectionable.

Section 405, page 57: It will be noted that this congressional committee is empowered to require, by subpena, the attendance of witnesses and the production of books, papers, and documents. We will remember the howl that went up last year from General Motors when it was simply suggested that they produce their books to sustain their contention that cost would not justify a further wage increase and that a further wage increase would inevitably result in a substantial increase in retail prices. This bill empowers the investigating committee to require any corporation or any business anywhere, at any time, to produce books, papers, and documents, and is a wide-open door for the fishermen.

6. Page 36, paragraph 3: It will be noted that the language here requires a person to testify, even though it violates his constitutional rights and might tend to incriminate him or subject him to a penalty for forfeiture.

In conclusion, in an attempt to deal with some abuses, such as jurisdictional disputes and secondary boycotts, this bill goes far too far and would in effect contribute to industrial chaos and industrial strife. It absolutely destroys the United States Conciliation Service, the most effective agency in the United States for the preservation of industrial peace and for the settlement of industrial strife, and it completely violates the plank in the Republican platform of 1944, which read as follows:

"All governmental labor activities must be placed under the direct authority and responsibility of the Secretary of Labor." (See p. 26 of the minority report relating to S. 1126.)

Tourism in World Peace and Prosperity

EXTENSION OF REMARKS
OF
HON. ROBERT HALE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Friday, May 2, 1947

Mr. HALE. Mr. Speaker, Senator OWEN BREWSTER, of Maine, has written a very able and thoughtful article on the importance of tourism in the development of world peace and prosperity. The article has been published in the American Motorist magazine and other publications of the American Automobile Association.

Senator BREWSTER's basic thesis is simple: Through travel there will develop a greater understanding among nations; money expended by travelers will make an impressive contribution to world trade.

Senator BREWSTER's declaration has already evoked considerable interest in all parts of the country. The Hartford Courant published much of the text under a headline "International travel seen aid to world recovery." The Indianapolis Star used an eight-column headline and opened its article with this sentence:

> A great international travel boom soon will "roll back the iron curtains of prejudice among nations," Senator OWEN BREWSTER forecast this week.

The New York Times commented editorially on another important phase of the Senator's article. The Times declared that—

> The American Automobile Association has urged the Department of State to transmit to the United Nations a request to use its influence in lowering barriers to travel. There exists today a bewildering procedure of passports and visas, entry and departure permits, health and vaccination tickets, police permits, photographs, tax certificates, and the like * * * Senator BREWSTER * * * emphasized the simplicity of the convention

on the regulation of inter-American automotive traffic, sponsored by the AAA, already ratified by the United States and eight other countries, as a pattern for standardization of forms and procedure for all kinds of travel in many parts of the earth. Such freedom and ease of travel hardly can fail to extend the concept of one world.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include this article by Senator BREWSTER:

TOURISM IN WORLD PEACE AND PROSPERITY

(By Senator OWEN BREWSTER)

Today the nations of the world stand at the threshold of tremendous opportunities for more friendliness and tolerance, for greater productiveness, higher standards of living for more people, and, consequently, increased happiness for all. It can be either those things or the alternatives of recurring wars, misery and poverty, and further destruction to national institutions and cultures.

The key to this is greater understanding between nations, founded on a sound economic basis and through more and more individual contacts that will give a wider knowledge of the habits, customs, and historical backgrounds of all people, the one to the other. It is only in this way that we may roll back the iron curtains of blind prejudice, intolerance, and suspicion.

The United States has a unique opportunity in this respect, both historically and from the standpoint of our role of world leadership today. To begin with, Americans are cosmopolitan. In the almost 200 years since the Republic was founded we have welcomed and assimilated millions of people from all over the world—from a large number of nations, all classes of society, many shades of political opinion, and a variety of creeds. This has given us a certain flexibility in our relationships—a tolerance for the habits, beliefs, and customs of others, no matter what our own individual backgrounds may be.

As a nation we are great travelers—the greatest in the world—both within our own borders and abroad. At home this has been made possible by the excellence, variety, and relative inexpensiveness of our transportation facilities, including first and foremost the motorcar, which has been brought within the reach of virtually every citizen during the short space of half a century. This has meant that the Californian has had the means of knowing the rock-bound coast of Maine, the Floridian of exploring Puget Sound, and the Minnesotan of seeing the broad plains of Texas.

Year after year in normal times this interchange of visits has been going on, from the Black Hills to the Gulf of Mexico, from the Sierra Nevada Mountains to the Appalachians. It has increased steadily until today it is estimated as being a $6,000,000,000-a-year business, not only providing employment for scores of thousands of people, but constituting one of the major industries of our country. As a byproduct it has meant increased knowledge of one another, greater respect for our national institutions and cultural backgrounds, and more appreciation of both our progress as a Nation and our potentialities for future development—results that cannot be measured in terms of dollars.

The story of American travel abroad is equally interesting. Before the start of World War II the number of United States citizens touring outside the borders of our country had risen to a peak of 600,000 annually. These travelers spent an estimated $1,000,000,000 a year on such trips. When the war came, still more Americans, numbering in the millions, went abroad and became familiar figures in all quarters of the globe. While these men and women in olive drab and blue were traveling for reasons far removed from pleasure, they gave other nations a fresh and, on the whole, favorable opinion of our country and people, and they in turn absorbed something during their grim missions about life in those countries through which they traveled. In some cases this whetted a desire for further travel. And it meant that many of those who had stayed at home would be inspired, in listening to the experiences of service men and women, to see for themselves the people and places they had heard described.

The flood of applications for passports this year, especially since the bans on pleasure travel abroad have been partially lifted, indicates that tourism will quickly resume its importance as a major factor in world economy. That it will play an even greater role than in prewar days is suggested by other considerations, chief of which is the efficiency, speed, and economy with which air travel has been developing.

Recent hearings before the Committee on Air Safety of the United States Senate have demonstrated conclusively that flying by scheduled American airlines at home or abroad is one of the safest forms of transportation in the world. It is relatively inexpensive, too, and will become more so. Indeed, 10-hour trips to Europe for $100 are a distinct possibility. As facilities and schedules are expanded, no spot in the world will be more than 2 days distant from any other spot in the world. This means that for millions of Americans, the most remote sections of the globe will become 1 day as familiar as parts of their own country are now.

Not only does travel abroad constitute a significant influence for peace through understanding, but it has a more tangible benefit in that it contributes importantly to world economic recovery and stabilization. Those of us who believe in protection for American industry and agriculture are concerned with the challenge presented by the ability of our foreign customers to pay for the things we have to sell.

In a gradually improving world economy an export goal of $9,000,000,000 may be reasonably anticipated. Under existing law something like $6,000,000,000 may be expected in duty-free non-competitive imports, leaving a balance due from foreign customers of from two to three billion dollars.

Money expended by Americans in travel abroad may well contribute impressively toward the settlement of this balance. With a national income of $160,000,000,000 a year as compared with the $80,000,000,000 of prewar years, we may confidently look forward to the goal of two to three billions in expenditures for travel abroad. This, it should be pointed out, can be accomplished without interfering in any way with the continued expansion of our great domestic recreational and travel industry.

In view of these considerations, those who are endeavoring to promote travel, both abroad and at home, are to be highly commended. And at this point it seems fitting to pay tribute to the work being done by the American Automobile Association with its members and their families, totaling 6,000,000 people. Since the war, this organization has reactivated its international travel department, and vastly increased the scope of its activities so that it is now prepared to serve all of the travel needs of its membership by any mode of transportation and to any point in the world.

AAA contacts in large cities abroad have been reestablished, and the association has also created a new department of Latin-American affairs which is working to make travel in the Western Hemisphere countries below the Rio Grande easier and more pleasant. The inauguration of this department has already resulted in moves to establish new motor club affiliates, and to increase the number of service facilities and other accommodations for tourists in Mexico, Central America, and Panama.

In passing it should be mentioned, too, that the AAA has been at the forefront in the drive for adoption by the various Western Hemisphere countries of the Convention on Regulation of Inter-American Automotive Traffic. This agreement, already ratified by the United States and eight other countries, provides for the free circulation of automobiles through the signatory countries, with a minimum of red tape. The AAA believes that with this beginning it may be possible to establish a similar standardization of forms and procedures for all kinds of travel to other parts of the world, thus doing away with the elaborate, repetitious, and tedious formalities required by many nations before visitors are admitted.

American leadership in the world today, both from the standpoint of our interest in world problems and the fact that our Republic is a shining example of freedom to people of other lands, makes it obligatory on us to promote better understanding and real friendship wherever and whenever we can. That an increasing interchange of touring visitors and ideas on a free and unfettered basis is a real step in this direction cannot be gainsaid. Herein lies the hope of that peace that passeth understanding. Herein lies the hope of that domestic tranquillity and prosperity that shall make America an example of ordered progress for the salvation of the world.

"And I, if I be lifted up, shall draw all men unto Me."

Are Wallace's Views Fooling Some Congressmen?

EXTENSION OF REMARKS

OF

HON. HOWARD H. BUFFETT

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1947

Mr. BUFFETT. Mr. Speaker, are Henry Wallace's views fooling some Congressmen on the Turko-Greek deal? Is his opposition to that scheme causing a number of Congressmen to favor it—afraid to vote against it, regardless of its booby-trap aspects.

Is the Wallace hullabaloo carefully staged to divert attention from the fact that the New Deal crowd is overwhelmingly backing the Truman scheme?

If conversation in the House and around the cloakrooms is an accurate criterion, the answer is "Yes." That verdict is hard to swallow—that Members of Congress would let the position of Henry Wallace warp their vote on the most dangerous scheme ever considered by an American Congress.

For there is no surer way to destroy America than to commit this country to underwriting the combined budget deficits of all non-Russian nations on earth.

That impossible task, Mr. Speaker, is what the so-called Truman doctrine proposes. Under this scheme every nation in the world—tyrannical, despotic, or what not—can be enabled to balance its finances by drafts on the United States Treasury.

If an easier or more certain method can be shown to destroy America by bankruptcy, I hope someone will explain it.

MOST NEW DEALERS ARE FOR TRUMAN SCHEME

If it were not tragic, the attention given the Wallace side show would be

an amazing demonstration of the use of a counterirritant. The focus on Wallace has completely blacked out the factual truth that the New Deal radical crowd is overwhelmingly for the Truman scheme.

The propaganda drive has carefully directed the attention of Congressmen away from the New Deal gang licking their chops at the prospect of a world-wide WPA program all dressed up in the lily-white robes of anticommunism.

Let us call at least part of the roll on the New Deal crowd on this deal.

First is the ADA—Americans for Democratic Action. The ADA has in its own words "committed itself to the broad objectives and methods proposed for aiding Greece and Turkey."

Mrs. Eleanor Roosevelt was chairman of a nominating committee which recently selected the executive board and officers for this group. Here are the officials:

Officers: Wilson W. Wyatt, national chairman; Leon Henderson, chairman of the executive committee; Louis Harris, national treasurer; Franklin D. Roosevelt, Jr., national vice chairman; Mayor Hubert Humphrey, of Minneapolis, national vice chairman; Joseph Loeb, Jr., executive secretary.

Board members: Harvey Brown, Melvyn Douglas, David Dubinsky, George Edwards, Ethel S. Epstein, Hugo Ernst, William Evjue, David Ginsburg, Lester Granger, Sal B. Hoffman, James Killen, Frank McCullough, B. F. McLaurin, Othoer J. Mischo, Reinhold Niebuhr, Mrs. Gifford Pinchot, Edward F. Prichard, Right Rev. William Scarlett, Arthur M. Schlesinger, Jr., Monroe Sweetland, Barney Taylor, Mrs. M. E. Tilly.

Other prominent ADA New Dealers include Charles Bolté, chairman of the AVC; Andrew Biemiller, former Milwaukee Congressman; and Herbert Lehman, former UNRRA head.

NEW YORK LIBERAL PARTY

The Liberal Party of New York State has gone on record in favor of the Truman intervention scheme. A recent official party statement declared:

> The Liberal Party greets President Truman's message to Congress proposing immediate and adequate aid to Greece and Turkey.

Vice chairmen of the New York Liberal Party include George S. Counts, Alex Rose, and Reinhold Niebuhr. The executive director is Ben Davidson.

ANOTHER NEW DEAL CROWD ON THE BANDWAGON

Another New Deal crowd that is quietly promoting the Truman scheme is Freedom House, Inc.

The board of directors of Freedom House have voted overwhelmingly to support the President's program. This fact is announced in the April Freedom House News Letter, and it is based on a poll of their board of directors.

The following directors of Freedom House are specifically recorded in favor of the Truman intervention program:

Dr. Harry D. Gideonse, Thomas K. Finletter, Leo Cherne, Rev. George B. Ford, Elmo Roper, Herbert Bayard Swope, Bishop Henry W. Hobson, Newbold Morris, Spyros P. Skouras, Rex Stout.

George Field, Herbert Agar, Cass Canfield, Norman Cousins, George Fielding Eliot, Christopher T. Emmet, Jr., Mrs. Henry Gale, Arthur J. Goldsmith, Harold K. Guinzburg, Mrs. Andrew Jackson.

Rev. William C. Kernan; Edgar Ansel Mowrer; Elizabeth M. Riley; Nathaniel Singer; Frederick F. Umhey.

This news letter did not report the views of Freedom House Director Chester Bowles, although his OPA associate, Paul Porter, is a leading ball carrier on the Greek deal.

NEW DEALERS 95 PERCENT FOR TRUMAN DOCTRINE

Mr. Speaker, the foregoing evidence seems to indicate that 95 percent or more of the leaders of the New Deal socialistic crowd in America are for the new handout venture.

The fact that administration propaganda seems to have been able to magnify Henry Wallace's opposition into confusing the thinking of some Congressmen bespeaks the power of modern political hypnotism.

"I do not want to be on the same side as Henry Wallace" is the wail that goes up among conservative Democrats and Republicans. And so they may play right into the hands of the New Deal by voting for the Turko-Greek scheme.

By setting that scheme into motion they may enable Stalin to sit on his front porch and watch America bleed to death.

Mr. Speaker, I pointed out the foregoing danger to an able Member of Congress recently. His answer was, "Howard, I think you are giving Stalin credit for being smarter than he is." Now the question I want to ask is, "Will Stalin have to take every trick from America for 14 more years before Congress will concede the cleverness of his strategy?"

How long must we be fooled?

America's Patent System

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, May 5 (legislative day of Monday, April 21), 1947

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of an address delivered by me before the Patent Office Society on May 2, in this city. The subject of the address was America's Patent System, and among the matters considered was the question of reducing the high mortality rate of patents through various ways and means of strengthening the patent system.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

PUBLIC WELFARE AND PUBLIC POLICY IN THE FIELD OF PATENTS

Mr. Toastmaster, distinguished guests, my friends, I am grateful for this opportunity to submit a few brief thoughts on a subject in which we are mutually interested.

Shortly after Pearl Harbor and early in 1942, some 800 employees of the Patent Office were moved out of Washington to Richmond, Va., in order to make room for various war agencies. It wasn't until 1945 that the return to Washington began and the return wasn't completed until just a few months ago. Along about the time that your move back to Washington was really getting under way, the Seventy-ninth Congress of the United States passed Public Law 601, which brought the subject of patents within the jurisdiction of the Senate Committee on the Judiciary. As chairman of this committee, I am happy to join with the Patent Office's many friends in welcoming this fine group back to Washington.

THE CASE OF THE VISITING SOUTHERNER

I'm certain that it isn't like the case of the old southern family where the widowed mother-in-law of the family went off to visit in New England. While she was in the New England States, she met a very congenial Massachusetts farmer—and after a few weeks' courtship—they decided to get married. The widow was a little apprehensive as to how her southern daughter and son-in-law would receive the news, but nevertheless wrote her daughter of her intentions to marry the northerner.

The daughter was very reluctant to broach the subject with her husband because she knew how he felt about northerners, but she finally screwed up her courage and decided to ask him.

"Joe," she said, "you know mamma's been up nawth visitin' in Massachusetts. What would you say if she were to marry a nawthener?"

Joe thought it over for a while and then said, "Well, sir, that would be one way of paying back the 'damyankees'."

And so tonight we're glad to have the disenfranchised Virginia rebels back in the fold here in Washington and to welcome them in this homecoming celebration.

Now that you folks are back in Washington, I am sure that your presence here will enable you to fulfill with greater efficiency than ever before your high responsibility. There have, as you know, been some critical statements that the Patent Office has not been as efficient as it might be in the processing of its work. However, your return to Washington, I am sure, will contribute greatly to the handling of your work.

THE CRISIS OF PATENTS

Just as you folks were Pearl-Harbored into Richmond, just so was the entire subject of patents Pearl-Harbored into page 1 prominence.

About the time that you first began to look for quarters in Richmond, the President of the United States was saying—on April 13, 1942—"Patents are the keys to our technology, technology is the key to production, production is the key to victory." Congress was still studying the report of the so-called monopoly committee, which charged that patents had become a "device to control whole industries, to suppress competition, to restrict output, to enhance prices, to suppress invention, and to discourage inventiveness."

Members of Congress were discussing the charge that American patents had become a Nazi weapon. Government-granted letters of patent were called the arsenal of monopoly.

ORIGIN OF PATENT SYSTEM

Mr. Toastmaster, we have come a long ways as a people and as a nation since the framers of the Constitution first wrote in article I, section 8, of the Constitution that—

"Congress shall have the power to pass laws to promote the progress of science and the useful arts by securing for a limited time to the authors and inventors the exclusive rights to their respective discoveries."

We have come a long ways as a people and as a nation in the century and a half since

George Washington gave his approval to the first patent act on April 10, 1790.

We have grown from a population of less than 4,000,000 to a hundred-and-forty-odd million. Throughout that span of a century and a half our land has been richly blessed with and by inventions.

Agriculture, industry, and plain, ordinary, day-to-day living have been enriched as a result of American ingenuity and American inventive genius.

Throughout the years our patent laws have in part been changed and improved. They were extensively recodified in 1870 and there are innumerable proposals for further change at the present time.

As a relative neophyte in the involved and specialized field of patents and patent law, I do not feel competent to express any hard and fast convictions on the future of the patent system.

I will say at the outset, however, that in its basic purpose and in its fundamentals, our patent system appears to have proved its worth in accelerating the American march of progress.

STANDARD FOR EVALUATING SYSTEM

As you all know, a patent is in substance a contract between the Government representing the people and the inventor, by which the owner is given an exclusive power to use, manufacture, and sell his invention. It creates a monopoly and the justification therefor, as we have stated, is that it advances the material prosperity of the people and tends to the betterment of our way of life. After the patent has expired, it becomes public property. A patent right, like any other property right, is subject to draft when the national safety is threatened, upon the payment of fair compensation.

STRENGTHENING THE PATENT GRANT

There are many avenues of patent policy which should be explored.

Basically, we must strengthen the patent grant in the eyes of the court. Probably because of certain procedural weaknesses, and because of periodic bloodletting by the court, patents are suffering from a particularly dangerous type of legal anemia. One distinguished Federal judge has made the statement that unless the patent grant can be strengthened in the eyes of the court, the patent system as we know it will be virtually wiped out in 8 years. While I do not agree with this conclusion, one cannot lightly brush it aside, it being the judgment of an able jurist.

HIGH MORTALITY RATE OF PATENTS

When a patent leaves the Patent Office, it carries with it a presumption of validity. The cold facts are, however, that most of the patents thrown into litigation are invalidated. In all fairness, however, it should be pointed out that the majority of patents are not thrown into litigation. The administrative rulings of the Patent Office have relatively little stature and standing in the court.

From time to time we have amended our laws relating to administration and procedure, and in this field further consideration should be given to the subject. It is claimed on good authority that patents too often are issued for things that are not in fact new inventions. If this is correct, it is a fault of administration. It would call for increased quality in the examining work.

It has been alleged that one serious fault is that patents often do not conform to the law and that they fail to clearly point out and distinctly claim the exact improvement of the invention. Again, it is said that mistakes are often made where multiplicity of claims contribute much to obscurity. This presents a challenge not only to administration, but also to the patent lawyer, who could do much to correct this evil by a more careful analysis and discrimination in the drafting of the application for patents and by not indulging in the shotgun method in drawing claims.

It is incumbent, as you and I know, upon the Patent Office, under its definite administrative duty, to compel compliance with the law in this respect. Again, I repeat, the examiners have the primary responsibility to see that applications for patents comply with the statute.

What has been characterized as a third administrative defect is the one known as the long-pending application. This should be stopped, and it is the obligation of the Patent Office to act accordingly. Perhaps legislation should be introduced that would provide that the patent would expire so many years after the filing date of the application for patent.

POSSIBLE MEANS OF REDUCING PATENT MORTALITY

This much is certain. The patent mortality is high. I believe it can be lessened if what has been suggested above is followed through, to wit:

(a) That no patents be issued * * * that are not for things that are in fact new inventions.

(b) That the personnel for the examining of patent applications be of the highest quality.

(c) That the patents conform to the law, pointing out and distinctly claiming the exact improvement invented.

(d) That the multiplicity of claims be obviated as far as possible, that the legal practitioners be more discriminative in drafting applications for patent and avoid the shotgun method in drawing claims.

(e) That the Patent Office accept its responsibility and compel compliance with the law with respect to (d).

(f) That the administrative defect of permitting long-pending applications be corrected.

MAKING PATENTS DYNAMIC INSTRUMENTS FOR PROGRESS

May I also add the following suggestions:

1. We must strengthen our patent system to make it a force for encouraging progress in the technical sciences.

(a) Prevent side-stepping of the system by those with an unwarranted amount of economic power—discourage contracts which destroy the incentive to invent.

(b) Correct whatever evils exist in the use of patents by those dangerous so-called patent pools which unduly restrict licensing.

WORLD EXCHANGE OF PATENTS

2. We must improve our international standing by utilizing the patent system to encourage disclosure to us of inventions made in foreign countries—and in so doing, we will be protecting ourselves against ignorance of foreign technology in the event of war. The international use of patents cannot be a one-way street.

INVITATION OF SUGGESTIONS FOR STRENGTHENING PATENT SYSTEM

You who have been in this field and have learned by experience, undoubtedly have many ideas that would be valuable to the legislator. Thus, I can assure you that the Judiciary Committee of the Senate would welcome any of your suggestions. You can write to me personally.

Already, we have had suggestions along the lines I have embodied above. What, however, are your answers to these questions:

(a) Do you think there would be any way that we could by legislation improve the practice in the patent litigation before the Board of Appeals and before the courts?

(b) Would you suggest the elimination of any defenses against patents issued?

(c) Do you think it would better the situation if a single Court of Patent Appeals were created?

I am sure many more questions will occur to you.

CONCLUSION

In conclusion, I repeat my belief that the fundamental principle of recognizing a property right in a technological creation is sound. The paramount interest, however, must always be the public interest, and our problem is to prevent the abuse of the right of the patent while maintaining the basic purpose and fundamentals of the system.

The industrial horizons of tomorrow are limited only by the vision and the ingenuity of American inventive genius. Our frontiers are frontiers of the mind and frontiers where invention and industry can join to raise the American standard of living to yet undreamed of heights.

May I express to you again my sincere appreciation for the opportunity to be with you tonight. I feel renewed confidence that through your able endeavors and those of the Congress, we will be able to fuse the public welfare and public policy with able administrative policy into harmonious and dynamic unity.

The War Widow: America's Forgotten Woman

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, May 2, 1947

Mr. TEAGUE. Mr. Speaker, I believe the Seventy-ninth Congress did everything in its power to provide helpful legislation to the returning servicemen of World War II. Our grateful Nation desired to help these men and women return to useful civilian life and the Congress was generous in providing for their needs in this transition period. However, I believe that one group of our fighting men was forgotten, or at least not given the proper consideration I feel that they should have been given. I refer to the more than 300,000 servicemen who gave their lives in training and in combat.

These men have been taken from us and it is our responsibility to care for their widows, children, and dependent parents. I regret that the first order of business concerning veterans' legislation in the Eightieth Congress was not to give consideration to the plight of these widows, children, and parents who truly gave more than anyone else in the recent conflict. I sincerely hope that they will not be forgotten in this session of Congress.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Henry Lee entitled "The War Widow: America's Forgotten Woman," which appears in the Coronet magazine of April 1947:

THE WAR WIDOW: AMERICA'S FORGOTTEN WOMAN

(By Henry Lee)

This is a report to America's war dead about the widows and children they left behind them. It is not a pleasant report—but it is a true one. It should shock us both in heart and mind, and make us pause to reexamine, in the light of simple human compassion, the promises we so glibly gave to the men who marched off to die on global battle fronts.

We have consigned 200,000 forgotten women and children to the half-life of a Government dole and the uncertain charity of family and in-laws. We have done little to relieve the tragedy of their past, the misery of their present, the grimness of their future.

A generous postwar Congress, while raising its own pay last year by some $96 a week, increased the widows' pensions—by $10 a month. They get about half of what the Government considers a fair, minimum wage for the working people of this country. Their children—heroes' children—get about half of what the Government considers the basic cost of rearing a child under decent circumstances. And to inflict the final cruel touch, they are not included in GI loans, benefits, or priorities.

The living conditions of war widows are pathetic. I found them in furnished rooms in YW's, in the homes of in-laws, or doubling up with any girl who had a spare bed. Many of them live like floaters, without a home, without furniture, without any possession more substantial than a compact and the snapshot of a man in uniform. They are, to all practical purposes, displaced persons.

Without any directed program, we give our war widows off-the-arm, contradictory advice. Should they seek out social activities, trying to forget? Should they remarry? But Mrs. Grundy demands respect for the dead. If, after 2 years of mourning, a girl has a date, it's quite likely to stir a neighborhood scandal.

I talked to one girl, a 21-year-old blonde with blue eyes. She has to live with a mother-in-law who half died when her son did, and expects her daughter-in-law to do the same.

"I loved Bill," the girl said simply. "I guess I always will. I know he'd say, 'Go ahead, have fun. Marry some good guy if you want to—just keep a little place in your heart for me.'

"I met a good guy who wants to marry me. But my mother-in-law says I ought to be ashamed of myself. So I just can't go on living with her. But on $60 a month, it's almost impossible to live any place else until I get married. I sneak out of the house when I want to see my fiance. Then I have to lie to my mother-in-law. It makes me feel mean and small. But what else can I do?"

For the older women with children, just existing day-by-day is the major problem. In many cases the situation is bleak. Take the 28-year-old mother who lives alone in New Jersey with a mentally retarded son. Or the woman in Massachusetts whose 5-year-old boy has a heart ailment, whose 3-year-old suffers from bronchial asthma.

Yet even more appalling is the public's ignorance and indifference. I've talked to Government officials, welfare workers, and plain, everyday Americans who were so proudly patriotic during the war. "Nobody starves in this country," they say complacently.

Maybe not. But almost no organization comes forward voluntarily to help these women. Few individuals know or care what's happening to them. Congress, breathtakingly liberal with billions of our money, turns a deaf ear to their modest requests.

The situation comes as a stinging shock to returned GI's. One veteran I know looked up a buddy's pretty young widow. He found her living, frightened and confused, in a furnished room, trying to subsist on her $60-a-month pension till she found a job. But she had never worked before, and personnel managers were sympathetic but firm. No experience, no job. Shocked, the ex-serviceman made a point of going to the next meeting of his veterans' organization, and walked right into a heated discussion about bonuses.

"Bonuses hell!" he stormed: "Is this what we fought for? Everything for the boys—and nothing for the women and children?"

Promptly his organization set up a widows'-aid committee. But veterans are in no position to handle the complex job of rehabilitation by themselves. Job training is one of the musts in helping our widows to get on their feet again. Thousands of them are either too young to have had business experience, or have been housewives for years. Recently an air line in the East offered a half dozen jobs as phone operators to a widows'-aid committee. But the committee was unable to find a single widow who could operate a switchboard.

When the women try awkwardly to help each other, they run into heartbreaking public ignorance. For example, I have a conscientious friend who feels a personal obligation to war widows, although she lost her own husband in the Pacific. She has a job, but in her spare time has organized a widows'-aid group in her town, spending $200 of her own money to launch the project. Recently, while arranging a benefit for the widows, she approached a clergyman.

"What's in it for you?" he asked frostily.

When she explained, his eyes opened in amazement. "Why, my dear," he said, "I thought the Government was providing liberally for you people!"

Even some welfare organizations show surprising ignorance. About 30 widows in one town arranged to meet monthly in a small, unused room in the central welfare building, which has recreation rooms, a swimming pool and a dance hall. At their second meeting the welfare secretary addressed them. "As you know," she said brightly, "we care for many needy and deserving people. So, hereafter we will have to charge you for coming here—$2 yearly for each member."

The widows couldn't afford $60 for the use of chairs and a speaker's table. So now they are meeting in one another's homes scattered all over town.

Widows like these are going through a profound revolution that touches every phase of their lives—social, economic, psychological. Even the younger, giddier women have been shocked into maturity. One, a gentle girl in her twenties, told me she was through with asking for assistance.

"I don't like to seem ungrateful," she said apologetically, "because several times when the children were sick the nursing service was wonderful. But they can't seem to understand that all we have left is our pride. They budget us, ticket us, pry into our lives. Then they lecture us. You'd think we were shiftless people who'd gotten on relief through some fault of our own."

On the economic front, the widows find they are being pushed backward while veteran legislation is pushed ahead. During the war they received $30 a month for the first child, plus free medical and dental care. Now they get $18 monthly for the same child, who eats more and scuffs more pairs of shoes. And they get no medical or dental care.

Of the two billions disbursed annually by the Veterans' Administration, only a small part goes to the 110,000 widows and 90,000 children of dead servicemen. The widows get $60 a month ,or $720 a year. Yet liberal-minded Congressmen deplore a 40-cent-an-hour minimum industrial wage—which is nearly $70 a month—as an impossibly low living standard.

The widow with more than one child is further penalized. For all children after the first, the Government allotment is pared down to $187.20 a year. Today, probably no widow is in rags, no child actually starving. But is that all a grateful country can guarantee them?

Many widows—but by no means all—receive income from the husband's service insurance. If he carried an average policy of $10,000, that adds $55.10 to the monthly budget, providing the widow is under 30. But the catch is that after 20 years—as the war widows reach middle age—the insurance lapses and the women go back to $60 a month.

Some widows also receive aid from social security, but thousands do not, for their husbands went into service before completing the necessary employment period. "Our men apparently died to provide for everyone else's children but their own," say the widows.

I have talked to these women, visited them in their homes. Each case is different, but each has a common gray thread. One small, dark, motherly person, a simple housewife by instnct, was head of her family by necessity. Her bewildering, grinding problem is best told in these figures:

Income, $201.50 monthly, comprising $109.20 pension for herself and 3 children, aged 9, 8, and 5: $49.50 service insurance; $43 social security.

Expenses, $170.54 monthly: Rent, $20; gas-electricity, $6; coal, $10.66; wet wash, $7; insurance, $6; milk, $13; food, $100; telephone (a necessity because of the children), $2.88; payment or debt, $5.

Balance, $30.96, to cover medical expenses, clothes, recreation, school funds, incidentals.

This war widow has no plans for her children's future beyond eighth-grade schooling, and when she feels ill it frightens her. If she should die, the children—as orphans—would receive a total of only $57.60 monthly.

These are the mothers. But what of the lucky childless ones—if you can call a childless widow lucky? In New York a widow of 22 decided to plunge into study to forget her sorrow. But the colleges, preoccupied with the Government-financed boom in education, made it plain that they had neither time nor funds for her. Undeterred, she learned that a small Texas college would take her in. With lower living costs, she could get by on her pension and savings.

"The going is certainly tough," she says. Then she adds: "But when I compare myself with widows who have children I realize how fortunate I am."

Here, you think, is a typical college girl, luckier than most widows. Then she adds wistfully: "Just the same, I'd give anything to have my husband's child." These are the people, frustrated of deep desires, whom we so quickly forget.

Even if a woman has proved her "business sense," the Government won't life a finger to help her. I know of one who earns money by using her car as a neighborhood taxi, by baking bread and cakes, by making aprons for sale. Her chief worry is funds for clothing and educating her teen-age daughter. Will she be able to send the girl to college? She could manage it easily, if the Government would endorse a business loan for her, as it does for vets.

And so the stories go. In each case the widow needs so little. A few dollars more, a business loan, tuition funds, medical care. But they may as well ask for the moon.

Desperate, a few widows went to Washington last year to plead their case. The pilgrimmage was pathetic. While slick, professional lobbyists got millions for special interests, the women stumbled through an unfamiliar legislative maze, getting brush-offs. After all, there are only 110,000 of them—and votes weigh more than blood.

A few Congressmen, genuinely touched by their pleas, introduced bills—to extend the GI bill to cover war widows, to insure educational opportunities for children. The bills were printed—and then died in committee.

When Congress did increase allotments by 20 percent, it was in no specal recognition of the women's plight. The increase applied to all dependents of World War I and II veterans, and was a somewhat tardy answer to the skyrocketing cost of living.

Announcing the boost, the journal of the Gold Star Wives of World War II said: "Almost a pint of milk a day added to the menu of war orphans. That's all for now, kiddies."

Despite the programs now under way in some States, calling for bonus payments and

educational grants, the Gold Star Wives firmly believe that God helps those who help themselves. National headquarters in New York and local chapters in every State give the women a rallying point and help them stand on their own feet.

Through an "Aunt Susie" program, the organization encourages childless women in a community to care for the families of widows while the mothers seek part-time work. It also sets up job bureaus, offers legal aid and house-hunting assistance, and even stages monthly birthday parties for children.

Gold Star Wives started with a membership of four, but in the last year it has grown swiftly, with city and county chapters springing up all over the country. Dues are a maximum of $2 yearly, while sale of $1.50 widow's pins—a gold star with a purple bar emblematic of the Purple Heart which their husbands earned the hardest way—is another modest source of revenue.

Directing the Gold Star Wives is Mrs. Marie Jordan of New York, a small, pretty, hard-working widow who has a 3-year-old son. Mrs. Jordan helps to set up new chapters, explains the cause to the public, appears before legislatures to urge a square deal.

The widows give enthusiastic support to the organization—"200-percent cooperation" in the opinion of Mrs. Myrtle Verzi, energetic president of the Bergen County chapter in New Jersey. Her unit contains 40 women, ranging in age from 22 to 50. A few are fairly well off. The rest need help. More than half have children, while only a third are working. Theirs is typical of a situation that exists everywhere.

What must be done to correct the tragic plight of America's war widows and their children?

First, and immediately, Congress should increase their allotments to assure a normal, decent living, not a relief subsistence.

Second, since widows are heads of families, they deserve the same priorities in education, housing, job finding, and business opportunities which the veterans enjoy.

Third, instead of making it possible for them merely to live, we should help them to start living. If Government, welfare organizations, and private business cooperated, every widow who wants to work could be quickly trained for a job.

Finally, children's education must be assured. Every public and private college should have a yearly quota of scholarships. There are more than 1,000 such schools. If each accepted 90 of the children, they could quickly absorb all 90,000 in the country.

Despite experience, America's war widows persist in their faith in the future. "We know that they died so that we and our children might live in a better world," they say. They are working toward that goal as best they can. But obviously they need our help—and they need it quickly.

Reply to Representative William G. Stigler

EXTENSION OF REMARKS

OF

HON. FRANK B. KEEFE

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1947

Mr. KEEFE. Mr. Speaker, it should be apparent to any thoughtful person that there is a definite conspiracy being engineered by left-wing New Dealers to smear, and destroy if possible, any Member of Congress who has the courage to fight for reduction in expenditures by the Federal Government. Many smug and self-satisfied bureaucrats who never have faced the wrath of an electorate are utilizing all of their propaganda resources in an attempt to head off the Republican efforts to balance the budget, to reduce taxes, and to begin paying the national debt. Certain commenators, columnists, and some Congressmen are unable to adjust themselves to the present Republican control in the Congress and hope that by spreading half-truths, innuendoes, and outright falsehoods they will be able to return to the lush, good old days when blank checks were passed around and no one inquired why or what for.

The chairman of the full committee and the chairman of the respective subcommittees of the Appropriations Committee are the special targets of this "goon squad" of character assassins. The strategy seems to be to attack the chairman of the Appropriations Committee continuously, and before each subcommittee bill is reported to the House and thereafter to attack the chairman of the subcommittee. It will be understood that the end in view is the retention of access to lush funds that can permit application of the old Hopkins motto—"Spend and spend and elect and elect." The very thought of reducing Government spending and thus reducing Government personnel is repulsive to the New Deal. They have always preached the philosophy that if you have an end in view, any means adopted can be justified to attain it. It is against this screen of political intrigue that the gentleman from Oklahoma [Mr. STIGLER] projected himself on the 7th day of April 1947. The gentleman indicated that he intended to direct his remarks particularly to the appropriation for the Veterans' Employment Service, carried in the Labor Department appropriations bill. He stated that he had notified my office that morning that he intended to speak of and concerning the gentleman now addressing you. Unfortunately I was out of the city. The gentleman from Oklahoma was so advised, yet he saw fit in my absence to make a speech on the floor of the House that contained some of the worst and most violent falsehoods that have ever been uttered on the floor of Congress. I realize that this is strong language, but before I have finished I am satisfied that every honest, fair-minded Member of Congress will concede that it is a correct appraisal of the gentleman's remarks.

On page 3185 of the RECORD of April 7, 1947, the gentleman says that he did not have an opportunity to answer the gentleman from Wisconsin and did not have an opportunity to obtain recognition on the day the bill was being discussed. The gentleman says, and I quote:

> I, too, have spent some time since the bill was passed, in research work, getting material which I expect to deliver to the House at this hour.

Thus it is apparent that the statements made on April 7 by the gentleman from Oklahoma were deliberate, willful, and intentional. In the heat of debate, things are sometimes said that the speaker frequently regrets upon mature reflection and consideration. However, the things which the gentleman from Oklahoma stated are not the result of heated debate and must therefore be discussed in that light. The gentleman stated:

> The gentleman from Wisconsin boldly stood before this House a few days ago and, perhaps thinking that his words might go unchallenged, defied any Member to justify the continued existence of an expanded Veterans' Employment Service. I made an effort to accept the challenge then, but the gentleman seemingly wanted to cut off all debate after he finished, and made a motion that all debate cease. His party having the votes, the motion prevailed. In his brief hour of glory, he accused us of failing to read the RECORD—and when I am finished I believe you will agree with me that he must surely have uttered those words with a fervent prayer that no one accept his challenge, for the RECORD has revealed some very interesting things.

This quotation is characteristic of the things said by the gentleman throughout his speech. I have examined the RECORD which he refers to, of March 25, 1947. This RECORD discloses that the gentleman from Pennsylvania [Mr. VAN ZANDT] offered four amendments to the bill then under consideration. The RECORD also discloses that Representative VAN ZANDT discussed those four amendments at length. This appears on pages 2559, 2560, and 2561 of the RECORD. At the conclusion of the argument of Mr. VAN ZANDT, the gentleman from Wisconsin in charge of the bill answered him, and this will appear on pages 2561 and 2562 of the RECORD. The RECORD will also show that the gentleman from New York [Mr. ROONEY] then arose and was recognized in support of the amendments. The RECORD will further show that the gentleman from New York [Mr. ROONEY] asked unanimous consent to proceed for one additional minute, whereupon the gentleman from Wisconsin now addressing you objected unless the gentleman would yield. The RECORD further shows the following colloquy:

> Mr. ROONEY. Mr. Chairman, I ask unanimous consent to proceed for one additional minute.
>
> Mr. KEEFE. Mr. Chairman, I object unless the gentleman will yield to me.
>
> Mr. ROONEY. I will gladly yield.
>
> Mr. HOFFMAN. Mr. Chairman, I object.
>
> Mr. KEEFE. Mr. Chairman, I ask unanimous consent that all debate on the pending amendments do now close.
>
> Mr. ROONEY. Mr. Chairman, I object.
>
> Mr. KEEFE. Mr. Chairman, I move that all debate on the pending amendments do now close.

Thereafter on a division, the motion was adopted, and on a teller vote, the motion was adopted. At no place in the RECORD does it appear that the gentleman from Oklahoma made any effort to obtain recognition, and his statement above quoted that the gentleman from Wisconsin was in any sense fearful of anything that the gentleman from Oklahoma might say is a simple effort on his part to lend dignity and importance to his palpable misinformation on the subject under discussion. If debate was cut off, it was the result of action of the House of Representatives.

The gentleman from Wisconsin, as appears in the RECORD on page 2562 under date of March 25, 1947, in discussing the Veterans' Employment Service in the

United States Employment Service, did make this statement:

> Now, the fact of the matter is, when you provided in title 4 of the GI bill for this committee, and Mr. Faulkner was appointed secretary of that committee, there was absolutely not a thing in that bill, and I defy anyone to get up here and point it out if he thinks otherwise, that provided for a Federal veterans' placement service of the character and kind that is contemplated in the amendments offered by the gentleman from Pennsylvania [Mr. VAN ZANDT]. In fact it is the opinion of those who know about it that the whole thing is subject to a point of order and there is no authority for it in point of law.

I reiterate that statement as a statement of law and fact. The gentleman from Oklahoma attempted to respond to that challenge. He refers to some debate on the Wagner-Peyser Act which took place in the month of May 1933. This is the beginning of the confusion of thought that is so apparent in the speech of the gentleman from Oklahoma. He simply does not understand the subject he attempted to discuss. The arguments which he presented on page 3185 of the RECORD clearly indicate that certain people then believed that there should be a separate and distinct veterans' employment service created by Federal law. Others argued that the Veterans' Employment Service should be a part of the contemplated employment service to be set up under the Wagner-Peyser Act. The history of those debates and the later action of the Congress clearly demonstrates that the intent of Congress was to establish a system of employment services to be operated in the States on a Federal-State relationship. The Congress of the United States in 1933 adopted the Wagner-Peyser Act, setting up such an employment service and in that act provided:

> It shall be the province and duty of the bureau—the United States Employment Service—to maintain a veterans' service to be devoted to securing employment for veterans * * * establishing and maintaining a system of public employment offices in the several States and political subdivisions thereof in which there shall be located a veterans' employment service.

Mr. Speaker, ever since 1933, there has been a veterans' employment service, operated by virtue of the express direction contained in the Wagner-Peyser Act. In 1939 pursuant to the first reorganization plan of Mr. Roosevelt, the employment service was transferred to the Social Security Board. It continued to operate under State auspices with Federal contributions as provided in the Wagner-Peyser Act. It continued to maintain a veterans' employment service in every employment office in the land. January 1, 1942, the employment services were transferred to the Federal Government at the request of the President, and with the organization of the War Manpower Commission, the functions were transferred to that body. Later in the fall of 1945, by Executive directive, the service was transferred back to the Labor Department. During all of this period of time a complete veterans' placement service was maintained in the employment service as directed by the provisions of the Wagner-Peyser Act.

The Congress in 1944 passed the Servicemen's Readjustment Act, commonly known as the GI bill. I suggest that the gentleman from Oklahoma and any others who may be interested in this subject read that act. The passage of the GI bill did not destroy the employment services for veterans set up under the Wagner-Peyser Act of 1933. It was intended by Congress that the veterans placement service contemplated by title 4 of the GI bill would be ancillary to and supplemental to the services already being performed by virtue of the provisions of the Wagner-Peyser Act. One fact has escaped the attention of the gentleman from Oklahoma—namely, when the Servicemen's Readjustment Act of 1944 was enacted, the employment service office was under Federal direction and dominion. A careful reading of title 4 will demonstrate to any impartial mind that it anticipated the situation that would prevail when and if the employment services were returned to the States. Nothing could be clearer than that the Congress intended that when the employment offices were returned to the States, the veterans' placement activities were to be conducted in the field by State personnel. Title 4 of the GI bill provides for a veterans' representative to be attached to the headquarters staff of each State office. He was to be the liaison man between State operations and the policies promulgated by the veterans' placement board. It was his specified duty to see that there was a proper execution of the board's veterans' placement policies through the public employment service in the State. In it the veterans' representative was not authorized to directly administer the board's placement policies but only to see that there was a proper execution of those policies through the public employment service in the States.

Further emphasis is given to this status by the further specifications of the veterans' representatives' duties as set out in section 601. It is there specifically stated that these duties are to be carried out in cooperation with the States' employment service. The Congress further indicated its attitude when in section 602 it was provided that the State employment service director is required to appoint in any local office under his jurisdiction such staff as the board created under title 4 considered necessary for "discharging the duties prescribed for the veterans' employment representative."

Thus by clear and explicit language it is stated that the duties of the veterans' employment representative which are specified in section 601 are to be carried out by State personnel specifically assigned to the discharge of those duties in the local employment offices. It is true that the veterans' representative is given carte blanche authority in determining the number of local office personnel required for implementing the duties and policies placed on him by the Congress and the veterans' placement board.

It will be borne in mind that the employment services were returned to the States on last November 15. The operational procedure in vogue prior to that time must now be modified accordingly and any apparent change in attitude of the gentleman from Wisconsin is predicated upon the fact that there has been since last year the return of these services to the States, and Congress never intended that there be two overlapping and duplicating field staffs—one Federal and one State—carrying out the provisions of title 4.

It is clear that the so-called field assistants of Mr. Faulkner and his so-called veterans' placement service are all merely doing the very things that the law explicity provides shall be done "through the public-employment service in the State." I may say that it is not difficult to see how the situation became messed up. Section 604 provides that the Federal agency which was at the time administering the employment service—the services being federalized at the time—would administer the program as an entity and "during the period of its administration shall effectuate the provisions of this title."

Therefore, since there were no State organizations, to deal with the veterans' placement board through the United States Employment Service, which was then directly administering the entire employment service, it proceeded to hire its own field staff and directly administer the duties described in title 4. This was all right as long as there was direct Federal administration of the field activities of the employment service. In fact, since there was no State employment service organization, the only way the Federal organization could be set up was through a system of field representatives directly responsible to the veterans' placement representative who was at that time located in the headquarters office of the Federal agency in each State.

As I heretofore pointed out, however, the organization prevailing before November 16 went out the window when the employment services were returned to the States on that date. One does not have to be a lawyer to determine that under existing law, with the employment offices now being operated by the respective States, the veterans' placement representative set up under title 4 of the GI bill is now required by law to carry out the duties prescribed by statute and promulgated by the veterans' placement board "through the employment services of the respective States." There is every good reason why this should be done. Under the present arrangement the field assistants of the veterans' representative attached to the headquarters staff in each State are Federal employees and are therefore paid considerably in excess of State employees performing the same function. This dual wage level for the same job is administratively a very undesirable thing to have in any State.

The charge by the gentleman from Oklahoma that I have changed my position is not warranted by the facts. The facts are that the employment service has changed. Prior to November 15, 1946, it was completely under Federal operation. Since then it has been under the direction and operation of the various States and State agencies. This

requires a complete readjustment and realinement administratively of the veterans' service provided for in title 4 of the GI bill. I have no objection to it and in fact have voted to provide sufficient funds to set up additional services for veterans as contemplated in title 4, not for the purpose, as appears to be the suggestion of Mr. Faulkner and the gentleman from Oklahoma, of setting up a duplicating, competing Federal employment service, but for the purpose of supplementing the services already being performed by the States under the provisions of the Wagner-Peyser Act. The gentleman from Oklahoma made this statement on page 3187 of the April 7 RECORD:

The gentleman from Wisconsin has implanted his foot upon the prostrate body of the veteran and stamped out a service which is vital to the welfare of the veterans. I hope the gentleman's conscience will not suffer when he reads about and sees thousands and thousands of our heroic veterans trudging our highways and byways in search of employment with no Government agency to sympathetically administer to their needs. In defense of his actions as he prepared to crack the partisan whip to close off the debate he obviously feared, the gentleman from Wisconsin referred to organizations of veterans as pressure groups, and he told you that they should be ignored as they protest his actions.

That statement is a monumental falsehood from beginning to end and violates every rule not only of the House but of good conscience and decency. What are the facts? The facts are that the subcommittee of which the gentleman from Wisconsin has the honor to be chairman recommended to the full Appropriations Committee that there be appropriated to the States for maintenance of the employment service under the Wagner-Peyser Act the sum of $71,728,000. I requested the director of the United States Employment Service to advise me what proportion of this sum would be devoted to veterans. I have a letter from Mr. Robert C. Goodwin, director, in which he states:

DEAR CONGRESSMAN KEEFE: This letter is in compliance to your request for an estimate of what proportion of the funds for grants to the States included in H. R. 2700 is for service to veterans.

An analysis of the estimated work-load factors upon which the request for funds for the States has been based indicates that approximately 40 percent of the sum requested is for service to veterans.

The gentleman from Oklahoma ought to feel very small and puny indeed in the face of this authentic information. Here is a veterans' employment service for which the committee recommended for the next fiscal year nearly $29,000,000. It also represents every single dollar that was requested by the Department of Labor, and its United States Employment Service for State operations of the service. Does this look as though the gentleman from Wisconsin "has implanted his foot upon the prostrate body of the veteran and stamped out a service which is vital to the welfare of the veterans?"

The gentleman from Oklahoma may say, "Oh, I did not intend that. I was referring to the veterans' placement service provided under title 4 of the Servicemen's Readjustment Act of 1944." At least, a reading of his statement shows that it was callously general in character and was intended to arouse hate in the minds of veterans toward the gentleman from Wisconsin and against the members of the committee and the Congress who voted for this bill. If so, it ought to backfire, because the gentleman from Oklahoma voted for the bill.

As a matter of fact, let us see what the committee did for Mr. Faulkner's veterans' placement service. The gentleman from Oklahoma says that we "stamped it out." The fact is that the amount available for expenditure in 1947 was $2,342,500. The budget estimate for 1948 was $2,650,600. The committee recommended $1,756,800. This is a reduction below the budget estimate of $893,800 and a reduction below the amount available for expenditure in the current fiscal year of $585,700. Now, in view of the fact that the committee gave to the State employment services nearly $29,000,000 for veterans' placement activities, plus $1,756,800 for an additional veterans' placement service, under Mr. Faulkner, can anyone other than the gentleman from Oklahoma say in good conscience that "the gentleman from Wisconsin has stamped out a service which is vital to the welfare of the veteran"?

The gentleman attempts to smear and belittle the gentleman from Wisconsin in saying that I stated that veterans' organizations and veterans should be ignored. I defy the gentleman from Oklahoma or anyone else to search the entire RECORD and find any statement on my part that would even remotely justify such a statement. This is a pure figment of the imagination of the gentleman from Oklahoma, or the ghost writer that prepared his speech. The gentleman says, "Perhaps he does not now appreciate their sacrifices." May I say to the distinguished gentleman from Oklahoma that the gentleman from Wisconsin has four veterans in his immediate family, one of whom is local commander of the American Legion. They and thousands of their buddies will resent the untruthful false and malicious allegations placed in this RECORD for purposes of pure partisanship by the gentleman from Oklahoma.

Not content with attacking the gentleman from Wisconsin, the gentleman from Oklahoma turns his venomous attack upon Mr. Stanley Rector, president of the Interstate Conference of Employment Security Agencies of this country. The gentleman from Oklahoma attempted to see something sinister in the fact that Mr. Stanley Rector was a witness and testified before the subcommittee. May I say to the distinguished gentleman from Oklahoma that for years the president and representatives of the Interstate Conference have appeared before this committee—long before the gentleman from Wisconsin was chairman. It so happens that the president of the Interstate Conference this year is Mr. Stanley Rector, of Wisconsin, and may I state that he is honored and respected by people of intelligence in the field of employment security as one of the outstanding men in that field. He has a right to appear before the committee and did appear in his capacity as president of the Interstate Conference. The mere fact that he is from Wisconsin or the mere fact that he is a friend whom I cherish and respect affords no basis for the charges made by the gentleman from Oklahoma and the implications and innuendoes in his speech that Mr. Rector was brought before the committee as one who hates the Employment Service and every other Federal agency of Government.

The gentleman from Oklahoma said:

If under the new leadership we must resort to calling admittedly prejudiced and biased witnesses who hate anything done by the Federal Government from our home States to advise us as to the meaning and intent of laws, I think the people ought to know about it.

I may say to the gentleman from Oklahoma, and to any others who feel as he does, that the forum of the committee that I have the honor to head will always be open to those people from the States who have charge of the functions for which we appropriate the administrative funds. I am glad to state that my predecessors, the Honorable Butler Hare and the Honorable Malcom C. Tarver before him, as chairman of the subcommittee, have always been glad to receive the benefit of the advice and judgment of the people in the States who are spending Federal money in this whole field of social security and employment security. The attack, therefore, upon Mr. Rector comes with poor grace from one who knows so little of the matter of which he presumed to speak.

I may say that I have been doing some research since his speech of April 7, and I am reliably informed that the major portion of his speech was prepared in the Veterans' Employment Service office here at Washington. I am further reliably informed that the sole purpose of this vitriolic exhibition of hate and venom is all part of a political scheme to attempt to discredit those who are courageously trying to save the fiscal structure of our Government.

I wondered why the gentleman from Oklahoma had such an interest in this matter. Certainly the remarks made do not indicate that he has any extraordinary knowledge of the subject. Why, then, should the gentleman from Oklahoma join as an active party in this smear-bund campaign? Perhaps these facts might be a clue to the interest of the gentleman from Oklahoma.

Recently I came into possession of a memorandum dated March 10, 1947, from Perry Faulkner, Chief, Veterans' Employment Service, to headquarters staff. In this I find this statement:

William E. Morris is hereby designated as Assistant Chief of the Service. He will continue to perform substantially the same supervisory and review duties, will be authorized to represent and act for the Chief, and will act in the absence of the Chief. He will be immediately responsible for the coordination of all operations.

The moment I saw that I recalled that the secretary in the office of the gentleman from Oklahoma was named Alice F.

Morris. I wondered—could there be any connection? I called the office of the gentleman from Oklahoma and Mrs. Morris answered that call. She stated that her husband was the William E. Morris designated as Assistant Chief of the Veterans' Employment Service. It then became perfectly clear to me why the gentleman from Oklahoma has such an inordinate interest in the veterans' placement service. His attempt to make the veterans believe that it is because of them that he is spewing his hate and venom toward the gentleman from Wisconsin will, I believe, fall upon deaf ears when the veterans know the real, true facts of the situation.

I am further advised that the headquarters office of the Veterans' Placement Service planned to distribute thousands of these speeches of the gentleman from Oklahoma in an effort to cast discredit among the veterans upon the gentleman from Wisconsin. I may say that in my opinion such efforts will be rebuffed by every decent veteran in America who will not countenance shady politics hiding behind the decent mantle of the American veteran.

There has been too much of political chicanery indulged in in the name of protecting the veteran, and the veterans of America know this to be a fact. The time has come, therefore, to speak plainly in order that the American people, of whom the American veteran constitutes such a large part, may know the real facts.

The President's Loyalty Order

EXTENSION OF REMARKS
OF
HON. GLEN H. TAYLOR
OF IDAHO
IN THE SENATE OF THE UNITED STATES

Monday, May 5 (legislative day of Monday, April 21), 1947

Mr. TAYLOR. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a letter which was published in the New York Times of Sunday, May 4, 1947, on the subject of the President's loyalty order.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

LETTERS TO THE TIMES—LOYALTY ORDER OPPOSED—IS CALLED NAZILIKE LAW WHICH SHOULD BE REPEALED

(The writer of the following letter was former deputy chief counsel (economics) at Nuremberg. As such he was senior trial counsel in all Nazi industrialist cases.)

To the EDITOR OF THE NEW YORK TIMES:

Having recently returned from Nuremberg, I am struck by certain ironical contrasts between our Government's prosecution of Nazi criminal organizations at Nuremberg and our parallel proceedings here against so-called disloyal American organizations. It would seem that we are providing American justice for Nazis, but Nazi justice for Americans.

In Germany, when it was determined to prosecute the notorious S. A., S. S., and the German general staff, we observed the highest traditions of American legal process. Indictments, setting forth the charges in detail, were served on the affected organizations. They were afforded the right to counsel of their own choosing, failing which, we furnished them with counsel. They were given their day—indeed, their months—in court. And it might be added parenthetically that, in spite of our Government's sincere belief in the criminality of these organizations, two of them, the S. S. and the general staff, were exonerated.

KNOWLEDGE OF ACTIVITIES

But even with respect to the convicted SA, our legal process was by no means ended. For the condemnation of the SA in itself condemned nobody. Membership in the organization, per se, was no crime. It became additionally necessary to show that each person sought to be charged with responsibility for membership joined the convicted organization or remained in it, knowing of its nefarious activities.

No member of the SA could be convicted on the basis of the condemnation of his organization without first being afforded a full hearing at which he could submit any exculpatory or extenuating testimony. Only after this double trial could a member of an illegal organization be punished, and then generally by a token fine.

This was American due process in Germany. This was our show window display for the German people to see that no one, not even Goering, could be condemned without a fair trial.

Upon returning to the United States I found that, whatever we may have taught the Nazis, we have absorbed into our own legal system the German tyranny that we fought and inveighed against. I refer to our Executive order which provides that any one of the 2,500,000 employes in the executive branch of our Federal Government can be summarily fired if he is, or ever was, a member of, or in "sympathetic association" with, any organization or combination of persons placed by the Attorney General of the United States on his private black list.

CONDEMNED ORGANIZATION

The condemned organization receives no indictment or even intimation that its loyalty is impugned. It gets no hearing or opportunity to contest the charge. The Attorney General merely says: "Thou art condemned." Thereupon its members, past, present, and future, are automatically adjudged guilty of the heinous offense of disloyalty to their Government. The American citizen, unlike his German counterpart, is afforded no opportunity to challenge the Attorney General's ex parte condemnation of his organization.

This conviction without trial, borrowed from the darkest days of the Nazi inquisition, is a startling innovation in American judicial procedure. Its gravity is accentuated by the fact that the member of the condemned organization is subject to an extraordinarily severe penalty. Nominally, he is discharged from Federal employment. This is bad enough. But the practical effect is an economic death sentence. For one can imagine how remote are the chances of a person, discharged for disloyalty to his Government, finding other employment.

Another aspect of the Executive order presents a striking and sickening parallel to a Nazi decree which provided that no person could hold public office unless he could prove "by his conduct that he is willing and able to serve loyally the German people and the Reich." (Law regarding citizens of the Reich of September 15, 1935.)

Our own order likewise provides the very fluid word, "disloyalty," as a criterion of removability.

ELASTIC CONCEPTION

We know that in Germany any whisper of dissent was considered disloyalty. Do we have a right to assume greater tolerance of opposition here? We have all witnessed how the more circumscribed words "Communist," "totalitarian," and "subversive" get flung around even by men in high places. Breathes there a liberal worthy of his salt who has not been called a Communist? How much more misused will be the new criterion, that very elastic conception, "disloyalty"?

On this charge of personal disloyalty, the governmental employee gets a trial—a mockery of a trial. The charges, says our Executive order, shall be only as specific as, "in the discretion of the employing department or agency, security considerations permit." And this is further hedged by the rule that the investigative agency may refuse to disclose the names of confidential informants.

Yes; you get a trial on an indictment that doesn't inform you of the charges, and with no opportunity to confront or examine, or even to know of, the complaining witnesses. And the burden of disproving undisclosed charges rests on the defendant. It should be added—shades of the malodorous German people's courts—that the tribunal which hears these cases is appointed by and responsible to the department head, who may be the complainant.

This is twentieth century American justice.

The letter of Zechariah Chafee, Jr., et al. (the New York Times, April 13), while assailing the Executive order, takes the calm view that the situation can be redeemed by the self-imposed discipline of the heads of the individual departments or agencies charged with enforcement.

Sure, the department heads can go beyond the requirements of the law and gratuitously create for themselves more reasonable standards. But I find no comfort or redemption in this hope. In the first place, we proudly boast that ours is a Government of laws, not of men. It is our laws which furnish us the prophylaxis against the possibility of abuse from evil or stupid men. Second, I would prefer, particularly in this hysterical period, not to be dependent on the grace and conscience of the wild-eyed crusaders who may make up a large part of our enforcement units. In these days, when the issues are getting sharper and hotter, when dissent from Government policy brings down on the head of the dissenter pathological fury, even threats of jail, it is dangerous to have to depend on those who have the power to use it temperately.

In my judgment, the Executive order is, both substantively and procedurally, the most Nazi-like and terrifying law since the Alien and Sedition Acts. It should be repealed in toto. There are enough laws already on our books to protect us against treason, sabotage, and real disloyalty.

A. L. POMERANTZ.

NEW YORK, *April 26, 1947.*

Reclamation, Flood Control, and River and Harbor Appropriations

EXTENSION OF REMARKS
OF
HON. JOHN H. OVERTON
OF LOUISIANA
IN THE SENATE OF THE UNITED STATES

Monday, May 5 (legislative day of Monday, April 21), 1947

Mr. OVERTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me on appropriations for reclamation, flood control, and river and harbor work, delivered before the National Rivers and Harbors Congress in Washington last Friday.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It has been my privilege for a good many years now to appear before the National Rivers and Harbors Congress to discuss river and harbor and flood-control legislation. At the time of most of those meetings, we have faced great problems of varying degree, but at no time, in my opinion, have we faced a greater crisis in our labors to develop the enormous natural resources of our Nation than that which is before us at the present time.

Our problem now is not necessarily one of legislative authorization in the usual sense of the term. Our great projects, by and large, have been authorized, and, in many instances, not without much difficulty. Nor is our problem one which can be cured by the Executive, even if he were inclined to come to the rescue; on the contrary, he has manifested an opposite view, as witness his Executive order of last August, which drastically reduced funds for public-works improvements. The answer must come from the people themselves crying out from the wilderness of flood destruction, wasted arid lands, and neglected valleys.

Our progress was slowed by the illegal Executive order of last August, when our appropriated funds were impounded; the Bureau of the Budget recommendation for 1948 funds is so inadequate that in many instances work will come to a practical halt; and now, if we are to believe the rumblings on the horizon, we are to be dealt the knockout blow.

This is not a sectional problem, nor is it one of concern to a single great river basin. As I look down the roster of projects, I find them located in Vermont, in Pennsylvania, in Texas, in Kansas, in Illinois, in North Dakota, in Colorado, in Oregon, in California, in Mississippi, and in Florida. They involve the great basins of the Missouri, the Ohio, the Mississippi, the Columbia, the Willamette, the Sacramento, and the Red.

I have tried to compile a rough estimate of the amount of funds which the Budget has recommended for fiscal year 1948 and compare that figure with what I am informed by competent authority could be economically expended during the fiscal year 1948. I find that the Budget has recommended an appropriation of approximately $102,000,000 for rivers and harbors when twice that amount should be appropriated, if we are to proceed on a sound economic basis in our development of our water resources. On flood control projects, I find that the Budget has recommended approximately $188,000,000, as against an amount of more than $500,000,000 which should be appropriated in a sound economic program.

That our troubles are not sectional or regional is aptly illustrated by the amounts which the Budget has recommended for appropriation compared with the amounts which could be economically expended during the coming year. For instance, in the rivers and harbors appropriations, we find a recommendation of zero for the Great Lakes to Hudson River waterway, as against an economically justified expenditure of $3,000,000; a recommendation of $200,000 for New Haven, Conn., harbor, as against an economic figure of $1,450,000; zero for Kanawha River, W. Va., as against an economic figure of $515,000; zero for Crescent Harbor, Calif., as against a needed $600,000.

Under the flood control appropriation, one of the great follies already committed is in the paltry $24,000,000 recommended appropriation for the lower Mississippi River project, as compared with the $113,000,000 which could be expended economically. But there are others, and they too can be found throughout the country. There is nothing recommended for Punxsutawney, Pa., as against $1,363,000 which could be spent under a sound program. The recommendation for Cannelton, Ind., is zero, when $1,440,000 should be spent. Denison Reservoir, Tex. and Okla., would receive nothing, as against an economically justified $3,087,000. East St. Louis, Ill., is recommended for no appropriation, when $1,000,000 should be made available. The great project for the metropolis of Kansas City is recommended for an appropriation of $1,800,000, when $6,900,000 could be economically expended.

Garrison Reservoir, N. Dak., one of the key items in the comprehensive Missouri River Basin program, is recommended for an appropriation of $13,000,000, when $30,000,000 could and should be expended, if the project is to be prosecuted on a sound economic basis.

Syracuse, N. Y., would receive nothing, when $1,564,000 is needed. Parkersburg, W. Va., would get $300,000, when $2,200,000 should be spent. There is nothing recommended for Sutton Reservoir, W. Va., as against an economically justified $3,435,000. Where $7,715,000 should be spent on a series of Illinois projects, the Budget recommendation is absolutely nothing. That same zero recommendation is made for Kings River and Tulane Basin, Calif., when $1,700,000 should be appropriated.

And now they tell us that the Budget figures are greatly in excess of what should be and will be appropriated, and that in the face of a Budget recommendation of about 40 percent of what sound engineering and the economic welfare of the country dictate.

If I might digress for just a moment, I want to urge each one of you to become a committee of one to call on your Senators and Representatives during your stay here this week and press upon them the vital necessity for maintaining appropriations for these projects. They will welcome your views and, certainly, if our cause is to maintain itself, those views must be expressed.

Do those who would now engage in a meat-ax slashing of flood-control appropriations remember that 2,142 lives were lost in the great Johnstown flood? Would they be parties to a repetition of the 1927 Mississippi River flood when 900 perished? Have they forgot that 730 lives were taken by the great Ohio River flood of 1913? Can the 250 lives lost in the Texas flood of 1886 be ignored? Only a few weeks ago the Nation was shocked by the holocaust at Texas City, but few realize that floods which have visited the country periodically have many times taken more lives and left in their wake the same horror, disease, and destruction.

Are we, who have fought so long and so well for development of our natural resources, to stand idly by while a wave of hysteria based on false economy not only wipes out the great advances which we have made, but threatens to bring to a standstill our future operations? Are we to stand helpless as our cities and fertile farms are ravished by flood waters? Is this the time for us to say to those intrepid pioneers of the great Northwest that there will be no more water to feed their arid lands? Are we to see our great seaports become ghost towns of empty warehouses and decaying wharves, unused and neglected? Are our people to be told that no longer will they have the advantages of cheap transportation on our great inland waterways?

These, my friends, are the issues. They not only go to the core of our very existence as a great nation with a free and abundant economy, but in many instances they strike at the very heart of human existence. The challenge is clear. The gauntlet has been thrown down. Our whole future has been endangered. For myself, I have fought too long and too hard on these questions to avoid my responsibility in this fight. I, for one, pick up the gauntlet. I accept the challenge and call on all those who earnestly believe in the welfare and future of this greatest of all nations to go with me into the fray.

The President's Loyalty Order

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES

Monday, May 5 (legislative day of Monday, April 21), 1947

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Loyalty Order," published in the New York Times of April 13, 1947. The article is signed by four members of the Harvard Law School faculty, including its dean.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE LOYALTY ORDER—PROCEDURE TERMED INADEQUATE AND DEFECTS POINTED OUT

(Of the writers of the following letter, Mr. Griswold is dean of the Harvard Law School; Mr. Scott, an authority on the law of trusts; Mr. Katz and Mr. Chafee, who served as vice chairman of the Commission on Freedom of the Press, are professors of law at that school.)

To the EDITOR OF THE NEW YORK TIMES:

The moral and political validity of the Executive order "prescribing procedures for the administration of an employe's loyalty program in the executive branch of the Government" will be measured by its efficacy in achieving its twin purposes. As stated, these are: to afford "maximum protection * * * [to] the United States against infiltration of disloyal persons into the ranks of its employees," and to afford "equal protection from unfounded accusations of disloyalty * * * [to] the loyal employees of the Government."

It is possible so to administer the order as to accomplish these ends. It is also possible so to administer the order as to miss genuine culprits, victimize innocent persons, discourage entry into the public service and leave both the Government and the American people with a hang-over sense of futility and indignity.

The nature of the administration will hinge upon the procedures to be followed. This is the nub of the business. Here, as so often in our history, moral and political issues come to focus in a question of procedure. Although the order purports to prescribe a procedure, the prescription is shadowy and incomplete.

Conceivably, the silences of the draftsmen may be redeemed by wisdom in execution. At this time, however, we can only appraise the order according to its terms. The procedure actually described is quite inadequate. It fails to take due account of the gravity of the sanctions invoked against a person to whom the prohibitions of the order may be deemed to apply. It fails to draw upon the cumulative experience of courts and administrative agencies. It fails also to give effect to the conception of sound administrative procedure reflected in the very recently enacted Administrative Procedure Act.

MEANING OF DISMISSAL

It is imperative to keep clearly in mind what a dismissal under the order means. Far more is involved than the loss of job. It means that:

(1) The person dismissed will be denied all opportunity for employment anywhere in the Federal Government.

(2) As a practical consequence, he will also lose almost all possibility of finding employment within any State or municipal government.

(3) Also, he will encounter special difficulties in obtaining employment in private organizations.

Consider the case of one who, for 20 or 30 years—his entire mature life—has worked in the Forestry Service, or the Bureau of Animal Industry of the Department of Agriculture, or the postal service, or the Bureau of Standards, or the Tennessee Valley Authority. To deny him all opportunity for employment in governmental service—Federal, State, or municipal—is to deprive him of the only means of livelihood for which he has any training or experience.

The tested wisdom of our tradition and national experience dictates that no sanction so drastic shall be applied save after adjudication of wrongdoing based upon a full hearing before responsible and impartial public officers, who are not themselves in fear of losing their own jobs.

The Executive order provides for a hearing of sorts before a "loyalty board" in the particular department or agency whose members are to be appointed by the departmental or agency head from the personnel of the department or agency. Since Cabinet officers and other senior personnel are unlikely to have either the time or the taste for such service, the membership will tend to be drawn from third- or fourth-line employees, who will themselves feel none too secure.

EVIDENCE AT HEARING

And the nature of the hearing? The suspected "officer or employee shall be served with a written notice of such hearing in sufficient time, and shall be informed therein of the nature of the charges against him in sufficient detail, so that he will be enabled to prepare his defense." So far, good. But—"The charges shall be stated as specifically and completely as, in the discretion of the employing department or agency, security considerations permit."

The accused is also given a "right to reply to such charges in writing," and a "right to appear before such board personally, to be accompanied by counsel or representative of his own choosing, and to present evidence on his behalf." There the prescription ends. There is no provision that the accused shall be confronted by such evidence as there may be to support the charges against him, so that he may undertake to rebut it. Indeed, there is no requirement that the evidence against him shall be introduced at the hearing at all.

No provision is made for a detailed record of the hearing or, for that matter, for a record of any kind. There is no requirement that the findings of the loyalty board must be supported by the evidence. In fact, there is no requirement that the loyalty board make any findings whatever. After the hearing, the loyalty board makes its recommendation to the head of the department or agency. If the recommendation is for removal and is accepted by the departmental head, his decision is subject to an appeal to the Loyalty Review Board of the Civil Service Commission, which, after review, makes an advisory recommendation.

Since there is no provision for a record, it is by no means clear what the Loyalty Review Board of the Civil Service Commission will review or on what basis. The order is, moreover, wholly silent as to the procedure to be followed by the Loyalty Review Board upon such review. The membership of the Loyalty Review Board is to be appointed from officers or employees of the (Civil Service) Commission, presumably by the Commission.

IMPALPABLE STANDARD

This tells its own tale, but the tale is not yet complete. The charges against the suspected public officer or employee will derive their significance from the standards of wrongdoing defined by the order. The governing standard is explicit. "The standard for the refusal of employment or the removal from employment * * * shall be that * * * reasonable grounds exist for belief that the person involved is disloyal to the Government of the United States." Even in the most mature and most careful and fairest of hearings, it would be sufficiently difficult for the defendant to come to grips with so impalpable a standard.

But even this is not all. The "activities and associations of an * * * employee which may be considered in connection with the determination of disloyalty may include one or more of the following: * * * Membership in, affiliation with, or sympathetic association with any foreign or domestic organization, association, movement, group, or combination of persons designated by the Attorney General as totalitarian, Fascist, Communist, or subversive, or as having adopted a policy of advocating or approving the commission of acts of force or violence to deny other persons their rights under the Constitution of the United States, or as seeking to alter the form of government of the United States by unconstitutional means."

Here we swim in a sea of ambiguity. Is the Attorney General's designation to be taken as final? May the defendant undertake to show that a group with which he is sympathetically associated is not subversive, or must he limit his defense to an attempt to show that he has no connection with the organization? If he concedes his membership, and is foreclosed by the Attorney General's characterization of the organization, will this be taken as proof that he, as an individual, is likewise subversive, or at least as reasonable grounds for belief that he is disloyal? Where is the burden of proof? Is it on the accused?

ANSWERS TO QUESTIONS

These are questions which can be answered, and answered in such a way as to maintain both the integrity of our free institutions and realistic possibilities of control. The task is arduous, but does not lie beyond the reach of legal and administrative imagination and technique. There is an implication of surrender in the apparent abandonment of the elementary requirements that charges be supported, that issues be clearly defined, that the burden of proof be clearly assigned, and that an adjudication must be based upon evidence with which the defendant has been confronted.

As has already been indicated, the order embodies a novel variation of a familiar system of control—licensing. In effect, the public service is made a licensed activity, and a public officer or employee dismissed under the order is in the position of one whose license to pursue his calling has been revoked.

The settled practice of many administrative agencies, judicial decisions without number and a variety of Federal and State statutes have developed a well-established procedure for the revocation of licenses. There is a complaint, which specifies the charges; there is an opportunity to answer; on the issues thus defined there is a public hearing before the licensing authority; at the hearing the defendant is confronted by all the evidence against him and is given full opportunity to introduce evidence in his own behalf; the licensing authority must find that the charges have been sustained by the evidence in the proceeding, and no other evidence may be considered; a record of the proceeding must be kept; the order of the licensing authority must be supported by the findings, and the findings must be supported by the evidence; and the order of revocation, if issued, is subject to judicial review.

POSSIBILITIES OF ABUSE

The Department of Justice and the Congress have lately been much concerned about the possibilities of abuse in administrative procedure. Their concern has been given effect in the investigation and report of the Attorney General's Committee on Administrative Procedure and in the Administrative Procedure Act which became a law on June 11, 1946. These now stand as a somewhat ironic commentary on the misty procedure so indistinctly sketched in the Executive order.

The situation can be redeemed. The order does state that its expressed requirements as to procedure "shall be considered as providing minimum requirements," which may be supplemented by the heads of individual departments or agencies. This affords some possibilities for relief here and there, but is plainly inadequate.

It is for the President and his law officers to make the correction. In default of adjustment by executive action, the correction may be imposed by the courts, but piecemeal, slowly and after much clamor and confusion.

ZECHARIAH CHAFEE, Jr.,
ERWIN N. GRISWOLD,
MILTON KATZ,
AUSTIN W. SCOTT.

CAMBRIDGE, MASS., *April 10, 1947.*

Congress in Action

EXTENSION OF REMARKS

OF

HON. GEORGE W. MALONE

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Monday, May 5 (legislative day of Monday, April 21), 1947

Mr. MALONE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Congress in Action," delivered by the distinguished junior Senator from Michigan [Mr. FERGUSON] over the facilities of radio station WJR in Detroit on Saturday, May 3, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Good evening, members of the WJR radio audience.

I speak to you this evening from Washington, the home of Congress. The problem I would like to discuss with you in your homes is your Congress in action.

On January 3 of this year the Eightieth Congress went into session. It is composed of two parties—the Republican and Democratic. The real genius of the American Government lies in this two-party system. At the elections the people determine which of these two parties is to control the machinery of Congress. On January 3 the Republican Party, having a majority in both Houses, undertook the responsibility of guiding the legislative program for the next 2 years.

We do not have the sole responsibility because the minority can play its part, and, therefore, does not cooperate in the policies determined by the majority. It must also be remembered that the executive branch—the Presidency—lies in the opposite party, and that that branch controls the agencies and departments of Government.

In order that we may preserve the two-party system, each party has in it various shades of opinion, and, of course, these shades of opinion do not always permit complete unity. That is probably one of the saving graces of the two-party system.

The Eightieth Congress faced an enormous task. For 14 years the previous Congresses had been controlled by one party and one Executive.

Each party in Congress has a policy committee. I, personally, am a member of the

Republican policy committee. It consists of seven men. We hold many meetings at which we examine the public questions of importance and determine what should be done about them. When it is deemed advisable, the entire party is called into a meeting to determine whether or not the party as a whole wishes to take a certain stand. In these meetings the issues are debated and an attempt is made to reconcile the various shades of opinion. This is why, on occasions, it is difficult to determine just what stand should be taken.

It is not the number of laws which are passed by Congress which will determine whether or not Congress performs its services to the Nation as a whole. It is the kind of laws which are passed. It must always be remembered by the people that, as a rule, the passing of laws creates additional bureaus and agencies and therefore the tax burden of the people back home is increased. It must also be remembered that in the passing of laws, as a rule, the rights and liberties of people are restricted. Therefore, it is only when the general welfare of the people demands the passage of legislation, that Congress should act.

The great issues before Congress this session are, first, the cost of government. When it is realized that it costs more to govern the people of America than it does to feed them—that in other words the cost of government is more than the food bill—we can understand the enormous problem which must be solved in seeing that this condition does not continue and that the cost of government is cut. In cutting the cost of government, naturally taxes can be reduced.

What has Congress done in the 4 months which have passed? First, this Congress took a definite and determined stand against controls over the lives of our people. The President, following that mandate, ended many of the controls. Congress will continue in its endeavors to eliminate controls and to restore to our people all those freedoms consistent with the public interest.

The change in our governmental structure was not just the repairing of the machinery. We found a wrecked machine and it was necessary to rebuild the entire structure. Therefore, a great deal of confusion exists and we are going through a painful transition.

The more freedom which can be given to labor, business, and management, to work out their own problems, the more we have the right to look for a rising standard of living and a better America. The American way of life demands the elimination of governmental controls.

Those who are not familiar with the way Congress functions are naturally impatient because we have not worked miracles. I hope I can make clear to you the great problems which faced us when we met here in January and impress upon you that the process of making laws should not be a hasty one. When Congress met in January, it faced the task of completely reorganizing our legislative machinery. Last year the Republican Members of Congress voted overwhelmingly to modernize Congress. The people back home naturally were skeptical that this modernization would be carried out. It was feared that the old committee system, with its plums for the chairmen, would continue on. But the Republican Party has stood firm on its pledge to modernize Congress and took steps immediately to do so. We reduced the number of committees in the Senate from 33 to 15, and in the House from 48 to 19. We cut down the number of subcommittees from 176 in the Seventy-ninth Congress to 151 in the present session. At present, Michigan Congressmen are chairmen of 5 of the 19 committees in the House and 1 in the Senate. It was a difficult job to set up competent staffs and to select professional advisers for each of these new committees. But this job was done, and done well, by the present Congress. The enormous task of modernizing Congress was done speedily and efficiently in addition to all the many other problems which faced us before we were ready to go to work. This is a new foundation, and a new structure, and future Congresses will benefit from it and I am sure will be able to carry on their work much more efficiently. Better laws should come from this improved system.

I know you are interested and want an insight into the volume of work undertaken during the first 4 months of this session. The amount of work transacted by this Congress compares favorably with previous Congresses. Already there have been sent to the Senate 15,000 nominations and many of these nominations involve long and exhaustive study by the committees and on the floor before they are approved by the Senate. We acted upon 13,000 of these nominations. There have been 401 bills and 36 nominations presented to the Judiciary Committee of the Senate, of which I am a member. The committee has reported out 28 bills and 27 nominations.

Probably the most difficult work of the present Congress is done by the Appropriations Committee. I speak from personal knowledge because I am a member of this committee. All proposals for raising revenue and all appropriation bills must originate in the House of Representatives, and the work of the Senate is delayed until after these measures have been passed by the House. To date, the Senate Committee on Appropriations has reported out four appropriation bills, three of which have been passed by the Senate, and the other, the Labor and Federal Security appropriation bill, has been reported to the floor of the Senate. The hearings on the Treasury and Post Office appropriation bill have been completed and ne t Monday open hearings will begin on the Interior Department appropriation bill.

A new idea has developed in connection with appropriation hearings. Instead of secret sessions, we now conduct public hearings. In order to be able to intelligently cut billions of dollars from the executive demands, long hours must be spent in study and research. We are endeavoring to get Government out in public so the taxpayers may know where their tax dollars are going. This work is especially difficult this year because the present Congress is determined to cut down the enormous Government spending. We are making a careful study of every dollar asked for by the governmental agencies in order that we may grant some relief to our people from their tax burdens. And believe me, friends of the radio audience, saving the taxpayer money is an extremely difficult task. Government agencies, used to spending the taxpayers' money lavishly, fiercely resist any reduction in their appropriations. For example, I hold in my hand a memorandum put into the CONGRESSIONAL RECORD which purports to be a report from a Mrs. Johnston, customs collector at Minneapolis, to her chief, the Customs Commissioner, W. R. Johnson, here in Washington. According to this memorandum she says and I quote:

"I have written to the importers, to civic organizations such as the chamber of commerce, to the mayors and to the foreign departments of banks which handle foreign credit.

"The Customs Service Association (employees' organization) wired our two Senators and the chairman of the Senate Appropriations Committee (Senator STYLES BRIDGES, Republican of New Hampshire).

"The entire customs personnel, members of their families and friends, are sending letters and post cards to the Senators involved."

So, you see that every time that we try to cut a Government department that department and others go into action and generate all kinds of resistance to these reductions so that it is a very difficult job for us to get the unbiased facts, and to save the taxpayers' money from being lavishly expended.

During the past 4 months there have been 5,110 bills and resolutions introduced in Congress, 1,418 in the Senate and 3,692 in the House. The Senate committees have reported 127 and the House committees 326. The fact that there are more bills reported in the House of Representatives than in the Senate can be attributed to the fact that in the House no Member has to serve on more than one committee. Consequently there is no difficulty encountered by the committees in getting a quorum present at each meeting, whereas in the Senate a Senator serves on more than one committee, and at times conflicts develop in the time set for committee meetings, and it is impossible for the various committees to have a quorum present to do business. So far as the House passing more bills is concerned, this is due to the fact that the House operates on a limited-debate system, while the Senate has unlimited debate, and hence the House can act more speedily under the practice followed by that body. The House has 435 Members capable of proposing laws, while the Senate has only 96 men. The Senate has actually passed 149 Senate and House bills and resolutions and the House 153.

Of course, figures alone cannot tell the real story of the work in Congress. Few realize that the hardest and most painstaking work on legislation is done in committee.

Congress also has another function, and that is in connection with the investigations of public business. The white light of investigation has been put upon public business in order that our people may know of its operation. If this were not done, it would cost the taxpayers many more billions of dollars, and they would be continually in the dark as to what is really going on in Washington.

No bill should be passed by Congress without a full and complete hearing in the open and an opportunity given for all parties on both sides, and the general public, to appear and give their versions. Do you realize, fellow citizens, that America is the only place in the world where such hearings can be held and where investigations bring tl e true facts to light in order that the people may be advised? After all the committee work is done, reports must be made to the Senate and the House, and then debates are carried on on the floors of both bodies.

If a bill is passed in the same form by both Houses of Congress, it immediately goes to the President. However, if the House or the Senate passes a bill, and the wording is changed in any degree by the other body, it must go to a conference committee of the House and the Senate, so the differences may be ironed out. An identical bill must then be passed, and it is ready for the President's signature. All this takes time, but it is really the finest example of free people making the laws which are to govern them through their chosen representatives.

Tribute to the Late Franklin Delano Roosevelt by Charles M. LaFollette

EXTENSION OF REMARKS

OF

HON. HARLEY M. KILGORE

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 6 (legislative day of Monday, April 21), 1947

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in

the Appendix of the RECORD an address in tribute to the late President Franklin Delano Roosevelt, by Hon. Charles M. LaFollette, former Member of Congress from the State of Indiana, delivered in Berlin, Germany, on April 12, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Two years ago today the President of the United States, Franklin Delano Roosevelt, died at Warm Springs, Ga. The plain people of the world mourned.

Just 8 days later on the 20th of April 1945, in a prison in this place, 33 men convicted for opposing the Nazi regime, many of whom had undisposed of clemency pleas pending, were prematurely executed to furnish the celebration of the anniversary of the birthday of Adolf Hitler. Their survivors added their heartaches and tears to those of the other mourners who had previously suffered from and under the impact of viciousness incarnate.

We have come together as citizens of the sovereign nations which overwhelmed that viciousness to commemorate the death of the man who all men acknowledged was one of the great leaders of that fight. But we know even as we gather here by the troubled stirrings in the secret recesses of our hearts that until and unless we can come together as citizens of the world we shall desecrate the memory of all who died in and suffered from that viciousness.

Those who arrogate to themselves the privilege of commemorating the dead, may act in either of two ways. They may very easily, and therefore cheaply, cast upon themselves and momentarily bask in an unearned eerie light from the past, by an eloquent, throat-catching review of the deeds and accomplishments of the dead. Or they may earnestly and arduously try to evaluate the significance of the acts and deeds of those whose passing they prefer to memorialize. The first way gives to shallow and purposeless people a fleeting moment of emotional vicarious grandeur. The second affords to purposeful people some aid perhaps in their earnest attempt to create a living memorial. The completion of the unfinished tasks which the mystical forces of the universe required the living to lay down.

If anyone gathered here has not the purpose to create such a living memorial, then he or she should not be here. I shall not demean your intelligence nor impugn your good faith by offering you an emotional bauble. I choose to offer you with earnest, and I assure you not simulated, humility some thoughts which might perhaps make significant that which we attempt to do here.

Franklin Delano Roosevelt was a leader of men. Like all leaders, he was a controversial figure in his own land. To deny this is to state an untruth. To state such an untruth here would desecrate this service. For it is the weak not the strong who need the protection of untruth. Time, which inexorably increases the capacity of men for objectivity, is even now turning into gray that which was once black and white. This is good. We serve no purpose here in disturbing the effect of time. Certainly this is true when those things which are uncontroversial offer us so much to learn from and build upon.

First, Franklin Delano Roosevelt was a fighter. Inevitably therefore, he surged into many battles. Second, it was his lot that every effective battle he fought as President of the United States was a counterattack, a counterattack against relentlessly moving, pressing forces.

What do these two uncontroversial facts in the life of Franklin Roosevelt furnish us in the way of guideposts to the unfinished tasks which we must complete if we intend to do more than to give lip service to the life of the man whom we here memorialize? First, we shall fight the fight for a better world and find our reward in the battle itself. Every good fighter so finds his reward. The goal for which he fights is, of course, before him, but it is to him an accomplished certainty; therefore, having no doubts as to the ultimate attainment of victory, he does not need victories as a reward for his efforts. I have always felt, and I believe that you will agree with me, that those who have publicly mourned over the fact that Franklin Delano Roosevelt did not witness through mortal eyes the victory against viciousness which he had so splendidly fought have unfairly measured the true fighting qualities of the man. Therefore, they have attributed to him a desire which only an inferior fighter would have felt, and thus depreciated this greater quality which was his outstanding characteristic.

But it is not enough that we here avoid that mistake which others have made. Constructively we accomplish nothing unless we also learn to fight for the things which are good and to value the privilege of participating effectively in the fight as sufficient reward for our efforts. For actually he is a mercenary, who fights only because he hopes to gain some reward in his time for the efforts which he makes. The achievement of a better world, in which people can live free from the fear of destruction from that form of mass murder which we call war, is a victory which must be an impersonal objective of the man who fights for it. For it will not be a better world if we still expect to engage in a mad scramble for a disproportionate share of the benefits to be found in such a world. Therefore we must learn to find our rewards for the efforts which we make toward achieving this goal, solely in the fact that we are engaged wholeheartedly in the making of that struggle. Only thus do we carry on in the world as a force for good the standards of all great fighters which Franklin Roosevelt demonstrated so clearly to us.

Again we must understand that the leader of a counterattack inevitably has before him the unaccomplished task of directing and leading his own attack. For he who leads a counterattack against an aggressive pressing foe cannot at the same time successfully and effectively develop the strategy or evolve the tactics for his own attack before and until his counterattack has driven the foe from the field which the foe first chose to fight upon. It must follow, therefore, that when such a leader is forced to abandon his leadership, unfinished tasks are passed on to those who follow.

We here are primarily concerned not with the unfinished domestic tasks but with those which affect the hopes and aspirations of the plain people of the whole world. The forces of racial prejudices and racial superiority and nationalistic greed, which sought to overrun the world, chose the time and place and field of battle first. This was true not only in the world of material things—of planes and tanks and overrun lands and destroyed people—but it was true in the world of mystical spiritual forces which affect men's minds and emotions. Therefore, the task of the counterattacker was not only to drive back from the overrun surfaces of the world the forces of the attacker but also to fight back against the vicious thoughts and ideologies spread and broadcast over the world by a scheming, designing, effective propaganda machine, which had been instilled into the minds of men far behind the material fighting lines, where these mystical forces of evil had extended themselves.

All this time the Hitlerite forces, material and intangible, were pressing, fighting, and surging to break out and enslave the bodies of men and permanently infect their minds with the vile of viciousness, which was the motivating force of those forces. To hold and contain them and to drive them back was of necessity the immediate objective toward which Franklin Roosevelt led the people of America, and, indeed, inspired the peoples of the world. In such a crucial battle, the replacing of evil by positive good was, of course, always a subsequent goal, but the opportunity to complete the plans and the designs and the program for the attainment of that goal was of necessity denied him.

The attainment of that goal is the only effective monument which we, the living, can build as a memorial for those who have died. Because of the very nature of things, we cannot look backward and rely upon the strategy and the tactics, which were sufficient for an effective counterattack, as furnishing us with the new plans and strategies necessary to make successfully the attack upon those forces of the world which would still deny to the plain peoples of the world that goal they so instinctively seek.

Every person here engaged in this quadripartite effort is a fighter for the creation of that goal. Axiomatically with each degree of authority there arises a corresponding degree of responsibility. Inevitably the higher the position of authority, the greater becomes the remoteness of the person who exercises it from the simple thoughts, hopes, and aspirations of the mass of the people he desires to serve. The essentially plain people, people in humble positions, we must remember are not infected with prejudices or hatred of other peoples unless they are given to them by those who exercise authority over them. The task that lies before us, the obligation to these people, who don't want to hate, or starve others or indeed to die in an attempt to starve others, requires us to open our minds and our hearts; to analyze and reject our false prejudices and those things in our dogmas which are false, if we intend to serve these people well.

Mankind has heretofore never attained this capacity but the necessity of mankind to attain it has never been so great before. We either attain these things or we destroy ourselves. And, if we destroy ourselves, then all of the lives which have been sacrificed throughout the preceding centuries will not be commemorated but desecrated by those of us of this generation who have this task entrusted to us. If we fail, let us at least be honest. Let those few who will remain after the holocaust, which will follow that failure, hold no more memorial services, not only for Franklin Delano Roosevelt but for all of the unknown people who have died and who were loved and mourned in the humble dwellings of the world.

Let us not add to our failure the sign of hypocrisy.

Address by Senator Martin Before Executive Committee of the American Legion

---

EXTENSION OF REMARKS
OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 6 (legislative day of Monday, April 21), 1947

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the distinguished Senator from Pennsylvania [Mr. MARTIN] at the banquet of the National Executive Committee of the American Legion, at Indianapolis, Ind., on Monday, May 5, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a great honor to come here tonight. I regard an invitation to speak to the National Executive Committee of the American Legion as equivalent to a military order, which cannot be refused. It is also a real privilege to come to the great State of Indiana which is so widely known for its highly developed industry and agriculture, and the cultural and spiritual attainments of its people.

During my term as governor of Pennsylvania, it was my good fortune to come in frequent contact with your distinguished governor, Ralph F. Gates. As a result of my associations with him in the meetings of the Governors' Conference, I developed great admiration for him.

Then later when I went to the United States Senate I found in Congress Senators HOMER E. CAPEHART and WILLIAM E. JENNER, and the Majority Floor Leader of the House—Representative CHARLES A. HALLECK. What a team! My association with them is one of my valued possessions. My, but Indiana is fortunate to have such able, outstanding and respected public servants. All are real veterans and are imbued with the true American spirit.

During my lifetime, the Legion and other veteran organizations have been a source of great inspiration to me. As a boy I was thrilled by the long line of blue-coated men of the Grand Army of the Republic as they marched to the stirring tunes of war. Those men lived for and preached a great, strong and dynamic America.

Then I joined the United Spanish War Veterans and marched with them. Our dress of blue wool shirts, khaki pants and leggings was not like that of the Grand Army, but we stood for the same kind of America.

Then I joined the Veterans of Foreign Wars and the American Legion. I have continued to join various veteran groups—all having the common purpose of helping the veteran and standing firmly for the ideals and purposes of the United States. I am also proud of my membership and fine association with that younger organization, the Amvets of World War II.

All these organizations are outstanding and of great aid to veterans and to America. But the greatest of them—the greatest organization of its kind in the world—is the American Legion. It has the greatness of numbers and a long record of unselfish accomplishment. Therefore, as an American and a veteran, I appreciate this invitation to speak to this important gathering of the keymen of this powerful organization. It is particularly important because it is your preconvention meeting to lay the ground work for the most important national convention of Legion history.

I am also proud of the invitation to come here tonight because the national commander is one of my own boys who served with me in France during the critical days of 1918. He was a leader even then, when he got his baptism of fire as a young doughboy. He was a fighter then and he is a fighter now. I have watched his brilliant advancement with the pride of a father.

As long as we have men of the same courage, understanding and ability as Paul H. Griffith to lead institutions like the Legion, the United States, as we know and love it, will be preserved.

The real greatness of the Legion is that through the years it has stood firmly and unselfishly by its ideals of aid to our disabled comrades, the dependents of those who made the supreme sacrifice, and for 100 percent Americanism.

While others slept, the Legion kept the watch. It did not court popularity but advocated the things that would preserve and make us a greater America. Its fight for our buddies and their dependents; the demand that all subversive influences be removed from the United States; and that we be adequately prepared to defend our institutions, are only a part of the greatest patriotic program in the history of the country. It has been an inspiring demonstration of what a great patriotic organization can do.

If Americans had acted upon the Legion's appeals for an adequate defense, Pearl Harbor might not have happened. If Americans had acted when the Legion urged that the disloyal be removed from high places, many embarrassments might have been avoided.

The Legion also made a great contribution to winning World War II by its experienced personnel joining the colors and assuming other positions of importance. It was a real example to the Nation.

The record of the Legion is glorious. It is one of the bright pages of American history. Its job, so well done, is only a forerunner. The Legion faces work ahead as difficult and as important to the future of America as anything it has done in the past.

I am not presuming to advise you experienced Legionnaires about your future role. Your record gives you the right to lead and direct. I am only too glad and honored to follow. Therefore, what I shall say is only by way of suggestion for your future consideration.

I believe that red-blooded Americans want a strong dynamic America. They want an America strong enough to preserve the American form of government and the American way of life. They believe that the American Republic is a better form of government than that of any other country in the world.

They want peace and good will in the world. They know you cannot buy peace. They know that peace, like war, is won by work, courage, sweat, and sacrifice, and by maintaining ideals, regardless of cost.

To achieve those objectives, our people must be well educated and physically fit. All Americans should know fully the proud history of our country—and of the God-fearing men who carved out its destiny.

I am not unmindful of the splendid Americanism program carried on by the Legion. Through essay contests and other activities that program is instilling into the hearts and minds of our youth love of our country and devotion to its ideals.

In recent years, however, I have been gravely concerned by the failure of our educational system in teaching American history. During my term as Governor of Pennsylvania hundreds of high-school delegations visited my office. I made it a practice to question them about the history of their county, their State, and their Nation. All too often I was disappointed to find that they lacked even a basic knowledge of our history.

Only recently a young man with the finest American background applied for an appointment to Annapolis. He wrote me very much concerned over the fact that one of the requirements for admission to the Naval Academy was American history. He had been graduated from a class A high school and was completing his course at one of America's leading preparatory schools. In his letter he stated that while he had studied ancient and medieval history and modern European history, he had never had any course in the history of his own country. He knew more about the Medes and Persians, the Greeks and the Romans than he did about the men who signed the Declaration of Independence; wrote the American Constitution; and fought our wars.

This, my comrades, is a sad commentary upon the teaching of history in our schools. This situation calls for correction. It calls for a job by the American Legion. There is plenty of room for an American educational campaign, one to prevent our schools from turning out a generation of youth which will know more about others than about itself. The curricula of our educational institutions should be revised so that American history becomes a cornerstone of the teaching.

Our children must be taught that while we have more rights than any other people, yet with those rights we also have real obligations. These obligations are to preserve America for future generations.

A firmer foundation in our history will serve as a shield to turn away alien philosophies. It will create greater pride in our own free institutions. Communism—the rankest growing weed on the face of the globe today—will not gain a foothold where the lesson of our past and the development of our present are known and understood.

We, in the American Legion, have been fighting communism over the years, trying to point out the dangers to people in high places. We have been fighting it at the national and at the local levels. I can disclose here tonight that I found it in the National Guard of Pennsylvania when I served as commander of that grand body of men. When we learned that the Reds infiltrated our guard, we quietly ferreted them out. Our G-2 did a fine job.

Today, at last, the job of ferreting the vermin from places in our Government has begun. They have built themselves warm and comfortable nests over the past years. We all recall clearly how at our last national convention, J. Edgar Hoover, whose Americanism has never been doubted, ripped aside the crimson curtain and warned us that we had better clean house before the house was destroyed.

We were all encouraged, recently, when President Truman issued his loyalty order to clean the Reds our of Government positions—despite the fact that only a few days before—on February 28, 1947—he had written to former Gov. George H. Earle, of Pennsylvania:

I quote: "People are very much wrought up about the Communist 'bugaboo' but I am of the opinion that the country is perfectly safe so far as communism is concerned."

I compliment our comrade, President Truman, upon his recognition of the menace, belated though it is.

In view of the President's loyalty order, it is hard to understand the failure of the Attorney General of the United States to set the wheels in motion to prosecute Communists for violations of Federal statutes. Congressman J. PARNELL THOMAS, of New Jersey, chairman of the House Un-American Activities Committee, has, on three separate occasions, reported 45 violations to the Justice Department. Nothing happened.

Only the other day, in despair of getting results by any other means, Mr. THOMAS addressed a letter to President Truman asking him for action. It is hoped this will have the desired effect and that the conspirators will be brought to justice.

I am not one of those who believes that war with Russia is close at hand. A recent survey reveals that Russia, in its sphere of influence, has but 15 percent of the war-making resources. We, and the nations outside of the Russian sphere, control 85 percent.

I am convinced that Russia's immediate plans do not contemplate war. Their policy is to build up a fifth column to spread hatred, prejudice, and eventually to lead to civil strife. They plan to create doubt and suspicion. They encourage a spendthrift government, so as to weaken the financial stability of the country in which they operate. Hence, eventually, if war should come, they will have little trouble in accomplishing their purpose. They will cause

confusion and turmoil within our own borders.

Communism is a real menace, not a fanciful one. It isn't necessary to have a majority of Communists to rule a country. Russia has a population of over 200,000,000 and probably rules over twice that many. Yet in Russia there are fewer than 6,000,000 active Communist Party members.

The number of Communists in the United States is small, but a great many leftists, pinks, and fellow travelers are working in cooperation with them. The number of Communists in South American countries is becoming alarming. The people of the United States should realize the danger and work to eliminate the corrupting influence of communism, particularly from all high places in our country.

I want to assure my comrades in the American Legion tonight that I shall stand shoulder to shoulder with you and fight with every ounce of strength and energy to root out this menacing alien growth.

While war with Russia may not be imminent we must be ready for any eventuality—strong, alert, and united at home. We've got to keep America a powerful enemy and a powerful friend abroad.

Our fathers settled this land with a rifle in one hand and the Bible in the other. There has never been a better formula for national defense. It is just as good today as it was then. Until the nations of the world indicate their willingness to live in peace, let us go our way with an atomic bomb in one hand and the spirit of the cross in the other—then every nation can choose which hand it prefers.

Our national defense must be based upon the ideals of our Republic. That means equal obligation as well as equal rights for every citizen. In the kind of world we live in today, in which things happen swiftly, equal obligation means to me universal military training. That is the only way to be ready on time when an emergency occurs.

I stand for, and I know the American Legion stands for, a highly trained Regular Army backed by a well-organized, properly trained civilian reserve.

We should have the best and strongest Navy and the best and strongest Air Force we can conceive. We had them in the recent war. Only fools would think of surrendering them now.

No matter how hard we hope and pray, this world and this Nation have not yet finished with conflict for all time.

Until the aggressor nations agree to lay down their arms and prove they want to live in peace with us, let us keep our muscles hard.

An America gone soft and flabby is an America inviting attack.

Behind the front line of steel and fire we must keep our industry, our labor, and our agriculture ready. Today American management and the American workman have the finest know-how. They must be ready to produce without delay the food, munitions, and transportation to support the armed forces. This is a cardinal principle.

In order to do this we must bring about industrial peace. Our country became great and strong by increased industrial production. That gave us the highest living standard the world has ever known. During the war no country on earth produced like the United States. We must do the same thing in the critical years ahead.

To strengthen our industrial plant Congress must enact laws—not to punish labor—but to correct abuses and inequities which, in recent years, have crept into labor-management relations.

The racketeer and the Communist must be driven out of the labor movement.

Now I want to discuss one of the most alarming situations we face today. It has caused me many sleepless nights. It is the solvency of America. Despite the fanciful theories of fuzzy-minded elements of our population, every clear-thinking American agrees that our country should be made financially sound. A minority of our people, composed of misguided do-gooders and those who deliberately seek to weaken us, would squander our substance and bleed us white.

Our fiscal policies must include a balanced budget, reduction of the debt, and equitable distribution of the tax burden. Every expenditure of our Government, whether for use at home or abroad, must be carefully scrutinized by organizations like the Legion.

The astronomical public debt of $258,000,000,000 endangers our solvency. If we collapse financially or if uncontrolled inflation results, America could easily drift into a dictatorship or a socialistic pattern of government.

This will result in America, as it has resulted in every other country, in the loss of individual freedom.

After World War I Germany had inflation which brought economic collapse. Hitler followed. Then we had confusion, war, and mass murder.

Our national debt is now almost $7,500 per family. After World War I we had a national debt of nearly twenty-five and one-half billions, or approximately $970 per family.

After the War Between the States the debt was two and three-quarters billion, or about $340 per family.

Italy is now on the brink of ruin and owes about thirty-five billions, which is $2,500 per family. Japan owes less than $40,000,000,000, or $2,200 for each family.

The public debt of Germany was about $138,000,000,000. This was $8,300 per family, $800 more than America's national debt per family today.

The time has come for Americans to stop and think when our Government is making an expenditure. Our world-wide financial commitments since VJ-day now total $31,000,000,000. We are a strong country, but can we stand the strain? Men like you must make the decision.

Our country in 14 years gave in grants and subsidies to State, municipalities, corporations and individuals $43,000,000,000. That means more than $1,250 per family.

The Federal Government is now too big, too complicated, and too much involved. It all means curtailing the rights of the individual citizens. In 8 years the cost of government has increased 371 percent. Remember, this is a peacetime increase.

The over-all cost of government, Federal, State, and local, is more than $52,000,000,000. That is more by billions than the entire national income in 1932, 1933, or 1934. By way of further comparison, let me point out that the highest national income in any year in the history of the Nation prior to World War II, was $83,000,000,000.

If I leave but one thought with you tonight, if I have but one plea to make to you, my comrades of the American Legion, it is this: That the American Legion spearhead the drive for a solvent, sound, and dynamic nation.

We in Congress who are working and fighting to accomplish this, need your help and assistance.

Let the veteran, who made the greatest sacrifice to preserve America, set the example to all pressure groups who would come to Washington demand the continuance of the philosophy of spend, spend, and spend.

Let me point out to you, first—that four-fifths of the huge, back breaking national debt will be paid by the veterans themselves. It is to their own interest to support us in our efforts.

Second, and more important, we must do it for our disabled comrades of all wars and the dependents of those who gave their lives in the defense of our freedom.

One of the great objectives of the American Legion has been the care and comfort of wounded and disabled veterans, and the widows and orphans of servicemen.

If we become unsound financially, it will destroy many of the benefits and annuities which these survivors are now receiving.

Yes, we want economy. We want it to save America and to insure the well-being of those whose care is our sacred obligation.

The 1947 Congress will never enact laws such as Public Law No. 2 of the 1933 session which economized only by reducing the benefits to disabled veterans and their dependents.

To me, economy in government means cutting to the bone consistent with efficient operation of essential Government services. It means trimming even the budgets of the Veterans' Administration and the armed forces—to wring out the water and remove the deadwood—but it does not mean reducing by even a hair's breadth the benefits to the disabled and to the survivors of the dead of our wars.

The liberty-loving people of the world are looking to the United States for leadership. Every nation, even those that criticize our form of government and our way of life, are begging for aid, loans, and grants.

In my opinion that is another convincing evidence of America's greatness. It is proof that our system has succeeded, while others failed.

We must consider these applications most carefully. We cannot help the weak unless we remain strong. Nations can go broke the same as individuals.

We must appeal to Americans to love and support the American flag and the things for which it stands—its red—hard work, industry and courage; its blue—loyalty to all our ideals, which have always been tolerance, good will and freedom to do the things of our choice; its white—purity, righteousness and peace.

Its stars—the guiding beacons of hope that the United States may always rightly govern its people and safeguard our sacred Bill of Rights.

We look to the future with hope and prayer in the lofty spirit expressed by Stephen Decatur 131 years ago:

"Our country! In her intercourse with foreign nations, may she always be right; but our country, right or wrong."

Thomas Jefferson

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, May 6 (legislative day of Monday, April 21), 1947

Mr. WILEY. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD the text of an interesting address delivered by the Honorable Smith L. Multer, past president-general of the Sons of the American Revolution. This address was delivered at the Jefferson National Memorial in Washington on April 13, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We gather here this afternoon in this hallowed place to commemorate upon the anniversary of his birth, the deeds, and life of a great American and to endeavor to gather renewed strength and inspiration from the contemplation of it all. We meet at one of the three great patriotic shrines here in the

Capital of the Nation. Here fitting memorials have been erected to the three commanding figures in the temple of this Republic—Washington, the Father of his Country; Lincoln, who preserved it; and Jefferson whose idealism and ringing words for the rights of men have given vitality to its life throughout the years.

It is difficult to speak of Jefferson, to know what to take hold of in this many-sided man, the most versatile chief magistrate of the Nation. With his philosophic foresight he probably better than anyone else appraised himself.

He sleeps within the confines of his estate at Monticello beneath one plain white shaft upon which is inscribed a remarkable epitaph composed by Jefferson himself. It reads as follows: "Here rests Thomas Jefferson, author of the Declaration of Independence, of the Statute of Religious Freedom for Virginia, and Founder of the University of Virginia." He did not write a single word of the high positions he had held and adorned, twice President of the United States, Secretary of State under Washington, occupying diplomatic posts of distinction abroad and showered with many honors by the Old Dominion.

Jefferson rested his name and fame upon the three great achievements he enumerated, which stand out as milestones along the pathway of human liberty and the liberation of the human mind. They all center about the preservation of liberty for men—liberty, the grandest word in all our language without which all the words are vain—liberty to live and to do and to accomplish, unfettered by the uncertain restrictions of government or the decrees of tyrants, freedom of the minds and souls of men, the promotion of knowledge and the strengthening of character that will enable men to know and to defend their rights and to remain free. That is what Jefferson did so much to achieve. And so he placed these accomplishments of his career above all others.

From Plymouth Rock and Jamestown on, men came to these shores in search of a larger liberty, an opportunity to do, and to achieve, and to work out their own destiny in their own way. And so they opposed the encroachments of the Crown with courage and determination. And finally, expression was given to their dreams and aspirations in the stately words that fell from the pen of Thomas Jefferson in the Declaration of Independence:

"We hold these truths to be self-evident that all men are created equal and endowed by their Creator with certain unalienable rights; that among these rights are life, liberty, and the pursuit of happiness; that to secure these rights governments are instituted among men deriving their just powers from the consent of the governed."

It was for these rights and for such a government that the Continental soldier marched and fought through the weary years to Yorktown. And then with American independence achieved, it was the task of the Constitutional Convention at Philadelphia to set up a form of government that would secure these rights and protect them from assault by any department of government or any man or group of men. The deputies knew that the great rights and freedoms would only be safe in a government of laws and not of men. And so they provided for a government of checks and balances with three great coordinate departments so constituted that each should be independent of the other and each revolve about in its own appointed orbit. While certain specific powers, such as were necessary for a national government to function, were given to the Federal Government, the great residuum of power was reserved to the States and to the people.

The founders believed, and experience has vindicated their wisdom, that government should be kept close to the people; that the people in their own States and communities are better able to know and are better informed as to their own local wants and affairs than a bureaucracy far away in the Nation's Capital.

Under such a form of government, into which has been breathed the soul of Jefferson's doctrines as enunciated in the immortal Declaration, for 150 years and more, of the matchless growth of this Republic, unparalleled in the history of the world, under an ever-advancing and changing civilization, all emergencies in peace and in war, at home and abroad, have been successfully met; and there are no problems nor difficulties however grave that may arise that cannot be met and solved within the framework of the Constitution of the United States.

Under our form of government and way of life, the American people have gone from pinnacle to pinnacle to reach the heights upon which they stand in the enjoyment of the noblest civilization ever known to the children of men here in this favored land of ours where, despite all our troubles—and they have been many—human happiness, security, and well-being have existed as nowhere else since time began.

Nowhere is property so equally divided as here. Nowhere are wages so high. Nowhere are comforts and well-being so universal. Nowhere does hope fly on such high and rapid wing.

Everywhere the strength and growth of our form of government profoundly affected the human race. Other governments modeled their constitutions on our own and upon the American continents the flags of freedom waved unvexed from our southern borders to the Antartic seas.

The forces of liberty gathered momentum; and their impact was felt against the thrones of kings; and rights and some form of representation were given to the people in nearly every land. It looked as though the heavens above would soon bend their starry arch over a world of freemen. This was not so long ago, within the memory of many of us here.

And then a strange spell came over the earth and all was changed. Democracy was challenged everywhere. Peoples surrendered their liberties for a false security that faded into ashes as they were betrayed, as they were bound to be, by the dictator and the tyrant. These dictators and tyrants reached out threatening the safety of the world; and we were plunged into a world-wide war to preserve our own freedom and the freedom of all mankind. A year and a half ago we emerged triumphant with our enemies utterly vanquished and lying prostrate in the dust.

With the invention of new instruments of warfare with unheard of range and destruction, we recognized the fact that oceans are no longer the barriers of old and mountains do not divide. And so we joined with 50 other nations in a compact known as the United Nations for the preservation of peace and the prevention of aggression. We knew that another such catastrophe as the one through which we had just passed, would wreck civilization. We were the first to ratify the Charter of the United Nations, believing that the example of the strongest nation on earth so to do would lead other great powers to join in working out the problems of peace in a spirit of justice to the smaller nations and a respect for their sovereign rights. Hardly had the ink dried upon the Charter of the United Nations, when we saw Russia reaching out everywhere, dominating and establishing spheres of influence and throwing communistic shadows over vast reaches of the European and Asiatic Continents. She set up puppet governments in eastern Europe and extended her sphere of influence westward to the banks of the Elbe. She has embarked upon a policy of delay in order to impregnate those countries as well as Germany itself with her communistic doctrines. No one knows what is going on there behind the iron curtain.

She marched her armies in little Iran and negotiated with a pistol at the head of that government and with longing eyes is looking upon the warm waters of the Persian Gulf. She has long waged a war of nerves on Greece and on Turkey and asks surrender of Turkish sovereign rights in gaining control of the Dardanelles in which event Turkey, Greece, and the Middle East will become her satellites, and then she will be knocking on the doors of India as soon as the British move out.

And in China, where we have long had the policy of "the open door," she is in Manchuria, marching in and out and back again and has incited disorder and chaos with a million Communists in arms waging civil war. She is endeavoring to obtain a foothold in the Western Hemisphere, and the upward surge of the Communists throughout the nations to the south of us threatens inter-American solidarity. Her agents are working in every nation as fifth columnists to create disorder and hatred and be ready to inflict grave sabotage in the event of any trouble with Russia.

Look at it as you will, it is the pattern of Hitler picking off free nations one by one; the pattern of a nation with an eye on the empire of the world.

In the midst of it all it has been the purpose of our representatives in the conclaves of the nations, former Secretary Byrnes and now Secretary Marshall, and the leaders of our foreign policy in both great political parties, CONNALLY and VANDENBERG, to work out some system of peace wherein there would be no further encroachment of Russia upon the rights of sovereign nations and to bring about a settlement of all problems within the orbit and spirit of the United Nations.

This policy has been termed by her sympathizers as getting tough with Russia. Upon the contrary, as President Truman said in his message to the Congress on January 6, "Our policy toward the Soviet Union is guided by the same principles which determine our policies toward all nations."

In other words, we would be opposed to any other nation encroaching upon the rights and imposing its will on any other people. The United Nations was brought into being to prevent just that sort of thing, to preserve peace and prevent aggression. When it fails so to do, it will have failed of the purpose of its being and become one more melancholy failure to establish peace among mankind.

It is to prevent such a failure that President Truman has announced the policy to aid peoples who are struggling to resist subjugation by armed minorities or outside pressure. This means that Russia must be stopped in her march of aggression. Of course, each case must be carefully scrutinized and judged on its own merits not only by the President but also by the Congress of the United States which holds the purse strings.

At present, we are confronted with the question as to what course of action to pursue in the case of Greece and Turkey, who have applied to us for assistance. The destruction of their independence by the Communists and the dire results that would follow are clear and obvious. Extending aid to them does not mean bypassing the United Nations. We are simply calling a halt to Russia and her satellites, which the United Nations would not be able to do, with no armed forces at their command and no means to sustain their economy. And in this connection it is well to remember that it is Russia that has continually blocked any effort of progress for the establishment of an international police force.

We also stand ready to desist at any time when the Security Council or the Assembly by majority vote asks us so to do. But to

stand idly by simply appealing to the Security Council to do something they are not able to do, and which no doubt would be frustrated by Russian veto, would make for the complete destruction of the prestige of the United Nations and more conquests by Russia in her control of other peoples and governments. Our course of action means not a weakening but a strengthening of the United Nations.

I have no doubt that the President will be sustained. Then, too, it will redound to the everlasting glory of the United States to come to the assistance of heroic Greece, where the spirit of liberty was born 500 years before the Christian era beneath Athenian skies. There is no doubt that our course of action is fraught with danger. But it is far less dangerous than to let another tyranny in the shape of communistic, atheistic Russia to continue on her quest for world dominion.

The conduct of Russia, to put it mildly, is disturbing; while Stalin in timed interviews proclaims there are no dangerous differences between Russia and the United States, yet at the some time the sinister facts stand out that at all times the Russian-controlled engines of propaganda continually emit their violent diatribes to poison the minds of the Russian people that we are an imperialistic, capitalistic Nation plotting the destruction of the Soviet Union. Of course, the powers that be in the Kremlin know to the contrary. We have no desire nor have we made any attempts to interfere in their internal affairs or form of government. We got along with the Czars and we can get along with communistic Russia if, in the same good faith which actuates all our acts, she will go along with us in carrying out the purposes of the United Nations. In her hands and not in ours rest the issues of peace or war.

Knowing that the struggle for peace is a continuing and an unending one; and that we are living in an uncertain and a dangerous world, it behooves us not to lower our guard but to remain strong in the world in which we find ourselves.

Twice within a generation we were drawn into a world-wide war and in each we were the deciding force in determining the issues thereof. Each time we were unprepared but we were enabled to prepare; in World War I, behind the English Navy and the armies of France, and in World War II behind the indomitable strength of England and Russia. Next time we will not be permitted to rally our resources behind any nation's protecting arms and, if not ready and able to face attack delivered with telling power and unprecedented speed, we will go down to irretrievable defeat.

We will not be saved by good conduct nor pious hopes nor hanging a motto on the wall, "Let us have peace." We must keep in mind that we are dealing with some peoples who have respect for force and power and that alone. We must look upon the world as it is and not as we would wish it to be. If we had been reasonably prepared, Japan would have hesitated to have attacked us and Hitler would have paused in his dreams for the conquest of the world. Anyway, being unprepared has not kept us out of war. It would be criminal folly not to be on the alert until such time at least as the United Nations is able by its military power to cope with any aggressor.

There is nothing un-Christianlike in this, I submit. Upon the contrary, it is the highest form of practical Christianity; for it means the preservation of this land of ours, the last great refuge of civil and religious liberty upon this planet. If she be saved, then all is saved; for "Time's noblest offspring is the last."

With communism and socialism sweeping over many portions of the earth, their repercussions are felt here; and the contest is on between the lovers of liberty and the exponents of the tyranny of the state. The continued preservation of the land of Washington and Jefferson and Lincoln will demand our best thought and the most earnest efforts of which we are capable. Those who would undermine our form of government have the advantage in that they are bound by no rules of intellectual integrity and so promise the fantastic and the impossible. They magnify evils manyfold and decry the blessings of liberty as cheap and unsubstantial things.

The enemies of our institutions are everywhere, the Communists and their fellow-travelers. Wherever there are differences between capital and labor, wherever there is any disturbance, no matter what its nature, there they are attempting to foment trouble and disorder and to intensify bitterness and discontent.

Confronted by these dangers here and abroad, what is needed is unity among our people here at home—a supreme need that the devotion and consecration to our country in time of war be carried over into these days of peace; that there be a production from field and forest and rolling off our assembly lines unimpeded by any cause or any group; that an enduring faith in our form of government and way of life exist without which constitutions availeth not; that a wider brotherhood and tolerance may prevail, bringing about a kindlier feeling among our people so that the effort to arouse class hatred and class consciousness will be in vain—all to the end that we may work out our problems and live our lives as a resolute, a united, and a liberty-loving people.

And let us listen to the words of wisdom and admonition in these troubled hours of the great men in whose honor memorials have been here erected by a grateful people, as they spoke long ago and still speak to us: Washington, "Let us raise a standard to which the wise and the honest may repair. The event is in the hands of God;" Jefferson, "Equal rights for all—special privileges to none;" Lincoln, "We shall nobly save or meanly lose the last, best hope of earth."

Accomplishments of Midwest Research Institute

EXTENSION OF REMARKS

OF

HON. JAMES P. KEM

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Tuesday, May 6 (legislative day of Monday, April 21), 1947

Mr. KEM. Mr. President, the Midwest Research Institute was born out of a desire of public-spirited businessmen of the six-State area surrounding Kansas City, Mo., to enlist the principles and resources of scientific research in the commercial and industrial development of this region. How well the effort has succeeded in a little more than 2 years is shown by the fact that the Institute has participated in the development of a process for making corn sugar from grain sorghums; it has turned out the paper-tape sound recorder; perfected a coating for ammonia nitrate crystals, and has other accomplishments to its credit.

The Midwest Research Institute has recently announced a new process for milling grain, which may well be revolutionary in character. I ask the unanimous consent that an article from the Kansas City Star of April 20, 1947, describing the method, be printed in the Appendix of the RECORD, since this process may be of interest and significance to industry and agriculture throughout the country.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A NEW GRAIN ERA—REVOLUTIONARY PROCESS OF MILLING IS EVOLVED BY MIDWEST RESEARCH INSTITUTE—BLASTS WHEAT INTO FLOUR—AFTER COMPRESSED-AIR TREATMENT, FOOD SEEDS ARE EXPLODED IN CYLINDER—WILL ADD PILOT PLANT—PLANS CALL FOR $100,000 EXPENDITURE HERE TO CONTINUE LABORATORY EXPERIMENTS

(By Alvin S. McCoy)

Grain that explodes like a firecracker after being treated with compressed air or other gases forms the basis of a new process announced yesterday by the Midwest Research Institute, which considers the development its outstanding work to date.

Wheat literally has been blasted into flour by compressed air. Oat husks have been peeled off by lesser explosions. Grain sorghums have been shattered into bits.

Harold Vagtborg, president of the regional industrial research organization, believes that the revolutionary process may conceivably "bring improved methods to the milling industry to the advantage of both the miller and the consumer." It might even affect the bread on the table, or the breakfast cereal.

A NEW PROCESS

Scientists working in the collection of laboratory buildings at 4049 Pennsylvania Avenue have hit on something new. They have accomplished "the preferential segregation of the component parts of the grain berry." They have separated husks, bran, germ—the part that starts the roots and plant—and endosperm, or the flour part, with comparative ease.

That, to the scientists, is far more significant than merely being able to blow grain into bits. It has been a tough problem for milling.

The experiments have been carried as far as they can with the present laboratory unit. Plans have been made for the investment of $100,000 in a pilot plant at the institute to continue the tests on a commercial scale. Patent rights have been applied for in the name of the institute. Actual loaves of bread have been baked from "exploded" grain flour.

The process is known as explosive dissociation. It is brand new. No previous record could be found that it ever had been applied to grain before. Its principle is fairly simple.

INTO A METAL CYLINDER

Wheat, or any other grain cereal, for example, is put into a metal cylinder and the lid is screwed on. An ordinary filling station air compressor is started. The air, under pressure, fills the tiny pockets and cells in the grain. An electric motor is started to feed the wheat evenly. When a valve is turned, the wheat shoots like a stream of bullets through a small brass nozzle within the pipe. Instantaneous releasing of the pressure at the other end of the nozzle causes the compressed air in the cells to explode the grain.

Wheat cells are shattered by the violent escaping of the air. That is explosive dissociation. Strange and unexpected things happened. When the grain was examined under a microscope, to the surprise of the researchers, they found that wheat first split into halves, then quarters, and the germ came free.

The experiments have shown, Vagtborg said, that germ-free flour can be made. Some germ usually is retained in the standard grinding processes. Flour with too much

germ has a tendency to spoil, and does not make good bread.

Two batches of flour were run, one completely germ-free and the other with all the germ, or fortified. They were baked into bread in the laboratory of the C. J. Patterson company with several control loaves from regularly-milled wheat. The germ-free flour produced a whole wheat loaf that rated good-minus, or the same as the control loaf. It was slightly gray in color and had a slick crust. The test loaf with the germ remaining produced poor quality bread, as is true of all flour containing too much germ.

DIFFERENCE IN TASTE

Experiments point to the fact that breakfast foods or bread may be produced from exploded grain flour that even has a different taste, Vagtborg said, due to the complete separation.

For more than 8 months tests have been made on various types of grain sorghums, wheat, and oats. Varying humidities, different times of pressurization, different nozzle sizes, and pretreatment of grain with enzymes have been tried.

At the institute today one would see a contraption of pipes that might suggest a Rube Goldberg device, but one that the scientists take very seriously. An air compressor is beating. The process is noisy. When a valve is turned, the apparatus roars. A stream of shattered grain spins into a cyclone cone and drops out the bottom.

The result is a mixture of whole wheat berries, halves, quarters, bran, germ, and clear down to flour sizes. About half the grains are shattered in the first operation. Some flour is obtained. Separation is obtained by a series of screen meshes, shaken in an agitator. The dissociater might be compared to the first set of rollers in a mill. Some flour is obtained with each grinding, the rest is recycled.

NEED PILOT PLANT

"We have reached the stage," Vagtborg said, "where we shall need a large-scale pilot plant at the institute to carry the tests further. We are proposing to invest $50,000 in equipment in a continuous-process plant, and $50,000 in personnel and supplies to carry out commercial tests for 2 years. It is my belief that industrial cereal processors will cooperate with the experiments and assist in the sponsoring."

Plans have been drawn for a continuous-process plant, much like a complete mill, with a series of explosive dissociaters. Flour will be coming from each. There will be separation processes between. The final product will be flour and its byproducts, or experiments may be made at stages in between.

Letter to Pandit Jawaharlal Nehru

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1947

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

PANDIT JAWAHARLAL NEHRU,
Government of India
New Delhi, India

HONORABLE SIR: I note with keenest disappointment and sadness that you are supporting the Arab League in its demand for an independent Arab State in Palestine.

In the cable you sent to the League, you express sympathy for the Jews persecuted by the Nazis, but nonetheless insist that Palestine is an Arab country and should remain so.

Were there no reasons other than humanitarian ones, and there are many, the closing of the doors of Palestine to Jewish immigration would still remain one of the cruelest acts of our times. Six million Jews were slaughtered by the Nazis. Had the nefarious White Paper of 1939 which closed Palestine to Jewish immigration not been in effect, many lives would have been saved. After the sufferings of the Jews which the whole world witnessed, it is more than wanton indifference to keep hundreds of thousands of these innocent people in camps, stateless, without dignity and without hope. Only Palestine offers them both security and welcome and the opportunity which is rightfully theirs to begin life anew.

If the world is so constituted today that reasons of humanitarianism leave it cold, then we should examine the legal and political justification for not only the abrogation of this white paper, but for the establishment in Palestine of a Jewish national homeland as well. 52 nations, including the United States, consented to the granting of the mandate over Palestine to Great Britain for the specific purpose of facilitating Jewish immigation therein and for the establishment of a Jewish national home. All of Arabia was freed from Turkish domination by the victorious Allied powers and given independence, either immediately or through relinquishment in due time of class A mandates held by Great Britain and France. All class A mandated territories have received their independence save Palestine which by international covenant was reserved for use as a national homeland for the Jews. Out of the huge Arabian territory, this small land was set aside. So specifically and clearly had that intent of the League of Nations been set forth that when the Palestine white paper of 1939 was promulgated it was denounced by the Permanent Mandates Commission of the League of Nations as illegal. The Anglo-American Committee of Inquiry after an exhaustive study last year likewise maintained that this white paper must be abrogated to permit immigration of the Jews into Palestine. In fact, it has been the conclusion of 19 investigating committees and commissions, both government sponsored and otherwise, that the Jews are in Palestine "by right and not by sufferance."

I cannot quite grasp why you as a courageous leader of your people and with your evident and concrete concern with the well-being of all peoples have not taken into consideration the obvious social and economic benefits Jewish colonization in Palestine has brought both to the Jews and Arabs of that area. It is an established fact that Palestinian Arabs have the highest standard of living in the Middle East. It is likewise establish that the Arabs of Palestine have achieved a level of social and scientific progress beyond that of their neighbors in adjoining territory.

I can hardly believe it possible that you with your statesmanship and zeal for the welfare of the downtrodden would place yourself on the side of those interests which resist the social and economic development in the East and which fear the awakening of the populations of that area. I surely thought that you with your acute imagination would visualize the development of that country which had been so barren prior to Jewish colonization for the benefit of all peoples therein. The evidence is there before us how the will and the labor and the planning of the Jews in Palestine have already begun that development.

I, of course, realize the difficult plight in which India finds itself, torn as it is by factional and religious strife. I realize that peace in India is difficult without the good will of 90,000,000 Moslems, but I assure you that your statement on Palestine will make no difference to Mohammed Ali Jinnah. I am sure your statement is a matter of political experience. I am sure too that it is utterly foreign to your philosophy. I feel that to this political expediency you have sacrificed principle.

You have expressed sympathy for the Jews, but, of course, verbal sympathy will not save human souls.

I write thusly with great reluctance, but I am compelled to do so by my sense of duty. I write also as one with the deepest feeling for India and her people. I have not hesitated to join in the fight for India's independence and have espoused this cause both in and out of the halls of the United States Congress. I authored the congressional act which placed India within our immigration quota and permitted the entrance thereunder of Indians and their naturalization when resident here. It is my intention to do much more to bridge the chasm that exists between your people and mine. Not infrequently I am called upon by your people in this country to come to their aid and I have been happy and privileged to help on more than one occasion. I have advocated consistently the consummation of a treaty of trade and friendship between our two countries. The trader, for example, from India has none of the benefits accorded traders from other countries protected by trade treaties. I am certain my activities on behalf of the people of India are not unknown to you.

I shall continue to act for the best interests of both our peoples, despite the political opposition I encounter. This is so deeply a matter of principle.

I regret deeply that you deemed it necessary to aline yourself with the Arab League in the matter of Palestine.

Very truly yours,

EMANUEL CELLER.

Aid to Greece and Turkey

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1947

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Saturday Evening Post of April 19, 1947:

OUR SAFETY IS THE ISSUE, NOT ALIEN ISMS

The debate brought on by President Truman's proposed aid to Greece and Turkey illustrates the confusion inherited from past propaganda efforts to base foreign policy upon ideology instead of upon American security. The debate also suggests how much better ordered these things were in the days when certain concepts, like our Monroe Doctrine and Britain's defense of the Empire life line, were understood, and did not have to be laid on the line in crude terms almost certain to be interpreted as hostile by other countries.

Mr. Truman describes his policy as "support to free peoples who are resisting attempted subjugation by armed minorities or by outside pressure," but he also makes it plain that "the security of the United States" is our reason for action. To base our aid to Greece, Turkey, nationalist China or Brazil on ideological grounds, as certain commentators pretend to think we are doing, would lead to the same confusions which have grown up out of the propaganda fiction that Russia was being aided during the war because she was democratic, rather than because her millions of soldiers were mowing down Germans. Even the "Truman

doctrine," which is and has to be "power politics," is presented as some sort of crusade. In such circumstances it is not remarkable that people tangle themselves up in arguments over the relative democracy of the controlling elements in Greece, Turkey, Argentina and Soviet Russia—ignoring the far more important strategy of power politics of the situation. If a universal war against communism is the issue, why have we spent 2 years trying to force Communists on Chiang Kai-shek, and why did we fight a war which has resulted in the spread of Communist regimes all over the place?

The answer is that the westward march of the Soviet Union is a worry to the United States, and that this would be true even if the Soviet Union's present tactics were carried out by a government conservative enough to be headed by Senator WHERRY in an astrakhan hat. Furthermore, support for Greece and Turkey is not a reward for their qualities as liberals, but is offered because geography makes Greece and Turkey our babies in that part of the world. The British Empire would not have lasted for 200 years if its leaders had got into rows over the relative democracy of the Bey of Tunis and the Khedive of Egypt. What the British wanted to know was whether this or that quaint character in a fez was their man. The Russian play it the same way.

If our policy is at last to be related to American security first and to ideological conceptions later, our officials will have to smarten up their education so that the more flagrant inconsistencies can be avoided. It would be pretty foolish to hope to contain the Soviet Union by supporting Greece and turkey, while going out of our way to support Soviet puppet governments in Yugoslavia and Poland. And it would be even more stupid to hold the line in Turkey and permit Russia to gain Germany's war potential. Only a few weeks ago, the War Department, over General MacArthur's protest, permitted a delegation of the World Federation of Trade Unions—the outfit through which Russia hopes to infiltrate her line into labor movements all over the world—to visit Japan. If we are to contain Soviet imperialism in Europe, it is hard to see why we should facilitate its propaganda operations in Asia.

Once the strategic realities behind what we are attempting are understood, it will be easier to support a realistic power-politics policy, keyed where possible to reliance upon the United Nations and certainly to coordination with British policy. We can then laugh off hysterical deviations from American principles like Secretary Schwellenbach's demand that Communist candidates be excluded from the ballot in the United States. We have at least been liberated from the dangerous complacency into which propaganda had lulled us. To avoid eclipse and at the same time maintain peace will tax the skill of our national leaders to the utmost. That they have begun to tell the truth is at least a partial encouragement.

Appropriations for Veterans' Hospitals

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1947

Mr. MILLER of California. Mr. Speaker, my colleagues, I would like to tell you about a letter I received from Charlie Tye. Charlie Tye is a sort of an institution in the East Bay area of California. Charlie Tye is a big fellow with a friendly grin, knows everybody and likes people. He is a human individual. Charlie is a rabid sportsman. He broadcasts at the ball games. He encourages clean sport among the kids because he has a boy of his own and knows the meaning of clean sports to clean kids. Everybody likes Charlie Tye and Charlie Tye likes everybody. During the war he published a four-page paper that was sent free of charge to the boys in service. It was a clearing house for the news avidly devoured by them. It carried items about the fellows who were inseparable, fellows who played on the same softball team and now found themselves serving on different continents the width of the world between them. Charlie knew what they liked and he gave it to them. It was full of homey, homely gossip. You see, Charlie Tye has a boy and he knew what that boy liked. That boy was in the service and he was intensely proud of that service. That boy is now in a Veterans' Administration hospital as a result of his service. Charlie goes to see him regularly. He knows his doctors, his nurses, the orderlies, and the people around the hospital because he is vitally concerned with the treatment his son is getting, just as he is vitally concerned with the treatment other men in that hospital and in the hospitals throughout the United States are getting.

I received an interesting letter from Charlie Tye the other day dealing with the subject of hospitalization and drawn from his own broad experience with that subject. I commend it to you because I think it is good reading. I think it has a message we all might gain by reading. Here is Charlie's letter:

OAKLAND, CALIF., *April 29, 1947.*
Hon. GEORGE MILLER,
Washington, D. C.

DEAR FRIEND GEORGE: As you know my son has been a patient at the Palo Alto veteran's hospital since his return from the Navy service.

I have been a frequent visitor to see him and have closely observed the attendants, nurses, doctors, and the general service and so forth.

I want you to know I think those people are doing a great service to our boys, and I am entirely satisfied with the treatment accorded my son, even though he is still in bad condition, but I know it's no fault of theirs. They have tried every method known to aid him.

Today I learned that Congress is contemplating cutting the appropriations of the veterans' hospitals. George if you could visit these places and see the yeoman service being rendered to these poor unfortunate souls, you would yell to the high heaven against such a short-sighted and selfish action.

Instead of cutting, Congress should increase the amount of money so that these doctors, nurses, and attendants could have the proper number of helpers to aid them in their work.

There is much to learn about the care of the sick-minded, and our mental institution doctors are in a real good position to learn if we give them the tools to work with.

If we can spend billions on war, we should be able to spend millions on the care of the boys who were injured through war, and to find better methods to take care of all our citizens through the knowledge gained in our hospitals.

Palo Alto has a healthy climate, with a wonderful site, but they need more athletic rehabilitation directors, more attendants, more doctors, more nurses, and more equipment.

George, you know many people cannot express themselves, and so perhaps you never hear of our boys in the hospitals, but having a personal interest, I feel that I speak for thousands of parents and for those who work in the hospitals, when I say, "let's give the veterans' hospitals all they need to do a job, which every good American will applaud.

My best wishes to you and your family.

Sincerely yours,

CHARLIE TYE.

Polish Constitution Day

EXTENSION OF REMARKS
OF
HON. MARTIN GORSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1947

Mr. GORSKI. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therein the following resolution passed at a huge rally of Americans of Polish descent at Humboldt Park, Chicago, Ill., commemorating Polish Constitution Day:

RESOLUTION ADOPTED AT THE ANNUAL POLISH THIRD OF MAY CONSTITUTION COMMEMORATION, MAY 4, 1947, AT HUMBOLDT PARK, IN CHICAGO, ILL.

We, 100,000 Americans of Polish descent, massed in a rally under the auspices of the Polish National Alliance at the statue of Gen. Thaddeus Kosciuszko, Revolutionary hero of Poland and of the United States, in Humboldt Park, Chicago, Ill., to commemorate the anniversary of the Polish May 3 Constitution.

Being imbued with the spirit of genuine liberalism that emanates from that great document, moved by its concept of moral right and stirred by its faith in the dignity of the common man, stand apprehensive of the Communist forces that imperil these ideals and menace our American democracy, and thereupon resolve these declarations:

1. We approve wholeheartedly the new doctrine enunciated by President Truman to quarantine communism by bringing immediate aid to Greece and Turkey and urge the Congress to effect quick passage of the bill embodying that program. To implement that doctrine more fully it is necessary that such aid be also extended to other countries such as Poland where the people are in mortal struggle with their Communist oppressors.

2. We commend the House Committee on Un-American Activities led by Representative THOMAS for its fearless and vigorous campaign to expose and prosecute members of the Soviet fifth-column operating in this country. The activities of termites that would bore into the framework of our institutions from within must be relentlessly suppressed.

3. We support bill H. R. 2910 introduced by Representative STRATTON which would admit the 400,000 displaced persons from Europe into the United States through the application of the unused immigration quotas of the last war years. Admission of these victims of Nazi cruelty and Soviet despotism would not only be in the finest tradition of our noble history but would strengthen the moral fibers of our Nation in its challenge against totalitarianism, revitalize our national economy, and atone for the Allied blunders that aggravated their plight.

4. We urge most strongly President Truman and the Congress to reject the recent

proposal of Secretary of State Marshall made at the Moscow Conference to partition Poland again by revising her western borders in favor of our German foe. The proposal is inherently wrong and is in utter disregard for the bitter lessons of history. Return of these Polish western lands to Germany would not spell the desired political stability and economic health of Europe but would inevitably plunge the world into another conflagration.

These western lands cannot be considered as compensation for the much greater Polish eastern territory seized by Soviet Russia. That seizure was criminal and cannot ever be sanctioned or condoned by any amount of compensation. Moreover, the western lands have always been culturally and economically an integral part of Poland since the tenth century except when seized and held by German military might and now at best can constitute but small compensation for the unprecedented pillage and destruction inflicted by Germany upon the land and people of our Polish ally.

These western lands, having now been resettled by 4,000,000 Poles with the full approval of the allies, are fast becoming interrelated with Polish economy that will redound to the general peacetime stability of western Europe.

The severance of these lands in favor of our German enemy would discredit the democratic forces in Poland and diabolically enough thrust the Polish Nation into the monstrous Communist empire which is even now striving to absorb it.

5. The fundamental evil responsibility for the European disintegration can be traced to the infamous Yalta deal where great principles were compromised for questionable political expediency. Now only a swift disavowal of the Yalta pact will restore European cohesion and equilibrium.

Let us strive to effect the withdrawal of the Red forces from Poland and the other countries of eastern Europe, recognize the sovereign independence of the Baltic nations, restore the eastern lands of Poland—about which issue there prevails such morbid silence—bring about the free and unfettered elections in Communist-dominated countries and the secretary's objective for a peaceful and stable Europe will at once become a reality.

6. The current congressional debate to bar all nations under Soviet domination from participation of the administration's $350,000,000 foreign-relief bill ought not to be applied to the Polish Nation. For that nation was saddled with a Soviet-dominated regime by the Allies themselves contrary to its will and desire. We, therefore, beseech our Government to extend the proposed relief to the destitute people of Poland provided that it is administered under strict American supervision to assure its fair distribution.

7. To former Ambassador Arthur Bliss Lane for his forthright and undaunted stand in behalf of the Polish Nation and for his stirring patriotic address here, we express our deep thanks and sincere gratitude. May his clarion call for national unity and concerted action against the spreading menace of communism find a resounding echo in the hearts of all Americans.

May Providence in these perilous times bless our Government with wisdom, foresight, and daring and endow our Nation with moral strength and bodily vigor that our world responsibilities might be discharged with dignity and honor.

We, on this Constitution Day, aware of our liberal heritage, rededicate ourselves to the preservation of our American way of life and to the constant vigil of world peace and American security.

CHARES ROZMAREK,
Chairman.
JOSEPH WOJCIK,
Secretary.

Veterans' Administration

REMARKS
OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1947

Mrs. ROGERS of Massachusetts. Mr. Speaker, I am very glad to read this morning that General Bradley has announced he will not quit his Veterans' Administration job until the job is done. It has been very confusing to everyone in the Veterans' Administration to feel that he may resign any minute. I am sure every Member of Congress wants to help him in the tremendous job he is doing.

Under leave to extend my remarks in the RECORD, I wish to insert the following letter written by General Bradley to his assistant and deputy administrators. I hope every Member of this House will take the time to read and study this letter. It sets forth, clearly and understandingly, the general's aims and policies:

VETERANS' ADMINISTRATION,
Washington, D. C., May 2, 1947.

To All Assistant and Deputy Administrators:

Next week I shall go before Congress to show why we shall need $7,000,000,000 for the Veterans' Administration in 1948.

However justified our requirements may be, those vast expenditures offer a challenge to reductions in Government spending. The billions of dollars involved can too easily create false hopes for large-scale savings. Even the accepted necessity for our veterans' program cannot save the Veterans' Administration from becoming a target in this effort to reduce the budget.

The Veterans' Administration has sought reductions wherever those reductions might be made without imperiling our operations. But if further reductions in the name of economy threaten to cripple our program and dull its objectives, I feel it my duty to point out the danger. Where reductions in readjustment expenditures might result in the waste of human resources, where reductions in expenditures for hospital treatment might threaten standards of medical care, I shall oppose such reductions and defend the budget we shall need.

Our role unfortunately is an awkward one. At a time when other agencies can trim their budgets to peacetime needs, we are compelled to increase ours to pay for the effects of war. As far as expenditures for veterans are concerned, the war has only begun. We cannot hold out a promise of near or substantial reductions and at the same time provide the services and benefits voted by Congress. It is not possible to legislate benefits on one hand and refuse to pay their costs on the other. It would be folly for the American people to anticipate anything other than a period of unprecedented high expenditure for veterans' benefits for half a decade or more.

The pattern of this spending has already been set. During the next fiscal year, taxpayers will pay approximately 20 cents out of each Federal tax dollar for benefits to veterans. This proportion will increase before it begins to slacken. Our Veterans' Administration budget for the next year alone almost equals the entire cost of Federal Government in 1939.

An expenditure of this magnitude presents incredible dangers of waste in the administrative procedures this program entails. It will tax each employee of the Veterans' Administration with the sternest responsibility for competent, effective, and intelligent administration of those funds.

I have no doubt that Congress and the American people will pay willingly for the benefits voted veterans of this and previous wars. But they will not tolerate excessively high administrative costs. They will not tolerate extravagance and waste. And certainly they will not tolerate surplus or incompetent employees.

In appropriating funds for these activities of ours, Congress must also find the taxes that will support them. To warrant those tax levies on the people, Congress must determine to its own satisfaction that our appropriations are merited and just. For this reason, it becomes the duty of Congress to scrutinize our program and to direct wherever it can reductions in personnel and cost.

If I am shown that any of our estimates are needlessly high or inflated, I shall be the first to agree in cutting them down. For while I am determined to achieve our objectives, I am also determined to reach them at the lowest possible cost.

Our $7,000,000,000 budget for 1948 is divided into three principal parts.

Approximately $5,275,000,000—or 75 percent of the entire budget will go in the payment of direct cash benefits to veterans and their dependents. These benefits consist principally of pensions, compensation, educational subsistence, and readjustment allowance.

Approximately $1,365,000,000—or 19 percent of the entire budget will go in the form of indirect benefits to veterans. These benefits include the cost of medical, hospital and domiciliary care, educational tuition and counseling, vocational rehabilitation, hospital construction, veteran travel, and insurance.

Approximately $430,000,000—or 6 percent of the entire budget will be devoted to administrative costs—excluding the medical service. This expenditure includes salaries, office rentals, printing, travel, and such items as administrative supplies and equipment.

Administrative costs are a burdensome but essential part of any Government operation. This is particularly true in the Veterans' Administration where we administer an intricate and complex program involving a wide variety of benefits and laws.

The $5,275,000,000 payable in cash to veterans and their dependents is a charge for which Congress has already obligated the American people by law. This obligation cannot be reduced without changes in the law.

Of the $1,375,000,000 requested for indirect benefits to veterans, the greatest sum will go for the payment of tuition for approximately 2,000,000 students in schools and for the payment of medical care for patients in our Veterans' Administration hospitals and out-patient clinics.

It is true that this latter expenditure could be reduced by lowering our standards of medical care. However, I cannot countenance any reduction that might imperil our medical program and endanger the results we have obtained. If the American people risk this program to decay in their effort to save money, they shall reckon its cost the rest of their lives in the loss of health and human resources. I shall not be party to any retrenchment that might threaten to drag this agency into the backwaters of American medicine.

During the last 20 months since VJ-day we have been struggling through an emergency phase of our work. At the very time we were compelled to reorganize, decentralize, and expand, we were confronted with our heaviest burdens. Within 20 months more than 12,000,000 veterans emerged from the armed services. In addition to compensation, insurance, and medical care, millions of them sought benefits of the virtually untried Readjustment Act.

From the outset we looked upon the Servicemen's Readjustment Act as emergency legislation designed to meet the emergency brought on by demobilization. I did not hold you to penny-wise administration of the law, but asked that you do the job as promptly, effectively, and as inexpensively as you could. The speed with which we tackled the task resulted in some waste, some inefficiency, and some extravagance. This is unavoidable in an emergency operation. Even waste was preferable, however, to the loss that might have resulted had we concentrated on costs instead of results. The results indicate that in 20 months we have already come a surprisingly long way:

1. Medicine in the Veterans' Administration has advanced until today it ranks as the outstanding medical program in the world. Veterans entering our hospitals are assured of treatment at the hands of physicians who are among the most qualified in the Nation. This goal has been achieved primarily because the doctors of this country responded wholeheartedly to our call for help and brought into our hospitals the vast resources of their skills, training, and knowledge. We met this crisis, not because we depended upon ourselves but because we said, "This is not a problem for the Veterans' Administration. It is a problem for American medicine. More than that, it is a problem for the American people." This achievement, made possible through the fullest use of outside resources, is our best example of the new thinking and the new technique that should guide all operations in the Veterans' Administration.

2. In 20 months we have discharged more than 685,000 patients from our rapidly growing hospital system. With improved medical care, we have more than doubled the rate of turn-over in patients. We have added more than 23,000 hospital beds in VA hospitals alone. We have provided almost 8,000,000 out-patient examinations. We have given almost 6,000,000 out-patient treatments.

3. We have established 13 branch offices for supervision and control of local operations. We have opened 14 new regional offices and have moved 28 regional offices from remote locations to downtown centers of metropolitan areas. We have established 721 contact offices in the smaller towns and 305 advisement and guidance centers. We have opened 29 additional hospitals, including surplus Army and Navy institutions. We have opened 152 out-patient clinics and 31 clinics for mental hygiene.

4. During this same period we have handled more than 5,500,000 pension and compensation cases for veterans and their dependents. We have paid more than $1,865,000,000 in disability benefits.

5. In 20 months we have guaranteed $3,875,000,000 worth of veterans' loans on homes, businesses and farms.

6. We have paid out more than $2,000,000,000 in readjustment allowances.

7. In 20 months we have handled almost 6,500,000 applications for education and training. We have paid out more than $2,000,000,000 in subsistence and tuition.

Most important, we have been able to meet with only rare exceptions the demands of more than 14,000,000 veterans of World War II during the critical period of their readjustment. We can take some satisfaction in knowing that our work has substantially aided the rapid return of more than 11,000,000 veterans to jobs and the enrollment at one time or another of approximately 3,200,000 veterans in education and training. All this has been accomplished without any significant failure or serious break-down within the Veterans' Administration.

We have now completed this emergency growth.

The emergency phase of our work is ended; a new high-production period has just begun.

Although we have leveled off in size, there has been no slow-up in our work. We have reached the point where we can put greater emphasis on more efficient production and strive for steadily increasing quality.

For the duration of the Servicemen's Readjustment Act, there is little likelihood of any substantial cut-back in our need for personnel funds. However, when the life of this act eventually runs out, we can anticipate sizable reductions in both employees and in costs. This will signal the start of a third or peacetime cycle in our work. Even during that period, however, reductions in readjustment services will be offset partially by increases in the medical and compensation programs provided by existing laws.

During the new high-production period we have entered, the tempo of our activity will be governed considerably by the economic climate of the Nation. As long as we maintain prosperity levels of employment and income, veterans will have lesser need for their readjustment benefits. However, if an economic recession should strike the Nation, the Veterans' Administration will be confronted with a new and critical period of emergency. Readjustment allowances would be called upon to support jobless veterans during their period of unemployment. And it is probable that education and training benefits would be sought by many other veterans in their effort to ride out a recession.

In spite of the rapid strides we have made in the Veterans' Administration during the emergency readjustment period, I am disturbed by reports of failure to render service. I know that in an undertaking as huge as this, we can never reach perfection. But too often when I am called before Congress to explain our personnel requirements, I am confronted with examples of carelessness and delay in the performance of our work. We must remember that we shall be judged not so much by our accomplishments as by our deficiencies.

Now more than ever before we must concentrate on prompt and direct service to veterans. We are dealing with men, not procedures; with their problems, not ours. We must constantly seek to understand those personal problems and exercise the imagination to solve them. We cannot permit administrative difficulties to obscure the objectives of our work. We shall not do our job as it should be done until we remember that the end is more important than the means, that every bit of work must contribute something to the welfare of the veteran.

When I came into this agency on VJ-day, I recognized that we faced a period of crisis which we could not survive without the trust and confidence of the American people. We asked them to be patient with us and to endure delays while we sought to modernize and expand the machinery for this job. I can no longer ask for more patience. The public has a right to expect prompt, courteous, and efficient service from the Veterans' Administration. More than ever before, I must hold each assistant and deputy administrator individually responsible for the efficiency of services under his direction. I am not at all unmindful of the strenuous effort most of you have already put into this job. But I doubt that any of you are as yet satisfied—any more than I—with what we have achieved.

One of the purposes of decentralization was to give managers in the field authority to handle their local problems promptly. Central office retained only the responsibility for determining policy and for supervising the program through deputy administrators. In general, this practice has achieved the gains we sought from it. However, I am still concerned with the failure of some employees to exercise their full authority in meeting local problems. Sometimes this may have been due to confused instructions from central office, to complicated directions and befuddled language. In still other instances this is due to unwarranted timidity on the part of officials themselves. There are still too many people who would rather pass the buck than make their own decisions.

Muddy language is not confined to policies alone. Each of you has seen replies to simple questions in which the meaning was lost through hopelessly obscure wording. When a person writes to the Veterans' Administration he is entitled to an easily understood, frank, and courteous reply. If our replies cannot be understood, they are not only not worth writing but they simply create additional work.

During the period of expansion when we were forced to add more than 150,000 new employees to the Veterans' Administration we suffered from understandably low worker production. Now that these employees have been trained in their tasks we must expect greater and more efficient output. There is no room in the Veterans' Administration for negligent or incompetent employees.

In an activity as vast as the Veterans' Administration we are cursed with the problems of bigness. In view of the number of employees required to supervise the work of others, in view of the overhead required to keep our machinery in order, there is the danger that we may become so involved in the tools and crafts of administration that not enough of our effort is expended directly in aid to the veteran.

When I came to the Veterans' Administration I said that we wanted men and women who would keep their eyes on the human needs of the veteran. I am told that some employees have drifted away from this objective, that they have permitted red tape to blind their vision and obstruct their judgment.

This rigidity, this unyielding attitude, on the part of some employees who put their methods before results, who employ the letter of regulations without applying their common sense, is at the root of many problems that leap up to confront us.

There is likewise an unfortunate tendency on the part of some employees to look on their jobs with almost divine right. The Veterans' Administration is not a proprietary bureaucracy. It belongs to the people, not to the employees. We are simply servants of the public, ordained to represent their wishes through administration of the laws of Congress.

I am making this letter public not only because it marks a new phase in our work but because any matter of vital concern to this program is also a matter of vital concern to the American people. They have ordered this program and they will be paying the bill. They have a right to know what their money is buying. It is as important that we represent the American people in the administration of this program as it is that Congress represent the American people in the enactment of its laws.

Many of you have probably been reading in the newspapers that I am tired and discouraged and want to quit. I am no more tired than many of you. Certainly I am not discouraged. I mean to do my best and I shall not quit of my own accord until my job is finished.

Sincerely,

OMAR N. BRADLEY,
General, United States Army,
Administrator.

Mr. Speaker, it will be a great help to us and a great help to the veterans if, as a result of General Bradley's directive, official correspondence is clarified and simplified. When veterans write the Veterans' Administration they are often told things that are extremely confusing. That is one reason why the men have had such difficulty with their insurance, and why many have allowed it to

lapse. They have received the same letter over and over again from the Veterans' Administration regarding reinstatement. If his men carry out General Bradley's orders, we will have a much better administration.

Long Beach Federal Savings and Federal Home Loan Bank of Los Angeles

REMARKS
OF
HON. WILLIS W. BRADLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1947

Mr. BRADLEY of California. Mr. Speaker, the unwarranted confiscation of the solvent $26,000,000 Long Beach Federal Savings and the $43,000,000 solvent Federal Home Loan Bank of Los Angeles have jeopardized the homes and savings of 24,000 people in my district. Such seizures and confiscations by public officials of solvent financial institutions without notice, without hearings, and without cause, for the purpose of reprisal and intimidation as disclosed in testimony before a committee of the Congress, render officials responsible for these outrages unfit for public office.

Nine months ago a congressional investigating committee, after full hearing, recommended return of both of the above-named seized institutions. These recommendations have not been carried out.

Therefore, on Friday, May 2, I introduced a resolution requesting the removal of John H. Fahey and Harold Lee as officials of Federal Home Loan Bank Administration. This is the exact resolution introduced some time ago by the Honorable Cecil King and its reintroduction is by agreement between us. It is unfortunate that this Congress, with its multiplicity of problems, should be burdened by such maladministration on the part of executive agencies and with having to air such flagrant abuses of authority which go to the very foundations of our democracy.

I hope that prompt action by this Congress may be accomplished to rescue the homes and savings of 24,000 citizens of my district.

The conclusions and recommendations of the congressional committee are as follows:

CONCLUSION

The action here complained of was not only a disservice to the Government but also a greater disservice to the people for the protection of whose rights and affairs our Government exists. Should the time come when our Government is incapable of discharging that fundamental function, it must cease to exist in the form and for the purpose for which it was founded. The same end is inevitable for any endeavor with which the Government is identified. The necessity for unquestioned rectitude of purpose and sound, just, and impartial administration of governmental endeavor is paramount.

The Federal Home Loan Bank System was created to meet a need which the Nation experienced. It is a potential factor in the era which lies ahead of us. The functions of this Government agency loom up as far more important in the future than it has ever been. Unless its administration is elevated to a higher esteem and undergoes decided improvements, its efficiency will be seriously impaired.

RECOMMENDATIONS

The recommendations of your committee are—

(1) That the Commissioner revoke the order reducing the number of districts from 12 to 11 in the Federal Home Loan Bank System.

(2) That the Commissioner take all necessary steps to reestablish a Federal Home Loan Bank of Los Angeles and a Federal Home Loan Bank of Portland, and revoke the order or orders by which the assets of these two district banks were intermingled.

(3) Should the Commissioner, in the light of the evidence adduced before your committee, still adhere to the opinion that the number of districts should be reduced from 12 to 11, and is still of the opinion that he has the legal authority to reduce the number of districts, he should proceed to give due notice of such intention to all of the associations in the area affected, hold hearings, and give due weight to the recommendations of the officials of the banks involved and to the views of the associations which are members of the regional banks affected, and should likewise take into consideration the views of the industry generally. Any sudden and unheralded action, such as that taken in the case of the Los Angeles bank, is certain to have an unfavorable effect on the confidence of the public in the institutions involved.

(4) That the Commissioner revoke the order appointing a conservator for the Federal Savings and Loan Association of Long Beach and restore the assets and affairs of the association to its duly elected management, and render a proper accounting for the same, as expeditiously as is consistent with judicial determination of the questions at issue. Your committee questions whether the law ever contemplated that the Board should have the extraordinary power to seize and appoint a conservator for a solvent institution as a part of the supervisory functions entrusted to the Board over member banks.

(5) That the appropriate committees of Congress give consideration to the necessity (if, in the opinion of such committees, the necessity exists) of amending the Federal Home Loan Act in the following particulars:

(a) Clarifying the authority of the Board in the matter of approval of elective officers of the regional banks to the end that neither the Board nor other officials may exercise such authority arbitrarily.

(b) Clarifying the authority of the Board or the Administrator to increase or decrease the number of regional banks, and specifying the conditions and procedure under which such changes may be made.

(c) Prohibiting the agency from appointing conservators for any member association except under specific and well-defined limitations.

(6) It developed in the hearings that the order relating to the appointment of a conservator for the Federal Savings and Loan Association of Long Beach had not been filed with the Federal Register, as required by law. The Division of the Federal Register advised your committee that only on three occasions has the Federal Home Loan Bank Administration complied with the requirement that its orders be filed with the Federal Register. Your committee further recommends that the Administrator comply with the law in their respect in the future.

HOWARD W. SMITH, *Virginia.*
JOHN J. DELANEY, *New York.*
HUGH PETERSON, *Georgia.*
ALBERT GORE, *Tennessee.*
FRED A. HARTLEY, Jr., *New Jersey.*
JOHN JENNINGS, Jr., *Tennessee.*
CLARE E. HOFFMAN, *Michigan.*

In addition to Resolution No. 203 to remove these undesirable officials, I have introduced other bills, Nos. 3301 and 3302, to supplement pending legislation to fulfill the unanimous recommendations of the investigating congressional committee.

Aid to Greece and Turkey

REMARKS
OF
HON. PETE JARMAN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1947

Mr. JARMAN. Mr. Speaker, the gentleman from New Jersey reports from his district that the people of that district with whom he has conferred wish to fight communism in this country first.

I yield to no man in the United States in my desire to stamp out communism in this country. In fact, in my opinion, one of the excellent byproducts of the bill we are about to consider will be that it will tend to cause the communistically inclined people of this country to stop, look, and listen. I cannot help but wonder, as I heard the gentleman's report from his people, how they would have felt had we waited to fight Hitler first in this country?

Mr. Speaker, I include as a part of my remarks the following editorial from the Washington Post of May 4:

AVOIDING A BLUNDER

It is not so much the bill to aid Greece and Turkey as the Rules Committee which has been saved by its belated decision to let this measure go to the floor of the House. The bill could not have been bottled up by the rule-makers without bringing an avalanche of wrath upon their heads. More than a week ago it was reported favorably to the House by that body's Foreign Affairs Committee with only one outright dissent and one plea for amendment. Of course, the Foreign Affairs Committee is the only House group which has a right to pass upon the merits of legislation in this sphere before it reaches the House itself. Had the Rules Committee undertaken to veto what Foreign Affairs had done, such a high-handed usurpation would certainly have brought demands for stripping the committee of dictatorial power, and such demands would have had strong support among both House Members and the rank and file of citizens.

We think that Chairman Leo E. Allen, of the Rules Committee is entitled to a good deal of credit for subordinating his personal opposition to the bill to his sense of duty in letting the House vote on it. The same can be said for Representative HARNESS, who is reported to have voted to send the measure to the floor in spite of personal dislike for it. Yet these men have merely acted in accord with the proper function of the committee on which they serve. Their task is to facilitate the movement of important legislation through the House—not to sit as supercensors on every important bill that is approved by the legislative committees. We hope that their action will be regarded as a precedent whenever the committee is tempted to arrogate to itself the so-called "gag" power that it has so frequently exercised in the past.

As for the aid bill itself, it is obvious that the House should lose no more time in

enacting it. The opponent's next move will be to destroy or impair it by means of amendments. Some of these may seem plausible, but their effect would be to tie the hands of the Administration in carrying out a policy of inestimable importance. Congress is naturally concerned that the money be wisely spent and that as much as possible of it shall be devoted to actual reconstruction in war-torn Greece. But wise administration cannot be guaranteed by attaching restrictive amendments to an authorization bill. It can come only from the selection of an able and fearless administrative staff having the full confidence of the President and congressional leaders. The greatest contribution that Congress could make, in our opinion, would be for all of its members to recognize the Truman doctrine for the momentous policy that it is and to stop trifling with it as if it amounted to only the creation of a Mediterranean WPA.

Greco-Turkish Loan

REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1947

Mr. MASON. Mr. Speaker, I have been accused many times of being mistaken. I have been accused many times of being wrong, but I have never been accused of being inconsistent. I voted in the first place against lend-lease. I did not believe that if we provided the tools, as Mr. Churchill suggested, we would not have to provide the men. I voted against UNRRA and every appropriation for UNRRA. I voted against the British loan. Today I do not need tell you how I am going to vote on this Greco-Turkish loan.

Mr. Speaker, the $400,000,000 lend-lease request for Greece and Turkey is the first step in the 3-year program of world rehabilitation that will cost American taxpayers at least $21,000,000,000. This estimate is made by conservative authorities in the field of world finance. If we extend this new lend-lease aid to Greece and Turkey we will be forced to follow through with a complete program of world rehabilitation as a part of our new policy to stop Russia now.

If we do this, however, we should not lose sight of the fact that the financial burden we are assuming is not the whole burden. This new foreign policy will mean that we must continue to export huge quantities of scarce goods—food, clothing, fats and oils, sugar, farm machinery, and so forth—thereby boosting prices of these scarce articles higher and higher. It is estimated that the program will require us to export between thirteen and fourteen billion dollars' worth of goods each year for the next 3 years. This will result in an ever-increasing spiral of price and wage boosts, with their attendant labor frictions and work stoppages.

President Truman's new foreign policy, if adopted, will also mean that Uncle Sam accepts the role of world policeman; that from now on he will have to furnish the military might required to stop trouble wherever and whenever it arises in any corner of the world. It will mean that he has taken over the responsibilities and obligations that we had hoped a strong United Nations organization would assume and carry. The world now recognizes the fact that the UN is a weak reed, and so Uncle Sam is being called upon to feed the world, to finance the world, to police the world, and to support the world, in order to same the world from communism.

We saved the world from Hitlerism at a cost of $300,000,000,000, plus thousands of lives, and "blood, sweat, and tears." Now we are asked to save the world from communism at a cost that can neither be estimated nor predicted. Before taking the first step we should ask ourselves, "Is Uncle Sam strong enough to do all this, even if he should be willing to do it?"

Mr. Speaker, at the time of the San Francisco World Peace Conference many Members of Congress urged that the United States, with England and other peace-loving nations, should offer the following amendments to the Charter of the proposed United Nations Peace Organization, and demand that they be adopted:

(a) Abolish the veto power in the Security Council.

(b) Require all nations to agree to world-wide inspection upon atomic energy development.

(c) Agree upon a world-wide limitation of armaments.

We suggested that if Russia refused to agree to these amendments, or safeguards, and walked out of the Conference, the United States and England, with the other peace-loving nations, constituting at that time at least 70 percent of the world's military power, should go ahead and complete the UN, leaving Russia on the outside. After the organization was set up and functioning then Russia should be given the opportunity to come in or stay out as she desired. However, if she remained outside and thereafter disturbed the peace of the world—as she has done in the Balkans, Greece, Turkey, China, and elsewhere—the UN could brand her as an aggressor nation and throw the military might of the rest of the world against her. Our recommendation would have forced Russia to join the UN or commit national suicide if and when she became an aggressor nation. The recent stalemate at the Moscow Conference, as a result of Stalin's attitude, causes the same Members of Congress who recommended that action at the San Francisco Conference to wonder if it is too late to act now.

Mr. Speaker, in discussing prospective aid from the United States with an American representative, a prominent Arab of the Middle East said:

> All we are interested in is how many dollars will we get and when.

This statement expresses the general attitude of Europe, of the Middle East, and of the Far East. If we assume financial and economic responsibility for the rest of the world in an effort to stop the spread of communism, what will the program cost?

Since VE-day we have spent on International commitments between $8,000,000,000 and $9,000,000,000. That is the net amount of our postwar capital exports to date, and that is only the beginning. We are committed to extend further credits to foreign countries of approximately $12,000,000,000. There is no knowing when these distressed countries will be able to stand upon their own feet and pay their own way, as evidences of this condition in both England and France are much worse today than they were a year ago when we provided them with their first postwar loans. This means that both England and France will each soon be asking for another sizable loan to further bolster up their tottering financial and economic systems.

Summing up the serious world situation in which we find ourselves today, and the part the United States is expected to play in straightening out that world situation, I use the words of Chester D. Trip in his economic trend-line studies of April 30, 1947:

> An improverished world needs our help. But that help must not bankrupt the benefactor by raising domestic prices sky high. And with or without such help, the world can survive peace only if it works out its own troubles, concentrating on the burning problems of the present instead of chasing after Utopian ideals of the future.

Mr. Speaker, the proposed Italian peace treaty is a very drastic one. If ratified in its present form, Italy will be rendered helpless before her Communist-dominated neighbor, Yugoslavia, whose dictator ruler, Tito, is a Charlie McCarthy for Stalin. Thus the provisions of the Italian peace treaty, that we have agreed to, go absolutely contrary to President Truman's announced policy in connection with aid for Greece and Turkey. On the one hand we strengthen Stalin's hands by weakening Italy, and on the other hand we propose to strengthen Greece and Turkey in order to block Tito and Stalin. Does this make sense? Can Uncle Sam ride with the hounds and run with the hare at one and the same time?

Mr. Speaker, how long can our capitalistic system last under the continuous drain that has been placed upon it? England has gone the way of all Europe, at least she has deserted the capitalistic system and become a hybrid government, half democratic and half totalitarian. She has at the same time gone on relief. Not only has she gone on relief herself, but she is asking us to place her former dependent nations—Greece, Turkey, Iraq, and Iran—on our relief rolls. The idea of placing these impoverished nations on our relief rolls is to keep them from falling into the outstretched totalitarian arms of the U. S. S. R.

Democracy is dead in Europe. It died of war wounds. Democracy as we know it never existed in Asia. Democracy in South America exists in name only, because dictatorship is the order of the day south of the Rio Grande. In view of these facts we should devote all our efforts to preserving democracy at home. In order to do so we must keep our finan-

cial house in order; we must keep financially strong and solvent; we must not dissipate our strength nor our resources in trying to revive democracy in other parts of the world. If we weaken ourselves in an effort to revive democracy elsewhere, the last stronghold of democracy will become an easy victim for totalitarianism, the enemy of democracy.

In an address at Springfield, Ill., on January 27, 1837, Lincoln said:

If danger ever threatens us, it must spring up among us. It cannot come from abroad. If destruction be our lot, we must ourselves be its author and finisher.

Lincoln's words are prophetic. In the light of that warning uttered over 100 years ago, perhaps we should today stop, look, and listen.

National Rivers and Harbors Congress

EXTENSION OF REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1947

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to submit a digest of the deliberations of the National Rivers and Harbors Congress held in Washington, D. C., during the past week, as reported by the Associated Press and published in the Washington Post of date May 4, 1947. The article follows:

FUNDS TO DEVELOP RESOURCES OF UNITED STATES URGED BY RIVERS GROUP

The National Rivers and Harbors Congress requested yesterday adequate appropriations for all phases of our national resources development program.

It said in a resolution:

"We appeal to the Congress of the United States not to be swayed by the hysterical and verbose cries of advocates of a false economy which would deprive great sections of our Nation of funds for protection from devastating floods; would deny the necessary monies to keep open important arteries of commerce, and would fail to provide funds which would keep the arid lands of our country from returning to dust and desolation."

At its final session, the Congress also passed resolutions:

1. Urging that a study be made with a view to formulating a national power policy.

2. Favoring the construction of multipurpose dams, with full development of hydroelectric possibilities (for flood control, navigation, and irrigation.

3. Opposing the establishment of a Missouri Valley Authority.

4. Recommending that Congress provide funds to continue the reclamation program in the most economic and beneficial manner.

5. Requesting the appropriation of funds for advanced planning of rivers, harbors and flood control projects that have been authorized by Congress.

The organization closed its first postwar convention shortly after hearing Gov. J. Strom Thurmond of South Carolina urge continued development of river and watershed programs, and receiving reports of its project and resolution committees.

As a final act, the conference elected these directors:

One-year terms—Floyd O. Hagie, Washington; W. A. Smith, California; Walter Gahagen, New York; R. B. Page, North Carolina; Senator Leverett Saltonstall, Massachusetts; O. F. Wakefield, Ohio; Thomas B. Stockham, Pennsylvania.

Two-year terms—Dewitt L. Pyburn, Louisiana; H. H. Buckman, Florida; Al Hansen, Minnesota; Walter G. White, New Hampshire; Representative Sid Simpson, Illinois; William B. Rodgers, Pennsylvania; J. E. Sturrock, Texas.

Three-year terms—Fred D. Beneke, Tennessee; Senator Chapman Revercomb, West Virginia; Senator John L. McClellan, Arkansas; Senator John H. Overton, Louisiana; Representative Will M. Whittington, Mississippi; Representative Dewey Short, Missouri, and William H. Webb, Maryland.

The directors elected Senator MCCLELLAN as president of the congress, and Senator OVERTON and Representatives WHITTINGTON, FRANCIS CASE, South Dakota, and CHARLES R. CLASON, Massachusetts, as vice presidents.

Labor Law Not "Repressive," Merely Regulatory

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1947

Mr. JOHNSON of California. Mr. Speaker, upon a passage of a bill regulating labor, the hue and cry went out that it would result in industrial chaos; that the bill was "unfair to labor," "restrictive," "repressive," and so forth. It was even stated that the purpose of the bill was to destroy labor unions. I have talked to dozens of men who voted for this bill, many of who have been and are friendly to labor. I have yet to find one who had any malicious motive, as far as the members of organized labor or unorganized labor are concerned, in the vote which they cast for this bill.

It seems to me that it must be obvious to any impartial person that the way labor leaders have conducted themselves the last few years that there must be some regulation whereby their powers may be restricted for the interest of the general public. Furthermore, many individual laborers are merely pawns in a great system in which they have very little, if anything, to say about what their union or the leaders of their union do. The purpose of this legislation is to try to bring balance to our industrial relations. Some of the things that labor leaders do, if done by employers, have been declared an unfair labor practice. Yet, these things are legitimized by the Wagner Act and its administration. In other words, one side of the bargaining table, the employer, may do something which the law or the administrative agencies administering the law declare an unfair labor practice. Yet, this same conduct or similar act when done by the employee or his agent on the other side of the table is not considered an unfair labor practice.

It is obvious that the right of employers has been curtailed too much with respect to the matter of freedom of speech. The way the law has been administered it practically closes the mouth of the employer as far as discussing anything with his employees.

The fights and controversies between unions, such as occurred in the movie industry and other places, are tragic, not only as far as the individual workmen are concerned but as far as the great public which is affected thereby is concerned.

It may be that the Senate may change or refine certain policies laid down in the House bill. What the American public should understand is that this law was aimed at some regulation of the excesses of labor leaders and some protection for the individual workman and his right to work as well as protection of the public.

An interesting editorial occurred in the Washington News on May 1 which shows that history points out that every group whose status quo and special privilege is effected always cries "wolf" when some change is made for the benefit of people and the public who suffer by virtue of the especial privileges of that group. That is true in this case. For the information of Members we hereby quote the editorial:

OLD STUFF (AND NONSENSE)

Labor-union leaders aren't too smart in screaming that legislation they oppose would bring on chaos, disorder, depression, regimentation, and slavery.

And they aren't at all original.

Down through the ages, the beneficiaries of status quo and special privilege have always raised just such cries against proposals for change.

In our own country, it wasn't so long ago that workers who wanted protection for their right to organize unions were denounced by employers as anarchists plotting to undermine the foundations of society.

Plenty of statesmen, and even preachers, defended chattel slavery as an institution ordained by God for the uplifting of inferior races.

The Government-owned postal system—many businessmen thought—would mean the beginning of the end for private ownership of property.

Pure-food-and-drug laws were sure to wreck business and starve our people. Pasteurized milk was an assault on the freedom and the very existence of dairy farmers.

Regulation of railroads and public utilities was certain to destroy free enterprise. Antitrust laws would spell stagnation for industry and permanent unemployment for millions.

Equal suffrage threatened our noble womanhood with degradation. Laws against child labor would deprive parents of the direction of their children and wipe out the incomes of widowed mothers.

Federal regulation of stock exchanges and security issues was an open invitation to national disaster. And only recently the National Association of Manufacturers saw in Government control of atomic energy a dark plot to socialize patents and stifle invention.

All this doesn't mean that Congress can afford to ignore the danger of going too far in writing labor legislation. It does justify belief that legislation can be written to regulate unionism in the public interest with no such disastrous consequences as the union politicians are predicting.

This on the basis of past experience. For all this old hokum about chaos, disorder, etc., has been used before. And the things that were going to bring destruction became law and were accepted, while the dire prophecies that greeted them them are almost forgotten.

Aid for Greece and Turkey

REMARKS
OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1947

Mr. REED of New York. Mr. Speaker, I realize that those of us who are against the Greek-Turkish loan will not be given time to discuss the matter at any length. I am therefore taking this opportunity to present a few matters for your consideration with regard to it.

Mr. BROWN of Ohio. Mr. Speaker, will the gentleman yield?

Mr. REED of New York. I yield.

Mr. BROWN of Ohio. It was agreed in the Rules Committee when this measure was under consideration that time would be granted for the opposition to be heard. I understand that is a gentleman's agreement with the chairman and the ranking minority member of the committee.

Mr. REED of New York. I am very glad to know that that condition now obtains.

Mr. Speaker, Lenin, godfather of communism, boldly declared: "We shall oblige America to spend herself into destruction."

It is my contention that every vote cast for a foreign hand-out of our taxpayers' money will be the acid test as to whether or not Lenin's prediction will come true.

Under leave to extend, I am inserting an article published in the Jamestown Shopping Guide, May 1, 1947:

LENIN SAID: "WE SHALL OBLIGE AMERICA TO SPEND HERSELF INTO DESTRUCTION"

The endless schemes of planners to spend the American Republic toward destruction are without end. Is it only a coincidence that this mad spending fits perfectly into the well-known and diabolical Communist objective to bankrupt us?

Lenin, godfather of communism, boldly declared: "We shall oblige America to spend herself into destruction."

This is the master plan of the Communists to wreck our country. It is part of Lenin's Collected Works, the bible of the Communists. For many years its contents have been known to every intelligent person who wished to know the truth. Officials have known this for 30 years.

Stalin, in his Communist strategy, page 95, of his official book, Foundations of Leninism, published 13 years ago, in 1934, declares that "practical bankruptcy" is a special means of preparing a nation for easy victimization or communistic take-over.

People who lay awake nights worrying about the Russians showering terrible atomic bombs on American cities and towns need not worry. The Russians will not need to shoot anything, if we are so foolish as to go bankrupt, and complete the softening-up process by spending ourselves into our own destruction. Alert, patriotic Americans oppose taking the Communists' bait by playing their game, by squandering our remaining dollars all over the world, only to leave the home base bankrupt, wide open to the Communist take-over.

In view of these facts, some of the people who today claim they are out to defeat communism and save America, look ridiculous. By advocating spending plans, they are playing the very game the Communists most desire them to play—wreck the United States.

You can't eat your cake and have it, too. You can't spend the remaining dollars of Uncle Sam in a score of foreign lands, and still have the money here when you need it to save your country. Any grade school kid knows that.

The proposal to "save democracy" in Greece and Turkey, at an initial expense of $400,000,000, is but the curtain raiser in a gigantic fantastic campaign of the planners, to export $39,000,000,000—yes, thirty-nine billion American dollars, abroad in the next 3 years, starting right now. If you just add what we now owe in Federal debt, $260,000,000,000, plus the annual costs of our armies of occupation abroad, plus the local, State, and Federal annual tax costs, you can easily see that this is a starter to spend the last dollar we possess. At most, after the plan has been carried out, as mapped by planners, there would be only a few crumbs remaining for United States.

Financing foreign countries with American dollars to the tune of $7,000,000,000 a year for the next 3 years—$21,000,000,000 in "loans"—is planned to hand a ready-made economy to foreign lands.

Planners have blueprinted a plan to boost American foreign trade to $13,000,000,000 or more a year, for the next 3 years. Experience tells us that a dollar sent abroad as a gift or loan, does not return to America. It is a dollar gone forever.

But, if we stretch our imagination to the breaking point, and assume that foreign countries will spend all the $21,000,000,000 we hand them in the next 3 years "to put them on their feet," and we hope to sell our goods to the bankrupt countries of the world to the tune of $13,000,000,000 a year for 3 years, that it would be necessary for us to accept each year for 3 years, $6,000,000,000 worth of I O U's of very doubtful value. Figured this way, the whole $13,000,000,000 is converted into I O U's, or $39,000,000,000 in 3 years, plus the $21,000,000,000, or a grand total of $60,000,000,000.

In the most prosperous year the United States ever experienced, our foreign trade never exceeded 6 percent of our whole business volume. To expect to expand that small percentage, at such tremendous risk, is like wagging the dog with its tail.

But the foreign countries we expect to sell our goods to, and create prosperity on American farms and factory, all pay such low wages that it is utterly impossible to compete on our high wage scale. We cannot hope to develop an export trade unless we are willing to flood the American market with cheap, inferior goods made abroad. This would result in boosting by millions the number of unemployed American factory and farm workers.

A recent comparison of the world's wages, shows by what a wide margin the American factory worker's income tops all others. For an average 40-hour workweek, workers of the world receive the following weekly pay:

	Weekly wage
Czechoslovakia	$8.40
Netherlands	12.80
Russia	14.40
France	16.40
Britain	17.60
Sweden	18.40
Canada	29.20
United States	46.40

This puts the American worker in a class by himself; of all world workers, he is best able to use his 40-hour week to provide himself with an income that supplies home, food, clothing and shelter for self and family and have enough remaining to purchase a motor car and electric appliances. The worker in Britain, with his $17.60 weekly pay, must work 46 hours, or six extra hours a week, to repay the Socialistic-imposed food subsidies he pays for less and cheaper food.

How do our planners hope to develop and expand an export trade which will profit anyone, in foreign countries, when Czechs for example—receive only $8.40 per week—less than one-fifth the weekly pay of the American? Then there are the vast hordes of China, Japan, and India, all ready to flood the American market with their goods—millions of workers who receive 50 to 60 cents a day—$2 to $3 per week for a 50-hour work week.

After World War I, planners set out to redesign the world. We squandered $6,000,000,000 on worthless bonds in Germany, and a like sum in South America. We never realized a return to pay for the printing of the bonds. Today the world is in a far worse financial condition than 30 years ago.

Suppose your local businessmen developed sales as do Washington planners? They discover the people out in Pan Cake Hollow are not buying enough good and services in their city. A commission of smart young men is named to see what can be done about it. After numerous meetings, investigations, and goings-on (behind closed doors), they discover the folks out in Pan Cake Hollow just do not have any money to spend.

"We'll attend to that," report the local planners. "We'll just give them the money to spend, so they can come to our stores and buy things."

So, the local chamber of commerce stages a money-raising campaign to provide the folks in Pan Cake Hollow with some money to spend. Enough money is contributed by local business and professional people to hand each resident—man, woman, and child—$100 each, which they are asked to please spend in the city stores. No strings are attached to the deal; the money is simply handed over. The businessmen have given the money, a dead horse to them, but the people in Pan Cake Hollow are very, very happy. They have a lot of money they didn't earn, never expected to get, and what to do with it is now the question?

Now, as an added cost on top the gift, the businessmen put on a high-pressure advertising and sales campaign to get back, if possible, as many of their dollars from Pan Cake Hollow, as they can. But the people out there find that they can make the money go farther if they spend it in the local store or in the stores of another city, and so most of the money never is spent in the town which gave it.

You would imagine after one experience like that, no one would waste any more time mapping out a do-good campaign. But, you imagine wrong; after several similar experiences, in which billions and billions of American dollars flew away never to return to the United States, a band of self-appointed planners in Washington have mapped out the most gigantic give-away campaign in history, and intend to put it over at a time when the American people are mortgaged for about all they are worth.

The planners have neglected to date to advise either Congress or the people, to which country the United States will turn for a hand-out when we go bankrupt and our people are freezing and starving. We ought to know that address now.

Pressed for details as to how planners expected to supervise the expenditure of the vast sums of money, planners were forced to acknowledge that they had absolutely no over-all plan. It will be done on the typical American "on a wing and prayer" method of trusting the gods to deliver good returns for noble deeds performed.

Take one instance as an example. Planners hope Congress will let them ship $350,000,000 worth of food and clothing to certain starving people. But they frankly told Congress-

men that they had no supervisory staff to make certain how the food and clothing is to be distributed. They expect to depend on reports of American newspaper correspondents to investigate and report. Since few foreign countries even permit American newspapermen to wander around, write dispatches and make uncensored reports to home folks, we know before we start we shall receive very skimpy reports. We also know that vast stores of food and clothing have been diverted and ended up in Russia.

So, we find the planners are willing to place American taxpayer's money in new bets on the international gambling table, and take chances on the results.

"The shocking thing is to spend without a plan, to make "loans" willynilly as the breezes of UN oratory rise and fall," declares the editor of the Pittsburgh Post-Gazette. "We need a blueprint of the kind of world we will build. Unless we have a simply stated plan of action we shall get nowhere. Unless our spending is done with a time table and greater and lesser objectives we shall succeed only in dissipating our national wealth, bringing the United States down to the same bankrupt level of the rest of the world."

We are told it is necessary that we take over the world's troubles "because the British Government is practically bankrupt," and unable to assume responsibilities. Recently, British officials proudly announced to the world that they had balanced their budget for the first time in several years, and had a surplus of nearly $1,000,000,000. Yet, we are told it will soon be necessary for us to assume the British job of German occupation, half of which has been carried by Britain.

Planners have arranged for Great Britain to draw $1,600,000,000 in United States loans this year, an additional $1,300,000,000 in 1948, and $300,000,000 in 1949. Some extra financing then may be covered by the World Fund. Is it any wonder the British think U. S. means "Uncle Sucker?"

The gigantic $39,000,000,000 foreign-loan campaign will mean every American citizen—man, woman, and child—will contribute in increased taxes about $330 per head per year. We would have added to our present $2,200 individual Federal debt mortgage $330.

Before your family of four, with your present income, purchased, say, a motorcar costing $1,320, would you stop and consider whether, with your present debt compared to your income, you could afford the car? You will be forced to pay for this program of the planners just the same as you would for that car. Wise people are now telling their Representatives in Washington what they wish done about this.

Would the American people perform a greater good to the world's people by demonstrating that our kind of government and productive system is a success, providing the greatest good to the largest number of people, or would we perform a greater service by going bankrupt trying to free 2,000,000,000 people of worry who desire to live under their present conditions or who are doing practically nothing to change their condition?

If it is necessary to hold a special election to build a schoolhouse in your community, say at a cost of $100,000, should we not also hold an election before we permit exportation from the United States of $100,000 or $1,000,000 from each community?

Should a few unknown planners, behind closed doors, decide for us what we shall do with the remaining surplus we have, or shall we, the people, decide? Just what is this democracy we are setting out to save for somebody else?

Britain balanced her budget (with billion-dollar surplus).

This is how we stand:

United States funds available for world aid since war's end

Contributions:	
UN	$29,289,349
UNRRA	2,700,000,000
World Bank	3,175,000,000
World Fund	2,750,000,000
Lend-lease	2,163,000,000
Other advances:	
Surplus property	1,148,000,000
Loans to Great Britain, Philippines	4,390,000,000
War Department grants	1,771,926,293
Export-Import Bank	2,931,209,176
Total	21,058,422,818

The Government received last month $5,700,627,639.

The Government spent last month $3,958,257,688.

The Government owes $259,123,934,984.

May 3, the Polish National Holiday

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1947

Mr. SADOWSKI. Mr. Speaker, on May 3 Poles everywhere and citizens of Polish origin in many countries celebrate a Polish national holiday—the Polish Third of May Constitution Day.

In the United States, wherever Americans of Polish descent live, in cities and towns from coast to coast, this holiday is observed with appropriate exercises throughout the month of May, to pay tribute to the Polish Nation and to remind fellow Americans that Poland was one of the first pioneers of liberalism in Europe.

Just recently the Polish Constituent Diet adopted unanimously the following declaration:

(1) Equality before the law, regardless of nationality, race, creed, sex, origin, social status, and education.

(2) Liberty of person, life, and property.

(3) Freedom of conscience and worship.

(4) Freedom of scientific research and the publication of results thereof, and freedom of creative artistic endeavor.

(5) Freedom of press, speech, association, assembly, public meetings, and demonstration.

(6) The right to vote and to seek public office.

(7) Inviolability of the home.

(8) Secrecy of the mails and other means of communication.

(9) The right of instituting court actions and of filing petitions with the proper state authorities.

(10) The right to work and to periods of rest.

(11) The right to relief in case of unemployment and incapacitation.

(12) The right to education.

(13) Protection of family life and care of mother and child.

(14) Protection of health and working capacity.

This reaffirmation of the rights and liberties of its citizens is greeted with great joy by every freedom-loving American. This proves to us that the good, Christian people of Poland are not Communists and that Poland will be a great free and independent republic again.

From the many visitors who have been in Poland we learn that the Polish Nation is rising rapidly from its ruins and destruction. They have revived their ruined capital and have brought back life to their savagely destroyed country.

The will and fortitude, and love of country is beyond description. This was the one thing that Hitler and all the Nazis could not destroy.

This then, too, is the guarantee to the world that Poland will never go communistic.

But today I am deeply disturbed. I am not disturbed about Poland and that the Polish people shall not be successful in their struggle for reconstruction. I am fully confident that these virile, heroic and indestructible people will overcome all of their difficulties as they have throughout history. I am worried and deeply disturbed because of what has been said by former Secretary Byrnes and Secretary Marshall on the subject of Poland's western boundaries.

This policy must be strongly opposed. It would mean a weak Poland and a strong Germany. It means World War III.

Who is behind this policy? Not the American people! Big investment interests, both British and American, see the chance to make huge profits quickly by taking over German industry. They are behind this policy. They will reap tremendous profits. Europe is so devastated that the market is unlimited. They aim to obtain German good will by revising the Polish-German boundaries. In the next 10 or 15 years they will rebuild a stronger and more powerful Germany than before World War II.

Then will come another Hitler, Kaiser, Bismarck, or Frederick the Great. Another German leader will arise to expel the British and American investors and take over the new and powerful rebuilt Germany. Then will come World War III.

What about our allies? Who will be with us? Can we expect the support of the nations who were victims of Nazi aggression? We should rebuild the economy of those Allied nations now. They should not be made to depend upon German industry again. They are our friends. They have never been against us throughout the entire history of the United States.

The recent Gallup poll indicates that the overwhelming sentiment among the peoples of five allied nations—the United States, Great Britain, Canada, Holland, and France—is that the warlike ideals of Germany have not been rooted out, and that she will one day become an aggressor nation again.

Mr. Speaker, I feel that the results of this poll deserve careful consideration by my fellow colleagues, by our foreign policy makers, and particularly by Secretary Marshall. Here is an expression

on the part of the peace-loving peoples of five allied nations that they are fearful that we are rebuilding Germany's war machine so that some day it will be able to threaten world peace again.

We hear expressions of sympathy for Germany with increasing frequency. More and more we are told that the rapid reconstruction of Germany, before it is denazified and democraticized, is essential to world peace. This is simultaneously accompanied with a "get tough with our allies" attitude. In some circles our wartime reliance upon our allies to help us defeat Germany has now been replaced by a reliance upon Germany to assure peace.

This attitude has alarmed the constituents of my district, as well as myself and many of my friends. I come from Detroit, Mich. I come from a district largely populated by Americans of Polish descent—a district which took no second place in its contributions toward victory. From this district flowed a steady stream of arms and munitions which hastened the end of the war. All the various phases of activities to promote the war effort found enthusiastic support in my district. To many of the people there the complete destruction of the German war machine would provide a twofold satisfaction, for they knew what it would mean to their kinfolk in Poland.

They are disturbed by the growing feeling of compassion for those responsible for World War II, which is combined with a more calloused and harsh approach to our ally, Poland. When they hear new proposals which would reward Germany at the expense of its victims, they feel that it is time to protest.

They are aware of the great sacrifices of Poland and cannot grasp why an ally that was never found wanting by us in 6 years that it fought overwhelming odds should today find its considerations secondary to those of Germany in the thinking of certain circles in this country and abroad. Perhaps this would be a good place to refresh our memories and impress us of our moral obligations to a heroic people by presenting some statistics. Six million one hundred and four thousand nine hundred and ninety Poles were tortured, burned alive, and murdered by the Nazi butchers. This includes millions of women and children. Nearly a million civilians have suffered heavy injuries of the body and mind. This was the human cost to Poland of German aggression.

Since, in our approach toward the peace treaty with Germany, the question of the western frontiers of Poland plays such an important role, I think it is necessary for a clarification of American policy to eliminate some of the confusion and distortion which has been injected into the case. It is important to the United States that this problem be settled justly and correctly, for it will be one of the pillars of the future peace structure. Failure to do so will endanger world peace and possibly involve our country in another world war.

A brief examination of the developments affecting the question of the Polish frontier in the west up to the present moment might contribute to a better understanding of the problem.

It was at the Crimean Conference in February of 1945 that the Big Three agreed that the eastern border of Poland should follow the Curzon line, with a few digressions in favor of Poland, and in return for which the three heads of government recognized "that Poland must receive substantial accessions of territory in the north and west."

Poland agreed to accept this decision and proceeded to make the painful readjustments which such a revision of its eastern borders entailed, accepting in good faith the pledge made by all three governments that she would be compensated in the north and west by "substantial accessions of territory."

The Big Three further agreed that:

> The opinion of the new Polish Provisional Government of National Unity should be sought in due course on the extent of these accessions and that the final delimitation of the western frontier of Poland should thereafter await the peace conference.

At Potsdam on August 2, 1945, both pledges were realized. After consultation with representatives of Poland, the Big Three agreed to grant "substantial accessions of territory" to that country. The Potsdam accord declared that:

> The three heads of government agree that pending the final determination of Poland's western frontier the former German territories east of the line running from the Baltic Sea immediately west of Swinemunde and thence along the Oder River to the confluence of the western Neisse River and along the western Neisse to the Czechoslovak frontier, including that portion of East Prussia not placed under the administration of the Union of Soviet Socialist Republics, in accordance with the understanding reached at this conference, and including the former Free City of Danzig, shall be under the administration of the Polish state and for such purposes should not be considered as part of the Soviet zone of occupation.

The language is clear and the implication is obvious. There is not the slightest suggestion that the frontier defined was simply a demarcation line. This decision was hailed joyously by the Polish people, who now, with the return of their former areas, could look to a happier future.

It is obvious that the Potsdam Conference was not the peace conference and that any steps undertaken there would have to await formal ratification at the peace conference when it would be held. Here only the principles and bases for the peace conference were under preparation, and one of the most important dealt with the question of Poland, and it cannot be shrugged off through any verbal gymnastics or ingenious interpretations.

Following the Potsdam Conference, specific agreements were reached within the Inter-Allied Commisison on the evacuation of Germans from the areas granted Poland, which further implemented Potsdam and which permit of no misinterpretation as to the proposed permanency of that frontier.

The attack upon the Potsdam decisions and specifically in reference to Poland was launched by Winston Churchill at Fulton, Mo., where he wept bitter tears over the sad fate of those who only recently were dropping bombs on the defenseless women and children in London, Paris, Warsaw, and scores of other heavily populated areas. This stanch defender of the British Empire, which seethes with unrest and strife, took his place in the vanguard of those who defend the Germans when he charged that the Polish Government has been encouraged to make enormous and wrongful inroads upon Germany and mass expulsions of millions of Germans on a scale grievous and undreamed of are now taking place.

But the American people are alarmed most not by what Churchill, who was decisively repudiated by the English people, said, but by the statement made by former Secretary of State James H. Byrnes at Stuttgart. Byrnes gave hope to the unrepentant Germans when he declared on September 6, 1946, that—

> The United States will support the revision of these (western and northern) frontiers in Poland's favor. However, the extent of the area to be ceded to Poland must be determined when the final settlement is agreed upon."

I am disturbed by the Stuttgart speech and Secretary Marshall's views, as are many of my constituents who had looked to the United States to take the leadership in living up to the spirit and intent of the Big Three commitments to Poland made at Crimea and Potsdam. The Big Three had committed itself to grant Poland substantial accessions of territory, and at Potsdam compensated Poland with 39,000 square miles of territory for its loss of 69,000 square miles in the east. To lessen the amount of territory granted as suggested in the Stuttgart speech and Marshall's Moscow report would be to take it out of the realm of substantial compensation.

Understandably, the Poles and all of the Slavs are more than perturbed by these developments. The hobnailed boot of the Nazi aggressor is still a very fresh memory in every Slav home in Europe. Recollections of the unexampled bestiality of the Germans will live for generations and every move that would strengthen Germany is regarded with great doubt and suspicion. When one keeps this in mind, one cannot help but be surprised at the remarkable restraint of their criticism of the suggestion that there is a possibility that the Germans will again be provided with a dagger aimed at the heart of the Slav nations in the form of areas rightfully Poland's. Two world wars were largely fought on Slav soil—they do not want a third to devastate it again.

Since the Stuttgart speech there have been many inspired stories in the press quoting responsible sources calling for the return of Pomerania and Brandenburg to Germany. Some Congressmen, and even congressional committees, have joined the press and radio in the hue and cry to defend German interests attempting to justify their position in various ways, with which I will deal later.

It is interesting to note here that those who cried most loudly against the injustice done Poland at Crimea when the Curzon line was accepted as Poland's

eastern border are among the most vehement and determined to see that the Potsdam accord which compensated Poland for its loss of territory in the east be violated grossly. It might also be in order to make the observation that those who shed themselves of isolationism rather belatedly are numbered among the most ardent defenders of the poor Germans. They are, at least, consistent.

A profoundly disturbing document was released recently which attempts to make a case for the need to rebuild Germany while simultaneously calling for cutting off all forms of assistance to our allies in Europe. It was the House joint committee report released December 30, 1946, by my colleague, the gentleman from Mississippi, Representative COLMER. Its solicitude and good will toward the Germans, whose crimes against humanity have been unequaled, is alarming.

This report takes us, the Congress, to task for having made inadequate provisions for feeding both Germany and Austria. At the same time it calls for the liquidation of UNRRA which was, and continues to be, so important to the rehabilitation of the victims of Nazi aggression and degradation.

It does not require prophetic power to show that a continuation of this plight for Germany—

Declares the report—

means slow starvation and disease on a widespread basis to say nothing of the effect upon the working ability and political unrest of the population.

It then proposes that:

An immediate increase in the funds available to the Army for relief to bring the ration up to a real subsistence level is essential and should be regarded as the most serious emergency action immediately confronting American foreign policy.

There are, at the moment, 3,500,000 children in Poland who need additional nourishment. Two million five hundred thousand children require medical care. There are 1,000,000 orphans in desperate need of assistance in a country which fought the full fury of the Nazi Wehrmacht for several years before we entered the fray against Germany, and the Colmer report runs history upside down and declares that the "most serious emergency action confronting American foreign policy" is to feed the Germans.

A stranger unacquainted with the events of the last decade could only conclude that Germany had been our ally in the last World War, and that Poland, France, Czechoslovakia, and our other European allies were our enemies. He could only conclude that Germany must be rewarded for its role, and the other nations punished.

But the report raises an even more fundamental problem: Are we to rebuild Germany first or are we to rebuild those nations destroyed by Germany? Are we to again establish Germany as the dominant European power, or are we to guarantee the peace of Europe by rebuilding its neighbors? The problem comes down to that. The American people, I am convinced, do not want a Germany that will be a threat to world peace again.

The Colmer report adopts the position that a loan should be granted Germany and that no loan should be granted to the greatest victim of German brutality, Poland. It states:

In the final report of the committee, therefore, a special emphasis has been put upon the key problems which revolve around the position of Germany and Austria in the European economy because of their crucial import to the recovery of western Europe.

This approach is so reminiscent of the post World War I period which saw Germany rebuilt, granted loans and concessions, wooed by world powers and placed in the position where it challenged the world to combat and left over 30,000,000 dead on fields of battle.

I deal at length with this report because I am firmly convinced that this approach can only do irreparable harm to the cause of world peace and security. I am of the opinion that not Germany but the victims of German aggression should be reconstructed. It is my considered opinion that the reconstruction of Poland and the development of its recovered territories has greater importance for Europe and world peace than the resurrection of Germany. I cannot forget that we who hailed Poland as the inspiration of the world during the war have a deep responsibility toward her. It is no accident that the Colmer report derived satisfaction from the Byrnes Stuttgart speech which it says "reminded the world that the western boundaries are not yet drawn," while at the same time it calls for a return of railroad cars from Poland to Germany, a step which would further cripple Poland's economy which relies so much upon its coal production.

Further, in the last few weeks we have been showered with reasons which purport to prove why Pomerania and Brandenburg should be returned to Germany. All sorts of spurious arguments have been advanced which will not hold water upon closer examination in an effort to camouflage the real reasons behind the desire to return these age-old Polish areas to Germany.

An Associated Press dispatch dated December 29, 1946, which was prominently displayed on the front pages of the American press declared that:

The American position will be that Germany cannot be self-sustaining with the loss of 25 percent of her best agricultural land and that this loss will only provide for a new war, these sources (that is responsible sources in Berlin) said.

Now on April 28, 1947, Secretary Marshall states:

But the perpetuation of the present temporary line between Germany and Poland would deprive Germany of territory which before the war provided more than a fifth of the food-stuffs on which the German population depended.

Well, one-fifth would be 20 percent, so the Associated Press dispatch from Berlin was off by 5 percent. But both of these statements are wrong, as I shall now prove to you.

There is a remarkable coincidence between this line and that followed by the German delegation at the Versailles Peace Conference. There the Germans talked about these areas being economically indispensable to Germany, but conveniently forgot to mention that in comparison with the rest of Germany they were not economically developed.

What are the facts? These areas are no more indispensable to Germany after this war than they were after the first. I want to quote Dr. Wilhelm Volz, professor at the Leipzig University, who in one of his most important works issued in 1930, wrote that:

For the German Reich the east plays no role whatsoever as a supplier of wheat and a quite insignificant role as a supplier of rye. The Reich has no need whatever of the east for its supply of potatoes.

Dr. Volz points out that the Polish recovered territories supplied the Reich with only 0.77 percent of wheat, 4.53 percent of rye, 2.27 percent of potatoes, 5.68 percent of pigs, with 2.75 percent of cattle.

And in a letter to the Manchester Guardian on November 15, 1946, Prof. W. J. Rose, of the London University, said that on the basis of prewar German statistics, the territories lost to Germany supplied the rest of the Reich with 0.86 percent of the total wheat, 5.1 percent of rye, and 2.7 percent of potatoes. These figures include areas now ceded to Russia.

The same conclusions were reached by many other German scholars who cannot be considered prejudiced toward Germany.

Further, there has been a constant migration of Germans from these areas over the recent years, leaving them so depopulated of Germans that they depended upon Polish migratory farm workers for harvesting the fields. Pomerania and Brandenburg by no stretch of the imagination can be termed a granary of a peacetime Germany.

But the German delegation at Versailles fought for the retention of these lands for a much more important reason. They are a first-rate military base for operations in the east, and World War II confirmed that indisputably. We cannot shut our eyes to this danger. We cannot be lulled to sleep by that familiar refrain harking back to the period before World War II, that Germany could never again wage war.

On the contrary, it can be proven that these territories never were indispensable to Germany and constitute a hinterland for Poland now needed as never before in its history.

German written history is replete with reference to Pomerania, Brandenburg, and Silesia as colonies. The many years of Germanization and colonization never succeeded. The Prussian east as it was known, had the lowest density of population as a result of the exodus of German colonizers in the last century. It was impossible to sow the fields and reap the harvests without Polish labor. The huge estates of the Junkers would have been forced to lie fallow if Poles were not seasonally employed. In marked contrast, there was a dense population across the border in Poland with sufficient surplus labor to migrate seasonally

to sow and reap the German harvest. Minus the lands of the east, Poland today more desperately than ever, requires its lands in the west.

A further point emphasizing the fact that these lands were considered as a colony was the presence of only 1,500,000 Germans in all of these territories as of July 1945. The Germans had fled into their native land.

Where, then, is the argument advanced by some German apologists today that Poland cannot exploit the land and that the economy of Europe requires that they be returned to Germany? They have simply turned the facts topsy-turvy. The only guaranty that these lands will be fully exploited to balance the food supply of all of Europe is their possession by Poland from whom they had been wrested by conquest.

Now, for the first time in its history, the Polish nation has an opportunity to develop a healthy, industrial economy. The return of Stettin, Pomerania, and the control of the Oder River insures rapid expansion of the Silesian industries and the possibility of unlimited foreign trade. Pomerania and Brandenburg are rich in agricultural potentials. In the recovered territories are situated 25 percent of Poland's textile industries, 30 percent of her metal production, and 50 percent of her freight-car and trolley manufacturing plants, according to a recent dispatch from Marguerite Higgins in the New York Herald Tribune, dated February 19. With the acquisition of these areas, the mining and industrial production, which amounted to 215 zlotys per head before the war, will show an increase to 324—or 96 percent. The Polish cotton industry will increase production by 30 percent; wool industry by 60 percent; linen industry by 25 percent; sugar industry, 60 percent; cement industry by 30 percent; steel by 100 percent.

But. without the recovered territories, Poland's 3-year plan for economic reconstruction will be severely wrecked. The 6,000,000 Poles who will have resettled in these areas would have to live in a much smaller area. It would mean overpopulation, unemployment, and low consumption, which not only would cripple Poland's economic recovery and lower the standards of its people considerably, but would have drastic effects on world trade. For its reconstruction Poland desperately needs heavy machinery. America has this needed commodity. In the interests of American businessmen, Poland should retain these territories. In the hands of the Germans these territories would once again provide the base for international cartels, which benefit, not the independent businessman in America, but the cartelist and monopolist.

The economic, political, and social achievements that have been realized in these territories since Potsdam solidifies Poland's claim to these lands. Devastated areas have been rebuilt. Transportation and communication lines have been repaired. Over 5,000,000 Poles have been resettled, while only approximately 500,000 Germans remain. Factories and industries are flourishing.

Here are some figures: As of August 1946, 825 factories were operating, employing 226,305 workers, or 13 percent of the total for all Poland; 10,000,000 tons of coal were produced last year; the lower Silesian mines produced 60 percent more coke than the Germans did in 1939; despite the complete destruction of nearly all factories and the removal of all machinery the metal industry in the recovered territories has been built, and is now producing 19 percent of the overall Polish production, the ports of Stettin, Danzig, and Gdynia, which were mined and blocked by sunken ships when the Poles received them, are back in operation. Prussian estates have been and still are being broken up and parcelled among the peasants.

In the field of cultural advancement, much progress has been made also; trade-union membership in lower Silesia exceeds 12,000; there are 4,000 schools of all types, three polytechnics one university, and one academy of medicine; there are about 1,000 kindergartens and 130 homes for children; there are 31 newspapers and magazines, and 800 libraries; about 6,000 workers have been trained in special courses; over 80 industrial schools have been organized, training 9,000 pupils.

In short, the foundations for a fuller and better life have been laid. If these territories are taken away from Poland, all the good that has been accomplished will be undone. It would mean misery, privation, and despair for the millions of Poles who are now permanently resettled there.

What are the guardians of German interests doing when they ask that these territories revert to the Germans?

When at Potsdam, the accord of the Big Three was reached and the western territories reverted to Poland's possession, the Polish Nation embarked on one of the greatest tasks in European history—the resettlement and reconstruction of a war-devastated area which involved the movement of millions of people. The enormity of the problem is difficult to grasp. Since then, the bulk of the Germans have been evacuated and over 5,000,000 Poles resettled despite the lack of transport, food supplies, housing, medical supplies, and services. All public bodies had to be reconstituted and a million and one complicated situations resolved at a tremendous cost of both money and expenditure of human energy. Order has replaced chaos. Fallow fields have been resown. Devastation repaired. Transport and communications lines reestablished. The preconditions for an expanding and richer life were being fulfilled.

And with this as a background, just to pose the question of the return of these areas to Germany seems like a crime against the Polish people. In fact, it is rewarding the aggressor at the expense of the victim. Not only was Poland devastated by the Germans but she now also would have to reconstruct territories deserted by the Germans for the Germans. That is exactly what it means to raise any doubt about the permanency of Poland's western frontier.

From whatever angle you examine the question of Poland's recovered territories, you cannot help but be convinced of the justice of the decision reached at Potsdam.

Militarily it means that Germany will be deprived of a huge arsenal of war in Silesia. The Junkers, arch proponents of militarism and the Drang Nach Osten policy, will be rooted out from their huge estates in Pomerania and Brandenburg. Germany will be deprived of a place d'armes for future aggression. Poland will be provided a defensible frontier based on the Baltic, the Oder, and the Neisse Rivers—a frontier which now will have decreased almost fivefold from 1,180 miles to approximately 250. This is a practical program for the disarmament of Germany. Secretary Marshall should realize the defensive value of this frontier and its significance to future world peace.

Historically it will mean the righting of a grievous wrong done Poland. The area between the Oder and the Vistula Rivers was the cradle of the Polish Nation. Poland was deprived of these lands through the aggression of Teutonic hordes. Until the German invasions Silesia was uninterruptedly Polish and from there came several of her kings. Despite many years of the most unmerciful Germanization, the Germans did not succeed in accomplishing their task. From 1919 to 1921 there were three successive uprisings of Poles in this area, only subdued by the greatest brutality. Stettin was Poland's outpost on the Baltic which was seized by conquest together with Pomerania and Brandenburg. These areas are studded with ruins of Polish castles and churches. Historical archives are replete with evidence of the Polish character of these lands. Archeological excavations further confirm Poland's just claims to this area. The cultural ties of this area were never severed with Poland.

Economically, these lands were always a hinterland of Poland. The economic interdependence of Poland and Silesia was freely admitted by the Germans. Except in time of war, Silesia had to rely upon Poland to keep its industries going. Its fields in Pomerania and Brandenburg could not produce without Polish labor. The return of Silesia provides Poland with an industrial base which prewar Poland lacked and as a result fell before the Nazi onslaught. By the return of Stettin and Pomerania, Poland has been provided with broad access to the sea routes of the world, and, with the possibility of developing its foreign trade to record proportions. Its control of the Oder River assures the rapid expansion of Silesia which is indispensable for the task of reconstructing war-devasted Poland. For the first time in its history Poland will have the opportunity to develop a healthy economy which will be further assurance of a peaceful world. If the pledges we made to Poland during the war that we would help in her reconstruction are to be kept, we cannot retreat from our position adopted at Potsdam.

Morally, by supporting Poland's claim to these areas, we recognize the tremendous sacrifices made by the Polish people, both in human lives as well as in material wealth, in the common cause of victory

over the Germans. Polish arms played an important role in recovering these areas. Poland won back these lands not in a war of conquest and aggression, but in a just war against a nation which was out to rule the world. Furthermore, this territorial readjustment is not at the expense of Germany. Poland is being rewarded with not one inch of German lands. The policy is one of restoring to the Polish people lands that had been previously stolen from them by German military power.

For the past 1,000 years Germany has followed a policy of brutal military aggrandizement against all of its neighbors and particularly against the Polish nation and the Polish people. The territory east of the Oder and the Niesse Rivers is ancient Polish land which was taken away from them by German military power. It is time to declare an end forever to the German policy of Drang Nach Osten.

The Potsdam agreement has created the basis for an ethnographically homogeneous Poland, uniting all of the Poles within areas clearly Polish. They have also created the conditions for Poland's most rapid recovery and development. They have given Poland safeguards against future German aggressions. Had the Poland of 1939 been a homogeneous nation with a strong economy and based on strategic frontiers rightly hers, then it should be obvious to us that Germany would have found itself confronted by a foe able to withstand its onslaughts. The Potsdam agreement eliminated sore spots and trouble areas which remained after Versailles because of the short-sightedness of the peacemakers. To revise the Polish western frontier is to invite trouble and conflict. Even to raise the question is to create doubt and distrust among the Allies to the benefit of Germany.

Poland was the battleground of two World Wars. Poland was repeatedly the victim of aggression throughout history. One of the deepest desires that the Polish people possess is the desire for peace—lasting peace. On that score the Poles and the Americans think in similar terms. To hear arguments which, in effect, imply that Poland is seeking a peace settlement which would not assure her of peace is simply so much balderdash. The traditional friendship between Poland and our country goes back to the day of our Revolutionary War of Independence in which Kosciusko and Pulaski and their compatriots distinguished themselves. It is natural, therefore, that the Poles look to the United States for support of their sacred cause, a cause which will promote peace.

The Atlantic Charter, signed by our late great President, Franklin D. Roosevelt, declared that—

After the final destruction of the Nazi tyranny they—

The signers—

hope to see established a peace which will afford all nations the means of dwelling in safety within their own boundaries and which will afford all nations assurance that all the men in all lands may live out their lives in freedom from fear and want.

We recognized that principle at Potsdam. All that remains is that it be formally accepted. I think we would make a great contribution to the peace negotiations and eliminate a serious source of friction and delay if we were to announce unequivocally that we will live up to our commitment at Potsdam by supporting Poland's just claims to Silesia, Pomerania, and Brandenburg. This would be a serious blow to all those who are already conniving and plotting for another war. It would deprive them of the opportunity of fishing in troubled waters and trying to establish blocs and unholy alliances.

The Prussians, the Junkers are now where they belong—in Germany, on the other side of the Oder and Neisse Rivers. It took a long time to drive the Nazi-Prussian barbarians off of Polish soil. They should be kept out forever from now on.

Reciprocal Trade Agreement Act

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 5, 1947

Mr. REED of New York. Mr. Speaker, those who wish to know the real facts with reference to the failure of the so-called Reciprocal Trade Agreement Act might wish to study the statement made to the Ways and Means Committee by Dr. John Lee Coulter on May 3, 1947:

INTRODUCTION

My name is John Lee Coulter. For many years I have maintained a service with headquarters at suite 600 Investment Building, Washington, D. C., as consulting economist and statistician for many clients.

My present appearance is in behalf of the National Renderers Association. That organization is tremendously interested in many of the different products listed by the State Department for possible concessions to foreign governments in the matter of tariffs and excise taxes in connection with negotiations now in progress in Geneva, Switzerland, as a basis for entering into a series of 18 trade agreements, such as are authorized in section 350 of the Tariff Act of 1930 known as the Trade Agreements Act which was passed on June 12, 1934, and since that date extended and amended and which at the present writing will expire on June 12, 1948. This organization is also tremendously interested in the proposed charter for an international trade organization likewise being negotiated at Geneva, at the present time, under provisions in the Economic and Social Council of the United Nations.

Because of extraordinary changes which have taken place since the turn of the century (1900) and especially during the 30 years since our entry into World War I in 1917, in so many departments of political, economic, scientific, social, and military conduct of people in so many different parts of the world, the whole problem of international exchange, foreign investments, world trade, tariffs, and other forms of regulation and supervision of foreign economic relations and policy has fundamentally changed. I am pleased to appear before you today to examine some of the more important aspects of the subject as they pertain to the organization which I represent.

I am convinced that the Ways and Means Committee of the House of Representatives of the Eightieth Congress is in position to make one of the greatest contributions in our time not only to our general welfare but also to world prosperity, in its action pertaining to many phases of life which are directly or indirectly related to the economic activities of all people.

As provided by the Constitution, the Congress is charged, among other duties, with the power—

"(1) To coin money, regulate the value thereof and of foreign coin * * *";

"(2) To borrow money on the credit of the United States";

"(3) To pay the debts and provide for the common defense and general welfare of the United States";

"(4) To lay and collect taxes, duties, imposts, and excises * * *";

"(5) To regulate commerce with foreign nations * * *";

"(6) To promote the progress of science and useful arts."

To perform many other useful services, and finally—

"To make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States, or in any department or officer thereof."

Under the above constitutional authority the Congress passed the Tariff Act of June 17, 1930, and later amended that act on June 12, 1934, to provide section 350, known as the trade-agreements amendment of the act of 1930. Section 350 has been several times extended and amended, but will expire on June 12, 1948, during the life of the Eightieth Congress, while the act of 1930 will be continued in full force and effect indefinitely or until otherwise amended or repealed.

The Tariff Act of 1930 is entitled "An act to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, to protect American labor, and for other purposes."

Section 350 added to the act of 1930 on June 12, 1934, has for its purpose "to promote foreign trade."

It is particularly important to note that while the trade-agreements amendment stipulated as its purpose "to encourage the development of the export trade of the United States," it did not repeal the basic purposes of the Tariff Act of 1930 of which it was an amendment. In other words, the law on the statute books at this moment is (to repeat) an act "to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, to protect American labor, and for other purposes." Within that framework the President was authorized to carry on negotiations in the form of trade agreements with foreign countries (a) to modify tariffs wherever that could be done without injury to the domestic interests of this or other countries; and (b) to eliminate or modify other control measures, the result of which was to decrease or discourage international trade.

Within that framework it was thought that special commercial treaties—specifically designated as "trade agreements" would serve a useful purpose—supplementing commercial treaties on the one hand and modifying tariff acts and other regulations of trade on the other hand.

In spite of the limited scope set up in the amendment there has developed a perfect hysteria to eliminate all tariffs, excise taxes, and other regulations governing international trade. And widespread propaganda would have us believe that free, private, competitive enterprise is somehow to be destroyed unless we adopt world-wide free trade. Officially, this is toned down to "freer trade," but actions speak louder than these official words. The list of products now on the agenda for concessions covers substantially 90 percent of all import trade

of this country and the goal is another reduction of 50 percent (and in no case any increase) in customs duties and excise taxes on top of the tremendous reductions already made. And this is in the face of the present economic chaos which is world-wide, and far worse confusion in foreign countries than here. They ignore the facts that in our domestic economic life we must have taxes, and regulations of all economic activities such as ICC, FTC, FPC, FCC, SEC, etc., and would abolish revenue from foreign trade and destroy most existing commercial treaty provisions for regulation of foreign trade and other economic activities.

NEED FOR A FORMULA TO GUIDE THE CHIEF EXECUTIVE

The first point which we wish to bring to your attention is the fact that literally no formula or guide or measuring device was provided in the trade-agreements amendment, as a result of which members of the staff of the State Department and other executive agencies were empowered arbitrarily to make, in the case of each commodity, any change in classification or description which might appeal to them and any change in rate of duty or excise tax (falling within a 50-percent limitation up or down).

Many of those who favored the original amendment assumed that the Chief Executive would be guided by the provisions of section 336 of the Tariff Act of 1930 since those provisions were not repealed. In other words, a real formula was written into the Tariff Act of 1922 and carried forward in the Tariff Act of 1930. While the formula provided was difficult to administer in some cases and relatively slow, in view of the necessity for a thorough investigation before action, nonetheless it was thought that this represented the general view of Congress and would be used as a guide in any adjustments in rates or changes in classification which might be agreed to in trade agreements negotiated. In practice, however, the State Department has consistently since the passage of the original amendment of June 12, 1934, completely ignored provisions of section 336 of the Tariff Act of which the trade-agreements amendments forms a part.

The first criticism therefore we have to offer with reference to the negotiation of trade agreements has been the fact that no adequate investigations have been made and that no legislative formula has been followed. In other words, members of the staff of the State Department and other executive agencies have been in position to act arbitrarily and in many cases it is believed that their action has been injurious to the best interests of the agricultural, mining, quarrying, forestry, fishing, and manufacturing industries of the United States. We shall not, however, at this point go into a detailed discussion of specific illustrations of injury. On the other hand, we are satisfied from a continuous study of operations since June 12, 1934, that there has been very little, if any, encouragement to the industries of the United States; certainly there does not appear to have been any effort to protect American labor; and finally the administration of the amendment has not been carried on in such a manner as to provide revenue. As a matter of fact, whereas the amount of revenue coming to the National Treasury during the 5 years 1925–29 averaged about $600,000,000 annually, during recent years the amount of revenue fell as low as $301,375,000 in 1938 just before the beginning of World War II. Since the law does not permit the shifting of any commodity from the dutiable to the free list it is apparent that the more than 40-percent decline in revenue must be accounted for by the lowering of rates of duty, the falling of the price level in the case of products with ad valorem rates of duty, and the decline in physical quantity of imports of important dutiable items.

THE PRINCIPAL FOREIGN COMPETING COUNTRY

The second major complaint which we have to offer is the fact that the amendment itself did not require the Chief Executive to carry on negotiations with the principal foreign supplying country. In the formulas spelled out in detail in section 336 of the Tariff Act of 1930 adjustments in rates of duty and changes in classification of commodities could be made only in contrast with the situation in the country which was the principal foreign source of supply of the competing commodities. Those who followed the introduction and adoption of the trade-agreements amendment assumed that the Chief Executive would be guided by this provision. Your present witness was at that time a member of the United States Tariff Commission and an examination of my office files discloses the fact that I called attention to this point and suggested that this particular requirement be written into the amendment. I was told, however, by leading Members of the Congress that the Chief Executive would, of course, be guided by the major provisions of the Tariff Act of 1930 which unless changed in the amendment would be binding upon the Government.

We shall not at this time present the many illustrations which might be cited in which the State Department and associated agencies have completely ignored the requirements that negotiations and concessions shall be made in agreements with the principal supplier. This criticism is presented at this point, however, because it is pertinent in connection with commodities with which we are particularly concerned. We shall, therefore, cite only this one major illustration for purposes of documenting the record. When negotiations were in progress with Argentina the rate of duty on tallow was reduced from one-half cent per pound to one-fourth cent per pound and this became effective November 15, 1941. In the same agreement the excise tax on tallow was reduced from 3 cents per pound to 1½ cents per pound, and was made effective on the same day. At a later date when negotiations were carried on with Uruguay the lower rate of duty and the lower excise tax were bound effective January 1, 1943. It is to be noted that the Chief Executive kept within the law so far as spelled out in the trade-agreement amendment and so far as the general principle is stated in section 336 of the Tariff Act of 1930. In other words, over any considerable period of years Argentina and Uruguay would be the principal sources of foreign competing animal tallow.

For purposes of the record, it may be stated here that the largest quantity of imports, prior to the period of World War II, were during the years 1934, 1935, and 1936, which corresponded with the great American drought and period of dust storms. In the single year 1935, following the drought year 1934, imports of tallow amounted to nearly 250,000,000 pounds. While this was less than the quantity of copra, coconut oil, and palm oil, it nonetheless stood out as an extraordinary item, but in all fairness should be related to the fact of the greatest drought in American history.

We come now to the particular criticism which we wish to place in the record. When the State Department in November 1946 published its list of products on which possible tariff concessions will be considered in trade-agreement negotiations with a group of some 18 countries, tallow was not included and the members of the National Renderers Association felt that they were to be spared a possible further 50 percent cut in both the tariff and in the excise tax—especially since Argentina and Uruguay were not included in the list of countries with which negotiations were in progress. To our amazement, however, at a later date a supplementary list of products was published and this supplementary list included tallow. On the day of the oral hearings before the Committee for Reciprocity Information we learned that the request for this new 50-percent concession both in tariff and in excise tax had come from Australia and New Zealand.

Technically it may be argued by the State Department that during some of the war years relatively small amounts of tallow did come from Australia and New Zealand to the United States on return vessels engaged in the carrying of supplies from the United States to our Army and naval forces overseas and to our allies in the far Pacific area. This, however, does not appeal to us as a reasonable justification for again bringing this item into the picture and perhaps making a new 50-percent reduction across the board. Presumably, under another section of the trade-agreements amendment, any concession made at this time to Australia and New Zealand will in turn be extended to Argentina and Uruguay (under provisions for most-favored-nation treatment) just as the earlier concessions to Argentina and Uruguay were extended to all other countries (except Germany). This question of generalization may be dealt with as a separate problem.

It is our judgment that the Congress should, if it extends the trade-agreements amendment beyond June 12, 1948, write into the amendment a specific provision that hereafter concessions should be made only in negotiations with the principal foreign supplier, and further, that these concessions shall not be extended to other nations unless or until equivalent concessions are received from them in trade agreements negotiated with them.

GENERAL GRANT OF ALL CONCESSIONS TO ALL COUNTRIES

The third point which we wish to bring to your attention has to do with what is known as the application of the most-favored-nation principle. Section 350 (a) (2) carries the following provision: "The proclaimed duties and other import restrictions shall apply to articles, the growth, produce, or manufacture of all foreign countries, whether imported directly or indirectly * * *." In other words, when concessions have been made to any one country in a trade agreement all concessions are immediately extended to all other countries (except in the case of countries discriminating against the exports of the United States, provision for which is likewise contained in section 350 (a) (2)). In every case it is presumed that the foreign country with which negotiations are carried on will in turn make equivalent concessions to the United States in the case of products which we may export. Since the foreign country in question is expected in turn to generalize all concessions made to us it must be evident that no new benefit can come to us compared with benefits to other countries (in other words, concessions granted to us are at once given to all other countries). There remains only the general fact that rates of duty have been reduced and "other import restrictions" have been removed or at least modified. In turn, since concessions which we make are likewise generalized to all other countries, it must be apparent that the country with which we have negotiated has not gained in contrast with benefits extended to all other countries, except again the fact that the tariffs have been lowered and other trade restrictions have been removed or at least modified.

If the above statement as to procedure is correct, as it clearly must be correct, then any claim (1) that we have benefited in our export trade because of concessions made by foreign countries with which we have negotiated, or (2) that the other countries have benefited because of our concessions to them, must be wholly false, except insofar as the total volume of trade of all the different countries might be affected by lower tariffs

or changes in classifications or other regulations. In other words, neither we nor the country with which we negotiate will have gained any special advantage as a result of any trade agreement. This is the same as saying that these trade agreements are not, in any proper use of the word, "reciprocal" in nature. "Reciprocity" as defined in all economic literature for a hundred years has been tied in with the conception of "conditional" most-favored-nation treatment rather than "unconditional" must-favored-nation treatment. In other words, in order for a commercial treaty or a trade agreement to be reciprocal in character, the two or more specific countries carrying on negotiations must make concessions to each other and these concessions in turn will be extended to other countries only if they in turn make equivalent concession in order to gain any benefits which might come to them.

Because of this analysis of the subject we specifically protest the constant use of the word "reciprocal" in connection with the trade-agreements program as provided in the Trade Agreements Act and as administered by the Chief Executive at the present time. Obviously, we likewise protest against the fallacious use of statistics which purport to show specific gains either to us or to the country with which we negotiate (other than the general increase in volume of trade which might result from lower tariffs and the modification of other trade restrictions) since this cannot be true as long as we and the other countries follow the "unconditional" most-favored-nation method of procedure.

We are not protesting against general application or extending all concessions to all countries. It is in the tradition of the United States that we have at all times maintained a single column tariff schedule with only special exceptions as in the case of Hawaii, Cuba, Canada, the Philippines, and other special cases. The principle of unconditional most-favored-nation treatment has been expounded most effectively by such great statesmen as Mr. Elihu Root, Mr. Charles Evans Hughes, Mr. Kellogg, and others during recent decades. Three phases of the subject which we desire to emphasize here are:

First, that negotiations should be carried on only with the principle supplier.

Second, that these concessions should be extended to others only on receipt of equivalent concessions.

Third, that an honest use should be made of the word "reciprocity."

We are not here attempting to make an exact comparison of the relative importance of concessions which we have made and of concessions which we have claimed to receive from other countries. This is largely a matter of human judgment since no dependable statistical measure has yet been made on this point.

DID TARIFF ACT OF 1930 CAUSE DEPRESSION?

The fourth point which we desire to make is the constant claims made by the most vigorous proponents of the trade-agreements program to the effect that the Tariff Act of 1930 preceded and caused the depression which engulfed the United States during the decade 1929–39 and that the trade-agreements program contributed very useful results in the recovery from that depression.

In the first place it should be borne in mind that the collapse in dollar value of imports of products on the free list from 1929 to 1932 was as great as the collapse in dollar value of imports of articles which were dutiable. Bearing in mind that commodities on the free list accounted for two-thirds of the dollar value of all imports, and that there were neither tariffs nor other trade restrictions, how can it be said that the collapse in volume of imports was due to tariffs or other trade restrictions when the decline was as great in the case of items on the free list as in case of items on the dutiable list? In this connection, the same thing should be said with reference to exports. The decline in dollar value of exports was almost exactly the same as the decline in dollar volume of imports and this applied to commodities on which foreign countries had relatively high tariffs, medium tariffs and low tariffs and on commodities which were admitted free of duty by foreign countries.

There are three points here which must be considered. The first is that the 70-percent decline in volume of foreign trade was almost entirely a collapse in the price structure; and second, that this price collapse was already well advanced before the passage of the Tariff Act of June 17, 1930; and third, had its origin very largely in foreign countries.

(It is not to be denied that the stock market collapse in the United States in 1929 was a factor in the depression, nor is it to be denied that the widespread collapse in banking in foreign countries was perhaps an equally important factor. Nor is it to be denied that the tremendous crops of cotton, wheat, corn, and other farm products in the United States was a factor in bringing about the widespread collapse in the price structure. It is not our purpose here, however, to attempt to present a detailed analysis of the major factors which brought about the world-wide depression.)

In order to fortify the brief statements already made with reference to the collapse in dollar value of both imports and exports the following brief table is presented showing an almost identical reduction in value of imports of commodities on the free list and of those on the dutiable list and likewise presenting the comparable reduction in value of exports from the United States.

Decline in dollar value of products on free list contrasted with dutiable imports and with exports, 1929–32

	Free list imports ($1,000)	Percent free	Dutiable imports ($1,000)	Exports ($1,000)
1929	$2,880,128	66.38	$1,458,444	$5,240,995
1932	885,536	66.82	439,557	1,611,016
Decrease	1,994,592		1,018,887	3,629,979
Percent	69.3		69.8	69.5

In order further to document this presentation it seems desirable to call attention to the fact that the world-wide depression not only did not start in 1930 but in fact was largely related to the collapse in prices in foreign countries. A few illustrations will suffice for this purpose. In 1925 the foreign invoice value of tin, bars, blocks, pigs was 55.40 cents per pound. This increased to 60.63 cents per pound in 1926 and 63.30 cents in 1927. But by 1930 the price had completely collapsed to only 33.31 cents per pound. In other words, there was a reduction of almost 50 percent in the price of this commodity, which incidentally was on the free list. The price of newsprint paper declined from 3.7 cents per pound in 1924 to 2.9 cents per pound in 1930—a decrease of 0.8 cents per pound or more than 20 percent. Newsprint also was on the free list. The price of carpet wool, also on the free list, fell from 30 cents per pound in 1925 to 20 cents per pound in 1930, a decrease of 10 cents or 33⅓ percent. The same was true of other types of wool. The price of jute or burlap fell from 13.6 cents per pound in 1925 to 9.1 cents per pound in 1930, a decrease of 4.5 cents per pound, or about 33⅓ percent. The same is true with reference to most if not all of the other fibers. Thus raw silk fell from $6.21 per pound to $3.57 per pound, a decrease of $2.64 or over 40 percent.

Many other items fell much more violently. In 1925 the foreign price of crude rubber averaged 48.4 cents per pound. And in 1926 the average was 54.6 cents per pound. Rubber also was on the free list. By 1930 the average price was down to 12.9 cents per pound. This was a decrease of more than 75 percent in the price of rubber. The price of coffee, also on the free list, fell from 22.3 cents per pound in 1925 to 13.1 cents in 1930—a decrease of not far from 50 percent.

The purpose of these illustrations is to bring us to the group of items with which we are particularly concerned. The principal foreign fats and oils of tropical, vegetable origin include copra, coconut oil, palm oil, palm kernel oil, and so forth. For our purpose it will be sufficient to cite the experience in the case of copra which is produced in the greatest quantity and is most available in the world market. In 1925 the average foreign invoice value of copra was 5.0 cents per pound and in 1926 the average was 5.1 cents per pound. By 1930 the average price was down to 3.7 cents per pound. This was a decrease of nearly 30 percent before the passage of the Tariff Act of 1930. Since copra was on the free list it cannot be said that the tariff had anything to do with the world price structure. There were no other trade restrictions to complicate the situation.

The price of copra continued down and during the period from 1926 to 1934 the price fell from 5.1 cents per pound to 1.2 cents per pound. This was a decrease of slightly more than 75 percent. In other words, a billion pounds of copra at 5 cents per pound would be worth $50,000,000, but at 1.2 cents per pound the value would be only $12,000,000. Here we have a concrete illustration of what really happened to our import and export trade. Taking all commodities combined, the dollar value of imports, free or dutiable, fell about 70 percent and the same happened to our exports. About one-half of the decline in prices had taken place before the passage of the Tariff Act of 1930. The other half of the decline took place between June 1930, and 1932-33. This should be sufficient to establish the point that since the collapse preceded the passage of the Tariff Act of 1930, that Act could neither be charged with being the cause or in fact with having anything directly to do with the world-wide depression. Incidentally, it may well be noted here that, assuming the same price level for all dutiable commodities, the rates of duty established in the Tariff Act of 1930 were only 1.6 percent higher than the average in the Tariff Act of 1922. And yet under the Tariff Act of 1922 the Nation grew rich and prosperous and foundations were laid for the greatness which was ours when we were called upon to participate in World War II.

Before passing to the next point, it should be noted that a very large part (if not overwhelming) which accounted for increases in dollar value of both imports and exports after the depth of the depression had been reached in 1932-33, came about through world-wide recovery and was in large measure due to the partial restoration of the world price structure. Here again it should be added that most of the recovery took place during 1933-34-35 before the trade agreements program had gotten into operation (except for the minor agreements with Cuba—September 3, 1934, Belgium—May 1, 1935, Haiti—June 3, 1935, Sweden—August 5, 1935). In other words, increases in foreign trade during the period 1936-39 were merely a continuation of increases which began during the years preceding the active negotiation of important trade agreements.

PARTIAL SUMMARY

From the analysis thus far made, it appears that in order to try to increase the volume of foreign trade, set forth as the purpose of

the amendment known as section 350 of the Tariff Act of 1930 (to authorize the negotiation of trade agreements), the State Department has been willing:

I. To ignore the title of the Tariff Act of 1930 which states as its purpose (1) to provide revenue; (2) to encourage the industries of the United States; and (3) to protect American labor.

II. To ignore all provisions of seetion 336 which provides the formulas to be applied as a guide in adjusting tariff rates within the range of 50 percent above or below the rates of duty set forth in the basic act, and to substitute therefor any arbitrary reduction (up to 50 percent) which may be proposed by importers or by potential foreign suppliers of competitive products, even in cases where the tariff was as low as 5 percent or 10 percent and in no sense a barrier; and

III. To ignore the requirements of section 336 which specify that cost comparisons shall be made with the principal foreign supplier, in the principal American markets.

On the other hand:

IV. There is nothing to indicate that equivalent concessions have been granted by foreign governments;

V. Such concessions as were granted by foreign governments have immediately been extended to all others so that there could be no specific gain to our producers seeking export outlets;

VI. Our own concessions were immediately extended to all other countries (with two exceptions due to charges of discrimination) so that the foreign country with which we were negotiating gained no specific advantage in our markets over other foreign competitors, but only an advantage over our own producers;

VII. When these concessions were generalized to all others these other countries were not required to make any equivalent concessions to us.

VIII. In spite of the fact that there could be no exact matching of equivalent concessions (country by country) and no direct benefit to us or to the countries with which we concluded agreements, the State Department erroneously, and evidently with the purpose to deceive the people of this country, has continuously referred to the trade agreements program as "reciprocal" in character when in fact it was merely a scheme to carry out a wide-spread reduction of all rates of duty, without formulae, in the midst of the worst world-wide depression on record, during the 6 years 1934–39, and the greatest military conflict of history, during the 6 years 1940–45. This program is now being carried forward, during an era of world economic chaos and confusion.

IX. In turn the State Department, when it was eminently clear that there could be no special benefit either to the United States or to the countries with which agreements were entered into, has continued to put out false and misleading statistics purporting to show that, while following the dual policy of country by country negotiation combined with unconditional most favored nation treatment, nonetheless special benefits could and did accrue to the negotiating countries.

X. Finally, the general downward revision of the entire tariff rate schedule in this piecemeal fashion is explained on the grounds that "the Tariff Act of 1930 was the highest on record in this country," "the highest of any country in the world," and "the cause of the depression" which we have seen began in foreign countries as much as 5 years before the passage of the act of 1930. They have even charged that the British Empire preference system was in retaliation when in fact Empire preferences had been developed over a period of more than 100 years and likewise existed with other colonial powers. Other charges have been found, upon examination, to be equally false. And finally, the trade agreements neither brought about prosperity or preserved peace.

REAL BASIS FOR TRADE AGREEMENTS PROGRAM

What, then, is the basis for the whole trade-agreements programs? The answer is clear that it is a plan to take jurisdiction over all tariffs, excise taxes, and the regulation of foreign trade away from Congress where it was placed by the Constitution and to carry out a widespread program of free trade, or as near an approach to that doctrine as can be accomplished under such benevolent slogans as "freer trade," "reciprocity," "removing barriers to world trade," and "world-wide economic peace, harmony, and prosperity."

While setting up the laudable purpose of reducing hunger and suffering all over the world, raising foreign living standards, and stimulating full employment and abundance, the program in fact contemplates opening the American market to cut-throat competition from low wage countries, exposing our markets to the unlimited dumping of low-cost and low-priced products from everywhere, produced under conditions which would not be countenanced in this country, eventually leading to a new collapse in prices, a new scourge of low wages to meet this competition or unemployment, and a new era of deficit financing, and the ever-present threat of communism. In the process we are asked to place the making of the rules of trade and their enforcement and policing in the hands of an international trade organization and thus to surrender national sovereignty in this field.

Undoubtedly the present price level is higher than we would want to continue. It is one of the results of wartime forces, unwise postwar economic actions encouraged by the Government as to wages and cost of production, and our foreign giving and lending policies. However laudable our foreign relief, rehabilitation, and reconstruction programs, they must soon be brought to an end. We, with 6 or 7 percent of the world's population, cannot rebuild and reorganize the whole foreign economic structure without insolvency or bankruptcy of our own Government and economic structure. Our greatest task is to bring the war's aftermath to an end as rapidly as possible and see to it that our own American market is protected for our own gainfully employed while efficiency, wages, and living standards of others are being raised.

If a collapse in prices is countenanced as a result of this drive to expand foreign trade (beyond reasonable postwar price readjustments now in progress) how shall our National Government support a national debt of over $260,000,000,000 or raise an annual tax bill of more than $26,000,000,000, or sustain a national income of anything like $150,000,000,000 when our population shall reach 150,000,000 people, or hope to maintain anything like present wage levels, or keep 60,000,000 persons employed?

And yet the ultimate goal of the trade-agreements program seems to be to bring the American market into open competition for all the low-cost products of foreign areas—including farm, fish, forest, mine, and quarry, and factory products—and thus to force prices back down to the levels of the 1930's—with collapse in wages and employment following the downward trail of prices.

It cannot be claimed that these foreign products are either efficiently or economically produced. We have the best balanced diversified economic structure in the world, and in efficiency, or production per man-hour, we lead the world through extraordinary use of plant, power, and machinery. The large use of capital for this purpose is why we call our system capitalistic. But it is also privately operated and competitive in character. The capital invested in plants, power, and machinery must earn interest or profits and management must have salaries. How is this system to compete with low foreign wages and low living standards, without the use—where necessary—of tariffs, excises, imposts, fees, processing taxes, or quantitative controls over potential imports if, as or when our price structure is endangered. These tools needed to protect our economic structure we now propose to take away from Congress and to give to an international organization.

In closing, permit me to call attention to a historical parallel. After a brief period of price inflation and an equally brief period of deflation, after World War I, prices leveled off to a plateau with a wholesale price index which we officially call 100.0—using the calendar year 1926=100.0. The range during the 15 years 1921–35 was as follows:

Wholesale price index numbers

[1926=100.0]

1921	97.6
1922	96.7
1923	100.6
1924	98.1
1925	103.5
1926	100.0
1927	95.4
1928	96.7
1929	95.3
1930	86.4
1931	73.0
1932	64.8
1933	65.9
1934	74.9
1935	80.0

From this we see a narrow range in price movement between 1921 and 1929 from a low of 95.3 to a high of 103.5. Then came the collapse, originating in many parts of the world. We were not prepared for it. The decline in our wholesale price index was about 35 percent by 1932, while the decline in dollar value of foreign trade was 70 percent. But between 1925 and 1930 the decline was from 103.5 to 86.4, a decrease of 17.1 points or one-half of the total decline before the Tariff Act of 1930 was passed and before any excise taxes or quotas were introduced in an effort to save us from the foreign collapse.

Now I must conclude with specific reference to certain tropical and other foreign vegetable and animal fats and oils.

[All values are cents per pound]

Year	Copra, foreign invoice	Coconut oil, crude (Pacific coast)	Palm oil, Sumatra (New York)	Palm kernel oil[1] (New York)	Tallow, inedible (Chicago)	Grease, A—White (Chicago)	Cottonseed oil, prime summer (New York)	Peanut oil	Lard, refined (Chicago)	Butter (Chicago)
1925	5.0	9.8	8.6	10.3	9.7	9.8	10.8	10.5	17.9	45.2
1926	5.1	9.4	8.0	10.0	8.7	8.5	11.8	11.3	16.9	44.4

1937	3.3	6.3	5.0	5.2	8.2	8.0	9.2	8.6	12.6	34.0
1938	1.8	3.4	3.1	4.1	5.6	5.3	7.9	7.1	9.2	28.0
1939	1.6	3.1	2.7	7.3	5.1	5.2	6.6	5.9	7.4	26.0

[1] Denatured, 1926–32; crude oil, 1933–39.

In this table the first four columns have to do with tropical copra and three tropical vegetable fats or oils. The last six columns are fats and oils, vegetable and animal, of domestic origin.

The price of copra fell from 5.1 cents per pound in 1926 to 1.2 cents in 1934—a decrease of 3.9 cents or 76.5 percent, or more than double the decline in wholesale prices for all commodities in the United States.

Crude coconut oil fell from 9.8 cents per pound in 1925 to 3.9 cents in 1934—a decrease of 5.9 cents or over 60 percent.

Palm oil fell from 8.6 cents per pound in 1925 to 3.1 cents in 1934, or 64 percent. Palm kernel oil fell from 10.3 cents in 1925 to 4 cents in 1934, a decline of 6.3 cents or over 61 percent.

Now let us see the effect upon our domestic price levels of competitive American products of farm origin. Inedible tallow fell from 9.7 cents in 1925 to 3.2 cents in 1932, a decrease of 6.5 cents or over 67 percent. It was trying to hold its place in the American market. The quantity depended upon the number and finish of cattle and sheep slaughtered and could not be reduced merely by closing a factory door. White grease (grade A) fell in price from 9.8 cents per pound in 1925 to only 2.6 cents in 1932—a decrease of 7.2 cents or 73.5 percent or equal to the decline in price of copra. It, too, was trying to hold its place in the home market.

Cottonseed oil, a joint product with production of cotton fiber, fell from 11.8 cents in 1926 to 3.8 cents in 1932—a decrease of 8 cents per pound or 68 percent. Peanut oil fell in the same proportion.

Lard fell over 65 percent from 1925 to 1932 and butter fell nearly 60 percent from 1928 to 1932.

It is important that we remember that coconuts, palm fruit, and nuts grow on tropical palm trees. Production was increasing by leaps and bounds during the period in question. Europe was short of fats and oils and needed billions of pounds, but wanted them at the lowest possible prices. They were willing to exploit the Tropics, as well as the whale fisheries in Antarctica. But why should we sit by and leave control to foreign groups?

Incidentally, European countries—in control in a buyers' market due to tropical expansion—because they paid such low prices to the people of the exploited areas, could sell little to them and lost a potential market in their tropical, colonial areas for manufactured products up into billions of dollars. Then they demanded entry into our markets for their surplus manufactured goods. This access to our markets they now expect to get under the trade agreements and International Trade Organization program.

In contrast with foreign commercially produced copra and coconut oil and palm and palm-kernel oil, such domestically produced items as tallow, grease, lard, and cottonseed oil are joint products of the livestock and cotton branches of American agriculture. Corn, oats, barley, and other feed grains, hay and forage crops, were equally affected, since they furnished the feed for livestock. All of these were affected in like degree. Peanuts, soybeans, and flaxseed are special oil-bearing crops which were affected incident to the general collapse. Although there was some recovery in prices between 1932 and 1937 due to partial world economic recovery, another period of depression set in during 1938 and 1939 and was only overcome by the outbreak of World War II. Now we find many of the fats and oils items, such as inedible tallow, fish oils, cottonseed, soybean, peanut, corn, and linseed oil, produced from materials grown on thousands of American farms, fisheries, and ranches being considered for substantial concessions in the pending negotiations.

WHAT IS AHEAD?

What have we to look forward to in the years just ahead? While present prices are excessive due to war and early postwar circumstances and should presently settle down to what we may hope to call normal levels, we cannot look upon present State Department programs of removal of all tariffs and excise taxes, or prohibitions of processing taxes on imports or quotas with anything short of fear, since present plans are to pledge foreign countries to tie the hands of Congress, fix or bind reduced status against congressional action and prohibit the use of quantitative and/or other forms of control. At the same time the general program of the State Department is to place extensive authority in the hands of an international organization to make the rules, enforce them and police the agreements—an organization in which we shall have only 1 out of about 50 votes, all of the others seeking a favored place in the American market.

SUMMARY OF RECOMMENDATIONS

The presentation of certain facts and figures with reference to fats and oils in which the National Renderers Association is principally interested and the accompanying discussion of economic principles, legislation and administration leads to the following conclusions and recommendations:

I. The Ways and Means Committee could to advantage make clear to the country that, until repealed, the law providing for the regulation of commerce with foreign countries, is still contained in the Tariff Act of 1930, as amended, and that the guiding principles still are "to provide revenue, to encourage the industries of the United States, and to protect American labor." Within that framework a large and increasing volume of international trade is to be encouraged (as provided for in section 350) by the negotiation of trade agreements with individual foreign countries, with necessary safeguarding provisions to assure the national defense and general welfare against possible injury. Laws providing for excises and processing taxes on imports and laws providing for protection of agriculture against excessive imports as well as the Anti-Dumping Act are supplementary and should be administered consistent with the Tariff Act.

II. Sections 336, 337, and 338 of the Tariff Act providing for tariff rate and classification changes, and action in cases of foreign discriminations and unfair methods of competition, are (like all other parts of the act) in full force and effect and cannot be changed except by legislation. The same applies to the Webb-Pomerene Act providing for coordination in the development of export trade. None of these provisions can be suspended in trade agreements, but can only be changed by acts of Congress or negotiation of treaties as provided by the Constitution.

III. Section 336 of the Tariff Act provides that changes in rates of duty or classification shall be made in relation to trade with the principal foreign competitor. This should be equally binding in negotiations under section 350. This is particularly important since concessions are then generalized to all countries. Where there are two or more important foreign suppliers of any commodity, each should be required to make equivalent concessions before being granted concessions by us.

IV. Before the present version of section 350 is extended an attempt should be made to work out more definite formulas or guides in order to avoid the possibility of error or arbitrary changes in the intent of the law. It may be that this could best be done by changes in section 336 and requiring the administration of section 350 in harmony therewith.

V. The organization and functioning of the Tariff Commission as an active agency of Congress needs review and important improvements, far beyond new instructions recently set forth by the Chief Executive.

VI. The Ways and Means Committee might well caution the Chief Executive against too elaborate a general revision of tariff schedules in the present negotiations in Geneva, Switzerland. The President, from time to time, in special messages, addresses, and press releases, advises the Congress and informs the public. Why not "reciprocate"? The Tariff Commission, after 2 years of study (since the last 3-year extension of sec. 350), has concluded that: "The economic conditions * * * throughout the world were so disturbed in 1939, as the result of preparations for and actual outbreak of war, that the statistics of United States imports for that year cannot be taken as indicating what would have been the effects of * * * duty reductions under peacetime conditions; the import data for the war years are still less indicative of what would have been these effects." They might very well have added that the same conditions prevail since the order to "cease fire" and may well continue until peace treaties have been agreed upon—if, indeed, not for a period of 2 or 3 years thereafter. All of this would justify a word of caution in order to avoid the possibility of a forced retreat along the tariff front.

VII. What has just been said with reference to revisions in rates of duty should be said with emphasis as to the inclusion in trade agreements of a great mass of legislative provisions unless these agreements are to be submitted to Congress for review before final acceptance.

VIII. It would seem to be especially desirable to warn against inclusion (in pending trade agreements) of the substance of proposals being considered for inclusion in the suggested charter for an international trade organization, unless or until the charter has been perfected, submitted to an international conference, and approved either by Congress or in the form of a worldwide treaty by the Senate. To include these tentative proposals might indicate not only a desire to avoid submitting them to Congress but might later cause utmost confusion if important changes were found to be necessary.

IX. Special precautions should be taken to make sure that functions assigned by our Constitution to Congress or to the House of Representatives are not delegated to any international body or traded away in any agreement entered into, without previous consideration by Congress or the Senate.

X. Since it is the duty of Congress—among other responsibilities—"to lay and collect taxes, duties, imposts, and excises, to pay the debts and to provide for the common defense and general welfare of the United States"; it may be placing the national economy in jeopardy by binding present or reduced rates of duty against increase or by binding all other imported products on the free list. The Constitution prohibits the imposition of duties on exports, but authorizes their use as a source of revenue on imports. It should be remembered that during the first 70 years of our Nation's history customs duties provided about 90 percent of the total ordinary revenue collected by the National Government; and from 1860 to 1915 nearly 50 percent came from the same source. In contrast, at the present time, customs duties provide only about 1 percent of the total ordinary revenue of the National Government.

During the last full year before the outbreak of World War II, the United Kingdom and Dominions, including Ireland and India, collected revenues from customs duties and excises of $1,637,153,000. This represented 20.6 percent of the value of all imports. On that basis the United States might set as a goal a revenue of a billion dollars a year (a flat 20 percent duty on $5,000,000,000 of imports), or 4 percent of a budget of $25,000,000,000. The question may some day be asked by some why foreign trade should be tax free while domestic production and trade bears the burden. Many of the imports are luxury goods and a tax on these might not be in conflict with sound fiscal policy.

We need not limit this comparison to contrast of United States policy with the British Empire. The 55 countries, outside of the United States and Soviet Russia, which will go to make up the United Nations organization reported imports valued at about $22,000,000,000 during their fiscal year 1937–38, and revenue from customs duties of $4,000,000,000, or almost exactly 20 percent. If we are to become the world's leading trading

nation and are to maintain the world's greatest naval and air service to aid in the maintenance of world peace and prosperity and to protect our commerce, the people of the United States might think it wise public policy to assess part of the cost of this enterprise to our foreign trade especially since billions of the people's savings are being invested in foreign areas in the form of government contributions to world relief, rehabilitation, stabilization, and development.

Tribute to James E. Shepard, Negro Educator of North Carolina

EXTENSION OF REMARKS
OF
HON. CLYDE R. HOEY
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 6 (legislative day of Monday, April 21), 1947

Mr. HOEY. Mr. President, I ask unanimous consent to have inserted in the Appendix to the RECORD an article from the Durham Morning Herald of May 4, 1947, which tells a most interesting story about a North Carolina college, one of the great institutions of North Carolina, maintained for the education of Negro boys and girls.

Dr. James E. Shepard, one of the outstanding Negroes of America, and in many respects the North Carolina successor to Booker T. Washington, was the real founder of this institution, and has been its president since it was established. He has shown great wisdom in the direction of this splendid college and in his leadership and guidance of the Negro race in North Carolina and throughout the South. This article was accompanied by many pictures of this institution, its president, its large student body, and its many activities.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NORTH CAROLINA COLLEGE, ONE OF FOUR INSTITUTIONS OF KIND IN UNITED STATES, STANDS AS MONUMENT TO JAMES E. SHEPARD

(By Tom MacCaughelty)

In a country where even Negroes are divided into two camps over techniques of raising the status of America's minorities, the North Carolina College at Durham stands as a living monument to a Negro who preaches and practices the philosophy that the minority group should emphasize its duties more than its rights.

This is not to say that Dr. James E. Shepard, founder and president of the college, is fully satisfied with the attainment of his race in North Carolina, nor that he has closed his eyes to the claims of discriminations against his people. It is to say that Dr. Shepard puts little faith in the efficacy of racial feuds in courts or elsewhere and much faith in the friendlier processes of democracy, which he describes as "that audacious belief of our people that in the most ordinary men there are resident the more extraordinary possibilities, and that if we keep the doors of opportunity open to them, they will amaze us with their achievements."

Symbolic of that definition of democracy, the college has become an open door to opportunity for countless Negroes, and both a producer of and a working place for men of achievement, as the following facts show: (1) Together with great numbers of needed but less outstanding workers in a wide variety of pursuits, the college has produced such men as A. T. Spaulding, the only Negro insurance actuary in the country; H. M. Michaux, head of the Union Insurance & Realty Co. of Durham; R. L. McDougald, vice president of the Mechanics & Farmers Bank; and J. L. Tilley, president of the Florida Normal and Industrial School; (2) out of its 43 faculty members teaching in the undergraduate school, 12 hold doctor of philosophy degrees; (3) the college is one of only four Negro colleges in the country that is approved by the Association of American Universities.

The college's history and growth offers one of the best arguments for its founder's philosophy of race relationships. And since one man, Dr. Shepard, is largely responsible for its inception, success, and prestige, the story of the college begins properly with him.

SON OF MINISTER

He was born the son of a minister on November 3, 1875. He attended Shaw University in Raleigh, receiving a degree of doctor of philosophy from the department of pharmacy in 1894. That same year he opened a drug store in Durham. In 1898, he became comparer of deeds in the Recorder's Office, Washington, D. C., and from 1899 to 1905 was deputy collector of United States internal revenue in Raleigh. Between 1899 and 1905 he traveled the country as field superintendent for the International Sunday School Association.

While working in this capacity he became convinced of the need for trained Negro ministers to act as leaders for the race, and soon afterward set about raising money to establish a training school. (In 1907, he was the only Negro speaker at the World's Sunday School Convention in Rome.)

The school, known as the National Religious Training School and Chautauqua, was established in 1910 on a 25-acre tract, forming part of the present site. The land was a gift largely of the white people of Durham. By January 1912, 10 buildings had been erected, 2 of which, Avery Auditorium and Chidley Hall, still stand on the campus.

Those early years were characterized by a wealth of enthusiasm but a dearth of money. Private donations and student fees were the institution's only support, and the latter had to be kept low. Board and room cost $7 per month; tuition $1 for the same period. A teacher or professor earned $500 to $1,000 a year.

Designed as a college, it was found necessary to include a high-school course; so the institution at first combined a high school, 4-year college training school for country ministers, commercial school, and home-economics school. What was to become, after 37 years and four changes of name, the North Carolina College at Durham, with approximately 1,100 students and over 100 staff members, began with a staff of 21 persons and 109 students.

ADDED MORE DEGREES

Dr. Shepard struggled to raise necessary funds and at the same time added more degrees to his name—D. D., Muskingum College, Ohio, 1912; A. M., Selma University, Alabama, 1913. Nonetheless, in 1915 the financial difficulties became so great that the school had to be sold and reorganized. In this second stage of its development the institution was known as the National Training School. Mrs. Russell Sage, of New York, came to the rescue by giving enough money for the property to be bought back.

The school had begun to attract the attention of observers throughout the South when the First World War dumped it into another financial depression. To insure the survival of the school two plans were considered. One was to turn over the control of the school to one of several interested denominational boards. The other plan, which was adopted, was to give the property to the State as a public institution. Accordingly, in 1923 the National Training School became the Durham State Normal School.

In 1925 the school experienced two important events. A fire destroyed three important buildings, the administration building, the classroom building, and men's dormitory. These were immediately replaced, but of more importance, that same year, Dr. Shepard, with a brand new literary degree from Howard University, and others were successful in a legislative campaign to make of the school the first State-supported Negro liberal arts college. The school became the North Carolina College for Negroes.

Then came expansion of the plant, with B. N. Duke contributing $42,000, the citizens of Durham $8,000, and the State $100,000.

But a new crisis arose in 1929 when the legislature considered the consolidation of the North Carolina College for Negroes with A. and T. College at Greensboro. Protests from citizens of Durham resulted in the appointment by Gov. Max Gardner of a fact-finding commission, whose unanimous recommendation that the college be continued at Durham was adopted.

NEW BUILDINGS ADDED

The world-wide depression in the years following 1929 checked college enrollment, but, at the same time, indirectly made possible Federal and State building projects which added a library, three dormitories, six cottages for faculty members, a gymnasium, a laundry, a science building, and an auditorium. Worthy of note, in this connection, is the fact that Dr. Shepard was instrumental in getting Federal and State grants from Democratic administrations, although he was and is an outspoken Republican.

Today the North Carolina College at Durham (so named by the last State legislature) not only offers 26 undergraduate courses in subjects from art to zoology, but also includes a graduate school of arts and sciences, a school of hygiene and public health, a school of public-health education, a school of library science, and a school of law.

The student body, about 60 percent women, represents nearly every State in the Nation, with a majority from North Carolina. Students represent all economic brackets.

There are accommodations for only about half the students to live on campus, the others rooming or living with relatives in town. All facilities are crowded, dormitories particularly, with four students often living in rooms designed for two occupants. Nonetheless, rigid scholastic standards are maintained, and graduating students have no trouble in entering graduate schools.

Being a State school, the college can't be highly selective in accepting students, but can and does bounce those who don't make the grade, once they have entered.

Dr. Shepard's fondest hope is for the college to become a university in the fullest sense. As might be expected, he doesn't expect this to be accomplished overnight. He hopes that a school of public-health nursing will be established this fall, and looks forward to the establishment of a school of social work that will lead eventually to a school of medicine.

Growth of Industrial Monopoly

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1947

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following articles

by Marquis Childs, from the Washington Post of May 1, 1947:

GROWTH OF INDUSTRIAL MONOPOLY

(By Marquis Childs)

The visitor from Mars—and if we accept the word of our more romantic scientists, he may be here any day now—is bound to find many puzzling contradictions on our troubled planet. Here in the United States, he is certain to be confused by the way in which the word monopoly is bandied back and forth.

It figures largely in the drive for restrictive labor legislation. The National Association of Manufacturers is spending a great deal of money on advertisements hitting at industry-wide bargaining. The public is being told that this is a monopoly of a little clique of labor leaders.

But curiously enough, at the same time we find the NAM growing red in the face with anger at anyone who dares to say that monopoly in the ownership of business is growing at a new and accelerated pace. It is only left-wingers and "collectivists" who would dare to say such a thing.

Specifically Earl Bunting, head of NAM, attacks a report issued by the Federal Trade Commission. Now the Federal Trade Commission is a respectable old-line agency that existed long before the New Deal was ever heard of. Yet Bunting interprets the report as sinister evidence that the FTC has been captured by left-wingers.

The NAM president has chosen an odd way to refute the FTC report on the growth of monopoly. He, or his economists for him, takes the number of corporations that have been absorbed by merger since 1940 and compares it with the total number of business firms. Thus he reaches the conclusion that, at this rate, it would take a thousand years to monopolize American industry and therefore we are perfectly safe.

In so doing, he ignores the major conclusion of the report. That was the fact that the 1,800 companies which were merged with larger companies represented 5 percent of the total value of all manufacturing corporations. Most of those mergers took place in the last 2 or 3 years.

The total number of companies is not the important point. The important point is that 5 percent, which is not to be derided as the bogey of left-wingers and collectivists. Five percent is a sizable chunk of our economy. The threat of merger and absorption is a very real one to thousands of smaller businesses throughout the country.

Name-calling is so silly and futile. It is always the last resort of a man with a bad case or a bad conscience.

Senator JOSEPH C. O'MAHONEY of Wyoming is no left-winger. He has been fighting for the past 10 years to keep the free-enterprise system free by keeping it competitive. He has had the courage to say that the giant corporations are in reality collectivism—a kind of private socialism. And being wise in the ways of politics and human behavior, he knows that private socialism will sooner or later in a democracy become public socialism.

O'MAHONEY and Representative ESTES KEFAUVER, of Tennessee, have a bill before Congress which would stop one of the loopholes in our antitrust laws. The law, as it stands today, says that one corporation may not acquire the stock of another where that would help to create a monopoly. It says nothing about acquiring the physical assets—plants and machines—of another corporation.

Most of the mergers in recent years have been by the latter method. The O'Mahoney-Kefauver bill would close that gap.

If Congress is going to attack the labor monopoly by law, as the NAM wants, then Congress cannot very well ignore the monopoly that exists in many fields of business. There seems to me to be little point in arguing which monopoly came first. Industry-wide bargaining may have grown up because of the existence of industry-wide trade associations and industry-wide price-fixing. But like the argument over which came first, the chicken or the egg, this is irrelevant.

"Now is the time," said NAM President Bunting, "to clean out the system changers from the temple of Government." As Senator O'MAHONEY sees it, the system changers are those who would monopolize all business and thereby prepare the way for the all-dominant state.

Hon. Charles L. Gerlach

EXTENSION OF REMARKS

OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1947

Mr. BEALL. Mr. Speaker, I want to pay a brief tribute to my dear friend and colleague, CHARLES GERLACH, who passed away on Sunday. When I first came to Washington as a Member of Congress, it was my good fortune to meet Mr. GERLACH. He began to take an interest in me, advising me on legislative matters and functions of the Government I should know. This friendship became warmer and closer and in his passing I know that I have lost a friend. The people of his district have lost a courageous representative, one who rendered great service to his people. We shall miss him greatly, those of us who served with him. A kindly, gracious, and courteous gentleman and friend, CHARLIE GERLACH will always remain in the memory of those of us who were privileged to know him.

Fascism in Action—Will It Be Printed as a Public Document?

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1947

Mr. PATMAN. Mr. Speaker, the booklet, Fascism in Action, was prepared by the Legislative Reference Service of the Library of Congress. It contains a thorough discussion after exhaustive study and research of fascism in Europe, particularly Italy, Germany, and Spain. The other work which was prepared contained a discussion on fascism in the United States.

February 5, 1947, I endorsed the following resolution:

Resolved, That the manuscript of a documented study and analyses of Fascism in Action, prepared by the Legislative Reference Service of the Library of Congress, be printed as a House document.

This resolution was referred to the Committee on House Administration. The Honorable KARL M. LECOMPTE, chairman of the Committee on House Administration, referred the resolution to the Subcommittee on Printing. The Honorable ROBERT J. CORBETT, chairman of the Subcommittee on Printing, reported the resolution on April 29 back to the Committee on House Administration, for consideration and report to the House of Representatives; this report carried neither a favorable nor an unfavorable recommendation. It is my understanding that it was reported to the Committee on House Administration for such action as that committee desired to take. The Committee on House Administration has a regular meeting next week, May 14, at which time this resolution is expected to be considered. It is my hope that the resolution will be favorably considered and the document printed as a public document.

COMMUNISM BAD—FASCISM EQUALLY BAD

The booklet, Communism in Action, has been very popular and very helpful to people who are trying to understand the different forces that are trying to undermine and overthrow our Government. We must be on the alert against the spreading of communism. It is wrong in principle, and there is nothing right about it, and our country cannot survive under the leadership of Communist dictators. At the same time, while we are fighting communism coming up from the left, we must not overlook the serious threat to our country from fascism on the right. In other words, while we are so fiercely and successfully defeating the enemy communism, we must not permit an enemy equally as bad and equally as destructive to approach us from the rear, and just as successfully destroy our country as communism would destroy it.

When a Member of Congress sends out the booklet, Communism in Action, it occurs to me that he should at the same time send out the booklet Fascism in Action, which represents the second threat to our democracy. In most of the requests I receive for the book Communism in Action—and I have sent out lots of them—a request is also made for the book Fascism in Action, but of course it cannot be sent now, for it has not been printed.

I do not favor either fascism or communism. I am strongly opposed to both. It is just as important that information be disseminated about fascism as it is about communism. We should never get ourselves in a position in this country where one will be fought so bitterly and nothing said about the other, that the other will remain the only alternative in a crisis.

It is my hope that on May 14 the Committee on the House Administration will authorize the printing of this document.

Twenty-five Cents a Thousand

EXTENSION OF REMARKS

OF

HON. JOSEPH P. O'HARA

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1947

Mr. O'HARA. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial

from the Amboy Herald, of Amboy, Minn., concerning the printing of stamped envelopes by the Post Office Department:

TWENTY-FIVE CENTS A THOUSAND

This is no secret for these facts are available at every post office in the land. Anyone can purchase 1,000 three-cent stamped envelopes for between $32 and $33, $30 of this sum being the postage. And, then, for around 25 cents extra per thousand, you can have your return card printed in the corner. No small-town publisher can compete with this kind of competition, and there is something wrong somewhere when the small publisher and printer is expected to tolerate this competition; and, then, on the other hand, to accept a big increase in second-class postage rates. Figured on that basis, the small newspaper man and printer is paying a premium for the second-class postage privilege. But we are told that a postage increase is necessary to wipe out a deficit in the Post Office Department, but they fail to give as one of the reasons of this deficit the Department's practice of printing 1,000 envelopes for the paltry sum of 25 cents. Such a practice is utterly inexplicable and unsound and must be abolished if the Post Office Department wants to be made even fairly solvent. But there is a ray of hope at last. One bill has now been introduced into the House and another into the Senate to eliminate the printing of envelopes by the Post Office Department, and if every newspaper in the country does not urge support of these bills, then he or they should have their heads examined. It's our move, and are we moving!

Address of President Aleman at the Pan American Union

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1947

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of President Aleman at the special meeting held in his honor by the governing board of the Pan American Union:

Your Excellencies, in behalf of my country I thank you for the cordial honor that the governing board of the Pan American Union has bestowed on me.

I am sure that my countrymen will, like myself, see in this gathering not only an act of international courtesy for the President of Mexico, but a recognition of the steadfastness with which my country from the earliest years of its independent life, has made the destinies of America a main object of its interest and of its devotion.

I am also grateful to his excellency, Don Antonio Rocha, president of the governing board, for the words that he has addressed to me and which I value in all their generosity. They are for me singularly significant coming from the representative of a republic with which my people and myself feel bound by strong ties of friendship and admiration.

On the magnificent perspective of history, the political thought of the Americas stands out over many others by virtue of its belief in the power of ideals. An ideal is always, in fact, a dynamic principle, pregnant with the marvelous power of projecting itself into the future. Like a seed, an ideal carries in itself the traits of a development not always foreknown. Maturing in time, it acquires a tangible form that brings out the growing power synthesized in its origin.

ADMITS SLOWNESS IN ACHIEVEMENT

From Simon Bolivar to our day the Pan American ideal has been felt to be the desire of our republics to unite. The liberator thought that the hour was at hand to lay the bases of his doctrine of perpetual alliance, although, certainly, his clearsighted genius was aware that such a union could not be achieved at once, as by a prodigy, but "through sensible effects and well directed efforts."

How did our peoples respond, for long years, to that purpose of unity? What efforts did they make?

We have to admit that for long whiles wraths and discords darkened the horizon. But despite several crises, our nations, at times unwittingly, made headway as desired. And if there were times when our nations despaired, it was because the road led constantly uphill, cutting into the hardest granite of the mountain.

Now that we find ourselves at a height from which we can view how far our republics have advanced, we marvel at the success attained. Many interests, apparently opposed, have been harmonized and many situations, irreconcilable in appearance, have been directed to the single goal which the liberator prefigured in full light during his poignant exile in Jamaica.

MANY OBSTACLES SURMOUNTED

Between the Congress of Panama and the creation of the commercial office of the International Union of the American Republics, and between this last and the Pan American Union of our day, many obstacles have been surmounted and much selfishness has been overcome.

The fulfillment of Bolivar's ideal is at hand.

The international situation over and above what our peoples may claim, shows how necessary the Americas are for the peace of the world and for the United Nations, an organization within whose worldwide scope, the usefulness of regional agreements is recognized.

Under such pressing circumstances, we must not defer making actual the principles that for more than a century have served us as solid bridges for our cooperation and our unity.

Our common love of freedom offers our hemisphere with honor and offers the best foundation for the political solidarity in which we live. Without the support provided by that common consciousness we might be, in the panorama of the present world, only a multiplicity of countries bound together by geography but dispersed by holding policies at variance with one another.

SPRINGS FROM LOVE OF LIBERTY

That which groups the stars of our skies into a clear constellation, what binds together and coordinates our countries without impairing the independence and the dignity of each, springs precisely from their essential love of liberty.

For us to be persuaded of this fact, it is not necessary here to recall that Hidalgo in 1810 decreed the abolition of slavery. The treaty of Panama condemned the slave traffic. The Mexican constitution of 1857 declared any slave free by the sole fact of setting foot upon territory of the Republic.

In prophetic vision, Abraham Lincoln, speaking of Negroes, said that "in some trying time to come they would probably help to keep the jewel of liberty in the family of freedom." Jose Marti movingly endeavored to institute "the cult of the full dignity of man" as the first law of his nation. In Brazil, Nabuco waged a fearless struggle. Benito Juarez, of unflinching will, made peace synonymous with the respect for the right of others.

The history of our people is the rehearsal of the enfranchisement of our citizens. We have wanted men free in order to have free countries, countries capable of achieving their union, as in this symbolic massing of flags, under a sun of freedom that does not deprive any of our banners of its colors and that shines with equal brightness upon the insignia of all.

Together with the feeling for liberty that so deeply in their being unites our countries, let me point out one of the more stable characteristics, the idea that liberty is to be preserved through the conjoint effort of our peoples.

CITES TREATY OF 1826

In proof enough of what I affirm, let us remember that Article 3rd of the Treaty of Union, League and Perpetual Confederation of July 15, 1826, contains in embryo the Act of Chapultepec. "The contracting parties"—that article stated—"obligate and commit themselves to their mutual defense against every attack that may jeopardize their political existence, and to employ, against the enemies of the independence of all or of any of them, all their influence."

These words burn with a faith that is still for us the faith of the Americas, the faith in the Americas. We have indeed formed an association to live in peace, and we do not wish to have our peace at the mercy of aggressors, because we know that sooner or later any aggression, wherever launched, imperils the peace of the Americas.

That fidelity to peace, as a bond of progress, is the essence of our heritage and is the truest promise of unity for the States of the New World.

Time flows by and is gone, circumstances change. But from generation to generation and from hand to hand, like the torch of Lucretius, the unchanging desire to live in independence is passed on. It is a desire that the independence of each nation, through the solidarity of all, may be the monument of an enduring peace, born in liberty, consecrated to justice and perfected through democracy.

Mexico, your excellencies, has never stinted its efforts to the task that this institution is designed to serve and to ennoble. Therefore, in expressing to you my appreciation of this ceremony that has brought us together, I but interpret the sentiments of my countrymen when I greet in each one of you a sister nation and when I express the fervent wish that continental brotherhood may always justify the pride of our republics in having achieved it, as well as we all desire it, with a heroic resolve, with foresight and with all our hearts.

Some American Problems, Immediate and Long Range

EXTENSION OF REMARKS
OF
HON. EDWARD J. HART
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1947

Mr. HART. Mr. Speaker, the annual Americanization Day parade and exercises took place in Jersey City on April 27.

This day was established in that city by the Captain Clinton E. Fisk Post, No. 134, Veterans of Foreign Wars of the United States. From small beginnings it has grown to become one of the most important days on the civic calendar. The celebration is still sponsored by the

post, which organized it. Long since it drew the cooperation of Mayor Frank Hague and the city commission, as well as that of many other posts of all veteran organizations and of patriotic societies generally.

This year the parade was led by Mr. John W. Meagher, one of Jersey City's two gallant holders of the Congressional Medal of Honor. His chief of staff was Mr. Daniel D. Kemp, Sr. The general committee in charge of the inspiring event consisted of Hon. Frank H. Eggers, city commissioner, honorary chairman; Mr. George A. Thornton, Sr., of the Captain Clinton E. Fisk Post, Veterans of Foreign Wars of the United States, was general chairman; and Mr. Alex B. Luken of the same post, honorary general chairman.

More than 10,000 men and women participated in the parade, which was witnessed by more than 50,000 people. At Pershing Field, where the parade terminated and where the reviewing stand was set up, patriotic addresses were delivered to an audience of several thousand. Among the speakers were Hon. Frank H. Eggers, Mr. William G. McKinley, national executive commander of the American Legion, and myself. Invocation was made by Rev. A. E. Lyman-Wheaton, a prayer was offered by Rabbi Theodore Adams, and benediction pronounced by Rev. Walter P. Artioli. The master of ceremonies was Mr. Charles A. Peterson, past State commander of the Veterans of Foreign Wars of the United States.

Each year on the occasion of this great and stirring demonstration Jersey City is honored by a visit from the national commander in chief of the Veterans of Foreign Wars of the United States. Our citizens were glad this year to welcome the present holder of that high and responsible office, Mr. Louis E. Starr. His splendid address, marked by eloquence, force, and wisdom, and received with enthusiasm, follows:

The lives of most of us are punctuated by occasional great moments. The opportunity to be with you here in Jersey City on Americanization Day and to address this wonderful gathering of Americans is one of the high spots of my life. I deeply appreciate this honor which you have bestowed upon me.

This organization which I represent, the Veterans of Foreign Wars of the United States, is a patriotic organization, united in comradeship, to promote the best interests of our country. Ours is an organization of more than 2,000,000 members who have been tested in war. Ours is a fighting organization composed only of those who served in combat zones overseas. Our members know, first-hand, the utter futility of war. We are determined that the world must not again be further devastated by armed conflict.

But our members are realists; the millennium is not here, and until the United Nations is able to keep the peace we feel that America must keep it.

Nearly 90 percent of the members of the Veterans of Foreign Wars have recently returned to their homes from combat areas all over the world. There they observed some of the results of life under various political system. Actually, the composite GI—if there were such a person—would know more about the world than anyone in America. The GI returned to his country convinced that the American way of life is the best in the world. I believe it is literally true that not a single member of our organization who returned from overseas and joined the VFW in good faith would exchange our concept of government and way of life for that of any other country. Consequently, when we see our American system threatened the Veterans of Foreign Wars considers it a solemn obligation to combat the dangers which threaten our country.

Today America faces unprecedented problems and responsibilities—both at home and abroad. The returned veterans who risked their lives for the country they love are now determined to save it from the dangers of the postwar world.

There are two phases to our country's problems today: The immediate or temporary phase which demands action now, and the eventual or permanent phase.

Our immediate need is for sufficient military strength to keep the peace. Sound strategy for America demands that we use the talents given us. Our people belong to the mechanical age. We have the genius for mass production. We very recently astonished the world by our industrial productivity in weapons of war.

The outstanding event of World War II was the emergence of air power as the greatest striking force known. Wars of the future will be decided by air power. Once a nation gains mastery of the air, war becomes a shuttling problem—a mere matter of dumping explosives on targets in enemy territory. And today, fortunately, our country is more capable of producing striking force in the form of air power than any other country in the world. But, for economy's sake, we immediately converted our war industry into peacetime production at the war's conclusion. Thus we permitted our Air Force—the strongest in the world 2 years ago—to dwindle into third-rate status. It was false economy and now we must make amends quickly.

I am advised by those in a position to know, that our Air Force today needs some $5,000,000,000 for its proper development, maintenance, production, and training. I believe that this money should be made available now, and that economy should be exercised elsewhere.

I do not mean to slight the other arms of the service by this remark. I invite your attention to the fact that we already have the most powerful navy in the world; that the only other navy in existence is friendly; that our only potential enemy of consequence has no fleet. Our position with respect to naval power today is, therefore, entirely favorable.

In the war of the future, our ground forces will be used largely to defend bases from which air striking power is launched and as troops to administer enemy lands.

The Veterans of Foreign Wars, therefore, has justifiably placed the development of the strongest air force in the world—capable of rapid expansion—as our first priority in the steps to safeguard our American way of life.

There is a second immediate problem. It is aid to the countries devastated by this last war. In these unfortunate countries, the economy has collapsed, the people are impoverished, the government structures are dislocated and threatened by totalitarianism. Such help as our country is able to give worthy peoples in need must be extended. But these measures must be considered merely as temporary expedients.

In the final analysis—if our way of life is to survive—people must want to enjoy the advantages of our system of government. If communism were to be destroyed, it could neither be destroyed by dollars nor by bayonets. It can only be eliminated by a better ideology.

Our long-range planning, therefore, must contemplate making our system work efficiently, effectively, economically—giving our people the maximum liberty with minimum interference from the Government. At the same time, our Government must be strong, yet liberal—a model for other peoples of the world to emulate, if they desire, so that they, too, will enjoy the benefits which we enjoy.

Certain results of the second war are possibly being overlooked by some of us. In Europe and in Asia some 15 countries are changing rapidly their economic and political structures. Imperialism is dead. The colonial system of the European countries is being dissolved.

The model in Asiatic countries is our successful experiment in the Philippines. These countries would copy this model.

From the ashes of World War II are arising new countries and new governments. All these new governments must eventually select their ideology. Totalitarianism through Communist agencies is making strenuous efforts to aline these new governments on the side in which the state is all, and the individual nothing.

Only the United States is strong enough spiritually and physically, to oppose the efforts which the Communists are making to establish puppet regimes. By word and by deed, our country must assume leadership. We must make our country and our way of life a model which the new nations, now emerging from the chaos of the war, seek to emulate.

The immediate problem at home today is to be strong militarily and at the same time preserve our economy. We are faced with an unprecedented public debt. We have operated with our books out of balance for nearly 20 years. Taxes have become so burdensome that the incentive to create new production is being imperiled. An examination of the history of taxes shows that throughout our country's existence, high taxes have limited production and low taxes have had the opposite effect.

Moreover, high taxes tend to deaden individual initiative. Today there are many able men in business who are unwilling to assume the responsibility of which they are capable. This tendency exists merely because their salaries and their income are so reduced by taxation that they elect an easier method of livelihood which pays as much as if they labored to the limit of their capabilities.

If our system of free enterprise is to survive, it must be unshackled and permitted to produce. As taxes are reduced, the incentive to use—and the availability of—venture capital increases.

I doubt if many of us have given much thought to the enormous and alarming increase in Government subsidies the last 5 years. We are spending billions in subsidies each year. This tremendously expensive practice must be curtailed as quickly as possible—lest the entire economy of our country become dislocated.

One of our great elder statesmen has recently remarked that the only salvation for America is increased production. With increased production and lower taxes, subsidies become less necessary.

Our world relief must be phased with our home planning. The two are not separate and distinct projects; rather they are analogous problems. World aid can arise only from a sound domestic economy.

Simultaneously, with the readjustment of our economy, our Government must cleanse itself of foreign influences which seek to concentrate power in the Government by taking it from the people. To free our Government of foreign influence is a matter in which we must all take a hand. We must devote the utmost attention to the selection of public officials who represent us.

Our Government can be no better than the people who support it. More than ever before, it is the duty of Americans to interest themselves in the policy and operation and effectiveness of our Government. If everyone in America would give his best

thought to the selection of public officeholders, and if everyone would study and express his conviction on public issues, I have every confidence in a great destiny for our people. If, on the other hand, we take no interest in preserving this great heritage of freedom which is ours, enemies, both from within and without, will rapidly rob us of our freedom. Let's be strong. Let's make our Government work. Let's put Americans on guard.

We Still Admire Congress

EXTENSION OF REMARKS
OF
HON. JOSEPH P. O'HARA
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1947

Mr. O'HARA. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Mankato Free Press, of Mankato, Minn.:

WE STILL ADMIRE CONGRESS

Americans like to have a laugh or two now and then at the expense of Congress; but only good-natured, well-intentioned laughs. Congress is, after all, a cherished institution, the citadel of democracy; the body, no matter what its shortcomings, that can come to bat and safeguard its citizens' rights. So it didn't go over well when a CIO organizing director, in speaking before a congressional committee as spokesman for organized labor, said "It would be a wonderful thing for the United States if Congress met only every ten years."

In reply to a question he added that he doubted if the committee, made up of 25 Congressmen, could do anything to improve the Wagner Act since no one of them had any comprehension of union labor's problems. It happened that some of them did have such comprehension. They had been workers in a number of trades and hold union memberships.

The Congress of the United States is the official organ for setting up national legislation covering labor and everything else. No institution representing a special class will get anywhere at all with the American people by flouting or ridiculing that body.

Polish Constitution Day

EXTENSION OF REMARKS
OF
HON. MITCHELL JENKINS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1947

Mr. JENKINS of Pennsylvania. Mr. Speaker, 171 years ago our forefathers expressed, in our own Declaration of Independence, the doctrines of freedom and personal and political liberty, which have been the guiding principles of this Republic of ours from that time down to the present. Those doctrines were not firmly established until they had been tested in the crucible of war and had been embodied in our Constitution. In that conflict there came to fight with us a great Polish patriot, Thaddeus Kosciusko, who had been nurtured in those same tenets of liberty and freedom in his native land. Fifteen years later, on May 3, 1791, he participated in the signing of the Constitution of—his own—Poland. What the Fourth of July represents to us here in America, the 3d of May represents to all true Poles, to those in Poland and those in exile, and to the millions of our fellow citizens of Polish extraction, in whose hearts burns the same love of freedom that drove Thaddeus Kosciusko to fight on the side of a few weak colonies against one of the great powers of Europe. We have in America no finer citizens than those Poland has given us, none more devoted to the fundamental concepts of a free society, none more willing to suffer privation and hardship, and to die, if need be, to preserve for themselves, for all of us, and our children, the precious heritage of freedom that has been bequeathed to us.

We in America can well be grateful to Poland and to the Americans of Polish extraction for what they have contributed, from its inception, to our country. And we can, with profit, scan that constitution which, long before we freed our own slaves, made every man who set foot on Polish soil, a free man; recognized the responsibility of the legislative body to the people, who were its creators; removed economic barriers; guaranteed religious liberty; and placed upon all citizens the responsibility for the defense of their country.

Today Poland is not free. As happened in the days of Catherine of Russia, today the same Russia has trampled ruthlessly upon the freedom of the Polish people. Its liberty gone, that word but a mockery, its constitution today but a farce, and the Russian usurper ruling in Warsaw, in the spirit of that constitution yet lives the soul of the people, and always will. As it did after Catherine's dismemberment of it, Poland will again be a free country, and, as we salute Poland on this anniversary, let us not forget that on us, and on our acquiescence in the Yalta agreement rests part of the responsibility for what is happening in Poland today. I hope the day may soon come when America can cleanse itself of that sin against a people whose only fault was that they were our allies and fought with us and for us to the bitter end, and can play its part, and it should be a major part, in driving out the usurpers and in restoring to those valiant people their freedom and their native land.

Alabama Department, Veterans of Foreign Wars

EXTENSION OF REMARKS
OF
HON. LAURIE C. BATTLE
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1947

Mr. BATTLE. Mr. Speaker, the Alabama Department of the Veterans of Foreign Wars is now embarking upon a campaign to raise funds with which to erected in the State capital of Alabama, a suitable State headquarters. While this headquarters is primarily for the purpose of providing adequate facilities for the Alabama Department of the Veterans of Foreign Wars to discharge its obligations in behalf of the disabled veterans and the widows and orphans of those who paid the supreme sacrifice, as well as for the administration of that organization in Alabama, nevertheless, it will likewise serve as a living memorial to members of the armed forces who have lost their lives in the defense of our country. By unanimous vote of the administrative council of the Alabama department, it was decided that this proposed building would be dedicated as a memorial to those heroes, and the name of each preserved in bronze display in a special chapel of the building for this purpose.

This great organization of overseas veterans, now by and large made up of World War II veterans, has undertaken in Alabama to aid in the readjustment of veterans to civilian life by seeing that each post of the organization becomes an integral part of the civic life in the area where it is located, and that each member actively assume and discharge his civilian responsibilities and support his Government in a manner commensurate with the patriotism of wartime service in the armed forces. Accordingly, this veterans' organization is not calling upon Government directly or indirectly to burden itself by providing financial assistance so badly needed for an adequate department headquarters. But, on the other hand, the members of the Veterans of Foreign Wars of Alabama are raising the necessary funds by their personal contributions, and by donations from private businesses, industries, and individuals who are the friends of the overseas veterans.

Mr. Speaker, my colleagues, PETE JARMAN, GEORGE ANDREWS, and ROBERT E. JONES, and I, all of whom are oveseas veterans and members of the Alabama Department, Veterans of Foreign Wars, have been authorized by the entire Alabama delegation to commend this organization of young veterans in their behalf for the work that it has done in Alabama and for the undertaking of the meritorious project of erecting a State headquarters as a living memorial to our comrades who have fallen. I am pleased to remark that each and every Member of Congress from the State of Alabama has pledged himself to aid in every possible way in making the memorial drive of the Alabama Department of the Veterans of Foreign Wars a success. There are over 170 posts and approximately 30,000 members of this organization in Alabama, all of whom are overseas veterans. The people of our State will not soon forget the sacrifices that these patriots have made, nor the hardships they have endured, and it is the considered opinion of the Alabama delegation that industries, businesses, civic organizations, and numerous individuals, who are true

friends of the overseas veterans and wish to be identified as such, will lend liberal support, both spiritually and in material contribution, to this undertaking. Their names will be displayed in the memorial as the friends of the overseas veterans, and will be permanently preserved along with the names of each and every soldier, sailor, and marine from Alabama who has given his life in the defense of our country.

Efforts of this nature by returning veterans cannot but be applauded, and in behalf of the Alabama delegation, I commend this project as a shining example of the spirit and attitude of those returned veterans who meant so much to preserving the freedom and happiness of our land during the past wartime years.

A Housewife Union

EXTENSION OF REMARKS

OF

HON. MAX SCHWABE

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1947

Mr. SCHWABE of Missouri. Mr. Speaker, I ask unanimous consent to have printed in the Appendix of the RECORD a poem by Mrs. Ida Skinner, of Boonville, Mo., an active leader of women in my congressional district, which is pertinent and timely, and I think expresses the feeling of the large majority of housewives who struggle daily to make ends meet without any apparent recognition of their efforts and courage.

Now, I'm just a housewife, don't you know,
I do all my own work and even sew.
I work outside because I can't pay,
Some lazy helper eight bucks a day.
I don't mind this work one single bit,
Even if I don't have the time to sit,
And read a book or go to a show,
But here's one thing I would like to know.

What would happen if the wives would belong,
To a housewife union, big and strong.
When the union says, "You don't cook on Sunday,
And maybe don't have to wash on Monday.
For mending you will draw double pay.
Time off each week to even play.
A game of tennis or round of golf,
And your husband at home won't dare to scoff
For fear he might his union wife offend
And she would walk out and let him tend
The housework, the cooking and children too
What on earth would the poor man do.

We wives are getting tired of this union way
Of stopping the manufacturing in the U. S. A.
By just walking off of every job,
And forming a roaming angry mob.
We work under hardships every day,
And when you try to buy, what do they say?
We have no sweepers, and no refrigeration,
Because the strikes are paralyzing the Nation.
Now, I bet Congress some labor laws would pass,
If the housewives would join this union class.

How To Lose Friends

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1947

Mr. SPRINGER. Mr. Speaker, quite recently an editorial appeared in the Indianapolis Star, which analyzes, to a certain extent, the general attitude of the people regarding the attempts that have been made to force legislative bodies to pass certain legislation which would be favorable to some certain group in our country. It is my considered judgment that this editorial expresses the general opinion prevailing throughout our country. I desire to insert this editorial in the RECORD in order that all may read it.

Mr. Speaker, under leave to extend my own remarks in the RECORD, I include the editorial to which I have referred, which is as follows:

HOW TO LOSE FRIENDS

It takes little insight to understand that you rarely make people sympathetic to your viewpoint by threatening them with violence and calling them names. But this is too often the method of union officials in trying to block any new labor legislation.

A delegation from the CIO met with Indiana Congressmen in Washington to protest the Hartley-Taft labor proposals. They were asked for specific recommendations. They replied with blanket denunciation of both bills and with threats.

One union official said labor's future would be in doubt if any new laws were passed and implied that workingmen would again have to "work like a slave 60 or 70 hours a week for practically nothing." He did not say which sections of the bills would endanger labor's future.

Walter Frisbie, CIO secretary in Indiana, said that the details of the bill were unimportant—a view most Congressmen do not share—and asserted that "when you put them all together they spell out hodgepodge that would create a field day for lawyers and that's about all." He offered no constructive proposal to replace the "hodgepodge," and no detailed criticism of either bill.

To cap the climax of this foolhardiness H. J. Noll of the South Bend UAW told Congressmen that if the labor movement is crippled by legislation "there is going to be bloodshed."

The present campaign of labor's leadership against all proposed labor legislation is the most stupid kind of lobbying they could possibly devise. They are doing themselves and their unions a great disservice by the unbending and threatening attitude they take toward Congress. They are forcing Congressmen to be severe because their belligerent stand lends support to the growing belief that without severe laws they would continue to grow more and more unmanageable and threaten the Nation's industrial recovery.

Fair, reasonable and temperate laws could have been written and passed by now if the leaders of labor had gone to Congress with constructive plans for labor-management peace, and helped frame new legislation. But fairness and reason do not thrive in an atmosphere of bullying and threats.

What labor's leaders get in the form of new legislation will be what they brought upon themselves.

Spread of Communism Throughout Central Europe

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1947

Mr. PRICE of Illinois. Mr. Speaker, under leave to revise and extend my remarks, I desire to include in the RECORD several news articles that have been sent to me by Mr. John C. Sedlacek, of 1321 North Thirteenth Street, East St. Louis, Ill., who is vice president of the National Slovak Society, Assembly 501. This organization, represented by Mr. Sedlacek, is deeply concerned with the spread of communism throughout central Europe. The National Slovak Society seeks action by the United States that will guarantee that the traditional rights of free assembly, free speech, and religious worship free from control be restored. The articles follow:

DR. TISO HANGED, GOES TO GALLOWS IN CALM PRAYER

(By Jan Mauthner)

BRATISLAVA.—The Reverend Dr. Joseph Tiso, wartime president of Slovakia, went to his death on the gallows Friday morning, his plea for clemency rejected by President Eduard Benes, of Czechoslovakia.

A Capuchin priest, who had spent the night praying with him, accompanied Dr. Tiso to the gallows. Dr. Tiso prayed while he walked up the gallows steps and continued his prayers aloud until the last.

The execution took place at 5:30 in the morning, 3 days after the Slovak National Court had pronounced sentence against him. During the period between the verdict and the execution, violent discussion took place behind closed doors between political parties in Prague and Bratislava, debating whether the plea for mercy should be recommended to President Benes. Dr. Tiso's sentence had been the subject of intense discussion by small groups huddled in streets throughout Slovakia. While 2 days earlier special editions had announced the news of the sentence 30 minutes after it was pronounced, the Slovak papers were cautioned to publish only brief accounts of Dr. Tiso's execution, and without comment, and special editions were barred.

On the day before his death Dr. Tiso was informed that his petition for mercy had been denied. He received the news calmly and requested the ministrations of a priest. It was like the composure he had displayed before the judges when his death sentence was read. He had stood erect when the verdict was announced and appeared calm although the klieg lights of newsreel cameras were focused directly in his face.

The reading of the sentence, which covered 215 pages, was a matter of hours. In it Dr. Tiso was found guilty on 97 of the 113 charges which had been placed against him at the beginning of the trial.

Questioned by Dr. Daxner, the president of the court, whether he wished to ask for clemency, Dr. Tiso replied: "I ask it for moral reasons." His lawyer then immediately submitted a petition for grace.

Before his execution Dr. Tiso requested that he be buried at Banovce, his parish for many years.

EXECUTION OF FATHER TISO COST BENES CHANCE TO WIN LOYALTY OF SLOVAKS, VATICAN PAPER SAYS

ROME, April 19.—The Czech government of President Eduard Benes sacrificed an opportunity of easing the tension between the Czechs and the Slovaks when it executed the Reverend Joseph Tiso, Osservatore Romano declared today in its comment on the hanging of the priest on a charge of treason for his part in serving as President of the Slovak state during the war.

Reliable sources both in Czechoslovakia and outside had expressed confidence that the death sentence would not be executed. Osservatore Romano said, "Whether this sentence was the just punishment of a guilty person, as one side asserts, or an act of political revenge as claimed by the other side, one thing is certain: an act of clemency would have contributed greatly to a spiritual union between the Czechs and the Slovaks.

"When the people are tired of war hatreds (that divide the world), this execution compromises in the Czechoslovak Republic the precious possibilities of pacifying the minds of the people. It is a sad thing, this germination of hatred by which anyone injured, reciprocates with evil and evil multiplies evil.

"Christ alone and His divine charity is capable of extinguishing such a sinister fire."

WSNY, SCHENECTADY, N. Y., BROADCASTS ABOUT TISO—STATEMENT OF APRIL 16 TELLS OF ANXIETY OF SLOVAKS OVER TISO VERDICT

An atmosphere of anxiety and grief has settled on the homes, as well as on the social and religious circles, of thousands of Americans of Slovak ancestry, says the Reverend Florian C. Billy, O. M. C., pastor of SS. Cyril and Methodius Slovak Catholic Church and national supreme secretary of the Slovak Catholic Federation of America, which includes all parishes, organizations, and groups of Slovak Catholics in the United States of America.

This atmosphere is caused by the current news dispatches telling of the condemnation to death by hanging of Msgr. Joseph Tiso by the Czechoslovakian courts.

Notice, continues the local pastor and national official, that I do not call it "surprise or shock; for how could I with all the advance information that has been coming to this office as well as to the general reading public on the eventual outcome of this far too little publicized trial. For instance, I can personally testify that in my own presence a certain very high official of the Czechoslovakian Government, now still President of the Slovak National Council, stated these words long before the trial of Msgr. Joseph Tiso began: "Dr. Tiso must be judged; Dr. Tiso must be adjudged guilty."

And I have before me a copy of the New York Times dated March 2, 1947, from which I quote the following: "Judge in Tiso Case Hostile to Defense.—It has been a peculiarity of the trial that the presiding judge, from the beginning has never attempted to conceal his hostility toward the accused."

Yes, American Slovaks are filled with anxiety and grief, rather than surprise and shock, because they felt that they had reason to hope that our United States authorities could and would influence the Government of Prague, which tells us so much of its American-like democracy and United States style of freedoms, in securing for Monsignor Tiso and all other citizens the kind of justice described in the pronouncement of our Hon. Robert H. Jackson in his statement: "All experience teaches that there are certain things you cannot do under the guise of judicial trial. You must put no man on trial before anything that is called a court, if you are not prepared to establish his personal guilt. If you are determined to execute a man in any case, there is no occasion for a trial. The world yields no respect to courts that are merely organized to convict."

While we grieve the impending loss of Monsignor Tiso, as well as the sufferings of countless other victims of injustice, who were guilty of no other "crime" except "wanting to have their own independent Slovak state and government," we are especially anxious that our American fellow citizens, as well as all liberty loving and doing peoples of the world know the true facts.

Contrary propaganda notwithstanding, we know:

1. That Msgr. Joseph Tiso and his government were not captured by, but delivered themselves voluntarily to the United States Army forces. Thorough and correct information is available to all, who want to know the facts.

2. The trial of Msgr. Joseph Tiso was by a packed court, tersely defined in the above quotation from Justice Jackson, and presided over by a judge who is a personal and political enemy of the accused.

3. From testimony at the trial it is evident that if Monsignor Tiso had agreed to the Soviet plan of making Slovakia a Soviet Republic, he would not have been tried as a war criminal.

4. A true and correct narrator of facts will also tell the world, that Monsignor Tiso's Slovakia was recognized duly by 27 countries, including the Vatican and Soviet Russia.

5. Silence of the press notwithstanding in the matter, it is known that the friends of Msgr. Joseph Tiso raised a purse of 450,000 crowns and engaged a lawyer, Alois Loyek, to prepare the defense for Monsignor Tiso and represent him at the trial in view of the inertia of counsel assigned by the court. None of the accounts in the American press have said anything about the fact that Loyek was abused by the security police, told he could not represent Tiso and all his material in preparation for trial was confiscated.

International Financial Policy of the United States

EXTENSION OF REMARKS

OF

HON. JOHN M. VORYS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1947

Mr. VORYS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following National Association of Manufacturers recommendations on international financial policy of the United States as approved by the board April 25, 1947:

The foreign financial loan and aid policy of the United States will have important effects upon the intergovernmental relations upon which peace largely rests and will seriously affect relations between businessmen of different countries.

The eventual goal should be replacement of Government loans and credits to foreign countries by international financing through private sources or international institutions as normal international relations become established.

It is recognized, however, that when critical conditions arise Government gifts, loans, or credits may be advisable. Proposals for gifts, loans, or credits at such times should be approved or disapproved, dependent upon the circumstances then existing, upon the objectives of such proposals, and upon the possible effects thereof.

Current and future proposals for gifts, loans, and credits by the United States to other nations should be judged according to the extent of their conformity to the following standards:

1. A gift, loan, or credit by the United States Government to another nation will not benefit the other nation in the long run if it does not contribute to the welfare of the people of the United States and does not help the people of the recipient country.

2. Gifts made by the United States to foreign countries should not be disguised as loans or credits. In every case current circumstances and prospective developments should determine whether action taken should be in the form of a gift or a loan.

3. United States gifts for economic rehabilitation should be limited to an amount necessary to put the recipient country in an economic position to apply to the International Bank or similar international agencies, or to private financing, for further economic rehabilitation.

4. The Government should not enter into negotiations for gifts, loans, or credits to foreign countries unless such countries:

A. Accord to business establishments in such countries owned by nationals of the United States treatment at least as good as that accorded to its own nationals in respect to police protection, access to courts, liability to taxation, and the conduct of commercial and industrial enterprises.

B. Permit representatives of United States companies and individuals with property in such countries to visit and inspect such properties.

C. Permit representatives of the press and business of the United States to visit freely in such countries and to report their observations without fears of subsequent discrimination or punishment.

D. Accord fair and nondiscriminatory foreign exchange treatment to United States private commercial and investment interests abroad, in the granting of applications for the remittance abroad of foreign exchange, in the exchange rates applied to such remittances, and in the imposition of taxes on exchange transactions.

5. No gift, loan, or credit to another country should be granted except on a basis of an adequate survey of the actual needs of such country. Such survey should determine the designed and probable effects of the financial action under consideration.

6. Any government gift, loan, or credit for relief or economic rehabilitation is unsound which does not provide definite limitations and requirements as to what the beneficiary will do in consideration of the benefit received; it should also provide for adequate United States supervision of the expenditure in an economic and strictly nonpartisan manner.

7. Gifts, loans, or credits to foreign nations should provide that wherever feasible, expenditure for goods should be for goods produced in the recipient country or in the United States.

8. Government loans or credits should not be granted to other nations which have confiscated (or expropriated) the property of United States nationals without having made prompt, adequate, and effective compensation, and this Nation's representative in any international lending authority should oppose loans or credits by such authority to nations which have so acted. It should be understood that adequate, just, and acceptable compensation should remove such barriers to loans or credits. Our Government should not extend financial aid which would be used, directly or indirectly, in a manner prejudicial to legitimate American interests.

9. Loans and credits should not be made to countries which show no evidence of intent or reasonable prospect of balancing their budgets and providing a sound currency.

10. Congress should confine the power to make loans and credits to foreign governments to only one government agency.

11. There should be full publicity, within the limitation of military security, on all forms of financial action taken by the Government.

With reference to the foregoing statement of objectives and standards to be used in any consideration of gifts, loans, or credits by the United States to other nations, we submit two concluding observations:

The United States will be able to supply financial aid and goods to foreign nations, even within the limitations listed only to the extent that we have a sound internal economy for whose maintenance we greatly need revised tax laws, constructive revision in our national labor laws, and confidence and harmony between all major groups in the country.

The United States will best support the cause of freedom throughout the world by itself furnishing an example of domestic poli[illegible], economic, and social freedom.

Heroes of the Alamo

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1947

Mr. DORN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Saluda (S. C.) Sentinel:

MONUMENT ERECTED TO TWO SALUDA HEROES OF ALAMO

The 12-ton granite shaft which is the monument to the two heroes of the Alamo who were natives of Saluda County, Colonels Travis and Bonham, was set in place this week. The memorial was sponsored by local fraternal and civic organizations and paid for by public subscription. Plans for dedication have not been announced.

The monument stands on the west side of the courthouse lawn, facing the sidewalk, which goes from Church Street up to the courthouse entrance. It is actually made of three stones, two square blocks, one on top of the other, forming the base, with the large shaft rising about 12 feet from ground level.

Colonel Travis was born in Saluda County, about 6 miles from the present town of Saluda, near the Johnston highway. His old home stood for many years and elder citizens of the county can point out the site, which is still marked by some of the old brick and stone which formed part of the original building.

The home of Colonel Bonham still stands near Saluda, although some of the beautiful fireplaces and mantels, it is said, have been removed.

The inscription on the granite monument follows:

"MEMORIAL

"Col. William Barrett Travis, born near Saluda, S. C., August 9, 1809, gave his life for liberty and freedom at the Alamo, March 6, 1836.

"His last message for reinforcements ended thus: 'I have held this place against overwhelming numbers and will continue to hold it or perish in its defense.'

"Col. James B. Bonham, native of Saluda County, born near here February 20, 1807. Died with Travis in defense of the Alamo.

"Travis and Bonham were friends in boyhood, comrades in arms, and perished together in battle.

" 'Thermopylae had its messenger of defeat. The Alamo had none.' "

Federal Aid for Louisiana Schools

EXTENSION OF REMARKS
OF
HON. JAMES H. MORRISON
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1947

Mr. MORRISON. Mr. Speaker, the condition of the public schools throughout many States in this great Nation is indeed deplorable. In the State of Louisiana a very serious situation has developed in the public-school system because the teachers are not receiving sufficient remuneration for their work. With the increased cost of living and present income taxes, salaries of the teachers are entirely out of proportion, and America's only hope for preserving its democratic institutions is through Federal aid to education.

Legislation is urgently needed to obtain adequate funds for public schools to equalize education opportunities. Teachers' salary schedules must be maintained at a level so as to make teaching more attractive to talented, young people as a life career. The National Education Association, largest organization of teachers in the country, declares that, in order to attract people of high caliber to the teaching profession and keep them, the minimum wage for teachers should be $2,400. The average teacher's salary in the State of Louisiana in 1945–45 was $1,515 per annum. Financial assistance is of vital importance to the elementary schools and high schools to modernize their program, better equip their facilities so that all children may have the best educational advantages possible.

As demonstrated during World Wars I and II, adequate health facilities are vital to our Nation. Health and proper educational training cannot be neglected if we are to have a generation of healthy minds and in order to have healthy minds we must have healthy bodies. The existing conditions hamper the educational training of our children as well as our Nation. On March 12, I introduced a bill, H. R. 2525, which is similar to the Taft bill, S. 472. The only difference between the Taft bill and mine is that my bill carries a $50 minimum for all school-age children instead of $40. This, of course, would increase the amount of the appropriation which would adequately finance the program. The legislation outlined below if enacted into law would help to provide a good education for all American children rather than make a minimum education available to public school children in some States.

The bill reads as follows:

H. R. 2525

A bill to authorize the appropriation of funds to assist the States and Territories in financing a minimum foundation education program of public elementary and secondary schools, and in reducing the inequalities of educational opportunities through public elementary and secondary schools, for the general welfare, and for other purposes

Be it enacted, etc., That this act may be cited as the "Educational Finance Act of 1947."

SEC. 2. No department, agency, officer, or employee of the United States shall exercise any direction, supervision, or control over, or prescribe any requirements with respect to any school, or any State educational institution or agency, with respect to which any funds have been or may be made available or expended pursuant to this act, nor shall any term or condition of any agreement or any other action taken under this act, whether by agreement or otherwise, relating to any contribution made under this act to or on behalf of any school, or any State educational institution or agency, or any limitation or provision in any appropriation made pursuant to this act, seek to control in any manner, or prescribe requirements with respect to, or authorize any department, agency, officer, or employee of the United States to direct, supervise, or control in any manner, or prescribe any requirements with respect to, the administration, the personnel, the curriculum, the instruction, the methods of instruction, or the materials of instruction, nor shall any provision of this act be interpreted or construed to imply or require any change in any State constitution prerequisite to any State sharing the benefits of this act.

APPROPRIATION AUTHORIZED

SEC. 3. For the purpose of more nearly equalizing public elementary-school and public secondary-school opportunities among and within the States, there is hereby authorized to be appropriated for the fiscal year ending June 30, 1948, the sum of $218,750,000; for the fiscal year ending June 30, 1949, the sum of $312,500,000; for the fiscal year ending June 30, 1950, and for each fiscal year thereafter, the sum of $375,000,000 to be apportioned to the States as hereinafter provided.

APPOINTMENT

SEC. 4. Ninety-eight percent of the funds appropriated under section 3 of this act shall be apportioned to the respective States, excluding those enumerated in subsection (G) of this section, in the following manner:

(A) Multiply (a) the number of children from 5 to 17 years of age, inclusive, in each State, as determined by the Department of Commerce, for the third year next preceding the year for which the computation is made by (b) $50.

(B) Multiply (a) the average of the annual income payments for each State, as determined by the Department of Commerce, for 5 years including the third, fourth, fifth, sixth, and seventh years next preceding the year for which the computation is made by (b) 1.1 percent.

(C) If, for any State, the amount calculated under (A) exceeds the amount calculated under (B), the difference shall be the amount of Federal aid due each such State.

(D) Determine the percentage ratio of (a) the amount spent in each State from local and State revenues for current expenditures (excluding interest, debt service, and capital outlay) for public elementary-school and public secondary-school education for the third year next preceding the year for which the computation is made, to (b) the average of the annual income payments for each State, as determined by the Department of Commerce, for 5 years including the third, fourth, fifth, sixth, and seventh years next preceding the year for which the computation is made.

When the percentage ratio thus determined in (D) for any State is less than 2.5, the amount of Federal aid due each such State, as computed under (C), shall be proportionately reduced.

(E) Determine the percentage ratio of (a) the estimated current expenditures (excluding interest, debt service, and capital outlay) in each State from local and State revenues for public elementary-school and public secondary-school education for the year for which the computation is made, to (b) the average of the annual income payments for

each State, as determined by the Department of Commerce, for the most recent 3 years, for which annual income data are available in the year next preceding the year for which the computation is made.

When for any year the percentage ratio thus determined for any State, after the fourth year of the operation of this act, is less than 2.2, such State shall be ineligible to receive any part of the funds authorized in section 3 of this act for the year for which the computation is made, and shall remain ineligible for that year until such time as revised estimates of expenditures, as determined in the preceding paragraph of this subsection, produce a percentage ratio equal to or greater than 2.2.

(F) In the event 98 percent of the funds authorized for any fiscal year in section 3 of this act are insufficient to pay to all eligible States the full amount of Federal aid due each such State, as computed in subsections (A), (B), (C), and (D) of this section, the amount of Federal aid paid to each eligible State shall bear the same ratio to the amount of Federal aid due each such State as the total amount of Federal aid paid to all eligible States bears to the total amount of Federal aid due all eligible States.

(G) From not to exceed 2 percent of the funds appropriated under section 3 such sums as may be necessary shall be apportioned by the Commissioner to Alaska, Hawaii, the Canal Zone, Puerto Rico, American Samoa, the Virgin Islands, and Guam according to their respective needs for additional funds for public elementary and public secondary schools upon the basis of joint agreements made with their respective State educational authorities.

CERTIFICATION AND PAYMENT

SEC. 5. The United States Commissioner of Education shall certify regularly the amounts allotted under this act to each State that has accepted the provisions of this act to the Secretary of the Treasury, who shall, through the Division of Disbursement of the Treasury Department and prior to audit or settlement by the General Accounting Office, pay to the treasurer or corresponding official of such State the amount certified for each fiscal year in four equal installments, as soon after the first day of each quarter as may be feasible, beginning with the first quarter of the fiscal year for which appropriations made under the authorization of this act are available. Each such treasurer shall account for the moneys received, and shall pay out such funds only on the requisition of the State educational authority.

AVAILABILITY OF APPROPRIATIONS

SEC. 6. (A) In order more nearly to equalize educational opportunities, the funds paid to a State from the funds appropriated under section 3 of this act shall be available for disbursement by that State to local public school jurisdictions, or other State public education agencies, for all types of current expenditures (excluding interest, debt service, and capital outlay) for public elementary-school and public secondary-school education.

(B) No provision of this act shall be construed to delimit a State in its definition of its program of public education: *Provided*, That the funds paid to a State under this act shall be expended only by public agencies and under public control, except that in any State in which funds derived from State or local revenues are disbursed to nonpublic educational institutions for expenditure for any of the purposes for which funds paid to such State under this act may be expended, funds so paid to such State may be disbursed to and expended by such institutions for such purposes; but the amounts disbursed during any fiscal year to any such institution from funds paid to a State under this act shall not exceed an amount which bears the same ratio to the amount disbursed to such institution during such fiscal year from funds derived from State or local revenues as the aggregate of amounts disbursed by such State during such fiscal year from funds paid to such State under this act bears to the aggregate of amounts expended during such fiscal year for current expenditures (excluding interest, debt service, and capital outlay) for public elementary-school and public secondary-school education in such State from funds derived from State and local revenues.

STATE ACCEPTABLE PROVISIONS

SEC. 7. (A) In order to qualify for receiving funds appropriated under this act a State—

(1) through its legislature, shall (a) accept the provisions of this act and provide for the administration of funds to be received; (b) provide that the State treasurer, or corresponding official in the State, shall receive the funds paid to that State under this act and shall be required to report to Congress, through the United States Commissioner of Education, on or before the 1st day of November of each year, a detailed statement of the amount so received and of its disbursement; (c) provide that its State educational authority shall represent the State in the administration of funds received; (d) provide for an audit by the State educational authority of the expenditure of funds received and apportioned to local school jurisdictions, or other State public educational agencies, and for a system of reports from local school jurisdictions and other public educational agencies of the State to such authority; (e) provide that the State educational authority shall make reports to the Commissioner with respect to the progress of education on forms to be provided by the Commissioner, which reports said Commissioner shall convey to the Congress with recommendations for such revisions of this act as in his judgment the Congress should consider, with particular reference to recommendations arising from changing conditions in our national economy; (f) in States where separate public schools are maintained for separate races, provide for a just and equitable apportionment of such funds for the benefit of public schools maintained for minority races, without reduction of the proportion of State and local moneys expended for educational purposes during the fiscal year ended in 1947 for public schools for minority races: *Provided*, That in any State in which the legislature has not taken the action specified in this section, the chief executive of such State may, until such action has been taken or until 6 months after the adjournment of the first regular session of the legislature in such State following the date of the enactment of this act, whichever first occurs, take such action for such period as is required by this act to be taken by legislative enactment;

(2) either through its legislature, or through its State educational authority, if the legislature so directs, provide in such manner as to comply with the provisions of section 6 of this act a plan of apportioning the funds authorized in section 3 of this act that will make available, not later than the fourth year of the operation of this act and each year thereafter, from all sources, to all local school jurisdictions not less than $50 per annum per pupil in average daily attendance for current expenditures (excluding interest, debt service, and capital outlay) for the maintenance of a program of elementary- and secondary-school education. The plan shall provide that in local school jurisdictions where separate schools are maintained for separate races current expenditures (excluding interest, debt service, and capital outlay) for the schools maintained for each separate racial group shall be not less than $50 per annum per pupil in average daily attendance; and

(3) shall transmit through its State educational authority to the United States Commissioner of Education official notice of acceptance and certified copies of the legislative enactments and the official regulations that may be issued by the State educational authority in connection with such funds. Any amendment of such enactments and revisions of official regulations shall in like manner be transmitted to said Commissioner.

(B) The funds appropriated under the authorization of this act shall be allotted only to those States which, during the fiscal year preceding the fiscal year for which the apportionment is made, have provided from State revenues for all public elementary-school and public secondary-school purposes not less than either the total amount, or the amount per pupil in average daily attendance, actually spent for such purposes in the fiscal year ended in 1947. The funds allotted to any State from the funds appropriated under section 3 of this act shall be paid by the State authority only to those local school jurisdictions that from State and local funds (which shall not be interpreted to include funds made available under this act) pay average monthly salaries to their teachers not less than the average monthly salaries paid as of February 1, 1947, or the nearest prior date when school was in session.

RIGHT OF APPEAL

SEC. 8. In the event a question arises at any time with any State educational agency, in any State eligible to share the benefits of this act, involving the administration of this act in relation to the purposes for which it is intended, such State educational agency shall have the right to appeal such question, with such statements and evidence as in its judgment are appropriate, to the United States Commissioner of Education: *Provided*, That within 90 days after such appeal, if not satisfactorily terminated, the State educational agency shall have the right to appeal to a United States district court, and such court shall have jurisdiction as to both fact and law.

DEFINITIONS

SEC. 9. As used in this act—

(A) The term "State" shall include the several States, the District of Columbia, Alaska and Hawaii, Puerto Rico, the Canal Zone, American Samoa, the Virgin Islands, and Guam.

(C) The term "minority race" or "minority State or Territorial legislature or other comparable body, except that in the District of Columbia it shall mean the Board of Education, and in American Samoa and the Virgin Islands it shall mean the Governor.

(B) The term "legislature" means the racial group" shall mean any race or racial group that constitutes a minority of the population of the continental United States.

(D) A just and equitable apportionment, allotment, or distribution of the funds provided under this act for the benefit of a minority racial group in a State which maintains by law separate educational facilities for such minority racial group, means any plan of apportionment, allotment, or distribution which results in the expenditure, for the benefit of such minority racial group of a proportion of said funds not less than the proportion that each such minority racial group in such State bears to the total population of that State.

(E) The term "State educational authority" means, as the State legislature may determine, (1) the chief State school officer (such as the State superintendent of public instruction, commissioner of education, or similar officer), or (2) a board of education controlling the State department of education; except that in the District of Columbia it shall mean the Board of Education, and in American Samoa, Guam, and the Virgin Islands, it shall mean the Governor.

(F) Annual income payments for each State, as determined by the Department of

Commerce, shall be defined as the total amount of income in cash and in kind received by residents of each State, from business establishments and governmental agencies, consisting of (1) wages and salaries after deduction of employees' contributions to social security, railroad retirement, railroad unemployment insurance, and Government retirement programs; (2) proprietors' incomes, representing net income of unincorporated establishments, including farms, before owners' withdrawals; (3) property income, including dividends, interests, and net rents and royalties; and (4) other income payments including direct relief, work relief, labor income items such as pensions, compensation for injuries, and social insurance benefits, mustering-out payments to veterans, and family allowance payments and voluntary allotments to dependents of military personnel (allocated to State of dependents' residence).

SEPARABILITY

SEC. 10. If any provision of this act or aplication thereof to any State, person, or circumstance is held invalid, the remainder of the act, and the application of such provision to other States, persons, or circumstances shall not be affected thereby.

Bonneville Power

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1947

Mr. ANGELL. Mr. Speaker, as I have recently pointed out on the floor, hydroelectric power in the Pacific Northwest is being overtaxed to meet the demands of industrial and domestic users. Unless a forthright policy is continued to provide increased facilities for production and distribution of power the Northwest will suffer great injury in the years ahead. This whole subject was discussed by Dr. Paul J. Raver, Administrator of the Bonneville Power Administration, before the annual session of the National Rural Electric Cooperative Association in Spokane, Wash., on April 24, 1947. I include in my remarks his factual and timely discussion on this important problem which is as follows:

During the past few days you have had an opportunity to learn something of this great Pacific Northwest region of ours—of its rivers, its mountains, its resources and its people; of the hopes and plans for its full development, not only for the benefit of those living in the region but for those of the Nation as a whole.

Many factors enter into regional developments, but the complexities of the problem are to a large extent dissipated if, in approaching the matter, immediate consideration is given a single basic element. This element is the provision of an adequate and expansible energy base—the base upon which rests the entire economy of any region or any nation, for it is energy that turns the wheels of the factories, lights the cities and the farms, puts water on the land and in general gears the progress of development in this technological age of ours.

This was the approach taken by the Federal Government here in the Pacific Northwest when it embarked upon the construction of multi-purpose dams along the Columbia River and its tributaries. Here, in this great river system, was the greatest energy base available—a base predicated upon the inexhaustible power of falling water.

Development of waterpower was, and still is, the only answer to the region's problem of supplying an adequate base to bring about full resource development in the Pacific Northwest. The region lacks coal in industrial quantity. It does not have oil. It does not have natural gas. All of these energy resources must be imported. Wood waste, burned to a considerable extent in the past for steam generation of energy, is becoming more valuable as a raw material to provide the fibers for building board needed in a critical housing program, or for use in the manufacture of alcohol and other higher products.

So, we find water the only reliable future source of power, and the Federal Government is attempting to help with the job on the Columbia River, a stream too large for private investment to undertake to develop economically.

With the completion of Bonneville Dam near at hand, the Congress determined that the power generated at the plant be put to the widest possible use at the lowest possible cost throughout the region. In August of 1937 it established the Bonneville Power Administration within the structure of the United States Department of the Interior. The purpose of the Administration at that time was to market at wholesale the available electric energy generated at Bonneville Dam. Subsequently, with upstream development at Grand Coulee and elsewhere on the river system, the Administration's market functions were expanded by departmental and Executive orders and by Congress. Today it is the designated marketing agent for Grand Coulee power and for power to be developed at McNary and Foster Creek Dams on the Columbia below Coulee, the series of projected dams along the lower Snake River and in the Willamette River Valley, and the Hungry Horse project in northwestern Montana.

Thus, over a period of 10 years, the Bonneville Power Administration has become the major wholesaler of power in the Pacific Northwest, and as such the key agency in the program for the development of the region's energy requirements.

In order to provide the Administration with the necessary tools for the marketing of the Columbia River Basin power, Congress specified in the Bonneville Act that transmission lines, substations, and other necessary facilities be constructed throughout the area "for the purpose of transmitting electric energy * * * to existing and potential markets." These lines, Congress said, would "encourage the widest possible use of all electric energy that can be generated and marketed" and at the same time "prevent the monopolization" of the power "by limited groups."

The administration has built lines—some 2,900 miles of high-voltage circuits to date—and is selling the power at wholesale to both publicly and privately owned distribution systems, as well as industry, throughout the region.

The administration, in order to chart its course more clearly in the work of giving the region the full advantage of the power from the Columbia system, set up five major objectives, and it is of some of these I wish to speak today.

Our first objective is to make the power a tool for the development of new wealth—to make it the means of opening up new opportunities for investment, enterprise, and employment—for agriculture, for new industries, for small business, and for the individual.

Secondly, we believe that increasingly large quantities of power at consistently low rates should be provided in order to create new opportunities for free enterprise. In industry and agriculture, the key to the whole power question is price with the cost to the consumer determining finally the extent of its use.

Our third objective is to make low-cost hydroelectric power provide new sources of tax revenues. New farms and new industries mean taxpaying population. They mean tremendous gains in tax income for local, State, and Federal governments; tremendous gains in the wealth and general welfare of the Nation economically and from the standpoint of security.

Fourth, we believe that the hydroelectric resources of the Northwest should be the means for providing asset-building jobs for returning servicemen and for war workers who are now seeking employment in the region.

Our final objective is to return to the people of the United States, with interest, their investment in the Federal power facilities of the Northwest, and this is being done today ahead of schedule and at the lowest wholesale rate for power in the country.

For purposes of discussion today, I want to go into some detail on the matter of what this Government development—this expansion of the energy base in the region—has meant out here and to the country as a whole in terms of the creation of what we call new taxable wealth. This is one of our key objectives and as such is directly related to the others I have just mentioned. The story is a thrilling one and well documented.

Creation of new taxable wealth is important to every taxpayer. Generally speaking, by increasing the base which bears the tax, the individual burden is decreased. This is particularly evident in the case of public debt and fixed governmental costs. Likewise, the larger the tax base in a county, the lower the tax rate to raise a definite amount of money.

The Federal-power development along the Columbia River and its tributaries is expanding the taxable wealth of the Nation. Not only is it paying its own way and subsidizing irrigation through power revenues, but it already has resulted in contributions in taxes on new private investment and incomes in excess of the total power investment on the river of $280,000,000 as of the end of 1946. These returns to the Federal Treasury can be traced directly or indirectly to Columbia River power—the tool that has created new opportunities for regional development through development or expansion of industry and business and other related activities.

But let us examine more closely what this cheap, assured, and potentially expansible energy base in the form of Columbia River power has accomplished to date in the creation of this new taxable wealth in the Nation.

In 1944, 12 new industrial plants served by the Bonneville Power Administration represented an investment in fixed plant and equipment of some $160,000,000. The size of this investment can be more fully appreciated when one considers that it is equivalent to 4 percent of all taxable property in the States of Oregon and Washington in 1939.

Construction and operation of these industrial establishments served directly by the Bonneville Power Administration, exclusive of the shipyards, have paid $58,000,000 in income and excess-profits taxes. Utilities purchasing Columbia River power have collected and paid large sums of excess-profits taxes which can be attributed to their sale of low-cost Federal power. Customers of both publicly and privately owned systems have received rate reductions because of low-cost Federal power. REA cooperatives in this area have benefited, bringing low-cost power to farmers and making more certain the payment of their loans from the Federal Government.

These figures represent direct benefits to the country in the form of new taxable wealth—of new, hitherto nonexistent income.

Indirect contributions of this new wealth-creating development out here are much larger. Boeing Aircraft alone paid $116,000,000 in income and excess-profits taxes in the 6 years 1941-1945. This company could not have made such a showing without aluminum produced by Columbia River power, which in 1947 will account for 40 percent of the country's entire output of the metal. Yes, the indirect effects are very great. For example, the aluminum industry here in Spokane, dependent wholly upon Columbia River power, is now supplying about 20,000,000 pounds of plate, sheet, coil, and circle monthly to some 600 fabricators throughout the country. An aluminum pot and pan manufacturer in New York, a building contractor in Chicago, a lawnmower manufacturer in Los Angeles, a truck body builder in Spokane all have made large investments based on the availability of the aluminum from these power-generated plants of the Pacific Northwest. They have made their tax contributions, as well as their job contributions, because the Government pioneered this cheap power program. Over 2,000 products are manufactured throughout the Nation from Spokane aluminum alone. Some 350,000 workers in all sections of the United States are dependent upon the supply of aluminum from the plants in this city. A billion-dollar pay roll is dependent upon it, and that pay roll in itself is taxable wealth.

The Spokane plants are only part of the story. The same thing is true with respect to all of the others in the region that are feeding upon the energy of the Columbia River.

Besides supplying materials for increased national production, the Columbia River power has expanded the income not only in the Pacific Northwest through large, new pay rolls, but also in the East, South, Midwest and other regions by building Pacific Northwest industry and Pacific Northwest residents into a larger market. This has made a better market for the products of the farms, as well as the factories.

New factories attracted to the Pacific Northwest by Federal power from the Columbia River projects too have made large local tax contributions. Through 1946, the 12 plants served directly by the Power Administration paid over $2,500,000 in local property taxes. Taxes on the homes of the workers directly employed amounted to about $1,000,000. Taxes for 1945 based on peak valuation of 1944 totaled $734,000. Workers' housing paid an additional $275,000. In many cases the new plant is the largest single taxpayer in the county. Clark County, Wash., for example, has 85,000 residents. Only 900 of these are directly employed in the new aluminum plant. Yet this company paid 8 percent of all property taxes payable in the county in 1947. Here in Spokane the three light metals plants paid $395,000 in property taxes in Spokane County for 1946. This is more than the combined property taxes in the county of all six railroads serving this important rail center. It is 75 percent greater than the property taxes paid by the Washington Water Power Co., one of the major taxpayers of the county.

Similar situations exist in other Pacific Northwest counties securing new factories as a result of this newly developed energy base. To a lesser extent local tax bodies throughout the Nation are also securing advantages as new factories rise to utilize Pacific Northwest materials or to supply the rapidly expanding Pacific Northwest market.

I spoke earlier of what the creation of these new tax sources do in the way of affecting the general tax structure of the country. We already have had some local examples, particularly in the case of Clark County, Wash. There farmers, home owners, merchants, the railroads, and the utilities have smaller tax bills as a result of the establishment of the aluminum industry in the county. In 1940 the county levied 12 mills to raise $249,494. In 1947 it levied only 9.37 mills to raise a larger amount—$277,891. The same can be applied to the national picture, for the contributions of the development here in the Pacific Northwest bear directly upon the income of the Nation and ease the problem of taxation on a national scale.

So here we have the picture of the Federal program in the region—what it means in the light of cold business terms. To me it is a convincing picture. To me it is an example of the true purpose of government, namely, to help, where necessary, to provide the tools with which the people of the country can make a living through private initiative, and live in peace and security.

But what of the future out here? We have enjoyed the prosperity of our new growth. The future can be promising but it may not be if we fail to expand our energy base. In the years ahead we can achieve greater goals for the benefit of the region and the country. The tax returns from the development out here thus far is but a pittance compared to what will be returned in the future if we are not short-sighted and delay in the expansion of our energy base—the element that makes such growth in the future possible. The industry which has grown in the Pacific Northwest on our present available energy base should not be considered the ultimate, but rather as the beginning. It should be regarded as but the first step in realizing the potential that can be ours, for the region and the Nation. McNary Dam, Foster Creek Dam, Hungry Horse Dam; these should be rushed to completion if we are to keep abreast of our energy requirements.

There is much concern over the problem of national security. This worry reflects the realization that as a nation we have seriously depleted many of our key resources to support the past war. We are on the verge of becoming an importing nation for many of the basic raw materials which in the past we have always felt were ours in unlimited abundance. This is the problem that has made it necessary for us to readjust our thinking from isolationism to internationalism, whether as individuals we wish it or not.

Our existence as the industrial leader of the world is predicated upon the availability of raw materials and the stability of our energy base. We can have the greatest technological developments in the world, but if we do not have the raw materials and the energy, we have nothing.

Hydroelectricity alone has not developed this region. We have prospered on California oil and Rocky Mountain coal. They are important sources of energy, but they are of necessity expensive and subject more and more to interrupted supply. As for oil, it is anticipated that within 10 years California's reserve will approach the point of depletion and that State, instead of being an exporter will become an importer. Coal no longer is the cheap fuel that it was, and there is constant disruption in its production and supply.

But we do not need to depend on forecasts to see the seriousness of the oil situation. There is a national shortage of fuel oil today and a critical oil shortage in the Pacific Northwest. The private and public utility agencies of this region, meeting in Tacoma, Wash., on April 14 estimated they would require 3,000,000 barrels of oil for fuel for their steam-generating plants this fall. They have thus far been unable to obtain commitments from oil companies to handle the supply. They must have this oil if the Northwest is to carry through the year without curtailment of power supplies because the hydroelectric capacity in the region is insufficient to meet the demand. This situation will become progressively worse until the program of the Federal Government for building additional dams on the Columbia and its tributaries catches up with the demand for power. More steam plants are not the answer because of the oil shortage. More hydro plants are the only solution to our problem here.

With this situation facing us, the Federal Government must turn to the waters of our rivers for future supplies of energy. We cannot predicate our future growth upon any other source. To do so would be foolhardy. We must take from our rivers their energy, thereby contributing not only to the continued industrial and economic growth of the Nation, as well as the region, but at the same time conserving our other energy resources for higher economic uses than fuel for electricity generation.

Creation of new taxable wealth with its attendant benefits in new jobs, new investment opportunities, and a broader tax base, together with conservation of our declining oil supplies, would be reason enough to justify the Government expenditures for these great dams, generators, and transmission lines. But we are not depending on these justifications alone. We are paying back to the taxpayers of the Nation the full costs of these power projects.

As of January 1, 1947, we had gross revenues of $94,753,000 from power sales. Out of this we had set aside $29,417,000 of interest on the power investment; $15,291,000 had been set up to cover depreciation of the property; $31,122,000 had been used for the expenses of operation and maintenance, and $18,923,000 of net surplus remained. Our pay-out studies show that we will pay off the Grand Coulee and Bonneville projects over a 50-year period while at the same time making a direct subsidy payment to the cost of the Columbia basin irrigation project of $250,000,000 from power revenues and have $195,000,000 left over for contingencies. The land owners on the Columbia basin irrigation project, in the meantime will pay $85 per acre on some 1,000,000 acres during the same period.

This program is not a gift from Uncle Sam. It is a big business proposition in which the Government is in partnership with the people of the region who will foot the bill. The people and the Nation will reap the benefits.

In closing I would like to leave this last summary thought about this great developmental program out here in the Pacific Northwest. It is a program to undergird and expand the free enterprise system. It is a program to expand opportunities for the exercise of individual initiative and of private capital. For the private capital system anywhere depends for its success on three factors—one, an assured energy base; two, an expansible energy base; and, three, a cheap energy base. Finally, it is a program to bring to the people of this fine land of ours a richer way of life, and to the Nation greater security by contributing to the industrial might that is already ours.

Rent Control

EXTENSION OF REMARKS
OF
CLARE E HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1947

Mr. HOFFMAN. Mr Speaker, to show that there is more than one phase to this issue, I am inserting typical let-

ters from two landlords. They read as follows:

BUCHANAN, MICH.

I am a veteran of World War II and, last January, purchased a home in the suburbs of South Bend, Ind. The tenants, now residing there, are paying me a frozen rental of $25 monthly, yet I am obliged to pay out $57 monthly on the mortgage. In addition, I must lease accommodations for my family and drive 40 miles to work each day. Consequently, such an arrangement is not a paying investment.

The local rent control officer, Mr. Jackson, can do nothing about the situation except to abide by the stupid rules which govern your agency. However, you can take action on this unusual case and dispatch an appraiser to that property, 115 East Darden Road, South Bend. Get a complete report on the condition of the premises and the taxes paid on them. Other properties in that neighborhood are getting twice that rental for facilities much poorer.

I will expect immediate action from you, through Mr. Jackson perhaps, so that some sort of justice will be forthcoming in this case.

ST. JOSEPH, MICH.

In regard to rent control, I feel that it is high time we should have relief. I am a widow and have to work for a living and I have an apartment to rent, but my food bill has just about doubled and my decorating and everything I have done just about costs me double until I could just about lock up my apartment and be money ahead. With the high withholding tax I pay on my wages plus this rent control business is far more than I can carry and I think it is very unfair to penalize people who try to earn their own living. Furthermore, the wages in most cases are so high I cannot see why people earning such wages as most working people earn, why they should be protected from paying a reasonable rent. A great many of them spend their money in taverns and such places and never will have anything anyway no matter how much the Government tries to help them.

Treatment of Finland

EXTENSION OF REMARKS

OF

HON. ROBERT J. TWYMAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1947

Mr. TWYMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to submit herewith an editorial by Frank C. Waldrop, which appeared in the Washington Times-Herald on Sunday, May 4, 1947. Most real Americans continue to be amazed by the un-American treatment of the Finnish people, which is described in this article. Americans like myself continue to sympathize with Finland, the only country which recognized and fulfilled their obligations to the United States. Unlike other countries, we owe them much. We true Americans put both Greece and Turkey on their guard when they accept willingly or unwillingly the offer contained in the so-called Truman policy.

The editorial follows:

OUR DIRTIEST TRICK

(By Frank C. Waldrop)

People who are rushing around to sell the need of American investment in Greece and Turkey as post-World War II insurances should be reminded of what our money has done to another small country.

First we handed that nation a few million dollars with which to get going after World War I. At the time we did it, hardly anybody in the U. S. A. had any idea where or who or what the country was, but it was in need and we felt generous.

As time passed, the country in question became a sort of pet.

We were proud of its record in the world and proud that we had financed its independence—especially proud because of all the nations we had backed, that was the only one to show any gratitude.

Billions that we loaned out elsewhere went a-glimmering. But that one nation never missed a payment.

Right. It's Finland we're talking about.

By 1939, Finland was completely convinced that right living and good conduct had made it a place in the world.

The Finns were progressive, democratic, energetic, businesslike, and highly cultivated.

They had no illiteracy, no slums, no radical extremes of wealth or poverty, and only one national fear—that something would happen to submerge them again under the heel of Russia, which had never stopped in 500 years a determined campaign to control the Finnish peninsula.

Well, in 1939 catastrophe struck. Hitler and Stalin made a deal against humanity. Between them they split Poland. Stalin also swallowed Latvia, Lithuania, and Estonia. Then Stalin undertook to swallow Finland, too. In that he made a bad miscalculation. The Finns refused to be swallowed.

Instead they fought like demons while we cheered them on from a very safe distance.

They came finally out of their first round in 1940 still with their independence but very badly clawed and shaken.

They had showed up Russia's weakness by slaughtering dozens of divisions of ill-trained troops, though in the end the sheer weight of Russian mass had smothered them.

And they had not only showed up Russia. They had also showed up the United States of America.

For a generation America had petted and praised the Finns. Yet when the Finnish chips were down our chips were not. We were looking the other way.

The Finns couldn't understand that and who could?

They had hardly expected us to go to war on their side but at least they expected our friendly support and some kind of material aid in the clinches. They were wrong.

Not only did we duck out on them then, but as the World War wore on past Pearl Harbor we followed Russia's orders and really cracked down on the Finns in a dozen nasty ways.

Finally, the Russians attacked Finland for the second time, and so, in desperate self-defense, they tied up with Hitler.

Yet even in that they really stood alone, for before the end they were fighting not only Russians on the one side but Germans on the other to preserve the last shreds of their independence.

Their story is one of the war's most poignant tragedies, and one in which we played our most ignoble part.

The dirtiest trick of all was America's pretending to be the great, big-hearted pal of Finland and then running out when trouble followed.

We might at least have tossed the little fellows a few dollars in our prodigal performance of the past 3 years, and we might have done something at the peace table to make the Russians ease up on them.

But we didn't.

Today, Finland is a completely subject state. Russia dictates its politics, economy, and foreign relations. As a sovereign power, Finland does not exist. And in Finland today the United States of America lacks what you might call popularity.

The Finns have seen the seamy side of our character.

And so the Turks and the Greeks, whose fingers are twitching to get hold of that glittering bauble of money the Truman administration is holding up to them, had better think twice.

So had we. Our reputation for constancy is bad enough already.

If we were really interested in square deals abroad, we would have cleaned up our debt to the Finns which we obligated ourselves to pay when first we dangled our dough before their eyes a generation and more ago.

That debt of ours needs no describing. Every American knows what it is. And every one of us knows it is unpaid. We owe those people a national apology.

Scientists and Atomic Control

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1947

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I herewith include the following editorial from the East St. Louis (Ill.) Journal of Wednesday, April 30, 1947:

SCIENTISTS AND ATOMIC CONTROL

There is, understandably, a great deal of pessimism regarding the possibility of the United States and Russia resolving their differences to the point where agreement for effective international control of atomic energy can be achieved.

For more than a year there has been fruitless debate concerning atomic control; and each statement of principles by American and Soviet spokesmen has merely served to emphasize the basic conflicts between the minimum requirements of the two great powers. Even such a patient and seasoned statesman as Bernard Baruch, after a year as chairman of the United States delegation to the United Nations Atomic Energy Commission, resigned in ill-concealed despair.

There has been no sign of compromise on the fundamental differences by the two powers who must agree if there is to be agreement. Shall we, then, give up in despair?

By no means, in the opinion of the Bulletin of the Atomic Scientists, published by scientists who took part in the development of the atomic bomb. In an editorial, the Bulletin declares:

"* * * We cannot rest in the satisfaction of having offered a fair and imaginative plan for international atomic control, and the disappointment of having seen that plan derided and largely rejected by the Soviet Union.

"We do not believe that all the possibilities of a peaceful solution have been exhausted."

Writing in the Bulletin, Prof. Leo Szilard, one of the world's leading atomic scientists—and the author of the technical memorandum that accompanied Albert Einstein's letter to President Roosevelt in 1939 which resulted in creation of the Manhattan project—calls for a crusade for a world-wide

system of economic and cultural cooperation within the framework of which atomic agreement might be reached.

Szilard's idea is that if we bait our atomic hook with other desirable international activity, Russia might bite.

But the point is that rather than giving up hope for international atomic control, the men who created the A-bomb are more insistent than ever that we keep striving for a settlement.

The Only Way Is To Be Prepared

EXTENSION OF REMARKS

OF

HON. CHESTER E. MERROW

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1947

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herein the following editorial from the Carroll County Independent, published in Center Ossipee, N. H., of May 2, entitled "The Only Way Is To Be Prepared":

THE ONLY WAY IS TO BE PREPARED

While the peace conference in Moscow was getting nowhere very fast and broke up without a single important decision being made, Congress was doing little to merge and increase the efficiency of our armed forces.

If we are honest, and face the facts in the case, we must know that no nation in the world can protect us if another war breaks out. France is smashed economically. The English Empire is disintegrating. These once great powers that absorbed the initial offensive in World Wars I and II will not be in a position to play the same role if World War III should come.

If we are to win, or even survive World War Three, when, and if it comes, we must have an extremely well integrated and efficient armed force for both offense and defense.

International conflict of the future will move with such speed that only the nation that can move with unified command and complete integration of all the branches of the service can hope to survive.

It is common knowledge that the army of the future will move in at least 200 miles per hour, completely air-borne. Pursuit planes will travel above the speed of sound, and bombers well up to the limits of sound. Already we possess bombers that can fly to any city in the whole world, drop atomic bombs, and return to their base.

If we can do this, it is foolish to say that another great nation cannot do the same.

Yet some Members of our Congress seem to be ridden by Civil War psychology, when an army's rapidity of movement was limited to the distance the average soldier could march under full equipment in a day.

We all know, or should by this time know, that there is no second price for the loser of a war. The loser is left with nothing and the winner is left in a semicrippled condition.

A Third World War would probably leave us with a wrecked financial structure, depleted national resources, and a dozen bombed-out cities, even if we should win.

The only way to avoid another conflict is to be so strong—with the best air force, army, and navy, all integrated under a single Secretary of Defense—that no nation will challenge us.

Pearl Harbor is only 6 years ago this next December 7, but already its fearful memory is slipping away.

Labor Legislation

EXTENSION OF REMARKS

OF

HON. HARVE TIBBOTT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1947

Mr. TIBBOTT. Mr. Speaker, under leave to extend my remarks, I include the following editorial which appeared in the Johnstown Tribune, Johnstown, Pa., Saturday evening, May 3, 1947:

GOVERNING TOO MUCH

In writing labor legislation the job of Congress is to establish basic policy—not to decide upon matters of detail which can better be left to the mutual give-and-take of private bargaining.

The Wagner Labor Relations Act of 1935 not only set a policy, but tried to regulate many details of the relationship between employer and employee. The policy lacked that impartiality which Government should preserve toward every citizen, regardless of class, creed, or color. The interference in details necessarily reflected that lack of balance and not only favored employees as against employers, but some segments of labor as against others.

As it moves toward correcting the errors of the Wagner Act, Congress should avoid the "ancient insanity of trying to govern too much." There are certain fundamentals which should be included in the contemplated labor legislation. These are:

1. Equal responsibility of both parties for breach of contract. To give either side the prerogative of irresponsibility is an invitation to neglect the primary obligations which are implicit in the signing of any contract.

2. Establishment of democratic practices. No citizen should be coerced in expressing his wishes regarding bargaining representation, whether the coercion comes from the employer or agents of the union.

3. Protection of the public interest. The injunctive power of the courts should not be impaired, but that power should be invoked only when it is evident that the public interest is truly affected. The right to bring this injunctive force into play should therefore be confined to responsible public officials.

These things are basic, and a law which established such principles could last for centuries without being altered by changes of administration.

Certainly no strike should be permitted against Government, because such strikes imply the power of a minority to paralyze Government, which is wholly incongruous with our conception of majority rule. We believe also that the secondary boycott contains an element of the fatal principle of the general strike which has been so disastrous wherever it has been tried. But as for strikes in private industry, we shall have to depend in the final analysis upon the good sense of employers and employees to avoid work stoppages which are costly to both.

Whether collective bargaining is industry-wide or local ought to depend very largely upon the nature of the industrial area in which the bargaining takes place. The closed shop works well in some cases, badly in others. The proper type of bargaining unit must be determined by the conditions in each case. These are details, concerning which general legislative regulation would fail of its purpose.

By making collective bargaining really democratic, making union and management equally responsible for breaches of contract, and protecting the public interest through the courts, Congress will have set a policy under which employees and employers can fairly work out their own destinies. The aim should be the ultimate withdrawal of government from interference in all the details of labor-management agreements.

Senator TAFT is right in his contention that the labor bill presented to President Truman should be a unified and coherent whole, and not a set of piecemeal regulations. But the bill should avoid the error of the Wagner Act—the error of requiring government to decide matters which should be left, as far as possible, to private negotiation.

Address of Dr. James B. Conant

EXTENSION OF REMARKS

OF

HON. ROBERT TRIPP ROSS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1947

Mr. ROSS. Mr. Speaker, under leave to extend my remarks, I include herein the following address by Dr. James B. Conant, president of Harvard University, delivered at the thirty-fifth annual meeting of the Chamber of Commerce of the United States on Thursday, May 1, 1947:

In the announcement of your annual meeting your officers have said that the world is on the threshold of a new era—the atomic age. Now as the former Chairman of the National Defense Research Committee and former deputy to Dr. Bush, the Director of the Office of Scientific Research and Development, you may expect me to give you all the answers to the $64,000,000 questions about the future of atomic energy. Yet I find it difficult to comply with this request. In the first place, it is my contention that we must be careful how we use this phrase "atomic age." Scientifically, we are now living in the atomic age. The physicists and chemists are exploring a wonderful universe to which there seemed no access a short 10 years ago. And from this exploration will undoubtedly flow many practical consequences of which we cannot now even dream.

From the industrial standpoint, however, the atomic age is quite another story. That age lies over the horizon and it is not for me to gaze into the crystal ball and tell you either when this age will dawn or what it will be like. I content myself by warning you against taking your technical prognostications from the daily press or current gossip. I content myself with quoting from the official bulletin of the United Nations Technical Committee, wherein it is stated that "The large-scale production of electric power from atomic energy appears feasible though still in the developmental stage." In guessing at a time scale far be it from me to stick my neck out any further than the scientists of the United Nations.

Finally, as to the atomic age from a military point of view, it is my contention that we are not living in this age in spite of the fact that the atomic bombs have since 1945 been part of the official armament of the United States. We shall only be living in the atomic age when two nations have bombs in quantity sufficient to constitute a military menace to each other. And I am frank to say I hope we shall never have to live in such an age. I hope before that grim time comes, the United Nations will have adopted and put into operation something approaching the famous Acheson-Lilienthal plan.

As far as public opinion in the United States is concerned, I think most people are now convinced that if we are to avoid living

with a sword of Damocles hanging over our industrialized civilization an international control of atomic energy is essential. To date, however, we appear to have had some difficulty convincing our Russian friends of the desirability of such a scheme. Now the dwellers in the Kremlin are hard-headed realists; I can only conclude, therefore, that these gentlemen think that an international control of atomic bombs is unnecessary. Perhaps, they do not appreciate the military value of the bomb; perhaps they do not realize that until atomic bombs are abolished by international agreement they remain a method of waging war, if war should come. But it seems more likely to me that they may well expect the United States to disintegrate in a whirlpool of internal troubles in the postwar world. Even the shrewdest of men, if thoroughly imbued with the Marxist philosophy, can hardly escape wishful thinking about the United States; and as long as this thinking seems plausible to our Russian allies of World War II, so long, perhaps, may the international control of the atomic bomb be delayed.

Now if there be any merit in this line of argumentation, the healthy growth and continued strength of this country is a prerequisite to the successful solution of the problem of the atomic bomb. And tonight I am going to be bold enough to maintain the thesis that the strength of our free society is intimately connected with our success or failure in making our system of public education work. To me, our free tax-supported schools are the sinews of our democracy. For they are a product of that special history of this Nation which has likewise produced the unique American ideals which must guide our future. They are likewise the guardian and transmitting agency of those ideals on whose vitality the future of our democracy depends.

Before attempting to document this proposition, which has probably already aroused a spirit of skepticism among you, I must first trespass on your time to consider what are in fact the goals which we Americans have set ourselves as a free people. For a sound educational philosophy must be based on a considered social philosophy. This in turn requires a formulation of ends to be achieved in a democracy by the cooperative action of the citizens. The schools and colleges of this country are powerful instruments for forwarding our ideals and shaping the nature of our country. Therefore, we do well to face the question at the outset: What sort of a society do we want to develop here in the United States in the next 100 years?

To do justice to this question one should write a volume, but in spite of the complexity of the details I believe we can sum up our typical American hopes and aspirations in a few words and phrases. Our American ideals spring from the history of this Nation. Our political creed was formulated in a revolutionary era which has been nourished by the writings of the eighteenth century. From this heritage comes our adherence to a form of representative government based on free elections, untrammeled discussion of political issues, universal suffrage. Our legal system is founded on the centuries of evolution of the doctrines of the common law and we consider the rights of the individual as of paramount importance: trial by jury, the writ of habeas corpus are as essential to us as the air we breathe; likewise, the civil liberties, including religious freedom embodied in the Bill of Rights. However much we may differ among ourselves in the inevitable cleavage between the right and left as to specific measures to be taken by governmental bodies (local, State, or Federal), we never cease to think of officials of the Government as our agents. American conservatives and American radicals alike join in repudiating the alien notion that the state as such is a mystic entity to be worshiped or a transcending force to direct the lives of ourselves or of our children. All this is so obvious as hardly to be worth taking your time to restate here tonight. I do so only to contrast these political ideas common to all democracies with certain unique ideals which are the hallmarks of American democracy.

To my mind, these ideals which I shall sum up by the words "equality of opportunity" and "social democracy" are a product of our special history. In the first place, this Nation, unlike most others, has not evolved from a state founded on a conquest. As a consequence we have nowhere in our tradition the idea of an aristocracy descended from the conquerors and entitled to rule by right of birth. On the contrary, we have developed our greatness in a period in which a highly fluid society overran a rich and empty continent, and one of the highly significant ideals of the American Nation has long been equality of opportunity. This implies on the one hand a relatively mobile social structure changing from generation to generation, and on the other mutual respect between different vocational and economic groups; in short, a minimum of emphasis on class distinction. That is why we Americans so often refer to a man as being "democratic" when we have reference not to his partisan affiliations but to his social habits. That is why we Americans have insisted that our public schools be as far as possible ladders of opportunity.

Our economic system, our political institutions, and our social ideals form a closely interwoven pattern. Equality of opportunity could only be a reality in a political democracy, it would have meaning only in a competitive society in which private ownership and the profit motive were accepted as basic principles. If I had time, I should like to discuss at some length how the impact of the European radical doctrines of the nineteenth century based on the notion of a class struggle has confused the thinking of some of our reformers in this century. These foreign doctrines have to a considerable degree diverted the attention of forward-looking men and women from the social goals implicit in our native American tradition. As a consequence, we have thought too little of our system of public schools—the concrete expression of our belief in equality of opportunity—we have thought too little of this system of universal education as an instrument of national policy.

Our type of political, social, and economic system is on trial in the grim world of the mid-twentieth century. I have no doubt that it will prove its worth not only here at home but in distant lands if we regard it as a growing, changing system moving gradually forward toward certain distinct and characteristic goals. These goals include:

1. The continuation of a form of government based on free elections and free expression of opinion.

2. A continuation of the many relatively independent government units, towns, cities, States, and the Federal Government—a flexible though complex system which allows for the maximum of home rule.

3. A much greater degree of honesty and efficiency in all these governmental units.

4. A continuation of our highly competitive economic system with its wide divergence of pecuniary rewards.

5. A greater degree of social mobility and fluidity and a lesser degree of social distinction between occupational groups.

6. A greater degree of equality of opportunity for the youth of each succeeding generation.

With some such goals in mind, let me turn to the role of our public schools in strengthening our democracy. In so doing we may think of our system of education as having a twofold purpose. First, the preparation of the future citizens of the nation for life in the kind of democracy we have in mind. Second, in developing all the varieties of talent latent in each generation and educating this talent as fully as is required. The first aspect of education may be spoken of as general education or education for citizenship or education for the good life; the second, as vocational training of which professional education is one special aspect. In short, we must concentrate on two problems: first, how to promote the best education in a democratic land for all American youth; second, how to find and develop the special talents needed in the great variety of occupations and professions characteristic of a modern industrialized nation.

Now, let me remind you of the fact that the situation which confronts our public schools today has little or no relation to that of 40 or 50 years ago.

I suppose everyone realizes to some degree how fast we have been moving toward the goal of universal education. But let me remind you of some startling figures. Seventy years ago there were 80,000 students in our high schools, in 1940 there were 7,000,000; 70 years ago there were 60,000 in our colleges, in 1940, 1,500,000. In the 70 years the population went up three times, the number in the secondary schools 90 times, the number in our colleges 25 times. We are now very close to our goal of universal education through the first eight grades, and have reached a point where one can argue as to how much larger a percentage of our youth should finish high school and go on to college work. In the last 50 years the American people have constructed a vast engine of democracy, our system of tax-supported schools. Now the problem is to make it run smoothly and in the best interests of the United States. Or to change the metaphor, our problem is one of improving at every level the quality of the job. And in many instances on the quality turns the difference between success and failure of the system.

But before discussing how we are to improve our schools, let me dwell a moment longer on the general nature of our effort. I have spoken of the uniqueness of our public schools. This uniqueness of our American system of public education lies in its flexibility and its democratic spirit. As contrasted with systems of universal education which have grown out of the European countries, it is unique, first, because there is little or no differentiation according to ability or taste or vocational goal among students in our public schools until after the high-school years are past. Second, because a very considerable percentage of the students go on to high schools, and, as compared to any other country, a very large percentage go on for post-high school education.

How significant is the first point is brought out by some comments of the United States educational mission which paid a visit to Germany last summer. They found the basic education system of Germany had been little modified by the Nazis, though the machinery had been captured by them to promote their totalitarian ends. But the fundamental structure of the German school system long before the Nazis reflected a spirit which differed from that which prevails in American schools. It was based on the philosophy of a class structure. It was the antithesis of our system which reflects the spirit of a democracy committed to the idea of equal opportunity for all.

"The German school has hitherto been a dual system," the Commission writes, "one for the 5 or 10 percent of intellectually, socially and economically favored who go on to secondary school, university and the professions; the other for the great group who have 4 years more of tuition-free elementary school and three or more years of vocational training. When he is 10 years of age or younger, a German child finds himself grouped or classified by the factors over which he has no control; such grouping to determine almost inevitably his status

throughout life. This system has cultivated attitudes of superiority in one small group and inferiority in the majority of the members of German society, making possible the submission and lack of self-determination upon which authoritarian leadership has thrived."

There is no need to point out to this audience the difference between such an educational philosophy and our own. Our democratic educational philosophy is a reflection of the ideals of this Nation. If we are to be strong in this tough postwar world we must strengthen our faith in these ideals and make our social realities a closer approximation to these ideals. Seen in such a setting the problems of our public schools take on an exciting nature, they are recognized as second to none in importance from the viewpoint of the survival of our free society.

To turn from the general to the specific the immediate job is to raise teachers' salaries and recruit more and better teachers for our schools. We are now in a crisis of public education. The situation in regard to teachers' salaries has been bad in many localities for decades. The drastic upswing in prices has made a bad situation a nation l scandal. The revelation of the shocking conditions has awakened public opinion, and locally in many States something is being done. But very much more needs to be accomplished.

If the gravity of the situation is brought home to the American public I am convinced that through local and State taxes, funds will be forthcoming in many sections to improve matters to a considerable degree. You have already had one session of this meeting devoted to the question of the financing of education. I do not want to repeat the arguments here again tonight. But I do wish to go on record as favoring a law providing general Federal aid for schools in those States which require this assistance, and a law which will stimulate the States to spend more on their public schools. Such a law would be in existence if Senate bill 472 sponsored by Senator TAFT and others should be passed by the present Congress.

Some of you may be suspicious of Federal aid bills. You do not want Federal strings to your local schools. Neither do I. Bill S. 472 is a very careful device. It seeks to maintain minimum educational levels by Federal aid where needed. But without Federal control. The abstention from any degree of Federal control over the States is painstakingly detailed in the bill.

Why should the citizens of a relatively wealthy State be taxed to help the education in poorer States? I often hear this question asked by those who oppose Federal aid. The answer is obvious and twofold. First, as the population figures show, we are a mobile people; there is a constant movement of inhabitants from one State to another. Particularly is this true as regards rural and urban areas. The future citizens of many of our wealthy cities are now being educated in our poorer States. Second, all the youth of the country are future citizens of the entire country; their activities as citizens and voters will determine the kind of nation we and our children are going to be living in in the next half century. Indeed, I can go further and say the education of all our future citizens may well determine the kind of world we are going to live in. As I said a moment ago, democracy is now on trial and only a strong democracy can prove itself in this century; a democracy can only be strong if all the citizens are properly educated and careers are freely open to all the talented.

Careers open to the talented. Let me dwell on that aspect of our system of public schools for just a moment. We are living in a complex society in a highly technical, industrialized age. As never before our professional men and women, using the word "professional" in the broad American sense, play an almost determining role in our national life. We must have the very best doctors, public-health specialists, lawyers, economists, research scientists, engineers, public servants, to mention only a few examples.

Thanks to our public schools, we are today, I believe, finding and developing a larger percentage of our potential talent than in any other nation, with the possible exception of the Soviet Union. But I am convinced there is a considerable untapped reservoir in many sections of the country because of the inadequacies of the elementary and secondary schools. Just as an illustration, I may mention some figures I have compiled from a survey of American Men of Science. A certain group of outstanding scientists are starred every 5 years by the vote of their colleagues and thus recorded in a sort of who's who among scientists. Taking the distribution of the younger group of distinguished scientists thus listed by the place of birth, one finds strange discrepancies among the States. One might imagine the numbers would parallel the distribution of the population, but they do not. Some States have failed to supply the average number. Why is this the case? No one can say with certainty, but it may well be the inadequacies of the educational system of the States in question. For this interesting fact appears on examination. There is a fairly close correlation between the number of scientists on the list in question and the expenditure per child for educational purposes in the States that spend less than about $120 per year per person. The State of birth of the scientist is presumably the State in which the elementary education was received, one might note in passing.

Of course, there are other factors, but the correlation is strong evidence that in the 25 or so States with the lowest expenditures for schools, the lack of adequate education may be the determining one. Certainly I see no reason to believe that potential scientific ability is not about equally distributed among all the inhabitants of the United States. But I am sure that in many areas we are not doing what we should to find and develop this particular brand of skill. The same is true, I believe, for all other types of talent which today require careful schooling in order to be of benefit to the Nation. To the extent we fail to discover and utilize the potentialities of the youth of each generation, we are dissipating our greatest source of wealth: the young people of the Nation.

Very well, some of you may reply, by all means let us improve our public schools so that our professions may be recruited from all sections of the country and no boy of real ability shall be overlooked. Our belief in equality of opportunity, as well as our desire, to have the best brains at the disposal of private initiative and public service combine at this point. But you may say, what about those who do not fall within this category? Is there not a real danger of overeducating the young people of the United States? Is there no danger of sending so many to college that we will have a white-collared proletariat, an army of unemployed, because many more will desire professional and semiprofessional work than our society can support? Yes; there is real danger in this direction. Though I should not use the word "overeducate" but rather say there is grave danger of giving boys and girls the wrong type of education. And here we arrive at one of the knottiest problems over which educators now wrangle. What sort of high-school education should be given and what type of institution should be provided to meet the increasing demand for post-high-school education? To sum up the matter in a few words we may ask the question, Is everyone to go to college? If so, what type of college?

Let me consider for the moment the average type of high school in the United States where only a third of the students now go on for further education. How can such a school through wise guidance and counseling see to it that the percent who go on to college are those who can really benefit from the college?

The difficulties in practice are very great, but with the improvement of our tests and examinations and our understanding of the issues, I look for great progress in this matter of counseling in the years ahead. It has been well said that educational guidance is the keystone of the arch of public education.

But even the best counseling and guidance will not alone provide the answer. For as everyone is saying nowadays, higher education is contagious. Some 2,000,000 veterans are receiving an advanced education with the aid of what amounts to a vast Federal-scholarship plan. These veterans are giving a splendid account of themselves in all the colleges. They now make up most of the college student bodies; about three-fourths at Harvard. They constitute the first student bodies whose chance to go to college was not dependent on geographical location or the financial ability of their families. This is a significant expansion of educational opportunity for one college generation. The younger relatives of these veterans, to a considerable degree, will want the same opportunities. In all likelihood there will be a pressure to increase the educational facilities beyond the high school. How is that to be done? What sort of facilities are to be offered?

In our thinking about this whole subject, I suggest we would do well to distinguish between general education (for broadening a man's horizon), vocational education, and professional education. Beyond the high school, vocational and general education can be provided locally in 2-year terminal institutions. And for many students this seems to be the answer. The expansion of these local 2-year terminal colleges seems to be of great importance for the immediate future. I underline the adjective terminal, for a local 2-year college which merely duplicates the first 2 years of a 4-year college is quite another story.

The provision for general education and vocational education is a responsibility of the State. On the other hand, training for the professions is a more national concern. The professions transcend State boundaries; therefore, professional education might well be financed to some degree by a direct Federal scholarship or fellowship program. This is one of the features of the proposed National Science Foundation. It finds its parallel in the new Naval NROTC program already in operation. In the present bill for a National Science Foundation only the scientific professions are specified, but to my mind medicine should eventually be included. Indeed, the case for a Federal scholarship program for premedical and medical students is very strong. You may ask why not other professions as well. I would have no objection to enlarging the list eventually if the expenditures were not too great. But we must make haste slowly in these matters, and a few selected professions should be tried first as a sort of pilot-plant operation.

In conclusion, I should like to speak for a few minutes of that core of common learning which should be the common heritage of all American youth. It will be composed of material drawn from the fields of history, political science, economics, fine arts, and literature, that is, the social sciences and the humanities.

In our ideal republic of the future we are surely concerned not with what a man has studied but with what he does. We may hope that men and women will be more interested in wise collective action of the citizens; that there will be less "gang politics," less despoiling of the public treasury, fewer completely selfish pressure groups, more self-

sacrificing men in public office—in short, a much healthier body politic.

The future citizens we desire to educate must have strong loyalties and high civic courage. These loyalties must be to the type of society we are envisaging and to the United States as the home of this society. Such emotional attitudes are in part the product of a common set of values. One of the tasks of the public schools is to evoke these loyalties through the medium of formal study. This can be done to some degree by the study of our heritage.

But the war has underlined the fact that the most effective loyalties are often to small groups of men bound together by a common experience and a unity of immediate purpose. A unifying faith is in such instances not a matter of words or intellectual concepts but a direct relationshp between men in danger. A not dissimilar loyalty, though in a lesser degree, is seen at work in athletic sports and certain types of extracurricular activities. Having once experienced this type of emotional situation, a man or woman is more likely to respond another time and is probably more inclined to transfer such loyalties to larger groups.

For these reasons the present emphasis in many public schools on "democratic living" seems to me to be of first importance. I should place high in the priority list of goals to be achieved by every teacher the inculcation of what we Americans call a "democratic attitude," and a firm character which is nonetheless tolerant of other views. A loyalty to the type of society we are slowly endeavoring to shape on this continent can be evoked far better by action than by words. To the extent that the school itself is a society exemplifying the ideals we extol, to that extent we tend to win the loyalty of even the most ruthless individuals in the group. And there is a good chance that this loyalty will be transferred later to the Nation.

Now, I should not want to leave the impression from my remarks tonight that I thought there were no problems other than financial in connection with our public schools. There are many and none more difficult than in the controversial area of the general education of which I have just been speaking. The social sciences and the humanities are the core subjects and we all know that it is possible for teachers to interpret the past of the human drama in a variety of different ways. As we all know, these interpretations may be grossly distorted for propaganda purposes. The totalitarian states have always regarded their schools and colleges as instruments for forming the political and social philosophy of the coming generation into relatively narrow molds. Is it possible in this democratic country with our wide diversity of religious, political, and social outlooks to have any agreement as to what our schools should teach in these controversial areas? To my mind it is, provided we are agreed at the outset that we must base our case on the importance of a diversity of opinion. I believe there is a group of American ideals of which I have already spoken which spring from the history of our country and which can be taken as the core of our common faith.

Such phrases as the dignity of the individual, the spirit of democracy, equality of opportunity, freedom of expression and political action, may sum up some of the most important characteristics of the common denominator which binds us together as a free people with a special history of our own. But there can be no doubt that it is characteristic of our tradition and our faith that we must be free to allow wide differences in interpretation of these basic ideals, and we must insist as far as possible that our teachers be neither propagandists nor dogmatists. Rather they must stimulate freedom of thinking and discussion to the degree that the maturity of the people makes this possible at every stage in the educational process.

In short, our education is based on our belief in the efficacy of free inquiry and the use of reason. Our system of education is diverse and flexible in its structure, and both comprehensive and tolerant as to the many ways in which our fundamental faith may be expounded or interpreted to the young people of the land.

Aid to Greece and Turkey

EXTENSION OF REMARKS
OF
HON. ROBERT J. TWYMAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1947

Mr. TWYMAN. Mr. Speaker, under leave to extend my remarks, I submit a telegram which I received yesterday from Mr. C. M. Burgess, an important manufacturer in the State of Illinois. It indicates his position with reference to President Truman's proposal for aid to Greece and Turkey.

The telegram follows:

GENEVA, ILL., *May 5, 1947.*

Hon. ROBERT J. TWYMAN,
Congressman from Illinois, House Office Building, Washington, D. C.:

I still urge you to oppose Greek-Turkish subsidy and any other gifts or loans to foreign countries unless there is a definite and guaranteed basis of repayment with interest. History has demonstrated that most loans are defaulted. This Greek deal can be a precedent for others which can bankrupt us. It is entirely political and the Russian situation is not and will not be involved except as New Dealers try to involve Russia so as to secure public approval of themselves. Certain business interests and bankers approve of it for their own selfish reasons. This is demonstrated when National Manufacturers Association board approves loan on recommendation of John R. Suman, vice president, Standard Oil, New Jersey. Most members of NAM in down-State Illinois are opposed to action taken by NAM. My company is resigning its membership in NAM because of the un-American position assumed by NAM board in respect to this cheap political issue.

C. M. BURGESS.

Address of Hon. John Davis Lodge Before Polish-American Congress

EXTENSION OF REMARKS
OF
HON. ANTONI N. SADLAK
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1947

Mr. SADLAK. Mr. Speaker, under leave to extend my remarks, it is a genuine pleasure to include the following very timely speech made by my distinguished colleague, the gentleman from Connecticut, Congressman JOHN DAVIS LODGE, Fourth District of Connecticut, before the Polish-American Congress, district of Connecticut, in Hartford, Conn., on Sunday, May 4, 1947:

Mr. LODGE. Ladies and gentlemen, I am very pleased and honored to participate in these exercises celebrating the one hundred and fifty-sixth anniversary of the adoption of the Polish Constitution on May 3, 1791. I am happy, also, that the State-wide campaign for American-Polish relief is getting under way.

I am particularly grateful to you for this opportunity because as a member of the House Committee on Foreign Affairs, I have some thoughts with respect to the world situation, and Poland in particular, which I should like to discuss.

With respect to relief to the needy of Poland, as you probably know, the relief bill was passed by the House last week. Unfortunately, it was amended on the floor so as to reduce the amount of relief from $350,000,000 to $200,000,000. I objected very strongly to this reduction. There was also an attempt to take Poland and Hungary out of the relief bill on the ground that they were Communist-dominated and that therefore the relief would be misused. Fortunately, we were able to reach a compromise so that Poland and Hungary will now receive relief, provided the Polish and Hungarian Governments will allow American missions to go into these countries for the purpose of seeing to it that the relief actually reaches the needy and is not used by the Communist plutocrats for their own nefarious purposes. This seemed to me a wise provision in order to avoid the fiasco connected with Polish relief under UNNRA.

As I have said, I vigorously opposed depriving Poland and Hungary of relief. I pointed out that if we acted in that fashion it would constitute a sort of double betrayal. We betrayed Poland at Yalta, and we would have compounded this shocking crime had we deprived her of relief. I believe that there are adequate safeguards in the bill so that if we find that relief is not in fact reaching the needy we can terminate that relief. It is my hope, however, that the bill as now written will bring relief to those who need it.

It was my position that we should not by hasty and ill-considered action throw millions of freedom-loving and hungry Poles into the uncharitable arms of the Communists. It is my settled conviction that we must instead give them hope, help them to revive, and indicate to them that we are prepared and determined to salvage from this troubled world some of the blood-soaked and tear-drenched principles for which we fought a successful war.

Let us now turn our attention to international events. These have been such as to cause us to reexamine the world situation with reference to its basic and essential outlines. The deadlock at Moscow with respect to Germany, the inability of the conferees to reach a decision on a treaty for Austria, the Greco-Turkish problem, the difficulties in Korea, the political disturbances in France and Italy, and many other signs of increasing disruption make it necessary that we take stock of our position in the world, and that we scour our brains in an effort to preserve a peace based on the principles of the Atlantic Charter and the Charter of the United Nations.

The problem of Poland, which is still one of great importance and urgency, is a problem which many people here and abroad regard as the test case of American resolve toward questions of international justice and that fair play among nations which alone can provide an enduring basis for peace.

I know that I need not recall to you in any detail the part played by Poland as our loyal and gallant ally in the war. Her military effort inside and outside Poland, on practically all European fronts, on land, on sea, and in the air, the courage of her indomitable people, their fighting spirit and readiness to sacrifice their lives for their independence and the principles at stake in the common cause, greatly surpassed all estimates. In fact, Poland's record as a fighting nation, as an unswervingly faithful

ally, as the only nation which, regardless of Hitler's unprecedented barbarisms, never produced a quisling—stands out unexcelled.

You will recall that on the 3d of September 1939, 3 days after Germany's attack on Poland, Great Britain declared war on Germany in accordance with her treaty to defend Poland's independence and territorial integrity.

You will recall further that on July 30, 1941, the day that the Polish-Soviet treaty was signed by General Sikorski and Ambassador Maisky in London, Mr. Anthony Eden, then British Secretary of State for Foreign Affairs, handed to General Sikorski a statement which ended with these words:

"I also desire to assure you that his Majesty's Government does not recognize any territorial changes which have been effected in Poland since August 1939."

You also know that the Atlantic Charter which was incorporated in the United Nations Pact of January 1, 1942, declared:

"Their countries seek no aggrandizement, territorial or other. They desire to see no territorial changes that do not accord with the freely expressed wishes of the people concerned. They respect the right of all peoples to choose the form of government under which they will live and they wish to see sovereign rights and self-government restored to those who have been forcibly deprived of them."

I think you will agree that free public opinion in all the countries which were signatories of this pact widely construed these phrases as a guaranty by the United Nations, jointly and severally, of the independence and territorial integrity of Poland, as well as of Holland, Belgium, France, Greece, Latvia, Lithuania, Estonia, Czechoslovakia, Yugoslavia, Austria, China, Korea, Ethiopia, Iran, Iraq, Arabia, and also of Italy, Hungary, Bulgaria, and Rumania. Many Americans are deeply disturbed by the fate of Poland which stands today as ineluctable testimony to our failure to live according to the principles for which Americans have died in two world wars.

This concern was accentuated by the fraudulent Polish elections held on January 19, 1947. The American people realize that particularly with respect to Poland, the United States is suffering serious strategic set-backs and losses in prestige all over the world. This active interest in international affairs is further demonstrated in the press and in the unusual demand for literature dealing with problems of our international relations. In my own survey of public opinion, it appears to me that aside from the normal political considerations and desires arising out of readjustments to peacetime economy—basic problems of taxes and wages and living costs—there is in America a groundswell of apprehension regarding the conduct of our foreign affairs. As so often happens under our system the people are in this instance a step ahead of their own Government. It appears to many Americans that we have not only sacrificed moral principle but also needlessly weakened our strategic and economic position in a confused effort to preserve by appeasement something of what we gained by force of arms. These concessions, largely predicated on our military position at the war's end, make it increasingly difficult for us to use our strength to achieve the peace which is the declared purpose of the United Nations organization.

I favor the proposed aid to Greece and Turkey not as a solution even of the problem there but because there is no constructive alternative and because it is an indication, I hope, of our determination to stand against the freedom-hating forces of the world.

It is a good beginning but it must be followed by determined efforts to reach the core of our dilemma. The core is, I believe, the betrayal of Poland. In this particularly tragic case, we not only failed to live up to our promises, we also participated in the partition of Poland which has made all subsequent problems much more difficult to solve.

Now, I do not suggest that the American people should be prepared at this time to implement the terms of the Atlantic Charter by force. However, we fail even to interpose a consistent policy of diplomatic insistence on the principles agreed to. In plain words, we acquiesced in and countenanced Soviet expansion not only in Asia but throughout eastern Europe. This diplomatic weakness was certainly no help to General Marshall in Moscow. He felt as many of us have felt all along that it is better to reach no agreement than to reach a bad agreement.

By agreeing to the compromise on Poland reached at Yalta and implemented by further concessions at Potsdam, we assumed in fact a responsibility for this fifth partition of Poland and for the imposition of a provisional government composed mostly of Comintern agents known to have been selected by the Soviet oligarchy.

Our Government has failed to obtain the carrying out of the one and only condition upon which it attempted to justify its recognition of that government, namely, the holding of free and unfettered elections.

The elections held on January 19 were officially declared by the United States Government to have been conducted in flagrant violation of pledges, and of the three solemn warnings contained in official notes addressed by the then Secretary of State on August 19 and November 22, 1946, and on January 9, 1947, to the provisional Polish Government and on January 5, 1947, to the British and Soviet Governments as cosignatories with us of the Yalta and Potsdam agreements.

While I understand fully the desirability of maintaining contact with the Polish people through our diplomatic officials in Warsaw, it should be noted that this continued recognition of the Polish Government by the United States constitutes in the eyes of many people a recognition of the validity of the very elections which we have officially condemned.

As I have indicated, the Soviet Government continues to regard Poland as the test case of its relationship to its western allies. For in this specific case, in which our signature on definite tripartite agreements involves our direct responsibility, the Soviet Government, barely 8 weeks before the momentous Moscow Conference, appeared to make use of the Polish elections to sound out our Government on its policy. Implicit in this Soviet attitude was their desire to ascertain whether we were ready to make further concessions or were at last determined to insist on the sanctity of those international agreements to which we are directly committed.

The fact that in the case of Poland we are now once more given the opportunity to make a definite stand on a matter of fundamental principle in which our immediate interests are secondary should afford our Government a welcome opportunity to reassert our determination that these principles shall be established as the true basis for international relations.

It is my considered opinion that although we must give firm and patient support to the United Nations organization, we must also take into consideration the elements of power and basic strategy which still operate in spite of the war's end. We are living in a period of continuing conflict, and I feel that it is vital that we make full use of our residual strategical position in order to salvage at least some of those things for which the war was fought. With that idea in mind, may I suggest that in spite of our dwindling Military Establishment, in spite of the severe drains which have been made on our financial and industrial resources, we still have substantial bargaining counters left with which to insure the rights of self-determination guaranteed by the terms of the Atlantic Charter. We can in this way regain the initiative which was ours during the war; we can by this method give a vigorous demonstration to the world that we are prepared, in the interests of peace, to exercise the responsibilities of leadership to which our military and industrial predominance entitle us.

The proposed aid to Greece and Turkey constitutes an admission that our foreign policy urgently requires revision. The coincidence of moral principle and strategic considerations in the case of Poland seem to me to indicate that Poland should be the focal point for such a new policy.

It has been maintained by many of our most distinguished thinkers that the European dilemma cannot be brought to a satisfactory solution until the problem of Germany has been dealt with. For this reason increasing sentiment was evidenced to postpone the ratification of the four treaties (Italy, Hungary, Bulgaria, and Rumania) until the German and Austrian problems had been decided at the Moscow Conference. Since neither the German nor the Austrian problems have been negotiated, it would seem most unwise, not to say dangerous, for the Senate to ratify these four treaties, particularly those which concern Hungary and Italy. Furthermore, it appears clear that a satisfactory arbitration of the German problem is almost impossible until the Polish question has been solved. If we fail to face-up to this original mistake, all our actions based as they must be on that mistake, will be fraught with portentous implications for the future. With the case of Poland as a significant precedent, the Soviet Government is in a far stronger position to establish a similar government in Germany. Since no freely elected German people's government would consent to the transfer already made of a large part of eastern Germany to Poland, the Soviet Government has an added reason for imposing a Russian gauleiter on the German people. Once that is accomplished, it is but a step to build up a strong Germany under Soviet tutelage by restoring these vast agricultural tracts to Germany. Since Russia is unlikely to return to Poland the territory east of the Curzon line, a sixth partition of Poland can in that fashion be easily accomplished.

If Russia could be persuaded to return to Poland the eastern territory which it now occupies, then the anti-Communist Poles would, I believe, not object to restoring to Germany that part of eastern Germany now occupied by the Poles. It is quite natural that the Polish-American Congress should object to this transfer back to Germany until the Russians have renounced their claim to eastern Poland.

Let us make our purpose plain. It is a reasonable speculation that had we done so in 1914 and 1939 war might have been avoided. Let us help the Soviet Union at least by making it abundantly clear what our purpose is. Let us by all means avoid being dragged into another war by the miscalculations of others with respect to our true intentions. If we fail to do this we run the risk of going from one Munich to another, until at the last, confused and alone, we are routed and overwhelmed within our own borders by an apocalypse of our own creation.

What then is to be done? Our participation in the Yalta and Potsdam compromise agreements can be justified only by the holding of genuinely free and unfettered elections, which would allow the people of Poland to express their untrammelled right to order their internal existence as they see fit. It follows that our obligations under these agreements were provisional and conditional. These were bilateral contracts which, because of the violation by one of the contracting parties, can be automatically regarded as null and void. In this fashion the entire problem of the independence of our wartime ally, Poland, can be reopened. In my opinion, the American Government should take this

stand. It should ascertain if the Soviet Government is prepared to withdraw its troops of occupation and its open and secret police and agents from Poland. If it is not, it should refuse further recognition to the present Beirut government. It should demand that a specifically appointed three-power committee cause new elections to be held in Poland on free and democratic lines as previously agreed.

In view of the probable refusal of the Soviet Government, I believe that the United States Government should accept no further compromise and should withdraw recognition of the present Polish Government, on the ground that it regards the violation of the solemn international agreement signed at Yalta and reiterated at Potsdam as a violation of the first, second, third, sixth, and seventh principles of the Atlantic Charter which were embodied in—and made a part of—the Declaration by the United Nations signed at Washington January 1, 1942, by the United States, the United Kingdom, the Soviet Union, and Poland, among other signatories; and also, as a violation of the Charter of the United Nations in the first and second paragraphs of its preamble; in paragraphs 1, 2, and 3 of article 1; paragraphs 1, 2, 3, and 4 of article 2 of chapter 1; and paragraph 1 of article 33 of chapter VI; and that, in view of these violations, the United States will recommend to the General Assembly of the United Nations that it resolve:

"That the Beirut government of Poland be debarred from membership in international agencies established by or brought into relationship with the United Nations, and from participation in conference or other activities which may be arranged by the United Nations or by these agencies, until a new and acceptable government is formed in Poland; to secure the participation of all peace-loving peoples, including the people of Poland, in the community of nations; if within a reasonable time; there is not established a government which derives its authority from the consent of the governed, committed to respect freedom of speech, religion, and assembly, and to the prompt holding of an election in which the Polish people, free from force and intimidation and regardless of party, may express their will, the United Nations consider adequate measures to be taken in order to remedy the situation; to recommend that all members of the United Nations immediately recall from Poland their ambassadors and ministers plenipotentiary accredited there; further to recommend that the states members of the United Nations report to the Secretary General and to the next session of the United Nations Assembly what action they have taken in accordance with this recommendation."

This is a job which the United Nations can now perform. It is unfortunate that this body, which represents the aspirations of so many people for a peaceful and prosperous world, has neither the resources nor the power to act in the Greco-Turkish crisis. The main reason for this is the Russian attitude. In fact the real bypassing of the United Nations has been accomplished by Soviet Russia. She has achieved unilaterally what the United Nations would never have sanctioned. Here, then, is our chance to present the United Nations with a vital undertaking. Here is our opportunity to face up to the principles to which we have given eloquent lip service. Here is a challenge to the United States, which took a leading part in the creation of the United Nations, to take a leading part in its perpetuation and enhancement by calling upon that body to decide one of the most crucial questions of the hour.

In addition, I need hardly point out that there are at our disposal means other than the United Nations organization and short of armed force for asserting our deep interest in this matter. The reciprocal-trade policy testifies to the fact that other nations have great need for our exports and that ours is the best market for their exports. Loans, UNRRA aid, relief aid, and other substantial assistance is further evidence of our power to promote a diplomatic climate appropriate to peacetime settlements. Since the Soviet position as acquired since VJ-day is based largely on power can we continue to sacrifice principle when we may ourselves have the peacetime power to make principle secure?

These vast and explosive issues should not be oversimplified but neither should they be avoided. There is a time for decision. The proposed aid to Greece and Turkey will give encouragement to the forces of freedom everywhere. If we follow this up with a determination to bring justice to stricken Poland by means of the United Nations, we shall not only be strengthening that body, we shall be solving a critical and urgent problem. In addition we shall be serving notice on the world that although we love peace we know that it cannot be predicated on weakness. We shall have solemnly proclaimed the exhilarating fact that there are certain principles from which we will not depart, and that we are resolved to devote our energies to a peace based on freedom, virtue, and reason.

The Panama Canal and Theodore Roosevelt Inseparable in History

EXTENSION OF REMARKS
OF
HON. JOHN J. ALLEN, JR.
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1947

Mr. ALLEN of California. Mr. Speaker, under leave to extend my remarks, I insert herewith the following address delivered by the Honorable WILLIS W. BRADLEY, Representative from California, at the annual banquet of the Panama Canal Society held in Washington, D. C., on Saturday, May 3, 1947, in order that the ideas contained therein may be available to the people of the Nation:

In all the modern world we, who look upon the accomplishments of the present, are prone to discount tremendously the great feats of the past.

Happenings during the recent years, both in civil life and in warfare, have been on such vast scales that they have dimmed our perspective of what might be and should be considered as great—as wonderful—accomplishments.

Today we gaze upon the Washington Monument and we realize that it is a majestic shaft indeed, but only we older people have even the faintest conception of the labors of designers and constructors which went into the building of the obelisk, because now, without modern technique of concrete reinforced with an intricate network of steel bars, it would be no particular trick to build another Washington Monument—even to build one twice as large. It would be merely a question of having the necessary money available, and the job would be done in almost routine manner in a comparatively short time.

And when we look back upon the ships of a few generations ago, such, for example, as the *Oregon*, we are prone to smile at her and to think of her as something close to the tugboat class. Of course, we realize in our lighter moments that there is something of a legend attached to the *Oregon* and that some of our so-called iron men in former seagoing days are said to have made quite a remarkable jaunt in this ship, as they took her around Cape Horn during the tense days of the Spanish-American War, but when she is compared to ships of the present time, to vast ships of war, such as the battleship *Iowa* or the carrier *Franklin D. Roosevelt*, or to great passenger ships, such as the *Queen Mary*, the *Oregon* fades into insignificance and, unless we can understand the struggles which went into her construction due to the lack of modern materials, due to the lack of modern machinery, and due to ignorance of present-day technique we lose sight of the great deeds of our forefathers in the way of ship construction.

So also it is with the Panama Canal, which I have had the opportunity of visiting just recently. Now one sails through the Canal in peace and safety. Much of the great work which was accomplished is concealed beneath the waters of Gatun Lake and long stretches of the canal. As one goes through the cuts there seems nothing particularly striking about them because their sides have been eroded by rain and wind; vegetation has grown upon them and they appear almost natural. Sometimes it would seem that they have been there since the beginning of time. The vastness of this cut going through the hills strikes one in the same way as if he were approaching a natural canyon through some part of the Rocky Mountains, when, looking through the windshield, he glides along on a fine concrete road and takes almost everything around him merely as a matter of course. The traveler has lost that conception—that awe—which came to his father or grandfather some 40 years ago when, perhaps, he stood in the bottom of the Gaillard cut (then the Culebra cut) and looked up at the mountains towering on both sides and realized that man had made this vast excavation which seemed on both right and left to reach to high heaven—when he realized it, because there were hundreds of shovels and trains and other pieces of machinery working therein, because thousands of men were toiling to dig even further into the rocky sides and bottom of the proposed Canal.

Yes, time and circumstances, and our vast accomplishments have dimmed our perspective in matters concerning the Panama Canal until now we hear responsible Americans speak of it as an outmoded, outdated, obsolete thing—almost as though it were in the covered-wagon class, rather than as one of the greatest accomplishments of man on this earth of ours.

Some 46 years ago the world was shocked by the news that the then President of the United States, William McKinley, had been assassinated while visiting the exposition at Buffalo, N. Y. As a consequence of that foul deed there came to the office of President of the United States one of the most able, determined, and picturesque men who has ever been in public life in the Western Hemisphere. That great American, that great Republican, Theodore Roosevelt.

When President Roosevelt was inaugurated into his high office, the idea of an interocean canal across the Isthmus of Panama was a dream—for decades it had been debated and discussed—the French, under DeLesseps, had made their great effort to sever the land at Panama and had failed. America was hoping to take the place of France and to proceed with the work, but had not been able to make the arrangements necessary to do so.

Theodore Roosevelt saw clearly that this great work must be undertaken for the security and prosperity of the United States. He knew that this Nation was on the way toward becoming one of the greatest—or even the greatest—powers on earth and that to fulfill its destiny it must have a way to get its shipping from one coast to the other without the long voyage around South America.

Fortunately, the people of the isthmus determined that they too must have the Canal, and, when negotiations with Colombia

reached a deadlock, they rebelled against the government of that country and declared their independence. Almost at once the United States stepped in and recognized the newly formed government of the Republic of Panama, shortly thereafter making a treaty of peace and friendship with that new state.

Naturally the United States gained some privileges from this treaty—it would have been ridiculous if we had not done so, for why should one offer its protection and give its financial assistance unless it has some recompense therefor. We are truly fortunate in that, at this time, we had in the White House an American imbued with those attributes which are commonly thought of in connection with a Yankee trader.

With only a small amount of delay operations on the Canal were commenced and were pushed forward steadily until its completion. During most of this time the guiding hand was that of Theodore Roosevelt, for while the problems of those who actually supervised the construction and who carried out the necessary measures of sanitation were great indeed, it was recognized that the master hand was in the White House in Washington, D. C.

It is not necessary for me to dwell upon the details of construction. These have been recounted to you many times and were actually witnessed by some of you who participated therein. Suffice it to say that a great work was done—and that there should never be any belittling of the colossal job of constructing the Panama Canal.

With only a few mishaps the Canal has served the people well—it has answered every call and every need through the two greatest wars of history and it has never let us down when there has been a real and imperative need of getting our ships from one ocean to the other.

During recent years some of the privileges acquired by the American Government at the time of the first treaty with Panama have been abrogated and returned to the Panamanian Government. Most marked of these is that which covered the right of the United States to take possession of such part of the Territory of the Republic of Panama as it might deem necessary for the defense of the Canal. At present, the United States must negotiate with the Republic of Panama for even such an insignificant move as the establishment of an antiaircraft battery, or for placing any other defensive equipment within Panamanian territory. This feature may prove to be one of embarrassment and may involve considerable risks in the defense of the Canal at some time in the future.

As time went on it was found that the locks of the present Canal were becoming inadequate for the accommodation of ships of the maximum size under construction or contemplated. Some years ago it was decided, therefore, to build a third set of locks somewhat detached from the others, of a size more than adequate to accommodate the largest ships on our present-day horizon. Construction on these locks was commenced and had progressed to the extent of the expenditure of about $70,000,000 when all work was discontinued due to outbreak of the recent war and the need of all of our resources to oppose the enemies of the Nation.

After termination of the war, the question arose as to whether or not the present lock canal—with three levels—is the best type to serve our needs across the Isthmus. Since it would be very foolish to proceed with the expenditure of large additional sums to complete a third set of locks for a canal not calculated best for our needs, the Congress decided to have a thorough investigation made before proceeding further with the third lock project. A commission, or Board of Consultants, was then appointed and directed to study all problems involved in the transit of ships from one ocean to the other via any practicable route across Central America and to bring in its report not later than December 31, 1947.

This commission has been at work diligently and the time is approaching when it will be submitting its report to the Governor of the Canal Zone for ultimate transmission to the Congress, where the final decision must be reached.

It is apparent to those who have looked into the question at all that there are only three types of canal which are likely to receive serious consideration. One is the present three-level canal with necessary improvements. Another is the so-called terminal lake canal in which the San Miguel locks are eliminated, the level at Milaflores raised to the optimum level of the Gatun Lakes, and only two sets of locks remain. The third is a sea-level canal in which all locks except those for tidal purposes would be eliminated.

At present there are only a few ships which cannot get through the locks now provided in the Canal. These, according to my recollections, are the carriers, *Franklin D. Roosevelt* and *Midway;* several of the older battleships, which have had extensive blisters installed; and one or two of the largest passenger ships afloat.

One is now led to wonder if it would not be for the best interests of the United States to postpone all action in regard to extensive modifications of the Canal, thereby currently saving great sums of money, rather than to go in for present expenditure of anything from one billion to two and one-half billions to acquire facilities which may not be essential for many years to come. If reasonable modifications and improvements were made to the present system, it should be practical to handle all shipping with all needed dispatch, and to offer passage to all ships except those few enumerated. It is difficult to conceive of any international situation wherein it would be vitally necessary to get those few warships, which are too big for the Canal, into another ocean with such haste that they could not make the trip around South America.

Also it is difficult to conceive just now of any situation in which a navy or navies could be built in this world capable of opposing the Fleet of the United States in more than one ocean, without this Government knowing of such construction for many years ahead; in fact, the inauguration of a policy of the building of heavy ships adequate to defeat the American Navy would certainly be known in ample time to allow the 10 or 12 years necessary to make all needed changes in the Canal to accommodate even our largest vessels. Without knowing what report the special commission will bring in, it would seem that inflation might be deterred somewhat and that a reservoir of work might be built up for a time of depression by holding off the vast expenditures needed to reconstruct the Canal during current years.

The second type of canal mentioned, that is, the terminal lakes canal, is not really new, but is generally recognized as being sponsored by the gentleman who is probably our foremost canal expert in governmental service, Capt. Miles P. DuVal, United States Navy, to such an extent that it is frequently called the DuVal plan. In this plan, which provides a two-level canal with a terminal lake near each end so as to give ample anchorage space above the locks, we have what to my mind is undoubtedly the very best answer to navigational problems connected with the movement of ships between the seas. In all the talks I have had with the veteran pilots of the canal, I have not encountered a single one who has opposed this DuVal plan. In fact, as far as I can recall, every pilot except one has favored it, and that one merely thought that the sea-level canal plans will prevail if recommended by the board of consultants. Bear in mind, I have not said all pilots of the canal, but only all pilots with whom I have had the privilege of talking. According to my ideas, this DuVal plan will be far less expensive than a sea-level type canal and far more satisfactory unless some question of defense with which I am not familiar is brought into the picture.

The third proposed type is a sea-level canal. Under this proposal, the canal would be dug to sea level for the entire distance across the isthmus and there would be a navigable ditch of about 32 miles in length. The cost of construction would necessarily be tremendous, but the work can be done if the American people so order and make the money available.

I appreciate that with the immense engineering skill and with the immense facilities we have for the manufacture of machinery there is practically no limit upon what we can accomplish in the way of construction jobs.

While personally I have not favored a sea-level canal because, from a navigational viewpoint, I have seen no necessity therefor, and I see many disadvantages therein when compared to a terminal lakes set-up, I realize that a new factor has come into the scene—a factor about which I know very little. This is the atomic bomb which has a faculty of contaminating everything within a considerable radius of its explosion, and which sets up intense radioactivity in structures of various kinds, and which contaminates the waters in the vicinity of its explosion to such an extent that they may be impracticable for the use of modern vessels as the crews of such ships would be seriously affected, or even ultimately destroyed, by the radioactivity encountered.

I say, therefore, that one must not close his mind to the construction of the sea-level type of canal regardless of expense, and regardless of less desirable operating conditions, until we know more of the probable effect of an atomic bomb or of its probable use in the event of another war.

I would also say frankly that the engineering consultants are carrying on experiments which are developing great accuracy in predicting the actual currents which might be encountered and that they are developing the possibility that, during certain hours of the day (probably 6 hours out of each 24), ships might safely proceed through a sea-level canal without the use of any tidal lock.

I have given you this short description of possible changes or improvements in the Canal, without any thought of technical data, merely so that you may see the problems which are ahead.

To me it seems the ultimate change of the Canal into one of the two latter types—that is, either the Duval terminal lakes type or the sea-level type—is most desirable, but, as I have stated previously, it seems also that, if possible, the Nation should prefer to hold all plans in abeyance after reaching a definite conclusion as to what it desires (unless international conditions make other action advisable) until the level of prosperity in the United States shows a definite need for the expenditure of large sums of public money to keep industry and wages up to a satisfactory plane. This Canal modernization project would be one of the great reservoirs of employment which we could have and, quite to the contrary of what some might think, it would afford employment to thousands of people not actually in the Canal Zone, for it would involve the labors of many American citizens in the manufacture of machinery and in the production of other supplies for use in the work.

During our recent trip to the Canal Zone, I observed that everything is going on in a thoroughly satisfactory state, insofar as Canal operations are concerned, and that other conditions are reasonably well taken care of. It is my own opinion that the Canal is suffering from the same disease which has afflicted practically all other departments of

the Government under the New Deal—that is, the number of employees has been increased tremendously for the accomplishment of practically the same work as was done theretofore, and that a sufficient reduction of employees is not being carried out. I know this is a very difficult problem, for when once the work done by one man is divided between two it thereafter never seems possible to impose heavier loads upon either individual, and that when once new jobs are established in time of war it seems thereafter impossible to do away with any of them, but, in the long run, this must be done. I look to see it come about gradually, both in the United States and in the Canal Zone, for certainly the experiences we are having in the Eightieth Congress, when it comes to reducing governmental expenditures and bureaucratic personnel, are not such as to lead one to believe that reductions in governmental expenses can be made except through the most desperate efforts spread over a considerable period of time.

In general, I believe that the Canal employees are well taken care of when compared to similar categories in the United States. I know that they do not have everything they wish, nor even everything I should like them to have, but, after all, one must compare their work with similar positions in the United States where we assume that jobs are paying in cash, or other remuneration, all that they will bear in our present economy. On that basis the total remuneration of the Canal employees is certainly reasonable and I am not inclined to believe that the greater part of the claims for further privileges and for higher remunerations are justified at the present time.

I know that this address has been somewhat rambling and I have attempted particularly to keep it away from anything which might be called technical as I do not believe that the ladies would be interested in technical conversation. Rather, I have tried to give a running story of the Canal as it might well be seen through the eyes of the average American. I have tried not to talk shop, but to present to you the story of one of the greatest feats of man on earth. The story of what, to me, is a vast monument to the memory of Theodore Roosevelt, and of what, to me, would seem to make the name of Theodore Roosevelt stand out among Presidents of the United States in equal degree and in equal stature with that of any wartime President.

I appreciate your kindness in giving me this opportunity to address you.

Trap Doors in the Rent Bill

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1947

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Louis Star-Times, of St. Louis, Mo., dated May 3, 1947:

TRAP DOORS IN THE RENT BILL

Given the House's undeviating desire to unfurl the national economy to whatever winds may blow, the local-option rent-control bill the Representatives produced looks, at a quick glance, better than might have been expected. At least the House trod daintily around voting the landlord's dream of a straight increase. The mere fact that the bill could have been worse, however, is no earnest that it is good.

Admittedly Congress faces a tough decision on rents. It would be obviously unfair to make landlords the one group to be denied income boosts to meet rising costs of living. At the same time, some of the landlords already have had boosts of a sort. Many are coasting on a 100-percent occupancy, for which they once didn't even hope. Many have saved by skipping maintenance work. Others have received adjustments through OPA. It would be unwise to let such as these trade on the acute housing shortage for profiteering. Sound legislation will have to pick its path carefully, then, avoiding double pitfalls. The House's bill hasn't done it.

Two of its provisions on rent, for instance, though they sound innocent enough, are tamped full of dynamite. One is the clause that permits a 15-percent increase in rent on a 2-year lease if the tenant agrees. The other is the local-option clause dreamed up by the Congress as a quick way of passing the buck.

Explained by its proponents, the 15-percent raise provision sounds most reasonable. Here you have a landlord eager to brighten up his property; here you have a tenant who would like to be sure of a roof over his head for the next 2 years. So the two sit down and chat amiably, agreeing finally on a 15-percent hike to be used for paint and wallpaper and new guttering. Only one small factor is overlooked—the landlord in today's market holds all the trumps. He need not offer a doorknob in trade for the increase; obviously he can make life miserable for any tenant who won't come through freely on an agreement. And a tenant presented with a take-it-or-leave-it deal cannot leave it; he has no place to go.

The local-option provision sounds as good—and can prove in practice quite as bad. Let any county, city, or town in good democratic fashion decide when it wants to end rent control, said the House. Who could object? But the legislators know well what real-estate lobby pressures will be exerted on the local governing bodies. They know, too, that they double the lobby's chances of success by tossing the decision on control or no control to small groups poorly equipped to resist those pressures. It's as if the circus strongman, tired of wrestling with a lion, had turned the animal over to Mr. Milquetoast in the audience to handle.

Yet the House hasn't stopped even there. In addition to rigging the machinery for rent boosts without regard to real needs, the Representatives elected to throw away almost the last shred of Government control over building. The decontrollers already have had their inning in construction; they managed to drum Wilson W. Wyatt out of his office as Housing Expediter and they got a wholesale weakening in controls when he left. In return, they promise a quick building boom. How they fulfilled the promise can be read in the reports that tell of the abrupt collapse of construction. Now the decontrollers want to try another dose of the same medicine. To help housing, they propose to let commercial and industrial building go on without a check. Presumably they work on the theory that it will warm a veteran's heart to see a new store going up even if he can't find a home.

Add it all up, the House bill comes to a retreat on the whole issue of rent and housing, no less complete for being concealed. In the Senate, where the Banking Committee has shaped a bill that would be fair alike to hard-pressed landlords and to tenants and would leave the few remaining controls untouched, wiser heads may prevail. If there is not to be an abject sell-out to the real-estate lobby, they had better.

Death of Hon. Charles L. Gerlach, Representative, Pennsylvania Eighth District

EXTENSION OF REMARKS
OF
HON. WILLIAM J. CROW
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 5, 1947

Mr. CROW. Mr. Speaker, as one of the new Members of the Eightieth Congress and a Member of the Pennsylvania Republican delegation, I wish to express my sincere regrets in the loss of our fellow colleague, CHARLES L. GERLACH, late Representative in Congress from the Eighth District of Pennsylvania.

It was a shock to turn on my radio the morning of May 5 at 7 a. m. and hear the news of his passing announced on the air.

I am sorry that we new Members did not have more opportunity to know Charley well. My contacts with him in our Pennsylvania delegation meetings and on the floor of the House, prior to his recent attack, showed him to be a loyal and true American, one deeply interested in his fellowman, cognizant of the views of his home constituents, and truly interested in protecting their interests, as well as the interests of his fellow Americans.

We Members of the Eightieth Congress have lost a true friend, the people of his district have lost a faithful servant, and our Nation has lost the services of an able legislator.

I wish to express my sincere sympathy to Mrs. Charles L. Gerlach and family in this time of their deep bereavement. May God give them strength to bear this burden of grief and sorrow and give them the faith necessary to heal all wounds.

Snappy Fight at Washington Over Expenditures

EXTENSION OF REMARKS
OF
HON. WESLEY A. D'EWART
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1947

Mr. D'EWART. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial by Mr. J. Russell Larcombe, editor and publisher of the Phillips County News, of Malta, Mont., which appeared in that newspaper May 1, 1947:

SNAPPY FIGHT AT WASHINGTON OVER EXPENDITURES

Proceeding briskly in Washington these days is an acrimonious feud over reducing public expenditures. On the one hand we have the Republicans who feel bound to try to redeem their campaign pledges. On the other we have the administration forces who, naturally enough, cannot admit publicly that they are extravagant. In the middle

are the sectional groups, both Republican and Democrat, who think it is a great idea to cut expenses everywhere but in the districts they happen to represent. Trailing the procession, of course, is the Remnants' Club of the New Deal which still thinks we should spend whether we have the money or not.

Before the final appropriation bills become law the real men in Congress will have a chance to stand up and be counted. So will those who talk eloquently about economy being a good thing for the future, but vote otherwise now. Probably somebody will do a good job of separating the sheep from the goats. The sheep will yield to sectional pressure and survive nicely, while the goats will be in hot water next election.

Republican Members in particular are having their feelings hurt. The more intelligent of them realized after the last election why they were given control of Congress. It was not because the people liked the way they parted their hair—it was because the Nation realized that a house cleaning was in order. And now, when the boys try to push the broom, they find even a good share of the press heaving rocks at them. Each of us seems to think that saving money at the expense of the other fellow is a good idea but we don't care to be injured ourselves.

Our own hard-boiled notion is that the way to reduce expenses is to go ahead and reduce them. We don't believe that any desirable governmental function is necessarily crippled because its appropriation is reduced, and we think the decision should be made by persons not employed by the agency concerned. Unfortunately, there is a well-organized opposition dedicated to scuttling the Republican program. Since the election there has been a rush toward the newspapers, magazines, and radios by New Deal left-wingers and they have done a remarkable job of embarrassing their enemies with the very weapons of publicity which previously helped ruin the New Dealers themselves. It is normal to hear bureaucrats squeal when their funds are reduced but the present blast is far more than normal. Its violence suggests a professional touch, an inspired campaign aimed at the Presidential election of 1948.

Politics being what it is, there is no cause for alarm in this. Least of all should the Republicans worry. They will be judged on their record no matter what they do, for they are distinctly on trial with the general public regardless of how the organized opposition performs. And it is the temper of the general public which decides elections.

Most of the noise out here will be over reclamation and any Congressman from the West who dares to trim a project appropriation will receive considerable attention. Some of us will want to shake his hand and others will call him a stingy curmudgeon out to crucify the old home acres. In the middle, however, and also voting, will be thousands of sober-minded citizens who know the difference between wrecking a program and reducing its scope temporarily. They will remember that most of these plans will go through eventually, anyway—the only question is, Shall we build them rapidly or more slowly? We doubt that any western Congressman has outright murder in mind. Personally, we hope that most of our Representatives will feel as the majority of their constituents must feel—luxuries are very nice to have around if we have the money but if we don't have it we must do without. Private citizens are required to operate that way and it is time the Government did the same. After all we still have a national debt of more than $160,000,000,000.—J. R. L.

Charles L. Gerlach

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1947

Mr. DAGUE. Mr. Speaker, under leave to extend my remarks in the RECORD, I am moved to take this opportunity to express the deep sense of personal loss which I have in the untimely passing of our beloved colleague, CHARLES L. GERLACH.

It was my privilege to have known him but a short while before he was forced to absent himself from the House by what we now know was his last illness, but in that short period I came to appreciate that in him were lodged those sterling qualities which contribute to honest public service and stanch citizenship.

Too many men upon being elevated to high places forget the basic fundamentals or their origins, and the greatest tribute that we can pay Brother GERLACH is had in the conviction that here was a man who was truly representative of his constituency; that here was a citizen who never lost sight of the responsibilities bequeathed to him by his patriotic forebears.

In joining with this House in mourning his passing, I can only set forth the prayerful hope that an all-wise Providence will temper with pity the overwhelming loss to his loved ones and that there will be for them the consolation that comes from knowing that here was a life that was lived to the utmost for others and that there must come, for those who believe as he did, a day of final glad reunion on that other shore when there will then be no more parting.

Address of Senator Edward Martin

EXTENSION OF REMARKS
OF
HON. WILLIAM J. CROW
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1947

Mr. CROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of EDWARD MARTIN, United States Senator from Pennsylvania, to the Pennsylvania State Chamber of Commerce, at the Penn-Harris Hotel, Harrisburg, Friday evening, April 25, 1947:

Mr. Toastmaster and fellow Americans, it is a pleasure to address organizations representing commerce, industry, labor, agriculture, education, the organized veterans, or any organization unselfishly striving for the common good. We can have real progress only when there is serious consideraton and frank discussion of the end result as it applies to all our people.

Tonight, I want to discuss certain principles and in doing so it will be necessary to present certain figures relating to governmental expenditures.

America, as I see it, is confronted with three dangers—big business, big labor, and big Government. All the faults of the first two should be corrected by the heads of their own organizations, but the evils of big Government, the most dangerous of all, must be corrected by the people themselves. The first two can be of inestimable service to our country if they will police themselves. If they look only to their own advantage and ignore the rights of others it will mean continual strife, and the general public will be the loser.

One of the reasons for the great centralization of Government in Washington is the never-ending demand for more services under the mistaken idea that the Federal Government has an inexhaustible revenue that comes from some mysterious source, a fountain of gold that will never go dry.

That idea seems to be held even by people and organizations that were most emphatic in their demands for curtailment of Government spending, for rigid economy, for a balanced budget, tax reduction, and a start on paying off the huge, crushing national debt.

Today, from these same sources—even from chambers of commerce and similar bodies—the Members of the Senate and the House of Representatives are swamped with pleas, protests, and threats of impending disaster when it is proposed to cut down any of the services to which they have become accustomed in the years of reckless spending. They profess great interest in saving the taxpayers' dollar, but are prompt, loud, and vigorous in opposition to every economy proposal which would reduce in any degree the specialized activities of their own pet projects.

Federal agencies resist every effort to cut down the swollen pay rolls and have not hesitated to organize pressure campaigns to have their activities continued on the broadest scale.

When I took office as United States Senator from Pennsylvania there was unmistakable and convincing evidence that the people were determined upon relief from the back-breaking burden of taxation and debt imposed partly by the war, partly by spend-thrift administrations of our domestic affairs and partly by the cost of relief in war-devastated countries.

Obviously two steps were necessary. One was increased industrial production to raise the level of our national income. The other was to eliminate waste, extravagance, overlapping, duplication, inefficiency and fancy frills in Government services.

Without reduction in Government spending there can be no hope of return to national solvency. It will take hard work and sacrifices. States, communities and individuals will have to learn once more to do for themselves the things that many of them have looked to the Government to do for them.

There is no easy way out. Continued deficit financing is the road to national bankruptcy. Nations can go broke the same as individuals and corporations. In recent months we have had a grim demonstration that even the richest nation can suddenly find itself poor. Britain, within our own lifetime, the wealthiest and most powerful nation on earth, reached a financial condition which forced her to call upon America to assume commitments she could no longer carry out in Greece and Turkey. From the experience of Britain we can draw stern warning that it can happen here.

In order to combat the growing menace of big government, the people must take a greater interest in government. Local government must be put in a position to function as was intended by the founding fa-

thers. That means certain taxes should be earmarked for local governmental use.

The higher levels of government, and particularly the Federal level, can destroy the lower levels by misuse of the power to tax. Big government at Washington means regulation and control. Eventually it means regimentation.

Regulation by the central government curtails the initiative of the individual, of business, labor, agriculture, and the lower levels of government. We must never forget that every grant made by the Federal Government carries with it certain restrictions and takes away rights which properly belong to the States or to the people.

In order to get at the continual increase of the scope of government let us take some figures. I regret burdening you with statistics, yet I know no other way to impress upon an audience the trend toward unwarranted bigness in government.

Townships in Pennsylvania in 1910 expended $6,000,000; in 1930, $21,000,000; and in 1940, almost $41,000,000.

Counties in Pennsylvania in 1910 cost $30,000,000; in 1930, almost $57,000,000; and in 1942, $196,000,000.

Schools in Pennsylvania in 1910 cost $30,000,000; in 1930, one hundred and fifty-seven million; and in 1942 almost $192,000,000. This was the cost to the districts and does not include State appropriations.

In 1910 the State appropriated for the public schools $7,500,000; in 1930, $28,500,000; in 1942, $43,500,000, and in 1946 almost $70,000,000. This does not include State appropriation for the State teacher's colleges and other colleges.

The over-all cost of State government in Pennsylvania in 1910 was $35,500,000; in 1930, $203,000,000; in 1942, $307,500,000. Much of this increased cost of State government was by reason of functions assumed by the State that formerly were done by the local level of government.

For example, mothers' assistance, $68,000,000; mental hospitals, $19,000,000; indigent mental patients, $13,000,000; city and State extension of highway roads, $30,000,000; township aid for roads, $62,000,000; maintenance of bridges, $24,000,000; construction of main roads and bridges, $180,000,000 or a grand total of about $610,000,000 in a 20-year period.

As a further illustration, in 1931 the State highway system consisted of 13,500 miles of road which has now been extended to over 40,000 miles of road.

Thus, it is apparent that the State has taken the burden off real estate by almost eight mills, but unfortunately, the cost of local government is higher now than it was 20 years ago regardless of the relief by the State. We want local government. It is self-government. It is home rule. The closer government is to the people the more efficiently and the more economically it will be administered.

Now for a moment let us consider some figures relating to Federal expenditures. In 1910 the over-all cost of the Federal Government was $693,617,000; in 1930 it was $3,994,152,000; and in 1939, the last prewar year, it was $8,765,338,000.

Now we are talking of a Presidential budget of almost $40,000,000,000. It is so large and startling that no one individual can comprehend it. It includes national defense, aid to veterans, conservation, and world-wide aid. The United States News gave an over-all picture of the foreign-aid program which should be closely studied by every American.

Here are the figures:

Active credit commitments, including loans, property credits, and advances, $9,270,000,000.

Credits in view, which include unused authority for the Export-Import Bank, subscription to the International Monetary Fund and the maximum loanable fund subscribed by the United States Government to the World Bank, $4,304,000,000.

Private credits in view through the World Bank: $7,200,000,000.

For relief purposes there are included funds spent or budgeted for UNRRA; War Department funds for occupied countries; general relief in other areas and to finance the International Refugee Organization, $4,206,000,000.

Surplus property to be sold abroad accounts for $5,760,000,000, the excess of cost over the sale price.

This adds up to the appalling commitment of $31,885,000,000. And yet from the dark shadows of the near future will come new demands for Korea, India, and other places all over the globe.

These shocking figures should bring the American people to their senses. If we are to continue on such a policy the American people must know that sacrifices must be made here at home. They must prepare to pull up their belts a couple of notches. They must save and pinch if we are not to become an insolvent and bankrupt Nation.

Every department of the Federal Government is now larger than it was before the war and so many people are demanding that the services they have enjoyed shall remain. In 14 years $43,000,000,000 of subsidies and grants have been made to States, local governments, corporations, and individuals. Unless checked this enormous expenditure at home and abroad will eventually curb the initiative of the individual and if carried on will destroy the financial structure of the Nation.

America has been able to make its great advances because of the liberty of the individual, and because the small business concern or the small labor organization can move forward as its ability warrants. It cannot do so if big government is to have control.

If we are to have complete control of our Government all the people must take a part in that Government. In the past people have lost their liberty because of an all-powerful Central Government. America can travel the same road.

What are we to do? I would like humbly to suggest the following:

1. Let everyone take an intense interest in government.

2. Let us not advocate the expenditure of any public money unless we agree we can afford it.

3. Let us all oppose the demagogue who seeks public office by promising the people to expend their own money.

4. Streamline local government and give it taxes to perform its functions. Its functions should be the public schols, care of the indigent, local police power, and the local courts, and elections.

5. Let the State care for the mentally defective, penal institutions, natural resources, roads and higher education, without curtailment of the expansion of our liberal arts colleges.

6. The Federal Government should care for the veterans, national defense, foreign affairs, and interstate relations where necessary.

7. Peacetime spending by the Federal Government must be cut to the bone.

8. State and local governments must not be curtailed as to their taxes. They must not be forced to be niggardly in their expenditures. This is the only way to curb the centralization of government at Washington.

9. Let us all realize that a strongly entrenched central government has always been the arch enemy of freedom. It derives its power from the failure of the individual to assert himself.

10. If we are to remain free, organizations of labor, agriculture, business, education, and the church must assert themselves, and work with each other for the best interest of all the people.

America is the last remaining hope of a free world. We cannot make the weak strong by making the strong weak. We cannot be an influence for good in the world by destroying our own financial structure. If we fail—civilization may not have another chance for a hundred years.

Federal Aid to Education

EXTENSION OF REMARKS
OF

HON. CLYDE R. HOEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 7 (legislative day of Monday, April 21), 1947

Mr. HOEY. Mr. President, I ask unanimous consent to have inserted in the Appendix to the RECORD an excellent article by Walter Lippmann discussing Federal aid to education. Mr. Lippmann states the case very clearly and effectively. Unquestionably, the time has arrived when Congress should pass a measure providing this necessary assistance to the schools of the various States of the Nation.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TODAY AND TOMORROW—MORE ON FEDERAL AID FOR SCHOOLS

(By Walter Lippmann)

Many would agree with what was said in the preceding article about Federal aid to the schools—as in the bill sponsored by Senator TAFT—that the principle is well established, that the Nation can readily afford to spend more on education, and that the need is very great. Yet some will be reluctant to act, feeling that a bill of this kind is a measure to tax the people of States that do well for the benefit of States that do badly.

They will, however, be astonished to find, if they look into the matter, that the people of the poorer States, with the poorest schools, actually make a greater effort, actually devote a larger part of their income, to educate their children than do the people of the richer and more favored States. The people of the poorer States can accept Federal money for their schools without loss of self-respect.

The reason for this is obvious, once you think about it, but the obvious often escapes us. The poorer States have, of course, less income per taxpayer. But they have more children per taxpayer than the richer States. They have to educate more children out of smaller resources.

If we are talking of justice and self-reliance, then the comparisons are in their favor. A poor family with five children cannot give each child as good opportunity as a rich family with one child. But that does not mean that the poorer family has not tried to do as well by its children as the richer one. Now, on the whole, the States with the worst schools spend a bigger proportion of their incomes on schools.

The fair measure of a State's ability to pay for education is the size of its income per child of school age. The 10 States with the smallest income per school age child in 1939

were, in the order of their poverty—Mississippi, Arkansas, Alabama, South Carolina, North Carolina, Georgia, Kentucky, New Mexico, Tennessee, Louisiana, West Virginia. But none of these States would be found on a list of the 10 which devote the smallest part of their income to schools.

Mississippi for example, is at the bottom of the list in what it spends on schools. But it is near the top of the list, actually ninth, for the whole country in the percentage of its income which is devoted to education. It spends 3.41 percent of its income. New York spends 2.61 percent of its income. But because Mississippi is so poor but has relatively so many children, it has an average of $400 to spend on a classroom unit whereas New York has $4,100 to spend per classroom unit.

In other words the States with the poorest schools are not those which make the least effort. Many of them make the greatest effort. New Mexico, for example, though it is among the 10 which spends the least, leads all the other States in the proportion of its income which it spends.

I do not, however, mean to give the impression that the effort of the poorer States is consistently greater than that of the richer ones. But it is true that most of them make an effort which is near the average for the Nation as a whole.

There is, therefore, no moral basis for objecting to Federal aid. The Taft bill would tax individuals wherever they live, and would distribute the proceeds to States which, though they spend 2.5 percent of their income on schools, do not have enough money to provide $40 per pupil per year.

I have labored this moral issue because I assume that there is no need to persuade any American that schools are vitally important, or that the Nation as a whole suffers if the children of any part of it are illiterate, or grossly uneducated, or miseducated.

No doubt the mere expenditure of money will not give this country the education it needs to govern itself and to prosper. That calls for a lot more than money. But mere money is needed urgently, even desperately, to provide the simplest kind of ordinary literacy throughout the Nation. On that, whatever our theories of education, we can all agree, and there is no point in being complicated and subtle about it.

Cost of World-Wide Relief

EXTENSION OF REMARKS
OF
HON. C. WAYLAND BROOKS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Wednesday, May 7 (legislative day of Monday, April 21), 1947

Mr. BROOKS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an able editorial entitled "Rationing Relief," appearing in the Chicago Daily News of May 2, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RATIONING RELIEF

The House rebellion which chopped $150,000,000 off the administration's $350,000,000 foreign relief measure, and threw anti-Communist safeguards around the expenditure, proves once again that the House is much more sensitive than the Senate to popular sentiment.

If the country was not awake to the staggering cost of world-wide relief, the realization came with the disclosure that Paul A. Porter's economic mission to Greece envisions another $350,000,000 program there. It is to come on the heels of the $400,000,000 Greco-Turkish project now before Congress. Both these, of course, are distinct from the relief bill.

Those who had been saying that $400,000,000 was only the beginning hardly expected such prompt corroboration. The relief millions are likewise only another item in that final bill. The true utopians of the we-owe-it-to-ourselves-don't-we school have hardly started. How else can we continue to produce, they are beginning to argue, unless we give most of it away?

The reduction voted in the House appears to have been purely arbitrary, based less on objections to any specific project than to the conviction that the United States taxpayer is being burdened too heavily.

The vote was an indication of the overwhelming extent to which the principle of relief is accepted. Only 45 Republicans and 21 Democrats voted against it.

An effort will be made in the Senate to restore the original $350,000,000. This was the administration's calculation of the amount needed to do the immediate job.

The administration has been remarkably unable to figure its own financial position correctly. We see no reason to suppose that it can come closer to calculating the Chinese and Italian relief budgets, unless it simply takes the position that they can use all they can get.

The anti-Communist barriers which the House erected around the use of the money are elemental common sense in view of the other costly projects for blocking the spread of collectivist slavery.

So long as Russia is draining the economies of the nations under her heel, we can hardly hope to restore them to prosperity. The most we can do is to alleviate human suffering. Experience with UNRRA has shown that, without supervised spending, relief money becomes another weapon for the subjection of people by Communist masters.

The House requirement that 90 percent of relief supplies be purchased in this country emphasizes a fact too often forgotten. It is not dollars that we are sending abroad, but wheat and shoes, lathes and locomotives.

This country does not begrudge the help it can give to cruelly stricken peoples. It does object to giving the administration too big a blank check; to sacrificing to maintain an iron curtain that disrupts the food and coal economy of Europe; to providing the whip wherewith revolutionaries tame hungry people; to inviting denunciations as an imperialistic Uncle Shylock; to paying war reparations by supplying the needs of countries whose own production is bled away.

The human needs of the world must be met. But our aim surely should be to help people to help themselves, and to stop somewhere short of sharing our charitable loaf in so many places that we lack the strength to bake another.

Retirement Pay of Letter Carriers

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Wednesday, May 7 (legislative day of Monday, April 21), 1947

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Faithful Service Deserving of More Attention," referring to increased retired pay for letter carriers, published in the Seattle Times of April 25, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FAITHFUL SERVICE DESERVING OF MORE ATTENTION

A group of old friends of thousands of Seattle households seeks support of the community's citizenry and of the State's Representatives in Congress in behalf of themselves and of thousands of their colleagues throughout the Nation.

Seattle's retired letter carriers, all of whom have been familiar daily visitors at this city's doorsteps for 30 years or more, ask that early consideration be given to their plea for increased pensions.

Their request is one which can be urged without any fear of upsetting Congressional efforts to reduce Federal expenditures. The modest increase in retirement pay sought by these veteran public servants will require no added appropriations from public funds. Its cost would be defrayed from the retirement fund to which the letter carriers themselves have contributed through long years of service.

The present maximum pension for letter carriers amounts to about $23 a week, though in many instances they receive less than that—some as little as $56 a month. A bill introduced in the Senate last January would provide an increase of 25 percent in these monthly stipends, or, as an option, it would provide annuities for the letter carriers' widows. Needless to say, the alternative provision for their families would be chosen by the majority of these faithful retired employees of Uncle Sam, if they were given the opportunity.

Seattle's contingent of retired letter carriers—men who have tramped these hillsides in all weather for three decades and fully earned the modest compensation they received for their peripatetic chore—number around 100. Their colleagues across the country constitute a small army of several thousands. Yet the bill designed to give them a greater measure of security in old age has received scant attention in Congress. It has lain in a Senate committee for 3 months without action.

That bill should be reported out and passed. By helping to accomplish this, the Washington delegation in Congress will earn the gratitude of a group of loyal and devoted citizens and their many friends.

Popular Election of President and Vice President

EXTENSION OF REMARKS
OF
HON. HENRY CABOT LODGE, JR.
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Wednesday, May 7 (legislative day of Monday, April 21), 1947

Mr. LODGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Sun of Attleboro, Mass., on the subject of the joint resolution which I introduced providing for the popular election of the President and Vice President.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SATURDAY MUSINGS

The fact that Oregon a week ago became the eighth State to approve the constitu-

tional amendment limiting the term of Presidents is indication enough that remedial action can be obtained in a hurry if the machinery for it is provided. That lends added interest to the fact that Senator LODGE has reintroduced a constitutional amendment to provide for the popular election of Presidents and Vice Presidents. It is the same amendment he proposed in 1941 and it deserves some study by the people whose rights it aims to protect.

The electoral college, as set up by the founding fathers, was intended to be an independent body which would select and elect the Executives. Two electors, back in 1796, attempted to use their independent judgment and that resulted in the formation of electoral groups pledged to certain candidates. Thus the method of the founding fathers went overboard and political parties took over. The electors became Charlie McCarthys with no will of their own though, since they are not formally pledged, there might come a time when a sufficient number of them could upset an entire election.

It is admitted that possibility of such skulduggery is remote but other objectives to the electoral college cannot be thus lightly dismissed. The principal objection is that minorities are disenfranchised by the unit rule in each State. Willkie with 4,200,000 votes in the States he carried received 82 electoral votes but he was 250,000 votes behind Roosevelt in New York State and the 3,000,000 Willkie votes in that State did not count as the unit rule gave all the electoral count to the top man. In 1944 Roosevelt similarly lost 1,500,000 votes in Ohio because Dewey carried the State and took all the electoral votes. In 1924 Davis received 6,000,000 votes that brought him no electoral votes. The examples could be multiplied.

In the election of 1944, the votes of 45 out of every 100 people who went to the polls were in effect disenfranchised. That one statement is sufficient reason for changing any such system. But that is not all. Three times the candidate with the most popular vote received the least electoral vote—Jackson, Hayes, and Cleveland. Then, since electors equal the number of Congressmen and senators from each State, a number based on population, small States have an extra advantage in the Presidential poll. South Carolina in 1944 had one electoral vote for each 11,983 votes cast in that State while New York had one electoral vote for each 133,869 popular votes. Each South Carolina voter was thus equal to 11 New York voters in electing a President.

Senator LODGE, in his list of eight defects in the present system, goes on to point out a deadlocked election thrown into the House is to be settled by unit voting in the States' representation and thus 25 small States could control such an election. Then there is danger that electors might be ill, go insane, or be killed before performing their duties. Finally there is the chance that elections might be swung by concentrating on doubtful States; Cleveland lost New York State by 1,200 and thereby lost 35 electoral votes which might win or lose an election. Someone has figured that a candidate could lose 36 of the 48 States and still win the office.

All these objections are not new. Benjamin Franklin and Charles Carroll argued in the constitutional convention for popular elections; Jefferson, Jackson, Wilson, and Senator George Norris all called for the reform of the system. Objection can be expected from smaller States which figure they would lose in importance and from the poll-tax States where fewer votes are cast than in free-vote States.

The subject is timely again and Senator LODGE'S move opens the way to a real discussion. The reception given the two-term amendment suggests that the time is ripe.

Admitting that the founding fathers did the best possible at the time and that their work represented only a compromise between differing schools of thought, the ancient idea that the Constitution was too sacred to be changed has now gone by the board. Both the States and the Congress have proposed amendments, 21 of which have been adopted. The amendments have considerably changed the fundamentals of the original draft and there is no need to suppose that other changes will not come. After all, no one of the founders could foresee the size or the number of the problems involved in the Nation as it grew and any pride in the authorship would have to yield to the needs of the moment. The Constitution is made for the Nation and not the Nation for the Constitution. When a serious situation presents itself, like that of the electoral system, it deserves a remedy lest it lead to greater dangers.

Power Politics or Justice in the Mediterranean

EXTENSION OF REMARKS
OF
HON. WALTER C. PLOESER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1947

Mr. PLOESER. Mr. Speaker, I have asked unanimous consent to extend an address delivered by Rabbi Ferdinand M. Isserman, which are his opinions, on the subject of power politics or justice in the Mediterranean.

The address follows:

So frequently people tell me that they would like to have a voice in the making of important decisions, in the shaping of the destiny of other nations, and in the formulation of policies in our own country. They feel that the individual counts very little and that his or her opinion is not given the opportunity to be heard in critical matters. In the important question which the President has placed before the Congress of the United States about financial and military aid to Greece and Turkey, the individual American citizen has an opportunity to make his influence felt and his voice heard. Not only has he the opportunity, but he has the duty. Not only will the President's recommendation change the foreign policy of America, but it may make the United States of America a party to a global system of power politics which may lead to war or all sorts of imperialistic adventures.

In Europe the game of power politics has been played for centuries. It brought Europe no peace, but periodic wars. Alliances and counter alliances were always made against the stronger nations, and the interludes of peace were periods when nations jockeyed for war. As a result of the new inventions in transportation and communication, the whole world has become as small as the European continent. Is the power politics that brought so much tragedy to the peoples of Europe to be reenacted on a world basis, and is America to become a party to it? In the issue now before Congress, at stake are war and peace, catastrophe and civilization, the destiny of America, and the destiny of humanity. Every citizen has a moral responsibility to participate in the national debate that now confronts us, to study carefully the issues and to help come to a conclusion. Only that individual is impotent who refuses to use the power that is his and abdicates his responsibility. Today are to be made the decisions for tomorrow. Everyone is morally responsible to share in them.

The proposal that the President has placed before Congress urges us to appropriate large sums of money to feed the people of Greece and to sustain the army of its present government with equipment and techniques to end its civil war. We are also to appropriate a large sum of money to help modernize the army of 600,000 of Turkey. We are doing this to prevent the sweep of communism and to preserve the independence of nations threatened presumably by Russia. If Russia were to propose to send military specialists and technicians to strengthen the army of Mexico or of Cuba whose governments were hostile to us, we would regard that proposal as an unfriendly act, and as a prelude to war. That Russia has not boldly so proclaimed our action is indicative of her military weakness and of her desire to avoid war with the United States. The proponents of the Truman doctrine contend that if there must be war between Russia and America, it would be to our advantage to have it out today while Russia is still weakened from World War II, and we are still near the height of our potential strength. So much stronger are we than Russia that we still can afford to threaten today, whereas tomorrow we may be threatened.

The average American citizen has a right not to have too much confidence in the State Department and in the reports that it may have prepared, on which the President's important decision was made. The State Department, itself, has made many glaring diplomatic errors. It has been so guided by the prejudices of the individuals who comprise it that it has hardly merited the confidence of the American people in a decision as momentous as this one. The State Department has, to a large extent, echoed the views of a small class of the social elite who had enough wealth to make a career of diplomacy. This group does not represent the broad sweeps of American life and has blundered seriously in the past decade. It urged our country to stand behind the Franco government in Spain, which destroyed democratic government with the help of foreign systems, the very thing that we are now trying to prevent in Greece. We have recently seen how the State Department was divided as to which policy to pursue in Argentina. Under Secretary of State Braden, a former Ambassador to the Argentine, an authority on Latin America, is convinced that the Peron government is a Fascist government, hostile to our form of government, hostile to the United States. It has given shelter to Nazi leaders. It controls large stores of the minerals essential in the making of the atom bomb. It has destroyed the freedom of organizations of labor. It has tampered with the freedom of the press, and in other ways it has indicated its contempt for the basic Bill of Rights. The Braden policies were challenged by Stettinius, who did not block Argentina's admission to the United Nations, and by Ambassador Messersmith, who had become a buddy of Colonel Peron, who meets and greets the former when he arrives and leaves the Argentine. With these differences within the State Department, the average American citizen knows that the report of the internal conditions of any country depends on who writes it. Braden writes one report; Messersmith writes another. If this is true of the Argentine, this may be also true of Greece. Who wrote the reports on Greece? What was their background, and what was their political and social philosophy? This the American citizen should know before he makes up his mind.

The American citizen also must not forget how grievously our State Department blundered in north Africa. There it persisted in doing what it may now be urging us to do in Greece—support the former enemies of the Allies and oppose the former friends of the Allies. Our representative, Ambassador Robert Murphy, was wined and dined by collaborators afterwards executed by the French when liberated. The men who had helped us were arrested after we arrived in north Africa, and some of our friends, even when

our troops were in control, were kept in prison for months. The money, prestige, wealth, good clothing, the good homes of Algiers were in the hands of the friends of Hitler, and with these best people, our diplomats liked to fraternize. The foes of the Hitler regime had been stigmatized as Communists or radicals, and these were ignored even after our landing in north Africa. All the men in important positions were Vichyites. The foes of nazism were ruthlessly eliminated, and our representatives flirted with the men in authority. Giraud, now the forgotten man, was preferred over De Gaulle. The American citizen should ask himself whether, in backing the King of Greece, our State Department is backing another Giraud.

But a much more important matter to consider is the international principle involved. There are bound to be, in the future, differences between nations, and it is not impossible that individual nations may seek to conquer smaller nations. The only possible cure for this situation that man has been able to devise is enclosed in the principle of collective security, through which all nations would unite against an aggressor nation. Therefore when wars would occur, they would be between an aggressor nation and the rest of the world. If this principle were securely established, it would tend to restrain aggressor nations. It would give small nations a sense of comfort and security which they have never had in the whole history of mankind. It would end the jockeying for alliances. It would eliminate all power politics. Nations would cease to fear the growing strength of other nations, and outlaw nations would be restrained by the thought of antagonizing the whole of mankind. When Japan invaded Manchuria in 1931, we, the United States, appealed to the principle of collective security. If our appeal had been heeded by the members of the League of Nations, Japan would have disgorged Manchuria, and a whole new code of international morality would have been established. When Italy prepared to invade Ethiopia, Ethiopia appealed to the League of Nations. The League of Nations could have prevented that invasion, but again the principle of collective security was ignored. It means united action against an aggressor. It is the only principle on which wars between nation and nation can be avoided.

We had hoped that this principle would be embodied in the United Nations, as it was. It would therefore mean not that force would not be used, but that force would be used collectively by all nations against any aggressor. There would be a police force, but it would be an international police force. There would be armies, but they would be international armies against aggressor nations which violate the moral code. Action would be taken, not by one nation which would bring war, but action would be taken by the United Nations. This was the great advance of the United Nations. This principle, developing through the United Nations, could have brought to an effective end unilateral action which is the prelude of war. Why was not the United Nations used in this instance? The American citizen has a right to ask. And the answer is that the United Nations is not effective enough. Now, if the greatest power in the world does not use the United Nations in the greatest crisis which confronts it, a crisis which may lead to war, how can we expect lesser nations to make use of the United Nations organization? Right now, we need not fear Russia. Right now, we have tremendous power. We could have waited and delayed to give the newly created international machinery a chance to work. That machinery did prove effective in the Iranian crisis. Russia did withdraw her troops from Iran, and the United Nations gained in prestige. Why did we choose to bypass the United Nations and thus give that international body a body-blow from which it may not easily recover?

The Russo-Turkish question is not a new question. Russia has for generations wanted a warm-water port. Between the conduct of Russia and Turkey during the war, there is no choice from our point of view. Russia gave everything she had to the Allied cause, and her contribution was significant. Turkey was ready to sell herself to the highest bidder, and at one time she stood prepared to let German troops through her territory to complete the encirclement of the Middle East by Rommel from Africa and by other German armies marching through Turkey. Because Turkey maintained a dubious neutrality, it does not mean that she should now be victimized by her powerful neighbor, but it should mean that Russia's claim for access to a warm-water port should receive favorable consideration. If Britain has a moral right to command the Straits of Gibraltar and thus determine who shall and shall not enter the Mediterranean, then Russia's claim on the Dardanelles should be heard. I do not believe that the Dardanelles should be given to Russia, but I do believe that these straits should be internationalized so that all nations of the world would have equal access to them. But if these straits should be internationalized, then all seaways, including the Suez and Panama Canals, should also be internationalized and placed at the disposal of all human beings. For us to send military personnel to Turkey now is carrying our "get tough" policy to dangerous extremes. It is taking a chance which the American people should not be asked to take, in view of the existence of the United Nations.

Greece is a heroic little country, to whom civilization is greatly indebted. Its 7,500,000 people put up a magnificent struggle against the Germans and Italians. That country has suffered woefully during the occupation. The Germans stripped it as a locust plague. Heroic Greeks never yielded but carried on a terrific underground existence. As in north Africa, so in Greece, there were elements in the Greek population in whom the spirit of liberty had died, and who came to terms with the Germans. They did not find it difficult to do so. They were Fascists themselves, and had crushed democratic processes in Greece. These Greeks joined their Fascist German allies and waged a cruel, unremittant war against the Greek underground resistance movement. When the war came to an end, the British hastily landed troops in Greece in order to prevent the resistance forces from taking over. British soldiers fought side by side with pro-Nazi Greeks and defeated the resistance and liberating forces. The elections held under the threat of British guns were not free elections, and were boycotted by large elements of the population. The choice given to these people was a choice between monarchy and communism. They were given no chance to choose democratic institutions. In such a small country, an army of 113,000 was necessary to keep the peace. In that army, according to the British Foreign Office, there were over 200 ex-German Army officers. Of all the liberated countries of Europe, Greece is the only one in which no Quisling has been tried. Is this the type of government that America wants to uphold? It may well be that Russia or her allies are supplying the resistance forces with weapons. If that is so, why can we not appeal to the United Nations to stop the flow of Russian weapons to the Greek rebels and to cease support of the Quisling army. Then, let the Greek people make their decision without outside weapons. Or is it our intention to prevent any radical governments, even if the people want them, to establish themselves in Europe? In that case the role of America is an unenviable one. Shall we become the supporters of reactionary and oppressive forces all over the world? What a role for the greatest Republic in the world to play.

When we act outside of the United Nations, the smaller nations of the world, even though they fear Russia and expansionism, will not be too happy. They will fear American expansion just as much. We believe that we shall use our power only for good and just causes, but smaller nations will not believe that of us. No one nation has the right to be the arbiter of the world. America does not want the role of determining by force the destiny of nations. This would be a destruction of freedom. I do not doubt that small nations tremble before Russian expansionist ambitions. I believe that these expansionist ambitions should be curbed, but they should not be curbed by any one nation. If they were curbed through the United Nations, then America could be a big factor in curbing them, and then it would have the confidence and good will of the whole world. The smaller nations would know that they have a voice. They could speak their minds with courage and integrity. They would be afraid neither of Russia nor of America. We would not be exposing ourselves to the temptations of imperialism, nor would the world think that our decisions, garbed in altruism, are motivated by oil in Arabia. There has been talk in our country of America dominating the world. Our acting outside of the United Nations gives credence to that talk.

It is very clear that our new policy was not born out of a great passion for democracy. Not only is the Greek Government undemocratic, but the Turkish Government is definitely tyrannical. President Truman's talk was devoid of great ideals, because it is impossible to link the American ideals of freedom and justice with the Governments both of Greece and Turkey. Are we, the United States, setting out to curb Russia now? Do we have to go to war with Russia? Do we have to go to war with any power which may become as strong as we are? There would be no hope for peace at any time if that were the case. We are the strongest Nation in the world today, but there are other nations which, in 25 or 50 years, may equal or surpass our strength. The people and resources of Russia, when their potentialities are fully developed, will be stronger than America. Are we now going to build an American empire so that we shall always stay ahead of a Russian empire? This will surely lead to war and catastrophe. This will never bring peace on earth. Powerful nations must learn to work together. They must learn to curb themselves and they must learn to work through existing international organizations. Small nations should seek refuge, not in alliances with powerful nations, but through the United Nations. Turkey and Greece, if threatened by the power of an ambitious neighbor, should seek protection, not from Uncle Sam, but from all the nations of the world. The prophets of old warned Israel against making alliances, either with Egypt or with Syria. They knew that small nations which make alliances with strong ones lose their freedom and become subject nations to the powers whose aid they sought. If Greece and Turkey receive American aid and accept American orders and allow Americans to dominate their economy or their military, then the Greeks and Turks become the vassals of America instead of the vassals of Russia. They will be better off under our tutelage than under that of Russia, but nevertheless they will have lost their freedom. It is that freedom that the President seeks to uphold. Then the way to uphold it is to extend whatever relief Greece and Turkey need through the United Nations. Then these countries will not be obligated to any one state. They will be obligated to humanity. Then they will be protected not by the armies and navies of one country, but by the armed forces of the world. Then the principle of collective security will be made secure and the principle of international war will have been undermined and weakened. By all means, let us help Greece, or let us help Turkey, or let us

help all states that need food and protection from aggressive neighbors, but let us help them through international and not through national agencies. Working through international agencies is to secure the peace of the world. Working through national agencies is to bind mankind to the rack of war.

The ideological warfare between American democracy and Communist autocracy will not be settled by armed force. It is one of the historical conflicts in which the march of events and time will be the umpire. The use of arms in this clash will becloud the issue and delay the decision. This is a debate of generations. Let that debate take place, not on the field of battle, but in the arena of life. And I am convinced that no philosophy which denied the basic liberties of man, as defined in the Bill of Rights in the American Constitution, can ever dominate the earth.

Hon. Charles L. Gerlach

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1947

Mr. SABATH. Mr. Speaker, I am pleased to join others today in expressing profound sorrow for the passing of one of our most useful and beloved colleagues who reached his earthly journey's end only yesterday.

Although we were of opposite political faiths, yet I came to know him as a high-class gentleman, a deep student of the principles of sound government and their proper application, and a fervid patriot.

Mr. GERLACH had an initial advantage in being born a Moravian and in a splendid community in Pennsylvania inhabited largely by Moravians, than whom there are no better. He was a member of the Unity of the Brethren.

During World War I, I was requested to make a series of addresses before gatherings of war workers and others, and it so happened that I was sent to Bethlehem, Pa., the birthplace of Mr. GERLACH. I soon found myself very much at home as one born in Bohemia, because Bohemians and Moravians, who formerly occupied the Northern Province of Austria-Hungary, which is now part of Czechoslovakia, are close kinsmen. We all well know the splendid reputation of Moravians for responsibility, adherence to compacts, and excellence of citizenship.

In my visits throughout the United States during the First World War I did not find any community more alert, intelligent, and assiduous in promoting and defending the national welfare than the citizenry of Northampton County, Pa. This was the source of much satisfaction to me because of the very close kinship between them and my own people. Mr. GERLACH in all his activities personified those good qualities. Although he had known or suspected for several weeks that the sun was about to set permanently for him, he did not quail, but with an approving conscience looked with confidence and serenity to the future.

In the 10 years he labored as a worthy servant of an intelligent and discriminating constituency he established a reputation that all of us may emulate with profit and enduring satisfaction.

UN and Palestine

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1947

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by Sumner Welles from the Washington Post of May 7, 1947:

UN AND PALESTINE—TIME FOR ACTION, NOT DELAY

(By Sumner Welles)

Will the Assembly of the United Nations assume the full authority conferred upon it by the Charter? Will it now, as the spokesman for world public opinion, boldly recognize its obligation to press for an equitable settlement of the Palestine controversy? Or will it let itself be used by the major nations as a tool in their contest of power politics?

Present prospects are encouraging. They are the more so because of the election of Oswaldo Aranha as President of the Assembly. His ability and character are unquestioned. His lifelong devotion to the principles of human liberty and human dignity is recognized. No wiser choice could have been made.

The issues are plain.

On the one hand, it is clear that the restoration of the legitimate rights, and even the salvation of the very lives, of a great number of the most tragically afflicted people in the world of today depend upon a decision of the Assembly that a just settlement of the Palestine problem must be found before the end of 1947. On the one hand, it is equally clear that Great Britain is determined to continue to rule Palestine, and to oppose any solution which would transform the present Jewish minority into a majority, or provide for the establishment of a Jewish commonwealth. She wants Palestine as a strategic base to replace that which she is losing in Egypt. She wants to retain Arab support. She considers the achievement of these objectives as essential to any successful attempt to check Soviet expansion in the Near East.

Great Britain has never shown greater ineptitude, nor a more callous disregard for her obligations to humanity, than in her recent policy in Palestine.

Mr. Chamberlain's white paper of 1939, continued in force by the Attlee cabinet, which practically prohibits Jewish immigration, is a violation of Great Britain's mandate. The persistent refusal of the British Government to reopen Palestine's doors has deprived the Jewish survivors of Hitler's mass murders of the hope that they can obtain security and a chance to start life anew.

There need be no extenuation of the crimes of the Jewish terrorists. But these are primarily a result of British policy and of British military repression.

When the British Government at last submitted the Palestine problem to the United Nations, it declared that it merely sought an advisory opinion, to be accepted or rejected as it saw fit. It was later explained that Britain could not undertake new responsibilities in Palestine unless they were acceptable to her. In her present predicament Britain should certainly not be asked to assume obligations she cannot readily carry out. But if the recommendations of the Assembly involve new military or financial burdens, these can surely be jointly shared by several states as provided in Article 106 of the Charter, until the United Nations is able to take them over.

What is imperative is that the United Nations shall not submit to pressure for further sterile delay. The Assembly cannot afford to appoint a new fact-finding committee to formulate recommendations, only to have these once more ignored or rejected by the British Government.

The present session of the Assembly should limit itself to the appointment of a special committee, preferably composed of only a few states, none of them major powers, and all of them devoid of any selfish interest in Palestine. This committee should receive categorical instructions to submit its recommendations for a permanent settlement to the regular session of the Assembly next September. The committee should be instructed to visit Palestine, to familiarize itself at first hand with the condition of the Jewish survivors in Europe, and to hear the views of all of the several interests involved.

The Assembly should agree at this extraordinary session that final action will be taken upon its committee's recommendations at its regular session next autumn.

Regrettable as it may be for several reasons, the only solution which will now be viable for a solution providing for a form of partition which will give the Jews ample territory within which to resettle the survivors of the Nazi massacres, and within which to develop a prosperous economy under an independent and democratic government. The region of Palestine assigned to the Arabs might well be incorporated within Transjordan. The Holy Places should be placed under the control of the Trusteeship Council. Britain's legitimate needs for strategic bases may be properly determined by the Security Council.

If our Government has as yet decided upon a Palestine policy, this has not been disclosed. Its backing and filling when responsible representatives of the Jewish people asked that their voice be heard at this session of the Assembly was not an exhilarating spectacle. It may be hoped that enlightened American leadership will still be undertaken before it is too late.

If the American Government is chiefly guided in this controversy over Palestine by what are alleged to be strategic considerations, and refrains from standing foursquare for the principles of human liberty and of justice that are involved, it will lose a great opportunity to enhance its own moral prestige and to increase popular confidence in the authority of the United Nations.

World Trade

EXTENSION OF REMARKS
OF
HON. WILBUR D. MILLS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 7, 1947

Mr. MILLS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of C. D. Jackson, vice president of Time, Inc.,

managing director of Time-Life International before the Committee on Ways and Means, May 7, 1947:

Mr. Chairman and members of the Committee on Ways and Means, it is a privilege and honor to be able to appear before you at this time.

I asked for this privilege not because I was in any way an international economist, professional, or even amateur, but because I am an importer of news from abroad, and an exporter of American magazines to virtually the whole world. Furthermore, during the war I was attached to the Psychological Warfare Division of General Eisenhower's headquarters, and part of my job was to appraise the reactions and ideas of liberated and conquered peoples toward the Allies in general and the United States in particular.

Like a great many other people in business in America today, I have come to realize since the end of the war that the United States businessman has not only a commercial, and if you will, selfish, responsibility to discharge today, but also an unselfish patriotic responsibility to assist his country in every possible way to achieve its proper place in the world—a world of which it is today an indissoluble part, whether or not that is a pleasing thought to individual Americans.

Trade is a great peacemaker and peace preserver. More world trade is what this world needs today. But in order to get world trade off dead center, someone must assume leadership, and obvious to everyone all over the world is the fact that the United States should and can assume that leadership if she so wishes.

In order to assume that leadership, and have it understood and accepted by the world, two things are necessary—one is intangible, the other is tangible.

The intangible one is evidence to the whole world that the United States truly desires an orderly, prosperous, trading world. Mr. Clayton is in Geneva now trying to get some 18 nations to believe that intangible.

Unlike a great many other countries today, the American democratic system of government can present the confusing spectacle of having an officially accredited representative abroad with a directive from the President of the United States to achieve certain ends, while simultaneously other official representatives of the same country are publicly attempting to counter his directive. This is understandable and acceptable to us because we have been brought up in the American tradition. It is terribly confusing to non-Americans, and sometimes can prove disastrous.

Therefore, on the intangible that Mr. Clayton is trying to put across, which can unite these nations within the western American orbit instead of driving them in confused despair to seek refuge if not safety in some other orbit, I hope and urge that this committee will find that the International Trade Organization program is something to be endorsed and heartily recommended to the Congress.

On the tangible side, there is the matter of actual trade—the exchange of goods, services, and money between these countries. For a variety of reasons, some of them historical, we have forgotten that the word "import" is inseparable from the word "export," unless we are willing to embark on the long term international trade suicide of unpaid loans of one sort or another, or unless we believe that we can cut ourselves loose from the rest of the world and exist happily and prosperously on a self-contained basis.

I do not believe that the latter needs much argument today, even for those who wistfully wish it might be true, if for no other reason than the fact that the American standard of living must be exported if there is to be peace in the world—and the American standard of living cannot be exported if we set a wall around ourselves.

Today there is not enough world trade. In order to have more world trade it must be freed from some of the present unnecessary and occasionally obsolete barriers which have been set up. One of those barriers is what is now being discussed in Geneva under the general name of the reciprocal-trade program.

It is proposed that the United States will sit down with these other nations of the world and will negotiate reciprocally the lowering of tariffs. This does not mean the abolishing of all tariffs; it does not mean that United States industry or the United States worker, either in general or in particular, is to be ruined. It does mean that certain tariff barriers will be lowered between the United States and other nations in order to permit a freer, faster, and larger flow of goods, from which this country expects to derive considerable benefit through increased exports.

But to export a product from this country requires dollars to pay for it. The foreign countries cannot obtain dollars except through loans or through imports into this country. Unless this Government is prepared to lend indefinitely, with little hope of repayment, then we must have added imports, and the best, most normal, and in the long run, most painless way of increasing imports is through the lowering of tariffs.

I mentioned above that the American standard of living must be exported if we are to have long-term prosperity and peace in the world. The troubles and wars of the world arise much more out of economic than geographical reasons, and if some of the trouble-making nations today and in the past had had more economic lebensraum—in other words, had been able to bring their people closer to the American standard of living—there would have been less shouting and eventually less shooting for geographic lebensraum.

In my own business, international magazine publishing, we receive thousands of letters a year from all over the world on a thousand different subjects. But the one common denominator that appears in almost all these letters, no matter what country they are from, is the desire on the part of the readers to see more American advertising. To them, an advertisement is not what it is to us, namely, a more or less ingenious sales appeal. To them, an advertisement is an editorial on the fact that America is functioning. They give us credit for having a virtual monopoly on all the great words such as freedom, liberty, democracy, etc., but they want to see what we make, because they know in their own unhappy, inarticulate way, that when we are making things, and displaying them, and selling them, we are functioning well, and when we are functioning well, there is a chance that they also may pull themselves out of the mess in which they are.

Therefore, let a functioning America send as much as it possibly can to the people of the world, and let us not give it, but let us sell it—because this is a capitalistic country and should produce and sell. But let us also be paid—and that can only be done by letting these other nations obtain the necessary dollars by selling to us.

Let us increase the velocity and volume of two-way world trade, in order to increase our national income here and raise the standard of living abroad.

It is inconceivable that we should once again revert to the dismal techniques of the twenties, when in order to get the necessary dollars into the hands of our customers we embarked on a program of indiscriminate foreign loans whose default unquestionably was a major factor in the 1929 crash. Then the machinery of the United States virtually came to a halt. As a desperate expedient we started buying the gold of the world, a great part of which is now buried in Fort Knox. This device kept exports alive until the world's gold was virtually exhausted, at which time the war came along and lend-lease furnished a new formula for getting dollars in the hands of our customers abroad. Now we are right back where we started, with the even grimmer necessity today for getting the trade of the world off dead center. On the basis of our actual experience with these past nostrums, can we again, as intelligent Americans, deliberately refuse to adopt healthy, normal, and permanent measures instead of the synthetic makeshifts of the past?

Here again you have it within your power immeasurably to influence this most tangible aspect of the problem through your findings and recommendations on the reciprocal-trade program which is now entering its first difficult stage in Geneva, where many eyes will be looking to you for a sign of hope.

Decisive choices are going to be made within the next few months. With your endorsement, the choice can be for world-wide peace and prosperity.

Poland

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1947

Mr. SABATH. Mr. Speaker, we do well again to pause for a while to commemorate May 3 as Poland's national holiday. Undoubtedly, one of the world's greatest documents, looking to freedom and progress after many, many years of oppression, was signed May 3, 1791. It is not exaggeration to say that the Polish Constitution, assuring the basic rights of man, be his station high or low, takes its high place alongside our own Declaration of Independence and the Magna Carta of 1215.

In commemorating this anniversary, we are reminded of the painful evoluticns that have brought Poland to her current high stature among the leading nations of the world. Her indomitable will to live, exhibited many times from 1772, when one-third of her territory was shamefully wrested from her, to the present day, is an example of courage, devotion, and fortitude not surpassed, if paralleled, in all earth's history.

In 1795, when Poland ceased to exist as a nation, the world thought she could never rise again; but, with unmatchable persistence, after 123 years of struggle under the heels of a conqueror, she again emerged to take her rightful place among the nations of the earth.

Obviously, people of common clay do not usually arise after being submerged 123 years, but that is exactly what the doughty Poles did.

Then followed 21 years of reasonable prosperity for the Poles, which the whole world, with but one exception—Germany—hoped might be permanent. But, alas, 1939 came, and Fate decreed that Poland be the scene where the issue of peace or war should be decided. The heroic action of Poland, in the face of

great military inequality, in opposing the further encroachment of the despicable Nazis is as inspiring a deed as covers the pages of all history. That opposition proved the mettle of a great people, and we all hope that Poland may enjoy forever a sound government of her own choosing. Indeed, her important contribution to the enormous scenes of especially the last 8 years entitles her to a lasting place in history and in the hearts of all who appreciate and love character, honor, fair dealing, and rectitude of purpose.

Admiral Frederick J. Horne

EXTENSION OF REMARKS
OF
HON. W. STERLING COLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 7, 1947

Mr. COLE of New York. Mr. Speaker, today I am introducing a bill which would give full active duty pay to any officer of the Army or the Navy who has retired upon completion of 50 or more years of service. So far as I know there is but one person now living who can qualify, and it is my information that there is no one else in all our national history who could have qualified.

Admiral Frederick J. Horne holds a unique and enviable place in American military and naval history, having served in an active capacity for over 50 years. His service with the Navy was not emblazoned with the roll of drums, the blaring of bands, the great acclaim, which are the usual deserved lot of our national heroes; yet the contribution which this man made to our national security is fully deserving of the plaudits of his countrymen as can be testified by those who knew him, his work, and his responsibilities during wartime. To me Admiral Horne is the unsung hero of World War II.

America has had many heroes who over a short space of time have cut their niche in a permanence of glory, but few have been the stalwarts whose quiet, conscientious, thorough, and constructive work has endured for year in and year out, decade after decade, unknown and unheralded. Such people are the great in America, and such a person is Admiral Horne.

Admiral Frederick J. Horne was born February 14, 1880, at New York City, and was appointed to the Naval Academy by Gen. Daniel Sickle. He entered the Naval Academy May 20, 1895, and was placed on the retired list on August 1, 1946, serving on the active list a little over 51 years.

As a first-class naval cadet he was present, on board ship, at the landing of the Army in Cuba in June 1898, and at the battle of Santiago on the U. S. S. *Texas*. Those naval cadets returned to the Naval Academy in October 1898, and their class was graduated on 28 January 1899.

Admiral Horne has been pretty well all over the world and served in about every kind of duty. He went through the insurrection in the Philippines from December 1899 to the end, and spent 14 years in the Orient altogether, in tours of from 2 to 4 years. He had command of the following ships: *Rainbow*, surveying French Frigate Shoals for an air base in 1914; *Von Steuben*, ferrying troops in 1919; *Buffalo*, destroyer tender; *Birmingham*, light cruiser, Mexican waters during the revolution in 1921; *Vestal*, repair ship for battleships and cruisers; *Omaha*, light cruiser, flagship of destroyers, Pacific Fleet; *Wright*, aircraft tender; and *Saratoga*, carrier.

As a flag officer, he had command of base force, United States Fleet; aircraft scouting force; aircraft base force; aircraft United States Fleet as vice admiral; and a cruiser division.

Admiral Horne's decorations are as follows: Navy Cross, Distinguished Service Medal, Legion of Merit, Navy Commendation Ribbon, Sampson Medal for the Battle of Santiago, Spanish War, Philippine Insurrection, First World War, Second World War, American Defense, American Theater, and decorations from Brazil, France, Poland, and British Empire.

He became Vice Chief of Naval Operations, with the rank of vice admiral, in March 1942, and served in this duty until October 1945. He was promoted to admiral under date of December 15, 1944.

Following are the citations received:

Navy Cross: For distinguished service in the line of his profession as naval attaché, Tokyo, Japan, in which capacity he had remarkable success in establishing and maintaining friendly relations with the Japanese authorities in supplying valuable information to the Office of Naval Intelligence and to the commander in chief of the Asiatic Fleet. He also performed extremely meritorious service in connection with the purchase and building of ships in Japan for the United States Government.

Distinguished Service Medal: For exceptionally meritorious service to the Government of the United States in a duty of great responsibility as Vice Chief of Naval Operations from March 26, 1942, to August 31, 1945. Displaying sound judgment, superb professional ability, and meticulous attention to detail, Admiral Horne directed the planning and operation of the logistics, intelligence, and communications systems of the Navy. An outstanding administrator, Admiral Horne, by exercise of unrestricted energy, excellent foresight, and management, brought about the vastly complex organization that provided the fleets of the United States and supported them throughout the world. Through the qualities of leadership which he displayed, Admiral Horne inspired in his subordinates a high degree of loyalty and devotion to duty. His conspicuous achievements contributed materially to the successful prosecution and outcome of the war.

Legion of Merit (from the Army): Admiral Frederick J. Horne, from May 1943 to September 1945, as senior member and later as Chairman of the Army-Navy Petroleum Board, provided astute guidance in staff planning and logistical collaboration concerned with problems of petroleum supply. The policies of the Board, coordinated with other organizations and Allied agencies, resulted in the adequate supply throughout the world of petroleum products to meet the essential wartime needs of the Army, the Navy, and civilian agencies.

Admiral Horne is certainly one of the most beloved officers in the history of our Navy. He was always gentle, courteous and considerate in dealing with people, and this particularly applied to enlisted men and junior officers. At the same time, Admiral Horne was a firm disciplinarian, and could be a hard-boiled fighting seadog when the occasion required it.

The least spectacular, but perhaps the greatest, contribution he made in his long and distinguished naval career was the quiet behind-the-scene job of being Vice Chief of Naval Operations during the Second World War. The Chief of Naval Operations and the Commander in Chief of the Fleets, Admiral King, was heavily involved in the Joint Chiefs of Staff and the combined chiefs of staff work, and left most of the administration and guidance of the Navy Department itself to Admiral Horne.

It was Admiral Horne's unfailing tact and vast knowledge of the Navy and naval operations that was mainly responsible for the smooth running of the Navy Department and of naval operations.

I do not believe that the country will ever know the full contribution to the prosecution of the recent war by this quiet, modest, sincere, but tremendously effective and capable naval officer. He leaves the naval service in the full, mellowed vigor of his years, and with him go the genuine affection of these who knew and worked with him, and the profound appreciation of a grateful people.

Fascism in Action—Resolution to Print as a Public Document

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1947

Mr. PATMAN. Mr. Speaker, next week, May 14, the Committee on House Administration is expected to determine whether or not it will recommend to the House of Representatives adoption of my Resolution No. 83 which provides that the booklet Fascism in Action be made a public document.

On September 24, 1946, after conferring with Dr. Ernest S. Griffith, Director of the Legislative Reference Service, Library of Congress, I addressed the following letter to Dr. Griffith, as Director of this Service:

I have received and read with interest the booklet which you prepared at the request of Representative EVERETT M. DIRKSEN on Communism in Action. It is House Document No. 754, Seventy-ninth Congress, second session. This booklet is very fine and I have enjoyed reading it. If it does nothing more than arouse a lot of people about the evils of communism, it will certainly be worth while. It is my belief that the book will serve a very fine, useful purpose and you are to be commended for the contribution you have made in its compilation.

I am opposed to communism in any form. It should be fought with every means at our command. It is obnoxious to our American democratic system of free enterprise

based upon initiative, intelligence, ability, and hard work. Our system is the best in the world and although it is so much better that communism, I just can't believe that communism can get any hold in America, yet we must be on the alert and make sure that there is no formidable start toward communism.

At the same time I dislike fascism. I think fascism is just as bad as communism. They are both equally bad. I would not attempt to say which is worse. To my mind fascism has a stronger hold in our country today that communism because its roots have become so firmly planted by so much abler and stronger hands and minds. Fascism in our country today is backed by plenty of wealth and a day never passes that the people of our country are not flooded with literature which would lead them down the road to fascism.

Therefore, this letter, in addition to commending you on the book on Communism in Action, is to request you as Director of the Legislative Reference Service, to prepare a book on fascism to show how fascism operates and to cover generally the same line of approach that you covered in the book on communism.

If you will prepare such a booklet I expect to offer a resolution in Congress, January 3 next, asking that it be made a public document in order that it may receive wide distribution.

I hope the time will never come in this country when our people will fear only communism or only fascism. They should fear both. Since the book has been prepared on communism I hope that people will not get the idea that fascism is not feared just as much by Congress and the Legislative Reference Service as communism.

Please advise me at your earliest convenience if you will undertake the preparation of the booklet on Fascism in Action.

Dr. Griffith advised me that the work would be undertaken, and I assisted to the best of my knowledge and ability. The booklet has fourteen chapters, as follows:

PART I.—POLITICAL AND SOCIAL

Chapter I, Government and Political Parties.
Chapter II, Education.
Chapter III, Use of Leisure Time.
Chapter IV, Living Standards.
Chapter V, Religion.
Chapter VI, Freedom.
Chapter VII, Foreign Policy.

PART II.—ECONOMIC

Chapter VIII, Organization of the Economy.
Chapter IX, Public Finance.
Chapter X, Industry.
Chapter XI, Agriculture and the Farmer.
Chapter XII, Foreign Trade.
Chapter XIII, Transportation.
Chapter XIV, Labor.

An effort was made to keep it around 100 pages, but it now appears that it will be nearly 150 pages. However, the number of pages is not as important as the value of the contents of the booklet.

A correspondent in Texas in a letter to me of October 1, 1946, stated:

Indeed, I believe that the Fascists in an effort to further their program are responsible for exaggerating the danger from communism. Fascism is the greater danger today. I look forward to the pamphlet on Fascism in Action.

Another recent letter states:

You're right. Americans should hear both sides. Fascism in Action should be published.

From New York a veteran of the war writes:

The fight you're putting up to get your resolution, H. R. 83, out of the congressional subcommittee is a heartening thing to an ex-soldier who fought this menace of fascism, only to see the possible recurrence of it in this country.

I trust you are successful in getting Fascism in Action published by the Government Printing Office. It is necessary reading for all Americans.

From the west coast, a correspondent writes:

It appears to me that many people who are prone to raise an outcry about "iron curtain" in other countries aren't aware of those forces in our own Government who are attempting an American iron curtain.

Still other correspondents write:

I have been reading about the book, Fascism in Action, which you hope to have published.

From the description, it must be an excellent book—just what is needed at this time to combat trends in this country.

What can I do to help get Fascism in Action printed by Government Printing Office? We need to expose fascism and communism both.

A correspondent in Ohio writes:

Why anyone not a Fascist or a Communist should oppose the widest publicity in showing up these two totalitarian twins is beyond me. Your efforts are to be commended by loyal Americans (and I don't mean either Communists or Fascists).

In a letter to me of March 20, 1947, a correspondent in Ohio wrote:

I am grieved to learn that the publication of the manuscript Fascism in Action is being delayed in the House Subcommittee on Printing—especially at a time so critical in our history. I hope you will do your utmost to hasten the publication of this manuscript and I should indeed appreciate a copy of the book, if and when it is printed.

Another recent letter from Texas states:

Our greatest danger today lies in fascism and the people should be made conscious of what fascism means and how alarming the trend is toward fascism in America at this time.

Aid for Greece and Turkey

EXTENSION OF REMARKS
OF
HON. WAT ARNOLD
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 7, 1947

Mr. ARNOLD. Mr. Speaker, if the so-called Truman doctrine of stopping communism in Greece and Turkey, and throughout the world, is accepted by this Congress, it will merely forge another link in the heavy chain that already binds the American taxpayers to a debt so great that the annual interest exceeds $5,000,000,000. And this link for Greece and Turkey will only be the first of a series of links in the already too burdensome chain that, in the end, can only succeed in sinking the American taxpayer and the Nation into an economic mire blacker and deeper than that of the Nations we are proposing to help fight off collapse.

Under the proposed Truman doctrine, the economies of Greece and Turkey are to be saved by $400,000,000. Communist infiltration is to be blocked by the $400,000,000. The integrity of two middle eastern nations is to be saved, and democracy is to be preserved with this $400,000,000. Standing alone, that amount of money looks more than sufficient to bolster a weakened nation if it were placed in efficient hands and fed into proper channels. But let us see how these countries have managed their affairs in the past.

Greece was one of the nations most ravaged by the war. Its economy was wrecked, its villages burned, and its people impoverished. The record, however, shows that during these trying times, and since the end of the war, Greece has received more than just sympathy from the United States. Here is what Greece has received to help her combat the evils that have plagued that nation.

In lend-lease materials, Greece was given $71,697,000 from March 11 through VJ-day. Since VJ-day Greece has received $3,970,000. That makes a total of over $75,000,000 in lend-lease alone through the end of last year.

Our Maritime Commission extended credits totaling $45,000,000 to Greece.

The Export-Import Bank committed $25,000,000 for Greece.

The United Nations Relief and Rehabilitation Administration allotted Greece $350,500,000. Over $7,000,000 of this remains to be shipped to that nation at this moment.

Truly, it cannot be said that Greece has not had a helping hand from this country already. These figures, all of which come from the agencies through which the aid was forwarded, show that the American taxpayer has given to the Greek Government a total of almost $500,000,000 to help it over the rough spots during and after the war.

Turkey was not even a party to the war just concluded. Yet, Turkey has received $90,000,000 in lend-lease from the United States taxpayers. The Turkish economy, in the opinion of many economic specialists, is today on a more sound basis than is the economy of the United States. In Turkey today, there is a standing army of somewhat over 500,000 men. Conditions inside Turkey are said to be good. Aid being asked for that nation, however, is of a military character to enable the Turks to better train, equip, and feed that huge standing army, and at the expense of the American public.

So here is what we have in this situation. On the one hand, aid is asked for a nation that already has received half a billion dollars from United States taxpayers, and whose economy today is on the verge of total collapse in spite of all of this money and aid. So why should Uncle Sam play Santa Claus any longer? Why should Congress not treat the taxpayers' dough as would a sound and dependable banker?

On the other hand, we are asked to support a grant of aid to a nation that is spending a great percentage of its income for a large standing army, and a nation that did business with Hitler while the democracies of the world were fighting to crush the Nazi military machine.

In the middle, and in a very tight squeeze, we have the American little man—the little men who have had to make good on all these checks written by the administration, that have done so little good. Here is what this policy means to the little men of America we are being asked to forsake:

For every $3 future generations of Americans have to pay in taxes, they will have to dig down for one more dollar to pay for all this foreign aid granted to nations abroad during the past 7 years. To further increase such a heavy burden is only a policy of self-destruction.

The solvency of America is today the real secret weapon in this war to preserve democracy on the face of the earth. The old adage "Give until it hurts" applies today to America. We have given already until it hurts. To give more will hurt us far more than any of us now can realize.

If these countries believe in themselves, and are willing to make the sacrifices our forefathers made for the cause of freedom and liberty; and if they will give satisfactory assurances of repayment, then let us quit talking about grants, gifts, or credits, and start talking loans to these people. No doubt private banking concerns in this country could handle the needs of these nations, thereby relieving Uncle Sam whose back is terribly bowed with our huge debt.

Intelligence System

EXTENSION OF REMARKS

OF

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 7, 1947

Mr. PATTERSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of May 3, 1947:

INTELLIGENCE SYSTEM

Nothing is so important to an adequate American intelligence system as continuity, both of effort and direction. For that reason another change in the leadership of the Central Intelligence Group is to be regretted. At the same time, it would be less than generous not to recognize the valuable service of Lt. Gen. Hoyt S. Vandenberg during his tenure as Director of Central Intelligence. He pieced together a working top-level organization to evaluate the many reports in a field where lack of coordination previously had been the most conspicuous feature. We hope that his successor, Rear Adm. Roscoe H. Hillenkoetter, will have similar success. Admiral Hillenkoetter's background will help him in his new duties.

General Vandenberg's resignation points up a fundamental weakness in our intelligence set-up which is carried over in the new Central Intelligence Authority envisioned under the armed forces merger bill. That is the weakness of permitting a military man to retain his active-duty status while serving as director of Central Intelligence. Inevitably this results in a tendency on the part of incumbents to regard the job as merely a stepping stone in an essentially military carrier. Hence it invites the trading back and forth between the Army and Navy evidenced by the appointment of two admirals and one general in 16 months. What is needed is to develop the concept of long-term career service in this highly important job. We hope Congress will see to it that the merger bill is amended to establish a specific term of office and to require that the director be in fact a civilian. This need not militate against Admiral Hillenkoetter if he is sincerely interested in an intelligence career, for he can relinquish his active Navy status and retain the directorship as a civilian.

Aside from these deficiencies, the part outlined for intelligence under the merger is highly significant. The merger sets up as a permanent part of our national policy activities which so far have had only the tentative backing of an Executive order. General Vandenberg outlined the vital functions in his testimony before the Senate Armed Services Committee. Foreign intelligence, he pointed out, is equally as essential in peace as in war. Indeed, good intelligence, in our opinion, can be a potent force for peace, since by acquainting policymakers with the facts, it helps to insure wise policy. That is the reason we have constantly emphasized a civilian appointment with assurance of continuity of service at the helm of intelligence.

Failure of Government Agencies to Cooperate in Scrap Efforts Causes Shortage of Steel

EXTENSION OF REMARKS

OF

HON. HAROLD C. HAGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 7, 1947

Mr. HAGEN. Mr. Speaker, the district I represent is devoted predominantly to farming. Our farmers are progressive. They make wide use of mechanical equipment. Shortages of farm equipment during the war handicapped them severely in their vital work of providing food for our armed forces, the Nation, and our allies. Nevertheless, they performed miracles in making inadequate equipment do, and in keeping worn-out equipment on the job.

Now it has been almost 2 years since the surrender of Japan brought the war to a close. Yet farmers in my district are still suffering for lack of machinery and other products made of metal. Mail and urgent telegrams come across my desk every day, asking what I can do to help our farmers get badly needed farm machinery, roofing sheets, nails, and baling wire. And each time I turn to manufacturers and distributors of these products I hear the same story—shortage of steel.

Going into the matter thoroughly, I was amazed recently to discover that our Government is doing little or nothing toward returning to this country the scrap steel resulting from the war. This is the scrap which our steel mills desperately need if they are to reach full production.

Because of this, the facts contained in a leaflet entitled "A Memorandum on the Iron and Steel Scrap Situation" have caused me a great deal of concern, if not downright irritation.

That memorandum states that present stocks of iron and steel scrap are the lowest on record. They are even lower than back in the war years when we were conducting scrap drives. Yet in Europe and on the Pacific islands, there are millions of tons of scrap in the form of out-of-date or damaged war equipment, bombed bridges, buildings, and so on. This memorandum points out that there are many other thousands of tons of scrap steel, in the form of obsolete machinery and industrial equipment, being held by the War Assets Administration, the Army, and the Navy. It is almost treason how this material is being held and stored at great expense to the taxpayers when it is so greatly needed by industry for American business, and agriculture, and to provide labor for American workers.

As a representative of a district clamoring for steel products, I demand to know why the War Assets Administration and the Army and Navy have not exhausted every means to get this steel scrap flowing back to the United States.

Now is the time to take measures for getting it back. It can only be done while prices are high enough to pay the cost of handling, shipping, and processing scrap. The present scale of prices cannot be expected to last forever.

My speaking out against the sluggishness of Government agencies in this matter is not a case of the pot calling the kettle black. My constituents, and American farmers generally, have done a good job of conserving scrap. Flow of scrap from farms to dealers has been very high. The amount of scrap remaining on farms is small, indeed.

Since farmers have scraped the bottom of the barrel, they are not feeling exactly happy to hear that stalling, delay, and indifference on the part of Government agencies is responsible for a good portion of our current scrap famine. Their resentment will be deepened, of course, every time they are unable to buy nails, baling wire, and farm equipment; every time they read or hear over the radio the fact that Washington's failure to move mountains of rusting war scrap back to America is causing an ever more rapid depletion of our ore reserves, the reserves we had to gouge into so heavily to win the war.

Our Government knows the basic facts. Why has it not acted?

Mr. Speaker, I ask permission to introduce the full text of this leaflet for the observation of the American people who are entitled to know the facts and a more complete survey of the scrap situation, and why farmers are not getting much-needed agricultural equipment.

The text of the leaflet entitled "A Memorandum on the Iron and Steel Scrap Situation" follows:

The present visible stocks of iron and steel scrap are the lowest on record and considerably below the quantity on hand in the early part of 1942 when it became necessary to conduct a Nation-wide scrap drive in order to maintain production of steel and castings for the "Arsenal of Democracy."

The heavy exportation of ferrous scrap, amounting to some 20,000,000 tons in the 10 years prior to our entry into World War II, plus the tremendous tonnage of steel in many forms sent abroad during the war, and other factors have combined to effect the present definite scrap shortage now existing in this country. Ferrous scrap is one of our important sources of metallics and it will never be possible for us to make up this loss of one of our basic materials for the production of finished steel and castings.

The present collection of scrap from the farms and rural areas, plus the generation of scrap by fabricators and automobile graveyards and the daily obsolescence of equipment in this country are not sufficient to meet the demands of the steel and foundry industries and accumulate safe reserves for the future. If the present scant supply is not augmented, production of finished steel and castings may have to be curtailed, as well as the production of commodities made in whole, or in part, of steel and/or castings.

The largest and most accessible sources of scrap to increase our present supply are under the control of the United States Government as:

(1) Surplus military and industrial equipment in the United States, occupied Germany and Pacific islands which is no longer usable and, therefore, to be scrapped. This surplus equipment is now under the controls of War Assets Administration, the Army and the Navy.

(2) Scrap resulting from warfare and worn-out equipment in occupied Germany and Pacific islands.

(3) The conversion to scrap of damaged and obsolete Navy and maritime vessels.

It is estimated that the potential scrap from these three sources would aggregate many million tons.

A bold and vigorous policy and program should be adopted by these Government agencies in:

(a) Declaring as scrap and selling these otherwise unusable surpluses.

(b) The return of all scrap under the control of these agencies for sale at Atlantic and Pacific ports.

The proposed and talked of sale of scrap in the European areas and Pacific islands on an as-is and where-is basis is wholly unsatisfactory. The number of companies in the scrap industry and steel industry which would or could bid on that basis is very limited. The necessity of the prospective bidders' visiting and having to view the scrap to see what they are bidding on, the making of arrangements with the Army and Navy for the rental of equipment to load the scrap, the transporting of scrap, and other problems would only drag out interminably and frustrate our mutual efforts to return this scrap to this country. The return of scrap to the Atlantic and Pacific ports by agencies of the Government would assure the return of all this scrap which is so badly needed, and would also give the Government a higher sales realization than if sold on a basis of delivery to the buyer in Germany or Pacific islands.

(c) The acceleration of the Maritime Commission and the Navy Department programs for the sale of damaged and obsolete vessels for scrapping.

The lack of a definite and immediate program for the sale of these ships makes it impossible for shipbreakers, many of whom entered the field at Government behest, to look ahead and plan for their operations. It also discourages many additional companies from participating in this shipbreaking program.

With a full realization of the seriousness of the situation there has been formed the Steel, Foundry, & Scrap Industries' Committee for Expediting of Iron & Steel Scrap, composed of the following:

American Iron & Steel Institute: Walter S. Tower, president, American Iron & Steel Institute; Robert W. Wolcott, chairman, Committee on Iron & Steel Scrap, American Iron & Steel Institute; L. D. Greene, consultant, American Iron & Steel Institute.

Institute of Scrap Iron & Steel: Philip W. Frieder, president, Institute of Scrap Iron & Steel; Edwin C. Barringer, executive secretary, Institute of Scrap Iron & Steel; Charles H. Lipsett, publisher, Waste Trade Journal.

Steel Founders' Society of America: Edgar D. Flintermann, president, Steel Founders' Society of America.

Gray Iron Founders' Society, Inc.: R. L. Collier, executive vice president, Gray Iron Founders' Society Inc.

American Malleable Society: W. W. MacMillen, general purchasing agent; c/o National Malleable & Steel Casting Co.

The Steel, Foundry, & Scrap Industries' Committee for Expediting Iron & Steel Scrap has the full-time services of L. D. Greene, located at Carlton Hotel, Washington, D. C., and Edwin C. Barringer, located at 1536 Connecticut Avenue NW, Washington, D. C., who are coordinating the efforts of industry and Government to accelerate the flow of Government-controlled scrap to the mills and foundries.

This memorandum is sent you with the earnest request that you aggressively support the program it outlines.

ROBERT W. WOLCOTT,
Chairman, Steel, Foundry, and Scrap Industries Committee for Expediting Iron and Steel Scrap, Washington, D. C.

The National Archives

EXTENSION OF REMARKS
OF

HON. CLARENCE E. KILBURN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 7, 1947

Mr. KILBURN. Mr. Speaker, you have all probably heard about the National Archives. You know it is a Federal agency—a fairly young one, having been established in 1934—and that it occupies a big pile of a building on Constitution Avenue here in Washington. It is an impressive building, almost too impressive. The name, National Archives of the United States, is also a bit overwhelming. The word "archives" sounds so formal, so solemn, so remote from your everyday affairs and mine. "Archives," however, simply means the records of a government or other institution or the organization that takes care of them. And I have found, as I know some of you have, that the records of the Federal Government in the National Archives are not at all remote from the lives of private citizens as well as officials and that the National Archives preserves these records for the use of the public as well as of the Government.

In the National Archives are some of the most significant documents in the history of the United States. These particular records are not often consulted by the average citizen but they are important to him as a part of his American heritage. Our struggle for independence is pictured in order books of Gen. George Washington and oaths of allegiance to the Continental Congress taken by Washington and his officers during the grim winter at Valley Forge. America's first diplomatic triumph is embodied in the Treaty of Alliance with France of 1778, which brought vital aid to us in the Revolution. The achievement of our independence is recognized by Great Britain and symbolized for all time in the Treaty of Paris of 1783, which brought the Revolution to a close. A draft of the Constitution, with changes made in it in Washington's handwriting, shows the thinking of the "founding fathers" about the fundamental framework of our Government. Civil liberties, personal freedoms—often denied in colonial days—are guaranteed in the Bill of Rights, the first 10 amendments to the Constitution. Other amendments to the Constitution, Lincoln's Emancipation Proclamation, acts of Congress, and records of Congress, including petitions from the people, illustrate the ceaseless striving for greater freedom and greater humanity that is characteristic of our democracy.

That "eternal vigilance is the price of liberty" has been truly said. Many times since the Revolution we have had to fight for freedom and American rights. The records of those struggles are also in the National Archives. Freedom of the seas was won in the War of 1812. Old Ironsides, the United States frigate *Constitution*, whose logbooks bring to life such famous encounters as that with the *Guerrière*, and "Old Hickory," Gen. Andrew Jackson, whose hand-written account of the Battle of New Orleans pictures that noted victory, symbolize the toughness of the American fiber that enabled the young Nation to command respect for its rights. The Mexican War, the Civil War, the Spanish-American War, and World Wars I and II are all variously recorded in orders, letters, muster rolls, account books, treaties, photographs, motion pictures, and even sound recordings in the National Archives.

The peaceful internal development of the United States is also mirrored in records in the Archives Building. The advancing tide of settlement upon the abundant land, the criss-crossing of the continent with lines of transportation and communication, the development of natural resources, and the advancement of agriculture, industry, trade, education, and science—on all these facets of American life Federal records throw some light.

Documents illustrating our priceless heritage of liberty and the development of the American way of life are kept on display in the Exhibition Hall of the National Archives, where the public is welcome. Most people expect to find such historic documents in the Archives Building. I doubt, however, that many realize that the greater part of the 800,000 cubic feet of valuable Federal records preserved there, which were transferred from Congress, the White

House, most of the Government agencies, and several of the Federal courts, are not important-looking papers with ribbons and seals. They are nevertheless vital to the conduct of public business, the protection of the rights of citizens, and to the advancement of knowledge.

Federal agencies, as you might expect, are the biggest users of Government records, but I am not going into those administrative and research uses. Congress itself uses records in the National Archives. It not only consults House and Senate files but records of the State Department, the Federal Reserve System, and of other agencies to determine precedents and to obtain other needed information. Such congressional committees as the one that investigated the Pearl Harbor disaster used transcripts of enemy messages recorded by Government listening posts and other records. Individual members can often get help from the Archives for themselves or their constituents.

Not long ago Representative KEAN, of New Jersey, learned about a man in his district who was trying to establish his American citizenship. Although the man was 26 or 27 years old, he could not prove that he had been born. His parents said his birth had taken place aboard the *Susquehanna*, an American ship that was bringing them to this country from Poland, but his parents' word did not constitute legal proof. There was no record of his entry at Ellis Island so he could not prove that he had been legally admitted to the United States. Thus, though he had been trying for years, he could not establish his citizenship.

Representative KEAN thought that surely the skipper of the ship would have recorded a child's birth aboard, and his efforts to locate the records of the *Susquehanna* led him to the National Archives. There it did not take the trained reference employees long to find the log of the ship. The entry for December 12, 1920, showed that a male infant had been born to the Polish couple, whose names were recorded, and the entry was signed by the ship's chief officer, purser, and master (for whom the boy was named). Since his father had been naturalized while the young man was still a minor, a certified copy of the entry in the log was all he needed to prove his birth and entry and to establish his long-sought citizenship.

In this case, a Congressman acted for a constituent, but anyone can write to the National Archives for information that he has reason to think may be in the records preserved there, and the small but competent staff of the agency will supply a reasonable amount of data by mail. Furthermore, anyone can obtain certified copies of records in the National Archives for a very small fee. If you want copies of documents, such as the surrender papers that brought World War II to a close, for framing or for some purpose other than legal, you can obtain photographic facsimiles from the Archives at cost.

In these still troubled times, as during the war, requests for information that would help to prove citizenship are constantly received by the National Archives. Only a limited quantity of naturalization records received from a few Federal courts are in the Archives Building, but records pertaining to passports, passenger lists, and even census population schedules often yield information vital in proving citizenship. Many pitiful letters are received from American nationals abroad who lost everything, including their papers, during the war. Some of them want to come back to the United States but cannot replace their destroyed passports because they cannot prove that they are citizens.

One American woman, whose entire family was killed when the Nazis invaded Holland, wrote that she had been born in New York City in 1878 but that her birth had not been recorded. Could the National Archives produce evidence that she was entitled to a passport? She wanted to spend her last days at home. Even in 1880 New York City was a big place, too big for the Archives to track down in the 1880 census of population everybody in New York who bore the name the woman gave. Further questioning of the woman and persistent effort on the part of the Archives, however, finally led to the location of the woman's name in the 1880 census of Staten Island. Armed with this presumptive proof of her birth in the United States, the old lady could again seek, this time with hope of success, a passport to her native land.

Some people have even fewer clues to offer when they turn to the National Archives. A swarthy young man appeared one day to appeal for help in establishing his citizenship. He had been born in this country, he said, but he did not know where. About the only pertinent information besides his name he had to offer was that his grandfather, an Arabian camel driver, had come to America nearly a century ago. To search the passenger lists of all the ships that brought in immigrants about 100 years ago would have been an impossible task. It looked as though the experts had been stumped. Then one Archives employee recalled that when Jefferson Davis was Secretary of War under President Pierce he had imported camels and camel drivers for transporting Army supplies over our western desert. Investigation of Quartermaster Corps records told the rest of the story. One of those camel drivers was the man's grandfather, who, it developed, had become a naturalized citizen.

Proof of age as well as of citizenship is important and can frequently be obtained from the National Archives. Old-age benefits guaranteed by law often hinge on proof of when a person was born. The recording of births is the business of the States, of course, but census schedules, military-service and pension records, and Federal employment files in the Archives contain data on birth dates that is often accepted in lieu of a birth certificate.

Service disability pensions may depend on such documents as sailors' health and welfare files. During the war many such records were soaked with black oil when ships were torpedoed, and when the records were recovered they were unreadable. The National Archives devised a way to dry clean these records, however, thus reclaiming them for the future protection of those sailors who were injured in line of duty but who would have great difficulty proving it without such records. Other service records in the National Archives bolster and protect the benefits that have been voted for those who have fought to protect this country.

Property rights of the people of the United States are also witnessed and protected by the preservation of certain records in the Archives Building. General Land Office records, which are basic to establishing title to three-fourths of the land area of the United States—all the public lands—are in the National Archives. When people get involved in litigation over titles, the National Archives can, and does when requested, furnish copies of the original land-entry papers, including the land warrants themselves. Every time a new oil field is discovered, for instance, the Archives does a land-office business in supplying those concerned, and those who would like to be, with facts about titles. Patent records protect the interests of those whose inventive genius has helped to make America the great industrial country it is.

You would expect historians and political scientists to use records in the Archives Building, and they do. Until the National Archives was established, many Federal records were inaccessible in basements, attics, and warehouses, but now they may be used by anyone who has a legitimate reason for consulting them in well-equipped search rooms, where attendants who can offer helpful suggestions are always on duty. Journalists and novelists also often search records for material. Carl Sandburg, in preparing his monumental volumes on Lincoln, used documents and photographs in the National Archives. Margaret Landon consulted diplomatic and consular reports relating to Siam in writing Anna and the King of Siam. King Mongkut's offer to the President of the United States of elephants which might live and multiply on our western plains was a genuine gesture of friendship documented by the records.

Sometimes it is not even necessary for scholars and others to come to Washington when they want to use records in the National Archives for research. Some important series of records have been reproduced on microfilm, and when orders for copies of such records are received positive prints of the microfilms are made at cost. Thus for a few dollars all the records of the Michigan Indian superintendency or of the American Embassy at Paris can be obtained on microfilm and used anywhere that a reading machine is available. If you have read Kenneth Roberts' recent historical novel, Lydia Bailey, you know what effective use he made of information in Federal Archives. It was chiefly microcopies of records in the National Archives that he utilized, I am told, microcopies of diplomatic and consular records relating to Haiti in the time of Toussaint L'Ouverture and to Tripoli during the war with the Barbary powers, which he bought

and took home to use at his leisure. Libraries and universities throughout the country have sent in so many orders for such microcopies that the National Archives is swamped with them. This service is justly popular, because it affords a convenient and inexpensive way of building up collections of source materials in institutions in many regions. Furthermore, by the production of multiple copies on microfilm the Archives is insuring the preservation of important materials even in the unhappy event of the destruction of the originals.

Personally I am interested in photographs. I have discovered that the National Archives has a very rich collection of pictures, which it has received from various Government agencies. There are more than a million photographic items in the collection, and they range in date from the Civil War through World War II. Since many of them came from the Army Signal Corps, a large part of the collection relates to the various wars we have been engaged in, but many personalities, the scenic wonders of the country, industrial developments, educational institutions, the District of Columbia, Federal buildings throughout the country, railroads, ships, airplanes, and even foreign countries are also pictured. In fact, the Archives can produce photographs on almost any subject you can name, and copies of the pictures may be obtained for a small sum.

Schools, libraries, and private collectors order thousands of prints every year. Among the most popular are pictures made by the famous Civil War cameraman, Mathew Brady, the granddaddy of all the ace war photographers. He persuaded President Lincoln to allow him and his assistants to photograph the armies in the field. As a result there is available a collection of portraits and scenes that in realism and excellence of photography cannot be outclassed even by the best of today's output. Brady's portraits of Lincoln, Grant, and Lee are especially good and are in much demand. Portraits of Indian chiefs made by Smithsonian Institution photographers and pictures of Indian villages are used by grade schools as teaching aids. American Legion posts are good customers for pictures of World War I units and heroes.

Hollywood, which ought to know the value of pictures if anybody does, is a constant user of photographic records. There is always somebody to squawk about historical inaccuracies in movies, but, if one may judge by the amount of research the industry does in the National Archives, it goes to great lengths to achieve verisimilitude. In making Gone With the Wind, searchers not only combed contemporary documents in the Archives Building but whole sets showing fortifications at Atlanta and street scenes were copied from Brady photographs there. For Wilson, pictures of the Versailles Conference were studied in great detail and news reels of the Conference made by the Signal Corps were interpolated into the picture. For utilization in the latest Hi-ho Silver picture, sound recordings of Indian chants have been obtained.

Educational institutions and private citizens may also obtain at cost copies of individual scenes (still pictures) taken from motion-picture film in the National Archives. In the custody of the Archivist there are about 40,000 reels of motion pictures. Most of these were made by the Government. They include training and incentive movies, reconnaissance and other films made for intelligence purposes, documentaries, and films such as those made on the 1939–41 Government expedition to the Antarctic picturing the areas explored. Wellesley College, for instance, recently obtained copies of films made on that Antarctic Expedition to illustrate for classes in geology the formation of icebergs.

Radio stations, colleges, historians, students of speech, and collectors also find the more than 200,000 sound recordings in the National Archives of great use. The voices of such noted men as William Jennings Bryan, William Howard Taft, Woodrow Wilson, Warren G. Harding, Winston Churchill, Franklin D. Roosevelt, Dwight D. Eisenhower, and Harry Truman and of such notorious characters as Mussolini and Hitler are among those on recordings. Reproductions of these recordings may also be obtained at cost.

The movie industry recognized from the first the help it could get from the Archives, and during the war many other businesses turned to the agency for information. They were chiefly interested in learning how industry adapted itself in World War I and what substitutes for strategic materials could be found. One manufacturer's representative said that what he learned from a study of World War I records in the Archives saved his company months of time valuable to the war effort in World War. The Federal Register, which contains Government rules, regulations, and orders and which is published by the National Archives, helped to keep the businessman informed of all the wartime regulations he had to comply with. Since the war representatives of business and industry have continued to utilize Federal records, for instance, for a study of the development of aviation, and many companies now utilize copies of photographs in the National Archives in advertising.

If you have ancestors, as who has not, you may be interested in genealogy or family history, as some prefer to call it. There are in the National Archives probably more original source materials about more people than in any other one place in the United States. Every day the search rooms of the agency are filled with men and women who earn their living tracing the descent of others or whose ancestors are their hobby. It is not possible for the Archives to supply much genealogical information by mail. The attention of the staff must first be given to facilitating Government business and to answering questions involving the legal rights of individuals. The nearly 5,000,000 case files of those who have been pensioned by the Government for service in wars from the Revolution through World War I, however, are available for consultation. Among these files are many odd documents, such as embroidered samplers listing the names of a father and a mother and all their children. There are also many family Bibles among these records. Some of you recall that these venerable Bibles are a kind of capsule family archives. They are a great find for the family historian. Although neither they nor the samplers were official records to begin with, they became so when the Government accepted them as proof of marriages, for instance, instead of certificates, which were not often given in early days.

Schedules of population made in the censuses of 1790–1880, 1910, and 1930, which are in the Archives Building, contain much data about individuals. Appointment papers and the personnel records of Federal employees also yield rich returns for the genealogist or the biographer.

The National Archives is not a bureau of missing persons but sometimes it can help locate members of families. One woman who had been adopted as a child found herself alone in the world when her foster parents died. She determined to try to locate her real family if any members of it remained alive. All she knew about it was that her father had once been in a veterans' hospital. Her search for him was unsuccessful until she tried the Archives. There a pension case in her father's name revealed that he was dead but that she had brothers and sisters, whom she lost no time in locating.

The services I have mentioned are just a few samples of those constantly performed by the National Archives. The agency is the repository of masses of records that can be of inestimable use to you and to your constituents. A trained staff is ready to serve you. Why not make use of the Nation's archives?

Dairy Industry

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 7, 1947

Mr. REED of New York. Mr. Speaker, I have the honor to represent a congressional district, a portion of which is largely devoted to the dairy industry. A great investment has been made in tested herds of cattle, in buildings, in farm land, farm machinery, and in specialized dairy equipment. The dairy farmers have been a large contributing factor to the community life and to the stability of the economy of Chautauqua, Cattaraugus, and Allegany Counties, N. Y. The trade agreement program threatens to weaken, if not ruin, the prosperity of the dairy farmers. I have opposed this whole scheme of opening our market to the dairy products of low-cost-producing nations.

The testimony presented to the Ways and Means Committee on May 7, 1947, by Mr. Charles W. Holman, a distinguished economist, who has long fought for the

best interests of the dairy farmer, is a masterly contribution. Under leave, I am extending his remarks:

The National Cooperative Milk Producers Federation, with offices at 1731 Eye Street NW., Washington, D. C., is an organization of 83 dairy cooperatives which are owned, controlled, and operated by approximately 380,000 farm families. These farmer-owned cooperatives market about 17,000,000,000 pounds of whole milk equivalent annually, delivered by their farmer members in the form of whole milk or farm-separated cream. That is more than 17 percent of the total whole milk equivalent sold by farmers.

THE IMPORTANCE OF THE DAIRY INDUSTRY

The manner in which the trade-agreement program affects dairy products is of tremendous importance because dairying is the backbone of American agriculture. Not only does it contribute more to the country's farm income, but it is more widely distributed over the entire country than any other single enterprise. Cash farm receipts from dairy products constitute 8 to 9 percent of total cash receipts from farm marketing in the South Atlantic and South Central regions, and up to 33 percent in the North Atlantic region.[1]

Dairy cows are kept on 4 out of 5 farms in the United States. There are 25,000,000 milk cows on these 4,500,000 farms. More than 2,000,000 farms are engaged in commercial dairying.[2]

Cash farm income from dairying in the United States in 1946 was about $3,900,000,000. Total milk production in 1946 was nearly 120,000,000,000 pounds[3] providing a milk supply of 850 pounds per person in the United States.

For more than 20 years total milk production in the United States has been virtually self-sufficient. Total milk production in the United States rose from 69,000,000,000 pounds in 1924 to 107,000,000,000 pounds in 1939, an increase of 20 percent, in line with the increase in domestic requirements.

During the war, production was pushed up from 107,000,000,000 pounds in 1939 to 122,000,000,000 pounds in 1945. Even though total civilian per capita consumption of dairy products was raised, we met war needs for dairy products with exports totaling 6,500,000,000 pounds of milk equivalent plus military procurement of more than 14,000,000,000 pounds.[4]

During the prewar years 1934 to 1938 average exports of dairy products from the United States in all forms were valued at $5,000,000,000 annually. Imports from foreign countries averaging $14,000,000 annually were principally types of cheese, of which small quantities could obtain a high retail price premium over similar domestic types.

THE FEDERATION'S TARIFF POLICY

The policy of our federation as to trade agreements is of long standing. Dairy farmers are dependent upon the stability of the domestic market and have needed protective tariffs against foreign competitors ever since the end of World War I. Throughout this period our organization has sponsored a policy of rational tariff-making. We have consistently supported the principle of levying import duties so as to equalize differences in the cost of production between domestic products and products of the principal competing foreign countries. Our federation worked diligently to secure adequate protection for dairy farmers in the Tariff Act of 1930.

Since the Trade Agreements Act first came up for extension and amendment our federation has consistently opposed it. It is unsound and unwise and ought not to have been extended. Knowing that extension was inevitable, we sponsored certain fundamental amendments which in our judgment should have been minimum requirements. These amendments included:

1. Senate ratification of agreements.

2. Permission to parties injured by the operation of tariff concessions to take their grievance into the courts of the United States.

3. Extension of benefits only to nations granting concessions in return.

None of the relief which we sought has been granted and we are now pessimistic as to the outcome of the current trade agreement negotiations being carried on in Geneva, Switzerland. Our fears are based on the following facts:

1. Reduced tariffs on dairy products, cattle and cattle products, fats, and oils endanger the livelihood of dairy farmers.

The dairy tariff structure has been built around the butter tariff of 14 cents per pound and duties on other dairy products equivalent to the butter rate on the basis of their butterfat content. A 7-cent tariff reduction would lower the farm price of butterfat 8¾ cents per pound. On the basis of the 4,000,000,000 pounds of butterfat sold in all forms in 1946 this would mean a loss of $340,000,000, exceeding by 24 times the entire value of dairy products imported in prewar years.

Mr. Will L. Clayton of the State Department, in his testimony before this committee, attempted to give the impression that dairy farmers would be among the principal agricultural beneficiaries of reduced tariffs. It is apparent that Mr. Clayton was drawing unwarranted inferences from the fact that large quantities of dairy products were exported during the war. It is true that dairy product exports during the war totaled 6,500,000,000 pounds of milk equivalent. These exports, however, were stimulated by a $2,000,000,000 subsidy program designed to lower consumer prices, and furthermore were virtually outright gifts through lend-lease and UNRRA to their foreign recipients. We do not see in this experience any ray of hope for the dairy farmer for extensive foreign markets for dairy products.

Contrasted with wartime, when our dairy exports were high and there was a worldwide decline in production of dairy products outside the United States, we are now facing a different situation. While world shortage of butter and cheese still prevails, world milk production is increasing and may soon reach prewar levels. In addition, the rush to rehabilitate the industries of war-torn countries may lead regimented economies to deny exportable dairy products to their own citizens in order to exchange them for industrial products of the United States.

A dangerous element is the prospect of the depressed level at which controlled prices have been held in foreign countries. During the present year the United Kingdom is buying New Zealand's entire butter exports for 35 cents per pound. This purchase was made by an adjustable contract which runs for two more years. The United Kingdom has similar contracts with Australia and Canada. The latest price report from Canada shows a price of 39.75 cents per pound (Canadian currency).

Against a world background of low prices, rising production, and trade manipulation, the outlook for United States prices, based on internal conditions is in sharp contrast. Dairy products here are in ample supply. Butter production is steadily approaching prewar levels. Butter prices in recent months have been mostly in a range of 60 to 75 cents per pound. At worst, butter may sink to the equivalent of the 90 percent of parity support price guaranteed by the Steagall amendment. In April parity was 59.9 cents per pound of butterfat at the farm, equivalent to approximately 55 cents per pound of butter. At 90 percent of parity, butter prices would be 50 cents per pound. This is 15 cents per pound over the 1946–47 prices in the British purchase contract with New Zealand. We may, therefore, find Britain tempted to unload her New Zealand butter on us as a means of repaying the three and one-half billion dollar loan which we recently made her.

2. Reduced tariffs on one dairy product lower the price of all.

It is proposed to reduce tariffs on all important dairy products except casein. A reduction in the tariff on one dairy product may have the same effect as a reduction on all, due to the intimate interrelationships between prices of dairy products. Dairy-product prices are closely interrelated because large quantities of milk may be quickly diverted from one product to another. Today flexibility of production results from the operations of multipurpose plants and from interplant shifting of producers.

The dairy tariff rates in the act of 1930 recognized these interrelationships. Trade agreements have breached this balance at some points. Reductions on cheddar and Italian cheese duties were put into effect only after war had spread itself over the globe. These duties, therefore, have not had a chance to display their harmful effect in normal times. Further reductions of these, or reductions of other duties untouched until now, will be evidence that the State Department, heedless of consequences, is determined to strip the American dairy farmer of every shred of defense against world depression.

3. Predatory practices in international dairy trade will persist in spite of trade agreements.

Predatory practices in international dairy trade were not affected by previous trade agreements. It is not to be expected that these practices will be remedied by further trade agreements.

Low world butter prices during the 1930's were in part assured by dairy price policies of practically all exporting nations. There were a variety of devices employed by these nations to bolster their domestic prices and directly or indirectly to subsidize exports. We know of such programs in Argentina, Australia, Canada, Denmark, Estonia, Finland, Latvia, Lithuania, Netherlands, New Zealand, and Sweden.

Four of those eleven countries, Netherlands, Canada, Finland, and Sweden, had trade agreements in effect with us during the time they used export subsidies. This gives us adequate reason to believe that the State Department's give-away program is unilateral in practice, whatever it may be in theory. It is to assure protection against such subsidized surpluses that the present butter and dairy tariffs should be retained without change, if not increased.

An example of the futility and one-sidedness of the State Department's trade agreements is found in the experience with Canada. Trade agreements with Canada in early 1936 and 1938 reduced the United States duty on cheddar cheese. Beginning June 1, 1939, however, Canada began to subsidize cheese production. It is true that after a

Department of Agriculture, Technology Bulletin 722, April 1940, and Dairy Situation, U. S. Department of Agriculture, Bureau of Agricultural Economics, September 1946.

delay of 7 months our Government got around to applying a countervailing duty against the subsidized Canadian cheese. The point is that the powers of other Government agencies had to be called on to offset a development that the State Department's program could not forestall.

4. Major dairy export nations stand to gain from present negotiations without granting any concessions in return.

The State Department purports to consider trade agreements only with countries which are principal sources of supply of the commodities in question. This policy is not being rigidly followed with respect to dairy products in the present instance. Three major dairy export countries are not participating in the present negotiations—Denmark, Italy, and Switzerland. Forty-nine percent of the world exports of butter, twenty-eight percent of the world exports of cheese and twenty-four percent of the world exports of condensed milk come from countries which are not parties to the present negotiations. Thus these countries which will give us nothing in return, will share the benefits of any concessions which we may make on butter, cheese, and condensed milk under the terms of our Trade Agreement Act.

5. Rapidly changing world conditions make it unwise to bind our tariffs against possible increases in the future.

I have already reviewed the dangers which threaten us because of existing price levels of butter, particularly those negotiated by Britain with her empire countries. Illustrations of the precariousness of world dairy price conditions could be multiplied.

During the war New Zealand increased her output of cheese 15 percent, Canada and Australia each 60 percent, and Argentina 160 percent. The United States is therefore faced with an expanded supply of cheese which dangerously threatens a sound domestic balance of prices and production.

Production of condensed and evaporated milk in the United States increased about 40 percent during the war, and Canada, Argentina, Australia, and New Zealand similarly increased their output. The opening up of the domestic market to the newly developed foreign production would further burden what is likely soon to be an overburdened domestic market.

Production of dry milk, like condensed milk, has increased vastly in the United States and abroad. Argentina produced practically no dry milk before the war, but she now has an established industry. Australia has nearly trebled her prewar output. The United Kingdom, Canada, New Zealand, and Switzerland have made great strides.

The oils and fats situation likewise threatens the United States dairy industry. Tariff reductions on oils and fats are harmful because competition of cheap imported oils has an unfavorable effect on the price of butter. Also, domestic producers of other animal and vegetable oils tend to become dairymen and create a surplus of dairy products when their markets are injured by foreign competition.

The world shortage of fats currently sustains domestic prices but within 2 years the world shortage will be over and the foreign areas will be knocking at our doors with cottonseed, coconut, palm and other oils. Then prices of oils and fats will tumble sharply and an era of wild readjustment will set in. It is questionable whether existing tariff duties will adequately protect against this eventuality. Members of this committee will recall having to report and pass the Emergency Tariff Act of 1921.

During the war we attained self-sufficiency in oils and fats and had an exportable surplus. Any threat to American self-sufficiency in oils and fats, such as reducing duties or binding them against necessary increases, would drag down producers of raw oil-bearing materials and overburden the dairy industry.

CONFLICTS TO DAIRY FARMERS' INTERESTS IN PROPOSED INTERNATIONAL TRADE SET-UP

The National Cooperative Milk Producers Federation has not yet considered approval or disapproval of the International Trade Organization. The federation's policies, however, are broad enough to call for the protection of the dairy farmers from those parts of the proposed international structure which appear to be oppressive. We therefore offer three objections: (1) the treatment of nonmember nations; (2) lack of representation of those affected by ITO policies; and (3) danger to sanitary standards.

1. Treatment of nonmember nations: Article 36 of the proposed ITO charter would prohibit the United States, if it becomes a member, from entering into any agreement with a nonmember nation under which such nonmember would be entitled to any of the benefits under the charter. It would also provide that tariff reductions effected by negotiations under the charter could not be extended to nonmember nations except with the concurrence of the Organization.

These provisions are apparently intended to force nonmembers to join the Organization. Such provisions, however, may hamper our trade relations with friendly nations that for some good reason do not desire to become members. The United States should be free to trade with nonmember nations on the best terms that can be worked out.

Under the 1934 amendment to the Tariff Act, sponsored by the State Department, the benefits of any trade agreement are extended automatically to all other nations except those proscribed by the President. It was under this policy that the act was used as the instrument for general tariff reductions. Today it is proposed to punish nations which are not members of the International Trade Organization by making it possible to deny them entirely the benefits of future tariff reductions made under the ITO charter. The United States, in effect, would be restricted by an organization superior to the Congress of the United States in negotiating trade agreements upon such terms as it might choose.

The federation has historically opposed the policy under which trade agreement benefits are automatically extended to all nations. It believed and still believes that negotiations should be conducted with each nation on an individual basis. This is regardless of whether that nation belongs to the ITO.

The State Department apparently has shifted its policy. Where it once meticulously enforced the Tariff Act by the extension of benefits far and wide, it now apparently seeks to circumvent the law. It would remove the tariff-making powers of Congress still further from our people to the orders in council of a world authority.

2. Lack of representation of those affected by ITO policies: Under the tariff acts, such as the Tariff Act of 1930, tariff rates on imports are controlled by Congress. Each dairy farmer is represented in Congress. The farmer himself or the cooperative association of which he is a member can consult with his Representatives in Congress and discuss the effect of tariff changes. Hearings also are held before congressional committees at which interested parties may appear. But under the Trade Agreements Act the dairy farmer has no representative in the office of the Secretary of State.

Although the law requires that hearings be held in connection with the negotiation of trade agreements, these hearings are pro forma and are indifferently conducted by minor officials below the negotiating levels of government.

In contrast to the democratic attitude of the Congress, the State Department is aloof and suspicious of representatives of our citizenship groups. To illustrate, during these hearings a member of this committee asked Mr. Clayton if he would consult with American representatives of industry at Geneva. Mr. Clayton replied that he would be willing to talk to them but "we could not tell them, we could not give away our case to them."[5]

It readily appears from the foregoing that under the Trade Agreements Act dairy organizations and other industries as well, have a very small voice in matters that may seriously affect them.

If we go into the International Trade Organization, the dairy groups as well as others, will be removed still another step from effective representation. Decisions which may affect materially the investments and income of dairy farmers will be made by an organization in which the United States will have but one vote.

3. Danger to sanitary standards: We are concerned also with the effect the International Trade Organization may have on sanitary standards for dairy products. There is, as you know, a marked difference in the sanitary standards for the dairy industry in this country and those in effect in many other countries. Our dairy herds are tested for tuberculosis and Bang's disease. Our dairy barns and milk-processing plants are required to meet rigid sanitary requirements. We are thus assured of a supply of milk and its products of a high quality. But these sanitary requirements add materially to the cost of producing milk and its products.

If milk and its products are to be in free trade, how much of an adjustment will be necessary in our sanitary standards?

We would like to see the standards of other countries raised to our level, but we doubt that it can be done under the International Trade Organization. We think that if the issue comes up, the majority of the members, having standards lower than ours, will not vote to raise them to our level.

Thus the International Trade Organization may make it difficult, if not impossible, for us to require milk and its products imported into this country to meet our sanitary requirements. If so substantial imports of low-cost products produced under insanitary conditions may force our own industries out of business or make it necessary to relax our own standards to meet such competition.

Article 37 of the proposed ITO charter would except measures necessary to protect human, animal, or plant life or health. However, article 35 would further provide that if any member should consider that any other member has adopted any measure, "whether it conflicts with the terms of this charter," which has the effect of impairing any object of the charter, consideration should be given to effecting an adjustment. If not adjusted, the question would be referred to the Organization. The Organization would investigate and, if necessary, consult with United Nations and other intergovernmental organizations. It would then make recommendations which, if not carried out would result in the imposing of sanctions.

Should the ITO conclude that some sanitary law of a member nation violates the spirit of the charter, it can order the law to be terminated and enforce its decision by oppressive sanctions even though the nation has not violated the letter of the charter.

---

[5] Hearings before the House Committee on Ways and Means on the operation of the Trade Agreements Act, etc., pt. I, p. 266.

In such a way a super-world government could be able to override decisions of our Congress and force us to adhere to lower sanitary standards as long as we might remain a member of the organization.

In conclusion we respectfully represent that in some way, somehow, this Congress should block, if possible, the consummation at Geneva of the proposed trade agreements with 17 nations.

It should tread carefully the road of international trade entanglements, envisaged by the ITO. For I truly believe that our Nation is on the verge of giving away the sovereignty of its people.

Charles L. Gerlach

EXTENSION OF REMARKS
OF

HON. HUGH D. SCOTT, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1947

Mr. HUGH D. SCOTT, JR. Mr. Speaker, death's messenger is unwelcome, but will not be denied.

In times of sorrow it is quite impossible to find words to express the emotions of the heart. This is particularly true when we suffer the loss of such a close associate and colleague as CHARLES GERLACH. Those of us in the Pennsylvania delegation probably knew him best; we were in a position to observe at close range his knowledge and ability, his energy and devotion, his vision and courage, all factors in his able qualifications as a legislator. We prized and cherished his friendship and his conscientious devotion to the performance of his duties and as one who was ever ready to sacrifice his own individual welfare in the interest of his constituency, his State, and his country.

I would not fail to record my personal affection for CHARLIE GERLACH. I sympathize deeply with the members of his family, as well as with his constituency. We shall miss him in these days to come.

Opposition to Merger of the Services

EXTENSION OF REMARKS
OF

HON. W. STERLING COLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 7, 1947

Mr. COLE of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of Mr. John P. Bracken, president of the Reserve Officers of the Naval Services made to the Senate Armed Services Committee on April 30, 1947, during the hearings on S. 758 to provide for the merger of the armed forces:

Mr. Chairman, gentlemen of the committee, I am speaking to you as the representative of the Reserve Officers of the Naval Services—better known perhaps as RONS—an organization with a membership of over 36,000 Reserve officers of the Navy, Marine Corps, and Coast Guard. The Reserve officers, the greater part of whom have now resumed their places in civil life in their home community, are vitally interested in the proposed reorganization of the armed forces. Most of them left positions of standing in their chosen profession or occupation to serve in the naval services for periods ranging from 2 to 6 or more years. Their number provided 350,000 officers to the naval services in World War II. They were active in every function of that tremendous wartime organization. While in the service, they saw many things done in a way which shocked their civilian concepts of the businesslike way of doing things. They experienced, in fact participated in, what were apparently gross duplications of effort by the Army and the Navy—in procurement, in research, in services. They condemned this then, and condemn it still. On the other hand, they, as officers, faced many situations where civilian experience gave no answer to the problem, where they were forced to recognize that the business-like way, the civilian way of approaching the problem, just wouldn't work.

No group in the country today has a better grasp, a more thorough understanding, a more intelligent approach to the underlying causes which impel a reorganization of our armed forces than the Reserve. Perhaps no group can more dispassionately weigh the pros and cons of reorganization than such a one. Yet to what extent has this vast reservoir of real experience been made available to this committee? How much of the testimony before this committee has come from the 10 percent who are still in the service rather than the 90 percent who have returned to civilian life, but who are still subject to recall in any emergency.

The membership of RONS has weighed the pros and cons of the bill now before this committee and by action of delegates to its national convention has overwhelmingly voiced its opposition to it.

I do not believe that the membership of this organization is opposed to comprehensive and intelligent unification legislation. They are opposed to this bill because it is not that; because on its face it will increase rather than decrease the cost of our Military Establishment; because its full implications are obscured by its intentional vagueness; because it reposes too great a power, places too much emphasis upon the authority of one man; because it seeks to replace an organization which successfully won the war with something that can best be called a pig in a poke.

As taxpayers, we are keenly interested in reduction of expenditures for the Military Establishment. However, nowhere within the four corners of the bill now before your committee is there even the slightest indication that this so-called merger will result in any saving to us in tax money. Instead of two departmental heads, with their staffs, we have a plan proposing three. In addition, we have superimposed upon the Military Establishment as then constituted a Secretary of National Defense, with four special assistants at $12,000 each, with a staff costing more thousands. Where are the savings which those who believe in a true unification desire? The bill which you are asked to enact does not in any word, phrase, or sentence direct the Executive to affect the savings which can and must be made. Will these savings be brought about by Executive order? What assurance does the Congress have that its wishes in the matter of unification will be carried out by the Executive or by this superchief of national defense? None whatsoever unless its wishes and intentions become law, and they are not law unless they are included succinctly and unmistakably in the four corners of the legislation as it passes the Congress.

We in RONS are against this merger bill because we believe that its full implications have not even yet become evident. We want to know why it must be couched in language so general that it can mean all things to all men. We want to know whether the present disagreement on its implementation, made so obvious for example by the testimony of the medical heads of the various services, does not make the surface unanimity of its support somewhat subject to question. Its vagueness obscures, possibly deliberately, many questions which we feel must be answered legislatively and not by Executive order. We want to know whether the Army will continue to maintain its fleet of transport and cargo vessels or whether there would not be greater savings by having them pass under naval administration; we want to know how this merger bill will affect the Coast Guard, which did such a magnificent job in the war as a component of the Navy; will it be merged too, will its Reserve be trained under Navy supervision or Treasury supervision. We want to know if the Marine Corps is to be relegated to the task of landing only in areas where it is hoped to establish naval bases and not on an island that is to be used exclusively as an air field. The glorious chapter written at Iwo Jima by the lads of the Marine Corps, many of whom were too young to be taken into the Army, would never have been written had this bill been law. Will the marines continue to be the specialists of the armed forces in amphibious invasion? We want to know what is going to happen to naval land-based aviation, to the blimps, the whole lighter-than-air program which proved its value in antisubmarine warfare. Is it part of this vague plan eventually to include the Veterans' Administration as a part of this proposed military establishment? What about long-range naval air reconnaissance over ocean areas? Will the Army continue to supervise, survey, and chart the navigable waters surrounding the country, the Great Lakes, and the rivers, while the Navy charts the seas; is not this, too, a duplication of services; is this, too, to be merged? And what about procurement; what about hospitals, hospital ships, and medical services? What about administration of military justice?

These, gentlemen, are but a few of the questions which are bothering us and which are unanswered by this bill. Perhaps you feel that these are details which can best be handled by Executive decree. If this act is passed, gentlemen, they will be handled by Executive decree and there will be no compunction upon the Executive to follow the wishes of the Congress unless the Congress has made these wishes law. I feel that I sense correctly the spirit of this Congress when I say that it will refuse, and the Nation will applaud its refusal, to permit the return to the days of rule by Presidential decree, by so-called Executive order.

We in RONS are bothered by the emphasis which this bill places upon the authority of one man, the Secretary of National Defense; "he shall establish policies and programs"; "he shall exercise direction, authority and control"; he shall have power of decision in the war council; the performance of duties by the Joint Chiefs of Staff shall be subject to his authority and direction: he shall direct the activities of the Munitions Board and the Research and Development Board. Is this man to be just an over-all supervisor, a mediator reconciling the differences of the three branches of the service—which is one interpretation that can be placed upon the functions that have been delegated to him—or is he to be an all-powerful, compelling and coercive force applying his limited, general experience, or the single-minded experience of his dominant adviser of the moment to problems of national defense? No one would question the reposing of such powers on a military leader in the field in wartime; there is serious doubt however whether it is necessary, or whether it is not in fact dangerous to

repose such power, in wartime or peacetime, in one man whose functions are planning and not operations. The man who holds that position must have a comprehension of and a deep appreciation of the missions of each of the components of the Armed Forces. With the tenure of Cabinet offices averaging 2 years, the military establishment will be subject to the whims and vagaries of successive Secretaries of National Defense. A Navy man might be tempted, under the guise of economy or expediency, to jeopardize the over-all security of the Nation by emphasis on the Navy as the chief arm of our defense and, in like manner, an exponent of air power or tank warfare, to a like degree. The man must have sound judgment, he must know when to act and when not to act. We in RONS most emphatically do not subscribe to the theory expressed by some military men that a wrong decision is better than no decision. Yet, this committee can certainly conceive of the possibility that one with that philosophy of command might well be chosen to head this establishment.

It is perhaps unfortunate that this whole unification movement had its inception, received its impetus, from isolated examples of noncooperation between branches of the services. Let us not lose sight of the fact that the war was the greatest cooperative venture ever undertaken by man. Not only did we cooperate with each other to win it but we cooperated with allies of considerably greater differences of opinion than that of our brother officers. The examples of cooperation are legion; of noncooperation, few. Already the Army and Navy have consolidated a tremendous amount of their procurement activities; integrated their medical activities; already there is in existence a joint Army-Navy aeronautical board; an Army-Navy munitions board; a joint board of the ranking officers of both War and Navy Departments; a joint economy board; a joint research and development board; a joint staff college; a joint industrial college; a joint war college. This is the organization which won the war. Is it to be scrapped in favor of a noble experiment?

I realize that it is very easy to point out the defects in legislation; to tear down; to criticize. I would be unmindful, however, of the high privilege which you have accorded me and the organization which I represent if my efforts were wholly destructive, if we made no effort to offer anything constructive in an endeavor to help the committee in its deliberations on this legislation.

We therefore propose, first, that where legislation is necessary to bring about the benefits of unification, that problems should be approached step by step, with the Congress enacting specific legislative bills to merge specific functions of the services, and not by enacting a general bill leaving, as does this one, all major questions to the Executive. Only should the national security demand immediate action on unification would legislation giving such a general delegation of power to the Executive, as proposed by this bill, be justified.

This committee has given much valuable time to this legislation. Undoubtedly, these hearings have clarified many points connected with merger. I repeat, however, that this committee has not as yet tapped the great reservoir of unbiased, experienced opinion which should be made available to it before it passes the bill on to the Senate with its recommendations. I speak of the Reserve officers of the Army and the Navy, the investment broker of today who was the Army quartermaster of yesterday; the certified public accountant back in Philadelphia who was the Navy supply officer in Trinidad; the banker in Baltimore who was the finance officer in Paris; the engineer from New Mexico who erected steel hangars in the swamps of British Guiana; the physician from Mercy Hospital who under great odds organized one of the largest blood banks in the jungles of New Guinea. The experiences of these men should be before the committee just as are those of the Regular officers of the Army and Navy who have appeared before you. Of equal importance to the committee are the experiences of the retired officers of military services, only one of whom has as yet been heard by this committee, and he is a former Member of the Senate. These men, Reserve and retired, have no compulsion to testify one way or another. Their opinions are based on their own experiences, not on the policies of their superiors.

I cannot help but feel that RONS is not only the voice of the Reserve but the voice of the conscience of the Navy; that it not only reflects the opinion of the Reserve officers but likewise the opinions of a large proportion of their brother officers in the Regular services. I respectfully submit that the announced official policy of the Navy Department is not a representation of the feeling of the officers within the Naval Establishment.

I urge this committee to delay immediate positive action on this bill and further I propose and urge the appointment of a commission of Reserve officers of the Army, the Navy, the Marine Corps, the Coast Guard, and the Air Corps to study the unification of the armed services, drawing upon the wartime experiences of their Reserve brother officers to assist them in this study and giving to this committee its recommendation based on that study. I offer the committee the fullest cooperation of RONS in conducting this survey.

Russian Propaganda

EXTENSION OF REMARKS
OF
HON. A. LEONARD ALLEN
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 7, 1947

Mr. ALLEN of Louisiana. Mr. Speaker, I have noted with very grave concern the speech which was made in the Western High School here in the city of Washington by Mrs. Aleksandra P. Lewis who was born and reared in Russia and who married a diplomatic clerk. According to news reports this party has been making other speeches. If it had not been for the fact that some courageous and upstanding young Americans in the school resented this strongly pro-Russian speech, we might never have heard of it. I deeply appreciate the students who walked out on this speaker and who protested what she said. To my mind, the protest of these students was most heartening. I am glad that these students appreciate the American way of life. I extend to them my congratulations.

The woman who made this speech, in my opinion, does not reflect the proper attitude for anyone to take who has come here and who is permitted to enjoy the blessings of liberty in this country. Her praise of Russia clearly shows her political philosophy. Feeling as she does about this country as compared to Russia, she ought to go back to Russia on the first boat and stay there.

The occurrence yesterday should serve as a reminder that our American schools and American institutions should be more on guard than ever against speakers of this class spreading their foreign ideologies. I hope this person who made this speech yesterday will never again have an opportunity before an American student body to repeat this performance.

Polish Constitution Day

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 7, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a radio address delivered by me over radio station WMEX, Boston, Mass., May 4, 1947:

Ladies and gentlemen of the radio audience, the men, women, and children of Poland were the first victims of Nazi aggression. And because they dared to resist, even against impossible odds, they felt the full fury of hate and terror.

That they survived at all is a tribute to their unconquerable spirit.

Yet, human beings can only stand so much. The agonies which the Polish people experienced have left deep and painful wounds on mind and body which only an abundant mercy on our part can heal to health again.

For life itself, they need food and clothing and medical supplies. With the liquidation of UNRRA, private agencies must assume this responsibility.

The Polish people do not cry. Their suffering has been too prolonged and tragic, leaving no energy for idle tears. Written on their gaunt faces, however, is the mute record of what they endured in defense of our common humanity.

A few days ago, I saw a picture in a newspaper which graphically told the story. It was taken in Warsaw, with lingering traces of snow in the foreground. A wandering photographer had found a customer for his wares and he proceeded to set the stage. From his kit, he took a long roll of canvas. This he hung up between the skeletons of two small trees. On this canvas was painted an attractive rural scene, to serve as a background for the picture he was about to take. It showed a neat cottage * * * crops in the field * * * and a pleasant summer sky. In front of this canvas stood the Polish woman who was posing for her picture. Her clothes were poor, but she carried a bunch of artificial flowers in her hand, and there was a glimmer of a smile on her face. The illusion was almost perfect.

But, on either side and above this canvas, one could see stark and dismal reality. The shattered buildings of Warsaw framed the scene.

It was a touching bit of "make-believe"—the wandering photographer, the woman, and the canvas, trying to recapture a picture of happier days, against the background of ruin and desolation.

There was one figure missing, without which even this pathetic attempt at "make-believe" could not succeed. The Polish woman had no child, at least not with her. Perhaps she did have children, and perhaps some of them are still alive, torn from their mother's arms and lost in the frightful upheaval of total war.

This picture of a photographer trying to make a happy picture, brought forcibly to my mind an ugly fact. The recent conflict produced new and hideous forms of torture, not the least of which is the one described by that feeble term "displaced persons."

Heretofore, we have considered the innocent children who have been orphaned by man's inhumanity to man, as the worst evil of war. But to this has been added a refinement in cruelty. This is the sadistic practice of taking children from their homes and parents to toil at slave labor. Final defeat of the evil-doers did not correct this wrong. For many of the liberated children are adrift, never to know and recognize their parents in the years to come, even though they may pass one another on a crowded street. Parents and children are alive, but separated forever. These displaced children are the psychological orphans of war, and no more anguishing sight can be seen in Poland today than the roving children who will never see their living parents again.

The civilized people of this world recognize their obligations in this matter. The Nazi evil has been destroyed. Its victims must be fed and clothed to protect the spark of life still in them. We must bind up their wounds, beginning with the women and children who have suffered, and are suffering from the backwash of the most vicious attack ever loosed upon the peoples of this world.

Buildings and machinery and raw materials are essential to the material recovery of a nation, but these are secondary to the immediate and pressing need of keeping body and soul together.

The physical vitality of a people is its primary asset. It must be safeguarded, whatever the cost may be. Without health, there can be no recovery in agriculture, industry, education, or any other expression of a nation's culture.

American relief for Poland faces this first fact.

It is not known how many children perished from the cold; how many were deported, never to be heard from again; how many died from hunger, exhaustion and disease, but their number is estimated at 1,000,000,000.

Those who live, are old before their time, never having known the joys of a secure and carefree childhood. These Polish children came out of the war physically undeveloped, mentally neglected, their nervous systems wrecked, their sense of moral values distorted by their terrible experiences.

No man or woman worthy of the name can think of this awful legacy of war without feeling it in his conscience. Maybe we, in the ignorance of our isolation, were responsible in some measure for the tragedy of this war. It is too late to make amends for that. But we are responsible, now, to give a helping hand to the stricken children of Poland, the first nation to fight in defense of our common freedom.

The orphanages of Poland need our help, and so do her hospitals.

The Nazis systematically looted and wrecked even those hospitals which engaged in no war activity, but ministered only to the needs of the sick and the aged among the civilian population.

Not only were there shortages of food and medical supplies and interrupted service caused by the frequent arrest of hospital staffs, but the meager supplies of linen, food, and drugs were burned by the invaders or thrown into the streets. Precious X-ray apparatus and medical instruments were taken away to the third Reich. Hospital buildings were repeatedly set on fire. Libraries, clinical and histological laboratories were wantonly destroyed. Many of the helpless patients were shot in their beds.

The few hospitals which escaped pillage were kept in isolation and were not permitted to learn of the medical progress which was made throughout the world during those long 6 years of the Nazi terror.

During that time, the undernourished people of Poland were denied adequate medical attention as well as food. Disease became rampant.

American Relief for Poland is urgently appealing to us for help in the present crisis. Mobile hospitals must be sent as crusaders of health, to fight widespread disease on every front. Many, many people in Poland are barely existing and the decision as to whether they shall live or die rests squarely with us.

Emergency relief is desperately needed in all the areas which were ravaged by the war.

It was Poland which gave to the world Madame Curie, leader in the fight to save humanity from the scourge of cancer.

In justice and in mercy, we can do no less than to try and repay the great service which she, and Poland, have given to the world.

The dollars that we give will never pay that debt. But they will be appreciated by the children of Poland, whose lives depend upon our conscience and our help.

Americans are a grateful and generous people. We who have been spared the martyrdom of the Poles will not stand by and see her little children endure further suffering.

I am confident that we will open up the latchstrings of both purse and heart to that most worthy cause—American Relief for Poland.

For as the people of Poland recover from the effects of war, the day will come when the liberal constitution, adopted by the Polish Parliament on May 3, 1791, will come into being again and Poland will be a free, happy, and prosperous member of the community of nations.

Christian Science Monitor Says Program for Supporting Farm Prices Must Be Continued Beyond 1948; Commends Secretary Anderson's Statement

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 7, 1947

Mr. HAYS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Christian Science Monitor of May 1, 1947:

One thing seems certain: When the present Federal program for supporting the price of farm products expires at the end of 1948, some other agricultural stabilization legislation will take its place. To talk about other possibilities appears as academic as to expect completely tariffless foreign trade or wage rates rising and falling in a free labor market. Furthermore, because the farmer cannot adjust his production quickly to fluctuations in demand, and because he is so utterly essential, the American people are unlikely to toss him overboard to sink or swim.

The question is, therefore, not whether there will be a new program, but what kind.

The old approach seems to have worn itself out in the public's opinion. There is widespread dissatisfaction among farmers themselves, not over the fact of Government support, but the manner.

During the early years of the depression, incentives to cut production made some sense. Demand had fallen sharply. The price bottom dropped out. Farmers tried to sell more—hence, produced more—to keep afloat. That glutted the market, prices fell even lower, and the farmers' plight was sad.

The farmers feel they have had just as much justification in asking and getting some help in maintaining a parity between the price of their products and the cost of the goods they must buy as labor has had in demanding wages which take account of the cost of living.

With the Nation and the world at war, it was doubtless necessary to underwrite maximum food production and to protect the farmer for a couple of harvests against a calamitous drop in demand.

All of these needs and efforts to meet them are understandable in their several contexts. Yet, in practice the remedies have been often proved egregiously clumsy. There has been something about payment for crops not grown, killing pigs that are not eaten, subsidizing more cotton than can be sold, and buying potatoes to be dumped out in the weather that deeply offends the sensibilities of even so prodigal a people as Americans.

That is why Secretary of Agriculture Anderson's outline for a new approach is likely to get a sympathetic hearing. He would stabilize consumer demand for farm products, instead of regulating supply and supporting prices. In times of depression at home he would bolster the buying power of inadequate incomes by extensive use of the food-stamp system. He would undertake agreements providing for sale of surpluses abroad at cut prices to needy countries.

Obviously, many difficulties of administration stand between the idea and a practicable execution. But in just venturing to walk around the farm problem and to look at it with some imagination from the other side, Mr. Anderson has made a contribution of some proportions.

Revolt Against Communism at Western High School

EXTENSION OF REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 7, 1947

Mr. RANKIN. Mr. Speaker, those students at Western High School who revolted against the communistic lecture on yesterday deserve the undying gratitude of patriotic Americans everywhere.

They simply raised the little iron curtain and gave the American people a glimpse of the treacherous and insidious method by which the Communists in this country are attempting to poison the minds of our children.

If we are going to try to check the spread of communism in Europe, we had better clean house at home, and drive them from the Federal pay roll, the State pay roll, the moving-picture industry, and above all else from our schools and colleges.

Charles L. Gerlach

EXTENSION OF REMARKS
OF
HON. GEORGE W. SARBACHER, JR.
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 5, 1947

Mr. SARBACHER. Mr. Speaker, I, too, join with all of the many friends

of CHARLES GERLACH in this moment of sadness.

A few months ago I had the opportunity and privilege of meeting Charles for the first time. I, like the other new Members, was deeply impressed with his warm personality and fine character.

Our country has lost a good citizen, our State of Pennsylvania an outstanding Representative, we new Members of Congress—who look for guidance to men of his caliber—an immeasurable loss.

Bonneville Power Administration

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 7, 1947

Mr. HORAN. Mr. Speaker, under leave to extend my remarks in the RECORD I wish to include a letter and a resolution passed by the City Council of the City of Spokane regarding the budget items for the Bonneville Power Administration.

While the House has already acted on the Interior appropriations bill, I do feel that this fundamental statement from a great metropolitan area in my district has a place in the RECORD and in the fullest consideration of Interior appropriations as they will be presented to the Senate and reviewed in conferences between the two bodies later.

The letter and resolution follow:

CITY OF SPOKANE,
Spokane, Wash., May 1, 1947.

Hon. WALT HORAN,
Representative, State of Washington,
House Office Building,
Washington, D. C.

DEAR SIR: Enclosed herewith is resolution adopted by the City Council of the City of Spokane at its administrative session held this date, requesting that the Senators and Representatives of the State of Washington support the Bonneville Power Administration's budget in the sum of $21,578,000 for the fiscal year of 1948, so that this community and the Pacific Northwest will have a continued source of low-cost power necessary for their continued growth and development.

Yours truly,

A. A. BROWN,
City Clerk.

Whereas it is recognized that provision for future supplies of electric power adequate to maintain continued industrial, agricultural, and utility development in the Pacific Northwest depends upon the construction of multiple-purpose projects on the Columbia River and its tributaries, and the Federal Government has assumed responsibility for the construction of these projects; and

Whereas the existing generating capacity in the Pacific Northwest is now fully utilized and studies have revealed that new Federal generating capacity in the amount of 318,000 kilowatts over and above the 745,000 kilowatts of generating units now on order will be required between the present time and November 1, 1949, to meet the present critical power-supply problems, and 1,565,000 kilowatts will be required by November 1, 1953; and

Whereas these Federal generating plants are located a considerable distance from the region's load centers, and any limitation upon the Bonneville Power Administration to build substations would, in effect, cause an increase in the basic Columbia River power rate, and since such an increase would be unjustified in view of the fact that existing rates will provide a surplus in addition to repaying within 50 years to the United States Treasury the full power investment plus interest, a large irrigation subsidy plus interest, and all operation and maintenance costs: Now, therefore, be it

Resolved by the City Council of the City of Spokane, That the Members of the House of Representatives and the Senators from the State of Washington be requested to support the Bonneville Power Administration's budget in the sum of $21,578,000 for the fiscal year of 1948, in order to insure that this community and the Pacific Northwest will have a continued source of low-cost power, so necessary for their continued growth and development.

Adopted this 1st day of May 1947.

A. A. BROWN,
City Clerk.

Federal Spending and Taxes Too High

EXTENSION OF REMARKS
OF
HON. W. F. NORRELL
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 7, 1947

Mr. NORRELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Arkansas Democrat, Little Rock, Ark., of April 29, 1947:

FEDERAL SPENDING AND TAXES TOO HIGH

Why should a reduction of Federal income taxes this year be a credit to the Republicans, and one next year be a gain for the Democrats?

That curious reasoning is intimated in a lot of the political chatter from Washington. We are told that high officials in the administration, who oppose a tax cut now, will plump out for it in 1948, in the expectancy of reaping pleased and delighted votes for their belated approval.

But why in all mystery would it work out that way? Wouldn't a 1948 reduction be put through by the same Republican Congress that wants to reduce the taxes now? And why wouldn't they make political medicine for themselves by reminding the electorate that they tried to reduce taxes in 1947, but were thwarted by the Democrats, who wanted to postpone it a year for their own political benefit?

The Republicans would do just that, brother and sister, and in a big way. They'd hire every available larynx to proclaim up and down the land that while they wanted to relieve John Citizen forthwith, as they'd promised to do, the administration kept his nose to the tax grindstone for a year, just to serve its own selfish purpose.

This paper believes that the administration is playing with dynamite in resisting a cut of income taxes now, and in standing for continued heavy Federal spending. Millions of Americans who haven't profited much by wage and salary boosts are having a hard time to make ends meet. They're sour on the necessity of pinching money out of their living needs to finance the extravagant ideas of Federal bureaucrats.

President Truman has gained in popularity. The Republicans no longer regard him as a push-over whom they can defeat with anybody they might nominate. He has them worried. But he is giving them effective campaign thunder in standing for inflated public spending and opposing tax reduction.

Economy in Washington and a tax cut are not a Republican idea. They grabbed it, true enough. But it was urged by Democrats in Congress of high rank, notably Virginia's Senator BYRD, long before the GOP made it a campaign issue in 1946. It is supported by three or four former Democratic Treasury officials, among a host of prominent citizens, Democrats and Republicans, in private life.

The President's budget request for the next fiscal year, $37,500,000,000, would mean an average of about $268 for every man, woman, and child in the Nation. It's too much—far too much. The people know it is too much. And the administration is making a mistake in defending such a gouge, and letting the Republicans slide into the role of defending the citizen from a horde of wasters in Washington.

Truman Should Practice What He Preaches

EXTENSION OF REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 7, 1947

Mr. JENKINS of Ohio. Mr. Speaker, under leave to extend my remarks, I wish to have printed in the RECORD an editorial from the Register-Star-News, of Sandusky, Ohio, written by a former Member of this House, Hon. Dudley A. White. I commend this to the attention of the membership. It follows:

TRUMAN SHOULD PRACTICE WHAT HE PREACHES
(By Dudley A. White)

The costs of living must come down. Inflation must be stopped to stave off a depression.

President Truman is right about that, but he abandons sound economics for the sake of an obvious political play when he fails to point out that costs must also be lowered if reduced prices are going to amount to anything more than a flash in the pan.

The penalties, sacrifices, and responsibility of the fight against inflation are a burden of war that falls on the doorstep of every American citizen. No one segment of our population can assume this burden for another.

It is no more than plain political hogwash to suggest that rising costs can be ignored or that special groups need not share the obligation of halting disastrous price rises.

Certainly excessive profits can block the path of return to reasonable prices. But such cases are few and far between as compared with the effect of the endless spiral of rising labor costs that have no basis in increased production.

The trouble is that everybody is demanding more and more for less and less. The American people have a right to expect that somewhere in the wilderness of 1947 unrest and confusion there might be a voice crying out the need for achieving greater production in return for increased earnings. Yet this is a forgotten principle in administration policies.

A nation's wealth does not grow on trees. And when we say "wealth" that means jobs, pay, profits, new enterprise, the necessities, the comforts and the standard of living enjoyed by the nation as a whole. No, sir, that kind of wealth does not grow on trees or blossom from political legerdemain. It must be produced. There is no way in the world for any nation to create wealth, except

through productivity. There isn't anything wrong with the United States today that could not be cured in a hurry by increased production.

If President Truman expects to stem the rising tides of recession he had better stop playing to the gallery of special political privilege and show the courage necessary to demonstrate that costs must be held in line in order to hold prices in line or lower them—and to drive home the important realization that increased production is the soundest means of all to bring about increased wages without the harmful or paralyzing effect of increased costs.

At the same time the President should do one other thing in this particular field of action. As everybody knows, the cost of government has become one of the most important elements in today's cost of living or doing business. How can Mr. Truman fairly ask laborers, white-collar workers, the retailer, the wholesaler, the farmer, and manufacturer to join in reducing prices for the good of the country unless he sets the example and starts the ball rolling by adopting corresponding policy to lower the costs and prices of the business he heads—the biggest, most costly, and far-reaching enterprise of all—the United States Government. This is Mr. Truman's opportunity to practice what he preaches.

American Economic and Technical Aid to Foreign Countries

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1947

Mr. JAVITS. Mr. Speaker, under leave to extend and revise my remarks, I include a summary of the report of the Division of Historical Policy Research of the Department of State, dated March 1947, entitled "American Economic and Technical Aid to Foreign Countries Since Mid-1945." Copies of the full report may be obtained by Members of Congress on request to the Department of State.

The summary follows:

AMERICAN ECONOMIC AND TECHNICAL AID TO FOREIGN COUNTRIES SINCE MID-1945

INTRODUCTION

This report is a summary of a 70-page study which was undertaken at the request of Assistant Secretary of State Willard Thorp in response to the suggestion of the Honorable JACOB K. JAVITS, Member of the House of Representatives from New York. The full study was prepared in the Division of Historical Policy Research, with assistance from officers of other divisions of the Department of State and various other Government agencies. Copies of the full study may be obtained from the Department of State.

As suggested by Congressman JAVITS, information was assembled for each country, regarding general aid (including loans and technical assistance), fixed war installations transferred, "hard goods" distributed through UNRRA, and special bilateral financial arrangements. The scope of the study, as thus defined, necessarily excluded a number of factors, such as American contributions to international organizations other than UNRRA, the regular or "routine" operations of the United States Government which may be of aid to some foreign countries, sales of combat matériel (as distinguished from fixed installations), and administrative expenses resulting from the extension of American aid abroad.

The study, therefore, was designed to furnish a general survey of certain significant items of American assistance to foreign countries rather than a definitive tabulation of such aid. In order to achieve the desired broad picture of American aid since the end of World War II, the starting date of the study has been indicated as, in general, mid-1945. This date, however, has not been adhered to so rigidly as to preclude the utilization of significant data covering periods which began somewhat earlier or later.

In view of the omission of certain countries from the following pages it is important to note that the sources used in the preparation of this study do not indicate that any direct American aid of significant proportions has been accorded during the period under consideration to the following countries: Afghanistan, Bulgaria, Eire, Liechtenstein, Luxemburg, Monaco, Morocco, Muscat, Palestine and Trans-Jordan, Union of South Africa, Sweden, Switzerland, Siam, and Yemen.

The full study was prepared under the direction of William M. Franklin by the following members of the Foreign Policy Studies Branch of this Division: William Gerber, E. Taylor Parks, Seward W. Livermore, Isaac Stone, and Velma H. Cassidy. The following summary is the work of one member of the group.

G. BERNARD NOBLE,
Chief, Division of Historical Policy Research.

GENERAL RÉSUMÉ

American economic and technical aid to foreign countries since mid-1945 adds up to an impressive record of concrete achievement. As a result of American loans, technical services, transfers, settlements, allocations, and surplus-property sales, many countries on every continent have a greater share of roads, hospitals, airfields, libraries, machinery, sanitation, cargo ships, and other tools of a civilized economy.

Lend-lease aid since VJ-day, having the character of "pipe line" shipments, i. e., continued shipment of materials for which contracts had been previously signed, amounted to almost $2,000,000,000, of which China received $673,000,000, France $344,000,000, the British Commonwealth $428,000,000, and the Soviet Union $198,000,000.

Loans and credits granted during the fiscal year which ended June 30, 1946, including Export-Import Bank loans, credits for the purchase of surplus property, etc., amounted to $2,163,000,000, of which $119,000,000 were allotted to the American republics, $100,000,000 to Belgium, $67,000,000 to China, $1,200,000,000 to France, and $310,000,000 to the Netherlands.

The value of fixed war installations transferred to foreign countries and the amounts of "hard goods" made available through UNRRA have contributed materially to the welfare of the recipient countries. It is not feasible to present over-all figures for these types of aid, as the fixed installations were in some cases sold at prices nearly reflecting actual value and in other cases transferred either for a small consideration or for no monetary return, and the bases of estimating the value of "hard goods" vary in different situations.

AMERICAN REPUBLICS

From July 1945 to December 1946, Export-Import Bank credits totaling over $125,000,000 were made available to governments and enterprises in Latin America. Surplus property costing $14,267,811 was sold to those republics for $3,796,120. The United States furnished lend-lease aid totaling $5,000,000 to the American Republics between VJ-day and June 30, 1946.

Some $16,000,000 have been expended in cooperative health and sanitation projects benefiting many millions of our southern neighbors. Cultural and technical cooperation with the other American Republics, including aid to United States cultural centers, exchange of agricultural and scientific skills, etc., will amount to over $2,500,000 in the fiscal year 1947.

Expenditures for the Inter-American Highway were approved by the act of December 26, 1941, which authorized the appropriation of $20,000,000 for the construction of a road from the Mexican-Guatemalan border to the Canal Zone, provided that one-third of the cost in each country would be met by the respective countries. The total work contemplated on the Inter-American Highway is said to be slightly more than one-half finished and to require about 4 years and $65,000,000 for completion.

For cultural and technical cooperation in Argentina the United States expended some $42,000 in the fiscal year 1946 and will have spent approximately $62,000 in fiscal 1947. The Export-Import Bank extended a credit of $193,000 to an Argentine firm for the purchase of harbor barges in the United States.

Half a million persons out of a total Bolivian population of 3,500,000 are estimated to have benefited directly from the United States-Bolivian cooperative health program. In addition, the United States expended some $74,000 in fiscal 1946 and will have spent $171,000 in fiscal 1947 on cultural and technical projects in Bolivia.

The Export-Import Bank granted credits totaling some $46,000,000 to Brazilian governmental and private agencies from July 1945 through December 1946. Brazil also benefited from cultural and health projects, the transfer of numerous fixed war installations (including air fields and hospitals), and the sale of surplus property at reduced prices.

Expenditures of $125,000 in Chile by the Interdepartmental Committee on Scientific and Cultural Cooperation in fiscal 1947 (compared with $70,000 for fiscal 1946) will provide aid to United States cultural centers and to several new projects. From July 1945 through December 1946, the Export-Import Bank granted credits of $42,000,000 to Chilean agencies.

The United States had contributed $1,805,000 and Colombia $3,436,170 as of September 30, 1946, to a cooperative health and sanitation program. Sixty-four health and sanitation centers and projects were in operation on September 30, 1946. The program of technical cooperation includes the development of rubber production and grants to various specialists.

Between June 1945 and January 1947, a total of $1,286,900 was expended for equipment, materials, and construction on parts of the Inter-American Highway in Costa Rica. By September 1946, 19 health centers and projects were in operation and 26 were approaching activation under the cooperative health and sanitation program.

On May 20, 1946, the United States transferred to Cuba an air base at San Antonio de los Banos, one at San Julian, and 13 buildings. On technical and cultural projects in Cuba, the United States expended $79,607 in fiscal 1946 and will have spent about $110,243 in fiscal 1947.

Under the agreements for a cooperative health program, the United States had contributed $400,000 and the Dominican Republic $175,000 as of September 30, 1946. Between July 1, 1944, and February 21, 1947, 22 Dominicans completed or continued specialized training in the United States under grants from the Institute of Inter-American Affairs.

One-third of Ecuador's population benefited directly from the cooperative health and sanitation program, according to reliable estimates. The Export-Import Bank

made $1,000,000 available to Ecuador to pay for American engineering services. An airbase at Salinas and a military base in the Galapagos were turned over to Ecuador in 1946.

Between June 1945 and January 1947, the sum of $167,500 was expended by the United States for construction of parts of the Inter-American Highway in El Salvador. The cooperative health program covered 29 health centers and projects completed and 44 in process of organization as of September 30, 1946.

The United States expended $232,700 for construction of parts of the Inter-American Highway in Guatemala between June 1945 and January 1947. Guatemala's contribution to the health and sanitation program exceeded, as of September 30, 1946, that of the United States: $3,905,444 from Guatemala and $1,050,000 from the United States.

Development of rubber production and support of cultural centers are major projects in Haiti of the Interdepartmental Committee. The United States contributed $808,000 and Haiti $192,850 toward the cooperative health and sanitation program, which covers 33 health projects in operation on September 30, 1946, and 35 nearing completion.

Puerto Castilla, a naval base, was returned to Honduras in 1946, and surplus property left there was sold to Honduras for $56,000. For the health program, the United States contributed $800,000 and Honduras $605,400 through September 1946. For the Inter-American Highway, the United States expended $354,500 since mid-1945.

The Export-Import Bank granted credits totaling $37,000,000 to the Government of Mexico and Mexican enterprises from July 1945 through 1946. To the health program, the United States contributed $4,000,000 and Mexico $2,550,000 through September 1946. Cultural and technical cooperation will come to over $300,000 in fiscal 1947.

The naval base at Corinto and the Army air base at Puerto Cabezas were transferred to Nicaragua in 1946. Other aid of the United States includes $405,800 for the Inter-American Highway, $845,700 for a road across Nicaragua, $800,000 for the health program, and (for fiscal 1947) $101,000 for cultural cooperation.

According to information available in the Department of State, 98 defense sites out of 134 have been returned to the Republic of Panama. Between June 1945 and January 1947, the sum of $13,000 was expended in Panama by the United States for construction of parts of the Inter-American Highway.

As of September 30, 1946, the United States had contributed $1,500,000 and Paraguay $500,000 to the cooperative health and sanitation program. Improvements in crops, dairies, etc., have been sponsored by the Institute of Inter-American Affairs with contributions of $600,000 from the United States and $275,000 from Paraguay.

It is estimated that at least 1,000,000 of Peru's 2,000,000 inhabitants benefited directly from the 44 health centers and projects in operation on September 30, 1946, under the cooperative health and sanitation program. The United States airbase at Talara was transferred to Peru.

A credit of $666,666 was extended to Uruguay for the purchase of surplus United States property. The cooperative health and sanitation program benefited one-third of Uruguay's population, according to reliable estimates; the program cost the United States $575,000 and Uruguay $252,298.

Expenditures in Venezuela by the Interdepartmental Committee on Scientific and Cultural Cooperation will have doubled in fiscal 1947 as compared with last year, $96,663 as against $48,353. The chief projects are aid to United States cultural centers and training grants in civil aviation. A cooperative health program is also in operation.

EUROPE AND BRITISH COMMONWEALTH

Export-Import Bank credits totaling almost $2,000,000,000 were made available to European countries from July 1945 to December 1946. Certain details respecting these loans, and a statement regarding the British loan agreement of December 1945, will be found in the appropriate country paragraphs below.

Some continental European countries received substantial amounts of "hard goods" through UNRRA, while the British Commonwealth was a source rather than a beneficiary of this type of aid. Many valuable fixed installations, however, were transferred to British Commonwealth countries as well as to continental countries, in some cases for a financial consideration far lower than the original cost.

Credits for the purchase of surplus American property amounting to approximately three-quarters of a billion dollars were made available during the fiscal year 1946 to countries in this category. Planned programs of technical and cultural cooperation, including the exchange of persons and of cultural resources, will total an estimated $736,321 in fiscal 1947.

The United States share of supplies furnished to Albania by UNRRA in fiscal 1946 was $13,052,284, of which about $500,000 was for (a) industrial and agricultural equipment, and (b) facilities for communication and transportation. Of the $27,450,000 allotted to Albania by UNRRA in July 1946, almost $14,000,000 was for agricultural and industrial rehabilitation.

As of June 30, 1946, the United States had transferred to Australia 178 fixed war installations, including 30 airports and 11 seaports. Lend-lease shipments since VJ-day are estimated at $17,500,000 in value. Of the funds received under the lend-lease settlement, the United States will spend $5,000,000 in Australia for educational purposes.

The Export-Import Bank made $100,000,000 available to Belgium. Lend-lease aid from VJ-day through September 1946 totaled $68,000,000. Two airports and 39 other installations were transferred to Belgium through September 24, 1946. Surplus property costing approximately $380,000,000 was transferred for a return estimated at $54,000,000.

The Alaska Highway was turned over to Canada on April 1, 1946.

Of the credit of $50,000,000 extended to Czechoslovakia for war-surplus property on May 29, 1946, $9,304,694 had been committed up to September 13, when the remainder was suspended. A $20,000,000 credit was extended by the Export-Import Bank. The UNRRA program for Czechoslovakia as of January 31, 1947, totaled $104,622,000 for industrial and agricultural rehabilitation.

Credits extended to Denmark include $20,000,000 by the Export-Import Bank and $50,000,000 for surplus war property. An unused portion of the latter credit was suspended. The United States has contributed to the maintenance of commercial air fields in Denmark which are available to American air lines.

Finland received credits of $40,000,000 from the Export-Import Bank and $15,000,000 for the purchase of surplus property. Civilian relief supplies shipped from fiscal 1942 through fiscal 1946 cost $2,566,180, of which the American Red Cross furnished three-fifths and UNRRA the remainder; some $50,625 of the total went for agricultural supplies and equipment.

The United States has extended credits of over $1,750,000,000 to France for reconstruction purposes, purchase of Liberty ships, and other uses. Some 468 fixed war installations were transferred to France for $196,000,000, and other such installations have been transferred as they became surplus.

The loan of $3,750,000,000 to Great Britain is giving that country a breathing spell. The sum of $20,000,000 has been set aside from surplus-property proceeds for educational exchange with Great Britain, under the Fulbright Act. As of June 30, 1946, approximately 800 fixed installations had been transferred to Great Britain, in some cases for a small fraction of the original cost.

The United States has advanced to UNRRA about $350,000,000, or about 72 percent of the total UNRRA program for Greece; approximately $91,000,000 of this sum is for agricultural machinery and industrial equipment. Other American aid includes a $25,000,000 Export-Import Bank credit; lend-lease aid of $75,475,720 as of June 30, 1946; $90,000,000 in credits for purchase of 100 ships and of surplus property; and the services of an economic mission.

As of June 30, 1946, 27 fixed war installations costing $65,000,000 had been transferred to Iceland. Of these, three were air fields.

Prior to the beginning of UNRRA aid, the United States appropriated $140,000,000 for civilian aid in Italy, which permitted the shipment of 1,800,000 tons of coal and 750,000 tons of foodstuffs, plus substantial quantities of industrial materials. Other aid included UNRRA shipments (begun with an appropriation of $500,000,000, the United States being the major supplier); Export-Import Bank credits of $125,000,000; transfer of 117 installations; sale of Liberty ships; and crediting of Italy with the dollar equivalent of the Am-lire used to pay American troops.

The Export-Import Bank extended $260,000,000 in credits to the Netherlands. Lend-lease shipments to that country from VJ-day through June 1946 totaled $50,000,000. A $20,000,000 credit was extended for purchase of surplus property, and the United States disposed of 84 installations in the Netherlands and possessions.

On July 10, 1946, a credit of $5,500,000 was extended to New Zealand for the purchase of surplus war property. Of the amount to be paid by New Zealand for this property, a part will be used for educational exchanges. As of June 30, 1946, the United States had disposed of 22 installations.

The United States has furnished over $6,500,000 in lend-lease supplies to Norway since VJ-day. A $50,000,000 Export-Import Bank credit was extended in March 1947. The Coast and Geodetic Survey has aided Norway in special tide predictions for nine ports.

Credits of $40,000,000 from the Export-Import Bank and $50,000,000 for the purchase of surplus war property were made available to Poland. Equipment and materials for agricultural and industrial rehabilitation were shipped by UNRRA to the value of almost $140,000,000 through January 1947.

Portuguese personnel have been trained in weather-observation techniques and in the operation of communication equipment by the War Department and the Civil Aeronautics Administration. Fixed installations in the Azores were transferred to Portugal.

The United States has transferred to Spain, for half the original cost, certain air strips, housing, and weather-reporting facilities constructed in the Spanish West African colony of Rio de Oro and used for maintaining air communication with the European theater of operations.

The lend-lease pipe-line agreement of October 15, 1945, with the Soviet Union called for the delivery of some $250,000,000 in goods, for which the Soviet Union will pay in 22 annual installments beginning in 1954. The program of UNRRA shipments included some $69,000,000 for rehabilitation supplies for the Ukraine and $23,205,000 for similar goods for Byelorussia.

Supplies for industrial rehabilitation amounting to $109,249,000 and for agricultural rehabilitation amounting to $37,188,000 were included in the United States share of the UNRRA program for Yugoslavia. Of these amounts, 79 and 78 percent, respectively, had been delivered as of January 31, 1947.

NEAR EAST AND AFRICA

Export-Import Bank credits of over $30,000,000, cultural-cooperation programs costing approximately $500,000, bulk sales of sur-

plus property on terms highly advantageous to the countries concerned, and other types of aid were rendered by the United States in the recent period to the countries of Africa and the Near and Middle East.

More than $18,000,000 in credits was made available to countries in these regions during the fiscal year ending June 30, 1946, for the purchase of surplus United States war property.

Approximately $10,000,000 worth of lend-lease goods were moved into Burma by the United Kingdom armed forces. The United States cultural program for Burma includes maintenance of information services at Rangoon.

The bulk-sale agreement of June 15, 1946, with Egypt provided that a considerable part of the proceeds received by the United States would be used for acquisition of official real estate in Egypt and for cultural exchange. An airport near Cairo was transferred to Egypt under the agreement.

An Export-Import Bank credit of $3,000,000 and a credit of $1,000,000 for the purchase of surplus property were made available to Ethiopia. Vehicles ($350,000), agricultural machinery ($400,000), and hospital supplies ($400,000) are included in the UNRRA program for Ethiopia.

Under the mutual-aid settlement of May 6, 1946, with India, that country is to retain the first $50,000,000 of the proceeds of the sale of surplus American war property in India plus one-half of the remainder. The United States had transferred to India 174 fixed installations, including 62 airports, by March 31, 1946.

Lend-lease aid furnished to Iran in fiscal 1946 amounted to $4,803,538. By April 1946 surplus property costing $72,293,000 had been sold to Iran for $24,867,000. Sixty-one fixed-war installations in Iran were disposed of by March 31, 1946.

Approximately $41,000 have been spent by the United States since mid-1945 for educational aid to Iraq.

The United States has granted $80,000 to the American University at Beirut, Lebanon, and the International College at that city, and has made grants totaling over $10,000 for other educational projects in Lebanon.

Approximately $19,200,000 in lend-lease funds have been allotted for construction of a port at Monrovia, Liberia. The cost is to be repaid from port revenue. An American economic mission and a Public Health Service mission have been operating in Liberia in the recent period.

Educational aid to Syria included $10,000 for Damascus College and several thousand dollars for travel grants and presentation of books.

Credits to Saudi Arabia were granted in the amounts of $10,000,000 by the Export-Import Bank and $2,000,000 for the purchase of surplus war property. The United States also transferred the air base at Dhahran to Saudi Arabia on March 15, 1946.

Assistance to Turkey since VE-day has included credits of $40,000,000 for general economic improvement, purchase of surplus property, and purchase of ships from the Maritime Commission; cultural grants of $60,000 to Robert College, $15,000 to Women's College at Istanbul, and others; and sale to Turkey for $862,000 of airfields and other installations costing $1,474,000.

FAR EAST

Outstanding examples of recent American aid are the extensive assistance rendered to China in the form of credits, lend-lease materials, and hard goods distributed through UNRRA, and the special cooperation with the Philippine Republic under the Philippine Rehabilitation Act.

Of the Export-Import Bank credits made available to China, three-fourths had been utilized before the end of 1946. Certain surplus United States war property was sold to China for roughly one-third of its cost. The sum of $620,000,000 is authorized to be appropriated in various categories, by the Philippine Rehabilitation Act.

Lend-lease aid supplied to China from September 2, 1945, to the end of 1946 amounted to approximately $700,000,000. Surplus materials costing about $62,000,000 have been sold to China for $20,000,000. The United States transferred to China fixed installations valued at $84,000,000. UNRRA shipments to that country of machinery for industrial and agricultural rehabilitation totaled some $97,900,000 through January 1947.

Titles I to III of the Philippine Rehabilitation Act of April 30, 1946, authorized the appropriation or expenditure of $400,000,000 for private war-damage claims; $100,000,000 for rehabilitation; and $120,000,000 for public roads, port facilities, etc. Actual appropriations have been passed for $10,000,000 under title I and $43,918,000 under title III.

OCCUPIED COUNTRIES

Loans for the purchase of surplus property amounting to $45,000,000 have been made available to Austria, Hungary, and Korea. Substantial amounts of "hard goods" have been distributed through UNRRA to Austria and Hungary. Germany, Japan, and Rumania have also received American economic aid, but no significant American aid in the categories under consideration appears to have been extended to Bulgaria.

During 1945–47 the War Department spent $51,500,000 for civilian supply in Austria. Credits were granted of $1,000,000 by the Export-Import Bank and $10,000,000 for purchase of surplus property (but only $2,000,000 worth of the articles were found to be suitable for purchase). UNRRA shipments of agricultural supplies and equipment amounted to $2,022,801 in fiscal 1946 and (projected) $20,000,000 for fiscal 1947.

From August 1945 through December 1946, the United States imported into Germany some $352,000,000 worth of food, fuels, medical supplies, and raw cotton. It was announced on February 11, 1947, that the largest sale of American surplus property in Europe was under way in the United States Zone of Germany.

Credits of $30,000,000 were extended to Hungary for the purchase of American surplus war property. The United States has returned to Hungary a sizable quantity of gold which had been removed from Hungary by the Germans. As of January 31, 1947, industrial-rehabilitation material amounting to $250,000 had been shipped to Hungary.

An appropriation of $186,000,000 for Japan for the fiscal year 1947 has been spent primarily for foodstuffs, agricultural supplies, medical supplies, civilian pay, and commercial ocean-transportation costs.

The 1947 War Department appropriation for South Korea was a little over $70,000,000. A credit of $25,000,000 was granted to the military government for the purchase of Army surplus property. UNRRA allocations for South Korea have been limited to $500,000,000.

As requested by President Truman on February 17, 1947, the American Red Cross appropriated $3,500,000 to finance and supervise distribution of relief supplies in Rumania.

UN Must Enforce Its Palestine Decision

EXTENSION OF REMARKS

OF

HON. FRANK BUCHANAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 7, 1947

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Walter Lippmann, from the Pittsburgh Post-Gazette of May 3, 1947:

UN MUST ENFORCE ITS PALESTINE DECISION

(By Walter Lippmann)

The opening statement made by Mr. Herschel V. Johnson, speaking for the United States on Palestine in the UN, has not attracted the attention which it deserves. For the statment recognizes accurately the new situation created by the British appeal to the UN, and defines the working principle which is bound to be controlling in the inquiry, in the debates, and in the conclusions, if there is to be a practical and constructive result.

The crucial sentence in the American statement is that "it will be extremely difficult, if not impossible, to enforce any decision which does not rally the support of most of the peoples of the world." These few words are pregnant, and they say a great deal. For they commit the United States to work for a decision which can be enforced by the United Nations.

This formula marks a definite break with the past. Hitherto the decisions have been taken by the British Government, as was inevitable since it alone had the responsibility and the burden of enforcing decisions. The American contribution has been purely advisory. The American advice has been given freely and copiously, sometimes, by invitation of Britain as in the case of the Anglo-American Committee of Inquiry of 1945, and oftener without being invited.

The new American formula calls for a decision which, not Britain alone, not Britain and America together, but the United Nations can enforce. That this is the right and the statesmanlike formula is plain. There is no point in submitting the problem of Palestine to the UN except to arrive at a decision that the UN will and can enforce, that Britain, and also America as members of the UN will faithfully participate in deciding and in enforcing.

There are three controlling terms in this formula:

First, that there should be decision, since all the many competing claims on Palestine cannot be satisfied.

Second, that this decision must be enforced since it must be assumed that no decision will be accepted voluntarily by all the parties concerned.

And third, that this decision must be one which can be enforced by the United Nations now, as they are today, in their present stage of development, not as they might be, ought to be, and some day, we hope, may be.

* * * * *

We have to find the solution within the limitations of UN. Now there are things which UN cannot do. They will have to be ruled out. There are things which UN can do. The solution will have to be that kind of thing.

What can UN not do? It cannot enforce any decision which requires it to crush the opposition of large organized masses of Palestinian Arabs or Palestinian Jews. It does not have the military power to do that sort of thing, and the UN would never sanction it anyway. This rules out any decision which would cede the whole of Palestine to the Arabs or to the Zionists.

Nor can UN enforce a decision which calls for the international government of the whole of Palestine. In the present state of the world—the rivalry of the great powers being what it is—an international administration of Palestine is a utopian solution. The utmost that can be done in this respect, and it is also an irreducible minimum which will have to be done, is to set aside Jerusalem and the other holy places as neutral and inviolable whatever else is done in the rest of Palestine.

We may generalize and say that UN is not competent to enforce any solution which requires it to govern within Palestine.

What kind of thing, then, can UN do? It can guarantee a lawful political boundary line. This is the kind of international function which UN is best able to perform. To be sure, a frontier cannot always be guaranteed absolutely. It can be crossed, as is now the case in Greece, by surreptitious bands. Nevertheless, as compared with any other type of international enforcement, the defense of a frontier is the most likely to be successful. Violations can most easily be detected. Resistance to aggression of this kind will, in the present state of world opinion, most surely rally collective action. Such collective action cannot, under article 51 of the Charter, be stopped by the veto.

Our international society is still an exceedingly primitive one. But it has reached a stage in its development when the violation of a frontier is universally recognized as aggression, and when under the Nuremberg precedent, the individuals who plan it and conduct it are subject to arrest and to trial as international criminals.

There can be little doubt that a partition, if objectively done, would leave only the extremists on both sides, who have grandiose and dangerous ambitions, to be dealt with by force. For once the line was drawn by authority of the civilized world, agitators and conspirators who sought to violate the line would be isolated as rebels against the world society, and as criminals subject not only to local law but to international law.

Gasoline—Five Hundred and Thirty Billion Barrels

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 7, 1947

Mr. CASE of South Dakota. Mr. Speaker, the interest that is being taken in our oil and gasoline reserves reminds me that this is a good time to call attention to the immense reserves of gasoline that exist in the vast fields of lignite coal in Montana, North Dakota, and South Dakota.

Until recently, these gigantic fields of sub-bituminous coal have gone almost unnoticed because of the large quantities of industrial coal in other places and because we have never had the spur of necessity to develop processes for their use. The Germans did, however; that is, they developed methods of producing synthetic liquid fuel from their brown coals with a high degree of efficiency.

The application of those processes to our lignite coals opens the door to a vast new industry, for the Geological Survey estimates the reserves of lignite coal in this 3-State field at 916,000,000-000 tons.

The Secretary of the Interior tells me that on the basis of a 70 percent recovery under processes of conversion now available, this field alone is equivalent to 530,000,000,000 barrels of gasoline as compared with proved reserves of crude petroleum in the United States of about 21,000,000,000 barrels.

The figures stagger one's imagination. They become even more impressive when it is estimated that the cost under present methods of conversion mean a gasoline competitive with one produced from oil at $1.50 per barrel. They become even persuasive when it is realized that one of the large oil companies has recently announced plans for a $125,000,000 synthetic plant in Pennsylvania, and that the lignite fields open a coal reserve that is not presently used for the general industrial purposes of anthracite and bituminous coals.

It was with this situation in mind that I introduced H. R. 2161 on the 24th of February, 1947, to extend and expand the Government's program for "the construction and operation of demonstration plants to produce synthetic liquid fuels from coal, oil, shales and other products, to conserve and increase the oil resources of the Nation."

I urge its early and favorable consideration.

In order that the members of the House may be aware of the official nature of the figures I have used on the extent of these reserves, I shall place in the RECORD, under permission heretofore granted, a letter from the office of the Secretary of the Interior, dated February 14, 1947.

I might add that it was because of my interest and belief in this program and because of the knowledge of the facts given in this letter that I raised the point of order against a clause in the Interior appropriation bill a few days ago to strike from that bill what appeared to be a reduction in the authorization to proceed with contracts on the intitial phases of this program which my bill seeks to extend.

The letter from the Secretary of the Interior follows:

THE SECRETARY OF THE INTERIOR,
Washington, February 14, 1947.

Hon. FRANCIS CASE,
House of Representatives.

MY DEAR MR. CASE: In reply to your letter of January 29, I can assure you that lignite is one of the most promising source materials for synthetic liquid fuels to supplement our diminishing supplies of petroleum.

The lignite field of South Dakota, North Dakota, and Montana, to which you refer in your letter, has estimated total reserves of 916,000,000,000 tons, according to the Geological Survey. On the basis of 70-percent recovery and present processes of conversion, this field is equivalent to 530,000,000,000 barrels of gasoline as compared with proved reserves of crude petroleum in the United States of about 21,000,000,000 barrels.

Small-scale tests made by the Bureau of Mines have shown that lignite from this field is readily liquefied. In a demonstration plant to be erected this year, provided Congress approves the necessary appropriations, large-scale costs will be determined and practical operating procedures developed. This information could enable private industry to apply the processes commercially to the production of oil from coal and lignite. While the demonstration plant is to be built at Louisiana, Mo., it will be used to test coals from the various coal-producing States. It is expected that the first coal used will be from the northwestern area.

To produce any significant portion of our oil requirements from solid fuels is going to require the establishment of a large new industry. The location of the necessary low-cost coal reserves will determine to a considerable extent the areas in which this new industry will be established.

Those sections of the country having large lignite reserves are in a favorable position. In planning such an industry, geologic surveys to determine the thickness and extent of available coal, and engineering surveys to formulate plans for the development of industrial water supplies, and low-cost power are important considerations. Therefore, the development of the Missouri Basin may promote the commercial production of synthetic liquid fuels.

There is enclosed a copy of my report to Congress on the Synthetic Liquid Fuels Act for the last calendar year, which describes the progress that has been made. I shall also be glad to have a Bureau of Mines representative acquainted with the synthetic liquid fuels program call at your office to discuss it in detail should you so desire.

Replying to the last paragraph of your letter requesting suggestions as to ways the people of South Dakota can advance the matter, it is my opinion that their interests can best be served at this stage by supporting the continuance of the synthetic liquid fuels program that Congress has established. House and Senate committees investigating petroleum have reported recently in favor of this work and a bill (S. 134), has been introduced in the Senate to authorize continuation of this work beyond the initial 5-year period which ends April 5, 1949.

Sincerely yours,

C. GIRARD DAVIDSON,
Assistant Secretary of the Interior.

A Poor Rent Bill

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 7, 1947

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Pittsburgh Post-Gazette of May 3, 1947:

A POOR RENT BILL

The rent-control bill approved in the House by a narrow margin is bad legislation. It should not be approved either by the Senate or by the President. It would mean the end of effective rent control.

Possibly the worst of its several bad features is the provision authorizing landlords to raise rents 15 percent in return for a 2-year lease if the tenant agrees.

On the face of it this may sound reasonable enough. Actually it is a club with which the landlord can beat the tenant into a 15-percent rent boost over and above any increases already allowed by the OPA.

The House bill provides that rent control would end next December 31, although the President would be given authority to extend this to March 31 if he finds it necessary.

The landlord could go to the tenant with this proposition: Either sign a 2-year lease calling now for a 15-percent rent boost or risk an unlimited rent increase when rent control expires within a matter of months The choice in such a situation is obvious.

There would be justification for permitting landlords a 15-percent increase if they had no other recourse for increases. But such is not the case.

Under the present law, there are several considerations under which the landlord can obtain Federal permission to increase rents. He can show capital improvements, increased services, increased occupancy of the property, or he can obtain relief through a substantial hardship petition.

This latter provision recently was liberalized so that the landlord has to show only

that his increased operating expenses have resulted in a decrease in his net income for 1946 as compared with the average incomes of any two previous years since 1939.

Under this provision, 6 petitions affecting 479 tenants in the Pittsburgh district have been granted in the last week. In April alone 178 petitions of all kinds, affecting 327 tenants, were granted. Last year the OPA granted rent increases affecting 3,020 tenants to 1,825 district landlords. Over the period of a year the increases granted in 1946 alone will total $201,360. It is evident from these figures that landlords have not been denied relief.

Another bad feature of this poorly written bill empowers local governments to end controls whenever they decide there is no longer a housing shortage in their areas.

Local governments are far more susceptible to pressure than the Federal Government. It is not unusual to find affected property owners sitting in local governing bodies. The result of this provision would be spotty rent control difficult of Federal supervision.

Space does not permit discussion of other features of this bill fully as objectionable as those described above. Suffice it to say that the measure in no sense resembles the effective control President Truman has asked for the proper protection of millions of our American families pending an easing of the housing shortage.

The House shouted down an amendment by Representative ROONEY, who called for an expression by Congress that "In view of the desperate housing situation, the American people deserve our sympathy." But such an expression would certainly have been appropriate in this bill

The American people deserve sympathy not only because of the desperate housing situation but because it does not have in the House enough men with courage to resist the forces of further inflation and hardship.

Aiding Displaced Persons

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 7, 1947

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I would like to include a very thoughtful and timely article on aiding displaced persons, appearing in the America magazine of May 3, 1947:

Americans would like to believe that displaced persons returning from western Europe to countries east of the Oder-Neisse line will receive treatment worthy of human beings. They would prefer to think that the returnees run no risk to their lives or liberties in trusting themselves to governments which employ the MVD or its affiliates.

Good people among us would like to believe that there are no slave labor camps in Russia or that, if there are, none but genuine criminals are confined there. One of the anomalies of current human behavior is the apparent eagerness of many otherwise responsible persons to interpret the actions of the Soviet rulers in the best possible light while manifesting an unwillingness to listen to the factual testimony of reliable witnesses who report on Russia's ruthless disregard for human rights.

Europe's displaced persons are again in danger of becoming victims of this American credulity. On their return trip to the homeland they expect to get a through ticket to Siberia or some other place where they will be punished for disloyalty to the regime and for accepting western ideas about human rights. The fact that there are now over a million DP's presents no particular problem to the MVD. The latter agency has established its reputation for handling well over 10,000,000 noncriminal prisoners—a number which makes the Czar's most ambitious compulsory-labor program look like a Boy Scout encampment. Upkeep, of course, is no obstacle. Many Americans find it hard to believe these things, just as they did of the Nazi regime, but that is because they see little more in communism than a reform movement.

Still others among us have or think we have plumbed the depths of dialectic materialism and love to reveal the evils of Stalinism in resounding pronounciamentos. Meanwhile on the question of giving substantial aid to victims of Communist terror we succumb to the penny-pinching views of Representative TABER and the NAM.

The more thoughtful Americans are rightly alarmed at the new line of thought on refugees appearing in American military circles abroad. The issue was clearly put in the open letter addressed to President Truman by the Refugees Defense Committee:

"We believe that neither UNRRA nor the IRO nor the American administrative authorities have any moral right to attempt to persuade the displaced persons to return unless they are prepared to guarantee that they will not be subject to racial and political persecution in the countries to which they are asked to return."

After the display at the Moscow Conference, who would risk making such a guarantee?

While the Refugees Defense Committee was drafting its letter, the executive committee of the National Catholic Rural Life Conference was passing a forcefully worded resolution on our duty to aid the refugees, especially by providing them a place for resettlement. The conference is rightly disturbed about the duplicity of our Nation, which allows large commercial farmers to bring in thousands of alien and West Indian agricultural workers, yet refuses to admit even a handful of bona fide refugees. At its meeting the executive committee of NCRLC made it clear that it has actual commitments for resettling displaced persons and that it stands solidly behind the Citizens Committee on Displaced Persons in its attempt to have legislation passed to permit entrance of refugees.

Distribution and Use of Railroad Freight Cars

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 7, 1947

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following factual statements on the car situation by the Car Service Division of the American Railway Association:

DISTRIBUTION AND USE OF RAILROAD FREIGHT CARS

THE SITUATION IN 1947, WITH PARTICULAR REFERENCE TO WESTERN CAR SUPPLY

Statements to the effect that there is sectional discrimination in the distribution of railroad freight car supply are based, in large part, upon superficial examination and misunderstanding of the regularly published car location reports of the Car Service Division, Association of American Railroads. These reports show the ownership of cars of various types by individual railroads and also the number of cars of each type on the lines of each railroad on each reporting date.

They show that Eastern railroads as a whole have on their rails more than their ownership of box cars. They also show, on the other hand, that Western railroads have on their lines more than their ownership of open-top cars. Both situations are normal. They are not due to discrimination in distribution of either type of cars but rather to the way commerce moves in this country.

Ordinarily and properly, those railroads on which there is a heavy origination of a certain kind of traffic have a relatively large ownership of cars suitable for that traffic. These cars are not intended to be kept at home. The very purpose of owning them is to have them loaded and shipped to points of consumption, commonly involving movement on other railroads. This is true of box cars of western ownership and of open-top cars of eastern ownership. The basis of the continental commerce of the United States is that these cars shall move freely from railroad to railroad, carrying the products originating in one section to consumers in other sections. The importance of this interchange among railroads of cars carrying loaded freight is indicated by the fact that during the week ending April 26, 1947, the latest for which figures are available, when shippers loaded a total of 894,000 cars, the number of cars interchanged among railroads totaled 715,000.

THE MEANING OF "ON LINE PERCENTAGES"

To attempt in a time of car shortage to keep 100 percent of ownership of each type of freight car on the originating and owning line at all times would result in intolerable congestion and delay to traffic, and unnecessarily add hundreds of millions of dollars to capital expenditure of railroads to own and maintain unneeded equipment, as well as add great expense in the cross hauling of loaded and empty cars. Furthermore, it is the history of railroad car ownership that since the beginning of interchange of loaded cars, one road with another, there has never been a time when each railroad had on line 100 percent of its ownership by types of cars. Such a situation would not be practical or economical, or in the interests of good transportation policy. Whatever may be said to the contrary, it is wholly impractical to distribute car supply solely with relation to individual railroad ownership without a disregard of the interests of the shippers and disastrous results to the commerce of the country.

Shippers are familiar with the movements of traffic and the return flow of cars which result in the fact that at any particular time any particular railroad may have less or more than its ownership of any particular type of car on its line. They know that to select the figures as of one time for one type of car, and for one railroad or one group of railroads, does not present a fair picture of car distribution.

The fair over-all picture takes into account all cars and all sections. Car distribution in the United States is on a national basis, not a sectional basis. The aim is to distribute all cars among all sections to meet, as nearly as may be, the needs of all shippers. The full reports of car distribution and location indicate how nearly this is achieved.

DIVISION OF CARS—EAST AND WEST

Taking all railroad-owned cars into account on April 1, 1947, there were on western railroads 99.7 percent of car ownership, and on the railroads east of Chicago and the

Mississippi River, 95.9 percent. (The approximately 3 percent of ownership remaining was in the hands of switching lines, or in process of transfer and not reported, or in Canada or Mexico.)

Breaking this over-all picture down to show ownership and location of major types of cars in the different sections, the railroads west of the line of Chicago, St. Louis, and the Mississippi River own 317,329 boxcars, or 43.6 percent of the whole number, and 189,498 open-top cars, or 21.9 percent of the total, while the roads east of that line own 409,796 boxcars, or 56.4 percent, and 675,539 open-top cars, or 78.1 percent.

As of April 1, 1947, the western railroads had on their lines 91 percent of their ownership of boxcars and 121 percent of their ownership of open top, while the eastern railroads had on line 104.9 percent of their boxcar ownership and 89.3 percent of their open tops.

Refrigerator cars constitute a special group, handled on an entirely different basis. Only three railroads in the United States own any significant number of refrigerator cars. The figures published in the Car Service Division reports refer only to these few cars, owned by individual railroads. The great bulk of the total refrigerator-car fleet of 140,000 cars, are those of refrigerator-car lines, either privately owned or controlled by groups of railroads, with which the railroads contract in order to supply cars for their refrigerator-car shippers. The distribution of these cars is handled upon advice of specialists, experienced in meeting the needs of the perishable-freight industry. The picture of distribution of refrigerator-car supply is not to be found, therefore, in the general Car Service Division car location Report CS–8A, but in special monthly reports covering all refrigerator cars, filed with the Interstate Commerce Commission. These reports show that on April 1, 1947, the distribution of all refrigerator cars among the sections was as follows:

	Percent
Lines west of Chicago, St. Louis, and Mississippi River	47.3
Lines east of Chicago, St. Louis, and Mississippi River	44.3
In Canada and Mexico	8.4

This distribution is believed to be as nearly responsive to shippers' requirements at this season of the year as it is possible to make it.

THE RETURN FLOW OF CARS

Insofar as box and open-top cars and the other railroad-owned types are concerned, there is a constant shifting and flow of these cars in the movement of commerce. Nevertheless, an approximate balance is maintained in the distribution of the car supply as a whole among the sections of the country. This is accomplished through the efforts of the Car Service Division of the Association of American Railroads.

In times of normal car supply there is a more or less automatic return of empty cars following generally in reverse direction the routes by which the loaded cars moved. In this way the same railroads which enjoyed the revenue on the loaded hauls carry the burden of returning the empties, when it is necessary for cars to return empty. This more or less automatic flow is governed by the car service rules, to which all railroads subscribe.

Loaded freight cars are almost always routed by the shippers and receivers of freight. They are sent over a great variety of routes to secure the benefit of various tariff provisions as to transit, reconsignment, delivery, etc., so as to market products to best advantage. A striking example of this is the movement of perishable freight, much of which is sold while it is en route, with the car being held, diverted, and reconsigned over various routes upon shippers' orders. There necessarily results a certain amount of circuity in some loaded movements, yet this is incident to the according of commercial advantages which are important to shippers and which they would hardly care to forego.

In times of car stringency, such as we have had during the war and since, it has been necessary to suspend the operation of car service rules, in many instances, and to send empty cars home by short routes, regardless of the route over which the car moved under load. Thus, under Car Service Division orders, eastern railroads have been required to make long hauls of empty cars, without compensation, for delivery to western lines at Chicago and St. Louis, in many thousands of cases in which the eastern railroads concerned enjoyed only a short haul on the loaded cars. The number of empty boxcars relocated from eastern to western railroads under special orders of the Car Service Division since December 6, 1946, has totaled 176,089, or an average of 1,214 cars a day. The fact that the Car Service Division has made such requirements of the eastern railroads is in itself a sufficient answer to the often-repeated but baseless allegation that the association is dominated by these eastern lines.

THE EFFECT OF CAR-SERVICE RULES

It has been suggested that the emergency system by which the return of empty cars to the West is expedited through Car Service Division direction should be discontinued, and the return flow of cars left to be governed by the full and strict application of car-service rules. If there were an ample car supply in the country, this would be both feasible and proper. It would divide the burden of handling returning empties among the different railroads more nearly in accord with the proportion in which they enjoyed the revenue hauls of loaded cars. But in the opinion of men who have lived and worked with car-service matters, both before and during the war, to restore the full application of car-service rules at this time would mean both fewer cars for the West and less freight-carrying capacity for the country as a whole, rather than more.

The power to require such returns of empty cars, regardless of revenue earned on the loads, is one entrusted to the Car Service Division by the railroads. The Interstate Commerce Commission is vested by law with authority over car distribution and car service. In seeking the most efficient and equitable distribution of cars, the Commission has made use of the long-established and Nation-wide machinery of the Car Service Division by designating W. C. Kendall, Chairman of that Division, as its agent. As such agent, Mr. Kendall makes daily reports to the Commission, and his actions are at all times subject to its direction and authority.

RECORD FREIGHT LOADINGS IN THE WEST

Despite statements to the effect that the West is being strangled for lack of freight cars, the fact remains that western car loadings are keeping pace with loadings in other sections and that more freight is being loaded on western railroads than ever before. In the first 3 months of this year, western loadings were more than 3,666,000 cars. That is nearly a quarter of a million more cars than were loaded in the same months last year. It is more, even, than were loaded in the peak war years of 1944 and 1945.

The loading and movement of grain and grain products in the West, in fact, has been greater in recent months than ever before in a similar period.

Such loadings on western railroads in the past 4 months have totaled 601,828 cars, as compared with 526,016 in the corresponding period of 1946 and 505,995 cars in 1945. According to the April 1 reports of the Department of Agriculture, the stock of wheat on farms is smaller than at any time in several years, despite the fact that we have had five bumper crops in a row. The number of country elevators reported closed for want of cars has been reduced in the past 2 months from 1,295 to only 46 out of a total of approximately 14,000 such elevators. In short, grain is moving and moving in record volume.

Reference has been made to mills closing down in the Pacific Northwest for lack of grain. Such temporary difficulties as have been experienced were due to lack by such mills of a particular type of grain grown in Montana. This lack was not due to failure on the part of the railroads to move the grain, but to the fact that because of price differentials the grain moved east to Minneapolis and beyond rather than west to the Pacific Coast. It was not a transportation condition at all but a marketing condition.

Many of the cars loaded in the West have gone east, carrying the products of western producers to eastern consumers. That's what the western producers and shippers wanted, and what the eastern consumer wanted, and what the railroads wanted to do—to use their cars to carry freight to those destinations where it is needed. There is no such movement of boxcar freight from east to west, so that it is necessary to return many of these boxcars empty, just as it is necessary to return large numbers of eastern open tops empty from the West, under special orders of the Car Service Division.

THE GENERAL SITUATION

Speaking now of the country as a whole, it is true that railroads have not been able in recent months to place currently for loading all the cars ordered at all points in all sections. The shortage has been general, and not sectional. It was due to general causes, which began to operate years ago. During the long years of the depression, when the surplus of freight cars was measured in the hundreds of thousands, few new cars were built. In 1938 it was proposed that the Government build several hundred thousand cars and lease them to the railroads. When it was held that there was no warrant in law for such a proposal, the proposal was embodied in the lend-spend bill of 1939, which, however, did not pass. The proposal was made more as a pump-priming device to increase general employment than it was as a railroad measure. It was made months before the war began in Europe, and of course without reference to that event.

When war started, the railroads began to build up their car supply, out of their own resources, even before the inauguration of the American defense program in 1940. Between the outbreak of war in Europe and Pearl Harbor, they put into service 158,000 new freight cars. By the time of Pearl Harbor, materials difficulties and Government priorities and allocations restricted freight-car construction. This condition continued throughout the war.

Since the close of the war the stringency in car-building materials has continued, with the result that during the past 20 months the number of new cars built for United States railroads has averaged barely more than 3,000 per month, or less than the number of cars worn out in war service which have had to be retired. We are assured now, however, that beginning in the middle of the summer materials will be available for building as many as 10,000 new cars per month. Orders from the railroads for more than 100,000 new cars are now on the books, with approximately 30,000 additional cars programed for future order.

But right now there simply are not enough cars to go around, and the job is to get the most use from those which are available. That is what the railroads, the cooperating shippers and receivers of freight, and the Government agencies concerned, all are trying to do. The record is that they are moving more freight more miles than ever before in peacetime

"We Believe America Can Enhance Her Prestige and Win the Admiration and Respect of the People Everywhere Only by Championing the Cause of Justice and Decency, Rather Than by an Unholy Alliance With the 'Unspeakable' Turk."—Armenian National Council of America

EXTENSION OF REMARKS
OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 7, 1947

Mr. GEARHART. Mr. Speaker, because I am deeply impressed by that which is contained in the pamphlet and I believe the membership should have the benefit of the views of those who sponsored it, it is my privilege to hand to the Public Printer for inclusion in the CONGRESSIONAL RECORD a memorandum on the subject of aid to Turkey which was recently released by the Armenian National Council of America, a patriotic society composed of American citizens of Armenian descent, one well worthy of our respect and confidence.

The memorandum to which I have just referred, Mr. Speaker, is the following:

MEMORANDUM ON THE PROPOSED AID TO GREECE AND TURKEY PRESENTED TO THE GOVERNMENT OF THE UNITED STATES BY THE ARMENIAN COUNCIL OF AMERICA

The message of President Truman to Congress on March 12, 1947, promulgated a new American foreign policy, in proposing to extend financial and military aid to Greece and Turkey, and to assume new political responsibilities in the Mediterranean area.

OUR DUTY AS CITIZENS

This new step imposes upon us as American citizens a grave responsibility; and because of our special interest and knowledge of the conditions in the Near East, we would like to present certain important facts for the serious consideration of our Government, and point out the far-reaching implications of the proposed new foreign policy in the Near East.

The Armenian people, having suffered long and bitterly under the despotic misrule of the old and new Turkish regimes, value highly their now-found liberties in this land of their adoption. They are devoted to the American democratic institutions and American way of life, and are therefore unalterably opposed to tyranny of all kinds. For over a century the American educational, philanthropic, and missionary institutions have been operating among the Armenians in the former Turkish Empire. It was through this close contact, that the American people came to a more intimate knowledge of the historical struggles and ideals of this ancient Christian people, and took a genuinely friendly interest in their welfare. It was during World War I, however, that the tragic fate of the Armenian people in Turkey, shocked the conscience of the American people, and aroused their deep sympathy and admiration.

We are told by our President that both Greece and Turkey need our help to maintain their independence and integrity as nations, and he has requested the American Congress to extend to Greece a loan of $250,000,000, and to Turkey $150,000,000.

GREEK PEOPLE DESERVE OUR AID

We believe that the heroic Greek people, who fought so valiantly for our common cause against Fascist and Nazi hordes, have a just claim and deserve every help we are able to give them to reconstruct their national economy and to maintain their freedom as a democratic nation. Our help, however, should not fortify the reactionary elements in Greece, nor force upon the Greek people a government not of their own choosing.

AID TO TURKEY UNJUSTIFIED

The proposal of financial and military assistance to Turkey, however, falls under a different category altogether, and can never be justified. It will not further our own national interest and security, and cannot promote justice and peace in the Near East. We wish to remind our Government of certain facts, which should be known to our Department of State:

First. Turkey has never been, and is not now a democracy, as we understand and conceive the meaning of democracy.

Second. Turkey is an aggressor nation. It has always nurtured plans of expansion using pan-Turanism and pan-Islamism as its double spear-heads.

Third. Turkey was an ally of our enemy Germany during World War I, and an underhanded collaborator of the Axis Powers during World War II. The protocol of the Tehran agreements of December 1943, reveals that U. S. S. R., the United States, and Great Britain had decided that Turkish active participation was vital for the Allies. Turkey, however, refused to enter the war on the side of the United Nations. The assertion by an official of the State Department that Turkish neutrality was beneficial for the Allied cause is contrary to the facts. It is a deliberate attempt to whitewash Turkey.

Fourth. Turkey did not fulfill her obligations under the Treaty of Mutual Aid, signed by her with England and France at Angora, on October 10, 1939, and the obligations assumed to come to the aid of Greece when attacked by Italy. Turkey declared war at the last minute, against Germany, without firing a shot, when the defeat of the Axis had all but been accomplished in order to secure for herself a seat in the United Nations.

Fifth. The alleged neutrality of Turkey during the Second World War, was bought at a high price. Turkey received as a consideration the Sanjak of Alexandretta, a mandated territory which was transferred by France unlawfully. Turkey also received considerable aid from England and the United States in lend-lease, but furnished nothing in reverse lend-lease. On the contrary, we had to purchase from her at exorbitant prices, chrome and other materials, in order to stop their sale to our enemy Germany. Turkey did not suffer any ravages of war; on the contrary, she traded with both sides and prolonged the war, and enriched herself at the expense of the United Nations.

Sixth. Turkey, taking advantage of the war, and under the guise of taxing wealth (Varluk Vergisi), robbed and crushed economically, all its minorities, especially the Armenians.

Seventh. Our financial or military aid to strengthen Turkey, will make here a menace to the middle eastern states, such as Syria, Lebanon, Iraq, and Iran, and will revive the danger of pan-Turanism and pan-Islamism, and will serve to encourage the aggressive designs of Turkey against her neighbors.

TURKEY NOT A DEMOCRACY

Turkey is not a morally defensible state, and our Government cannot, and should not undertake to assist and defend Turkey on the following grounds:

(a) Turkey does not recognize the validity of the Naturalization Laws of the United States. The Turkish Government has consistently refused to recognize the American citizenship by naturalization, of former Turkish subjects such as Armenians, Greeks, Jews, and other minority groups.

(b) There is no religious freedom in Turkey. She deprives the exercise of religious freedom by the American educational, philanthropic, and missionary institutions, within its borders. The reading of the Scriptures and the offering of prayers are forbidden in these institutions, in the presence of Turks.

(c) Discrimination is rampant in Turkey today. The minority races are denied the equal rights of citizenship, contrary to the stipulations of treaties of peace signed between Turkey and the Allied Powers after World War I. The Turks are a privileged class in all parts of Turkey. No non-Turkish school, business firm, or institution can run their own affairs without having a Turkish teacher, partner, or representative.

(d) For centuries, Turkey has trampled on and violated every treaty she has signed, she has always been a destructive force, and has not contributed a single iota to the progress of civilization.

TURKEY NOT DEPENDABLE

Within the last 100 years, all the great powers of Europe, at times, have bolstered up the Turkish state, hoping thereby to enhance their own interest, but their efforts have always failed; every time Turkey has come out weaker and more wicked, and at the crucial time betrayed her friends. Our help will only prolong Turkey's misrule and menace world peace. The security of the United States cannot be based upon the protection of a barbaric state like Turkey.

TURKEY, THE AGGRESSOR

The President's declaration to the effect that the integrity of Turkey is menaced is not justified by facts; even if Turkey felt that her integrity was being threatened, she had the recourse to apply to the United Nations, of which she is a member. The fact is that Turkey herself stands condemned by international law as an aggressor nation. The present Turkish Government not only defied the Allied Powers, in refusing to comply with the arbitral award of the President of the United States, Woodrow Wilson, in regard to Armenia, instead it committed an act of aggression in seizing by force the provinces of Kars and Ardahan, and now she is maintaining a huge army to defend her loot.

AMERICA'S COMMITMENT TO THE ARMENIANS

The demand of the Armenian people for the restitution of their ancestral home, in accordance with the decision of the Allied Powers and the United States, cannot be construed as a threat to the integrity of Turkey. Our Government has a prior solemn commitment to the Armenian people for their liberation from Turkish rule.

The proposed policy of our Government in attempting to perpetuate a barbaric government like Turkey is contrary to all American traditions and commitments, and will arouse a righteous indignation in the hearts of all justice- and peace-loving people throughout the world.

We believe America can enhance her prestige and win the admiration and respect of the people everywhere only by championing the cause of justice and decency, rather than by an unholy alliance with the unspeakable Turk.

Therefore, in the name of peace, justice, and humanity, as well as to safeguard our own national interest and security, we are absolutely opposed to giving any financial and military aid to Turkey.

Bonneville's Industrial and Resources Development Program

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 7, 1947

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Oregonian, Portland, Oreg., for May 3, 1947:

KILLING THE GOOSE

Among the departments the House Appropriations Committee considered superfluous in reporting out the Interior Department bill was the division of industrial and resources development of the Bonneville Power Administration. While the Senate is studying the drastic House reductions in the budget for western power and reclamation, it is timely to consider the record of the industries and resources division of BPA and the case for its maintenance.

The division, headed by able Ivan Bloch, has been spending from $200,000 to $250,000 a year to develop industrial power markets. This is less than 2 percent of BPA's present revenues of $13,000,000 a year from industrial customers. Utilities customarily spend at least twice that much for all kinds of sales promotion. The division's budget for the next fiscal year, entirely eliminated by House action, was $300,000. What are the Northwest and the Nation getting in return for such expenditures?

This division had the major part in locating in the Northwest and in arranging for peacetime operation of those which are war babies of the following electroprocess plants (new plants, not transplanted eastern facilities): Aluminum Co. of America, Vancouver; Reynolds Metals Co., Longview; Tacoma aluminum reduction plant, now operated by Kaiser; Troutdale aluminum reduction plant, now operated by Reynolds; Spokane aluminum reduction plant, now operated by Kaiser; Spokane aluminum rolling mill, now operated by Kaiser; Spokane magnesium plant; Wenatchee ferrosilicon alloy plant; Pacific Carbide & Alloys corporation's calcium carbide plant, Portland; Penn Salt Co., Portland; Electrometallurgical plant for ferro-alloys and calcium carbide, Portland; Salem alumina plant (now producing fertilizer material).

These Bonneville customers have a total plant and equipment value of $160,000,000. Federal, State, and local governments have collected more than $60,000,000 in taxes from them since their establishment. The total value of products manufactured by them is $475,000,000. They have provided direct employment for 7,500 persons, and indirect employment in mining, transportation, remanufacture, fabrication, and service industries to other thousands.

But the Division does not limit its activities to establishment of industries served solely by Bonneville power. It was responsible, to a great extent, for these other plants: Oregon Electric Steel Co., Portland; Ohio Ferro-Alloys, Tacoma; and Tacoma Powdered Metal Co. It assisted in establishing the Willamette Valley Wood Chemical Co. at Springfield, Oreg.; plants for manufacture of synthetic resin, and shipment of high-purity limestone for chemical purposes from Alaska. Samuel Moment, of the Division, was chiefly responsible for Federal policies which saved the wartime aluminum plants of the Northwest for peacetime operation.

The Division now is negotiating with important industrial concerns for the manufacture in the Northwest of phosphorus and phosphate fertilizer from the Idaho-Montana beds, hydrogen peroxide, silicon carbide, exothermic alloys, zinc, lithium, additional calcium carbide, rayon, acetic acid, aluminum fabricating such as wire and cable. The surveys, charts, and files of information compiled by the Division and made available in reports which gained national attention and have been of invaluable assistance to industrialists and to communities seeking industries are exhaustive and authoritative.

Bonneville's industrial and resources development program, which means jobs and profits for the Northwest, markets for the rest of the Nation, and national strength if war comes again, is just entering a period of great productivity. It is beyond comprehension that Congress, if it has the facts, will finally decide to knock this wealth-producing agency on the head. A $300,000 investment, fully repaid out of earnings, is hardly a risk when measured by performance in creating hundreds of millions in new wealth.

Memorial Day

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1947

Mr. HOFFMAN. Mr. Speaker, under permission granted, I am inserting herewith an article on Memorial Day which recently came to my attention:

MEMORIAL DAY—TIME CHANGES EVERYTHING; YES; MAYBE IT DOES

In America we celebrate Memorial Day once a year—but for the thousands of mothers who have lost their sons and daughters every day will be memorial day for them—their own flesh and blood, buried in some lonesome grave, marked only by a cross. After every famous battle there comes marching out of the past these same heartaches, the same sorrow, that same lonesome despair for those we love who will never return.

Down through the ages men have marched away to war to fight for the "four freedoms" as they are fighting today. From Bunker Hill, Valley Forge, and Verdun they are all the same. Out of these great conflicts march ghosts that will walk with those of Guadalcanal and Italy and Tarawa, and many will be added to that march of death that leaves scarring memories and steals from us those we love.

Let's keep believing that time heals everything. But will the memories of those gold stars, shining so brightly in so many windows tonight, ever be erased? That widowed mother down in Texas whose son was killed early in the war—and who had worked and sacrificed and slaved day after day on their tiny farm that her son could be a great lawyer. What went through her heart when she received that telegram "the War Department regrets to inform?" That's her memorial day and always will be. Her reason for living gone—nothing left but bare existence, no tender love, nothing but memories of her son and an aching void and a gold star that will always shine—yes—maybe—time changes everything.

Tonight as I sit alone, I realize that all those men, from the Revolution down to the present conflict, died for me. Yes, the civilization that I now enjoy, they made possible. The spirits that march hand in hand with their ancestors will go on marching that you and I may enjoy democracy and live in memories

May we be of some help to those boys of yesterday—happy go lucky when they went away, yet broken men of many battles when they return today. May I do something—anything to stop this march of death so that those young men can look forward to a world much greater and more peacefully democratic and say truthfully, "Those that did not come back did not die in vain." May I, by my vote, by my living example and by honest effort help make the victory they have won lasting and complete, that tomorrow's grandmothers—they are the gold-star mothers of today—can truthfully say, "Yes, the waters on the sands of time wash clean and time truly changes everything." May that everlastingly be true.

America's Pledge to Poland

EXTENSION OF REMARKS
OI
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 7, 1947

Mr. DONOHUE. Mr. Speaker, at this time, when it is becoming increasingly evident that the American people are concentrating upon the pressing need for a prompt, over-all European settlement, it is vitally important that the Government of the United States decide whether any peaceful and lasting world order can be created, when such international commitments as those incorporated in the Atlantic Charter and the Yalta Agreement are boldly violated.

The reports of the American correspondents who covered the "rigged" January elections in Poland, and events before and since, make it obvious that there is no semblance, and no intent whatever, of any real democracy in Poland, under Russian imperialistic influence.

The United States should make it clear that, in its considered judgment, what has occurred and is occurring in Poland constitutes a violation of the third article of the Atlantic Charter, to which every member of the United Nations is committed, under the United Nations' declaration, as well as a violation of article one of the United Nations' Charter.

The need for the American Government to take a forceful attitude in Poland's case must not be evaded. It is a matter of official record that in addition to the pledges set forth in the Yalta Agreement, the United States during the war years repeatedly and specifically assured the Polish people, through their representatives, that it would never recognize a government "not representative of Poland."

The United States cannot hope to retain the confidence of the smaller nations, and to exercise a continued influence in world affairs, if it disregards pledges of so solemn a character. The United States must redeem our pledge by calling upon the United Nations to assume the humanitarian responsibility of demanding that the Christian people of Poland, who suffered so much in the Allied cause, shall not become victims of the ruthless pagan imperialism of an oppressive totalitarian government

The Housing Problem

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 7, 1947

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Pittsburgh Press of May 4, 1947:

THE NATION'S NO. 1 PROBLEM: UNITED STATES HOUSING NEED STILL GREAT AS EVER, BUT BOOM FOLDS UP UNDER PRICE PRESSURE—SMALL BUYERS OUT OF MARKET—LABOR COSTS A BIG FACTOR

(By S. Burton Heath)

WASHINGTON, May 3.—Almost the first thing Jim and Mary did, when the Navy turned them loose, was order a $10,000 house in a veterans' emergency development.

They couldn't afford to buy. Both had gone directly from college into the Navy and had served in a high-living-cost area. They had little financial backlog.

Jim's salary in his first civilian job was not large. And there was a baby on the way.

But they needed some place to live. Even a tiny furnished flat was not found until Mary had spent the summer in a shore cottage, 35 miles from Jim's work, where he visited her week ends.

The other day word came that their house would be ready in a month. It was time to sign papers and prepare to put up cash.

Mary looked the house over. It wasn't bad—about a $5,500 prewar job, but honestly constructed. Much better than their inadequate flat, certainly. But they turned it down and canceled their order.

"We just can't afford an almost $10,000 mortgage now especially with a new baby," they explained.

This decision is being duplicated every day all over the United States. It is cutting seriously into the once huge backlog of demand for new housing.

BUBBLE THAT BURST

A few months ago it seemed that the enormous market for new housing was one of the most certain features in our transitional economy.

It was one demand that would not be satisfied for years.

The pressing need for new housing was estimated by the National Housing Administration last year at 3,195,000 by the end of 1947.

This still would have left 1,200,000 families doubled up.

Housing Expediter Frank R. Creedon says that 661,900 were completed last year, including some started in 1945. Estimates for this year place completions well under a million.

The National Association of Home Builders says it would take 1,500,000 new homes to "take the edge off" the need, and that 1,600,000 could be disposed of this year if they could be built.

Yet demand is slackening. Reports tell of cancellation of orders.

Why?

The NAHB blames it on those who have given veterans and others the "misinformation" that "new homes today are not good value and that construction costs will recede."

But the NAHB also notes that the slowdown began last fall in those areas where costs were highest, and has been getting slower recently.

ARTIFICIAL DEMAND

Thomas S. Holden, president of the F. W. Dodge, Corp., a leading source of building statistics, believes that a lot of the apparent demand was artificial in the first place.

He does not question that new homes are needed and wanted.

But he feels that continual emphasis upon the housing shortage, and the Government's provision for easy financing, combined to exaggerate the veterans' sense of frustration and the intensity of their demand for new houses.

Now that they have been back for a while, they have found some sort of roofs, however unsatisfactory. They have learned that they can get by without buying houses they know they can't afford.

What this country needs is from one and a half million to two and a half million more homes—not too expensive and most apartments.

The veterans' emergency-housing program got off to a wrong start for two reasons:

First, because emphasis was on houses rather than on homes.

Second, because the veteran was treated as a distinctive race that should be segregated in a new development of his own, while nonveterans continued to live on the other side of the tracks.

PROGRAM SET BACK

Both assumptions now are recognized as false. Both have been dropped.

But they persisted long enough to set the whole housing program back months—and at least scores of thousands of homes.

When the veteran came back for demobilization all the desirable homes were occupied. Something had to be found for him.

So a United States program was evolved with the idea of getting homes built at a price that the veteran could pay. This assumed that those already in existing housing would stay there, and veterans would take all the new housing.

"Within 48 hours after I became Housing Expediter last December I rescinded the regulation which prohibited nonveterans from building for their own occupancy," Frank R. Creedon said. "I believed this regulation to be undemocratic, and I know that it prevented many homes from being put under construction."

Mr. Creedon also relaxed the rule that required that every new housing unit be held at least 60 days to see if a veteran wanted it, before it could be sold or rented to anybody else.

And he has somewhat increased the ceiling on sales price or rental for new housing.

Most veterans do not want to buy homes—now, at any rate. They want to rent.

Former Housing Expediter Wilson Wyatt tried to shift emphasis from houses to rental homes—which means mostly apartments in the larger communities, at least. But those putting up the money say they didn't dare gamble much on rentals. They would rather take a small profit on a sale and get out.

An Army survey at separation centers last year showed that 70 out of every 100 married veterans felt they could not pay more than $50 a month rent.

TWO HUNDRED AND SIXTEEN DOLLARS AVERAGE INCOME

The Englewood (N. J.) Emergency Housing Committee recently found that the average veteran's family in that above-average community had an income of $216 a month.

There are two rules of thumb in real-estate practice to apply to such figures.

One is that the average family should pay about 1 week's income a month for rent.

The second is that a property owner must get 1 percent a month on his investment, as rent, to show a modest profit. That means that the average vet can afford to rent only a $5,000 house—or ignoring a number of complications, to pay only about $5,000 for a house for himself.

Because these economic facts are pretty hard and fast, the housing program for veterans only ran into a stone wall which is resulting in the slow-down reported from all over the country.

From Cleveland comes word that less than 7 percent of veterans want to buy. The sales range for new housing is in the $12,000 bracket—for rentals, the $80 to $100 range. This is above the vet's reach.

At Houston, the market in $9,000 to $11,000 houses is getting saturated. Demand now is in the $6,000 to $7,000 class (which vets can hit by a bit of financial jockeying) and in the $15,000 to $20,000 bracket.

These checks confirm the opinion of experts generally that the way to get the 1,500,000 to 2,500,000 new homes we need is to get houses—and particularly apartments—built at the lowest reasonable cost—let whoever wants and can afford them buy or rent them—and thus open up vacated homes to the veterans.

COSTS BEING STABILIZED

Most experts feel that the cost of building a house or an apartment building is becoming stabilized.

Materials are beginning to flow from mills and factories at an encouraging rate. In most lines the cost has stopped rising, or shown a tendency toward stopping. It is possible that costs may even begin to fall before long.

Myron L. Mathews, vice president of Drew Service, says that the house that was planned in 1941–42 for $5,000 cost $9,400 in February. The apartment scheduled before Pearl Harbor to cost $1,300 a room now costs $2,200 a room.

Building materials, over-all, are 77 percent above 1926 costs, the National Association of Home Builders reports. Brick are up 96 percent since 1939, Matthews says; lumber generally 150 percent, hardwood flooring 120 percent, plaster 58 percent, and so on.

The wages of construction labor have mounted and labor productivity has fallen, builders claim. O. J. Hartwig, executive secretary of the Long Island Builders Institute, says that before the war an $8-a-day worker laid 800 to 1,000 bricks.

Now a $18.03-a-day worker lays half as many. A typical small house has 9,000 bricks. The cost of laying them has risen from $72 to $324.

Of the increase, $113 is because the bricklayer is drawing higher pay; the remaining $139 is because he does less work.

Prefabrication has proven a disappointment thus far. With all the encouragement Government gave, Housing Expediter Creedon reports that only 37,200 "prefabs" were shipped last year and that things may speed up this year.

MASS PRODUCTION

Long Island, N. Y., builders long have been famous for their ability to give the maximum in value for the minimum in cost and still make a profit.

They do it by large-scale buying plus precutting and prefinishing of much of the material.

More and more the large-scale builder, financially backed to handle big projects, is going to be able to cut construction costs.

Prices never may settle back to pre-Pearl Harbor levels, but they should drop well below those that now are frightening veterans out of the home-buying market.

How Northwest Projects Pay Their Way

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 7, 1947

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the

RECORD, I include the following editorial from the Portland Journal of May 3, 1947:

HOW NORTHWEST PROJECTS PAY THEIR WAY

The Pacific Northwest needs to make no apology for its power and reclamation projects. They're not only playing a major role in the development of the region and the Nation, they are producing new wealth and they're more than paying their own way.

For example, Paul J. Raver, Bonneville Power Administrator, dramatized these facts effectively when, in addressing the City Club of Portland the other day, he pointed out that Bonneville and Grand Coulee have been responsible for new industries that have paid more taxes (Federal, State, and local) than all the money spent on these two great multiple-purpose projects to date—that is, more than $280,000,000.

In documenting this case, Dr. Raver said that 12 of the major industrial plants made possible by cheap Bonneville-Coulee power and representing an investment of $160,000,000 have paid almost $60,000,000 in Federal income- and excess-profits taxes and have paid more than $2,500,000 in local taxes, and workers in these plants have paid more than $1,000,000 in taxes on their homes. Four new electrochemical and electrometallurgical plants in Multnomah County pay $465,000 in local taxes. Alcoa-Vancouver pays 8 percent of all property taxes paid in Clark County, Wash., and aluminum plants at Troutdale, Tacoma, Longview, and Spokane make comparable tax contributions. And the Spokane plant, turning out aluminum sheets and shapes, serves 16 big processing plants making 2,000 different aluminum products and, in turn, creating huge pay rolls and paying heavy Federal and local taxes. As an example of the indirect tax-producing factor, Boeing Aircraft Co., which has been largely dependent upon BPA for power and upon Bonneville-served aluminum plants for aluminum, has paid more than $116,000,000 in taxes in the last 6 years. And don't forget every public power agency and every private company purchasing Bonneville power serves hundreds of new and expanded industries which make jobs and pay taxes.

It's about time eastern Congressmen quit thinking of western power and reclamation appropriations in terms of political largess, and start thinking of them in terms of bankable investments. For that's exactly what they are.

Power Breeds Tyranny

EXTENSION OF REMARKS
OF
HON. PRINCE H. PRESTON
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 7, 1947

Mr. PRESTON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following editorial from the True Citizen by Mr. Roy F. Chalker, editor, Waynesboro, Ga.:

POWER BREEDS TYRANNY

The growing willingness of the American people to depend upon government holds a deadly threat to the preservation of our liberties—and the maintenance of free, representative government itself.

Nothing is more insidious than the growth of the superstate. Power feeds upon itself. Dictators and tyrants rarely come to power by revolutionary means. Instead, they work slowly within the fabric of the law. They distort to their own ends the work of well-intentioned but short-sighted men. They praise freedom—while they are undermining freedom. They talk of the rights and dignity of man—while they plan to reduce man to the status of a helpless slave of the state, who may be used and exploited in any way that seems advantageous.

We have only to look at a map of the world to see what happened abroad. Country after country that was once free has sunk into serfdom. Peoples turned to government to solve all their problems. They gave government unprecedented powers over their lives, their businesses, their manner of living. And the end result has inevitably been tyranny.

It has been said that if government tells us what we must do, it is only one more step before government will tell us what we must think. That is a true and terrible fact. Even in England, which we have long regarded as the citadel of the basic freedoms, this pattern is taking shape, and it is to the credit of the British press than it has thundered its opposition. But, in a state where government is arbiter of all things, resistance can be crushed.

There can be no compromise with freedom. We will be free or we will be enslaved, and no middle ground is possible. And only a people which is ever alert to the dangers can save and defend freedom.

Greek-Turkish Aid Bill

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 7, 1947

Mrs. DOUGLAS. Mr. Speaker, under leave to revise and extend my remarks in the RECORD, I wish to include the following amendments which I shall introduce on the floor on Thursday with regard to the Greek and Turkish aid bill:

Atomic energy amendment: Insert after subsection (4) (A) after word "information", page 2, line 19, "except atomic weapons, fissionable material, atomic source materials or information relating to atomic energy or any of the foregoing other than as may be permitted in any general international agreement."

Section I, page 2, line 24, insert the following additional clause: *"Provided, however,* That none of the aid herein authorized for Turkey shall be furnished until the President shall have advised the Congress that the United States has requested the appropriate agency of the United Nations to inquire into conditions in Turkey and to take such action, if any, as may be necessary to safeguard the national integrity of Turkey, and that the United Nations has failed within 6 months after the enactment hereof to take action which in the President's judgment is adequate for that purpose."

Section III, page 5, line 24, insert the following additional clause: "that within 6 months after assistance by the United States has been made available, the Greek Government will cause to be held a free election, the conduct and results of which shall be supervised by a commission appointed for the purpose, by the General Assembly of the United Nations; or, if the President advises the Congress that the United Nations is unwilling or unable to appoint such commission, then, under the supervision of an American commission, composed of five members, appointed by the President and confirmed by the Senate."

Address of Hon. Arthur Bliss Lane

EXTENSION OF REMARKS
OF
HON. THOMAS S. GORDON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 7, 1947

Mr. GORDON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by the Honorable Arthur Bliss Lane, former Ambassador to Poland, on the occasion of the one hundred and fifty-sixth anniversary of Poland's Constitution Day of May 3, at Chicago, Ill., before a gathering of 150,000 Americans of Polish descent during the manifestation of this annual event, in Humboldt Park:

Twenty-eight years ago yesterday I had the privilege of witnessing as a junior official of the American Legation in Warsaw the celebration of Polish Constitution Day, its first celebration since the achievement of Polish independence following the First World War. This was the first opportunity which the Polish people have had to give expression to their enthusiasm for Polish nationality and Polish independence. At last they were no longer under the subjugation of the Russian, the German, or the Austro-Hungarian Empire. In keeping with the eastern Polish custom, the open windows of the Warsaw houses on a warm, sunny May 3 morning were draped with carpets. The streets were thronged with enthusiastic people who at last could open their throats and shout "Long Live Poland!"

A parade of the Polish troops which had fought in the Russian, German, Austrian, and French armies and in the German Navy was held, appropriately enough, in front of the citadel of Warsaw—infamous for the imprisonment of Polish patriots during the rule of Poland by the Czarist Russian Empire. The chief of state, General Pilsudski, stood at attention as the various detachments marched by, each with its characteristic march—the Russian Poles, with their long swing gait; the German Poles, with the goose step; the Austrian Poles, with short steps; and General Haller's troops, which had fought so gallantly with the French Army, in the quick march so well known in France. All of these troops wore the uniforms of the armies of which they had formerly been a part. There was but one addition—and a very significant one—the inclusion on each hat or cap of the crowned Polish eagle. Although Poland was no longer a monarchy, the crown was symbolic of the glories and traditions of the past and of the democratic principle in the constitution of May 3, 1791, the anniversary of which was then being celebrated.

It was a glorious day, that May 3, 1919. God had granted brilliant weather which gave to those of us who watched the impression and the confidence that Poland had before it generations of peace and independence to compensate it for the slavery which it had suffered as a result of its three partitions. But, alas, our hopes were short lived. There came Hitler and his aim to subjugate Europe. There came the war of 1939—the brutal attack on Poland by the Nazis. There came the brave but unsuccessful attempt to resist German aggression. There came the agreement between the Nazis and the Soviets to divide Poland—its fourth partition. There came the deliberate liquidation of the Polish patriots and intelligentsia. There came the asphyxiation and cremation of three and one-half million Polish Jews, and, finally, there

came the cruel and vengeful destruction of the city of Warsaw, block by block and house by house, as retaliation against the brave insurrection of General Bor-Komorowski and his followers, who were confidently but vainly hoping for the assistance of the Red Army against the common enemy occupying Warsaw.

And finally the Nazi Army collapsed and retreated from Poland. And again, the hope was kindled in the souls of the Polish people that the independence which had been smothered when the Nazis and the Soviets had overrun the country in 1939 would again be restored. But soon they were to find that the hopes which had been encouraged by repeated statements of the Allied Powers, were not to be realized. Instead of seeing a popular democratic form of government develop, the Polish people found themselves again overrun as during the Nazi occupation by the rule of a police state trained by Russian instructors in the art of spying, intimidation, and forceful measures to suppress liberty.

I happened to be in Warsaw again, this time as the representative of the United States Government, on May 3, 1946, when Poland for the first time since the close of the Second World War was to celebrate its Constitution Day. On this occasion the Polish provisional government took steps to impede the celebration which the people desired to make. Patriotic students in Krakow, who gave vent patriotically to their sentiments, were thrown into prison. It was explained by the Polish Government to foreign diplomatic representatives that May 3 would thereafter be a secondary Polish holiday and that the principal national holiday would be July 22, the anniversary of the formation of the provisional government at Lublin, a government hand-picked in Moscow and utterly unrepresentative of the Polish people. This cynical action to eradicate May 3, the glorious date in Polish history, and to substitute the commemoration of an undemocratic act of perfidy to the Polish Nation, was typical of the policy of the puppet Polish Government to disregard the wishes of the people while hypocritically representing that it was a democratic regime. Comparing the dates of May 3, 1919, and May 3, 1946, one fully appreciates the tragic and sickening change which had taken place in Poland since the end of the First World War.

It is perhaps forgotten that the Polish Constitution of May 3, 1791, was considered at the time of its enactment to have been one of the most liberal bills of rights known to Europe. It was, of course, opposed by the reactionary imperial governments of Russia and Prussia, but it was hailed by the press of the United States of that day with enthusiasm as embodying many of the principles of our own Constitution. Edmund Burke, that great champion of human liberty, whom not even the hypocritical Warsaw stooges of today would dare to call Fascist, described the bloodless revolution which led to the adoption of the Constitution as follows:

"Not one drop of blood was spilled; no treachery; no outrage; no studied insults on religion, morals, or manners; no spoil; no confiscation; no citizen beggared; none imprisoned; none exiled; the whole was effected with a policy, a discretion, a unanimity and secrecy, such as have never been before known on any occasion; but such wonderful conduct was reserved for this glorious conspiracy in favor of the true and genuine rights and interests of men."

And today, as we gather here to commemorate Polish bravery and the independence which was once Poland's and which, God willing, will again be Poland's legacy and to commemorate what Polish arms, perseverance, intelligence, and industry have contributed to the independence and prosperity of the United States, let us bear in mind what this Polish question means to us Americans. I, who have seen the physical suffering and, what is worse, the mental fear of police state methods being used on innocent members of a family, can well appreciate what those of you who have relatives and friends in Poland must feel. But it is important that as Americans we should look at the problem of Poland in the light of our international relations and in the light of the position of the United States.

We entertain, all of us, the utmost sympathy with the Polish Nation in its hour of anguish with its loss of political liberty and its loss of independence in foreign affairs. This tragedy is symbolic of what is transpiring in eastern Europe—due to the aggressive and imperialistic policy assumed by the Soviet Government in eastern Europe, which surely will expand to the west unless the United States Government, supported by the American people, calls a halt. This situation is as dangerous to the United States today as was the situation created by Hitler, which confronted us in 1940 and 1941. It is encumbent on you all, not because you are of Polish descent but because you are American citizens, to urge on your Congress and on your Government that no policy of appeasement be tolerated toward the Soviet Union. Resistance against a policy of imperialistic expansion is not a policy of reckless imperialism, it is a policy of prudence, of caution, and one which should lead to peace. It was the appeasing of Hitler which led to the successive loss of sovereignty of the states of Europe up to and during the last war. In our present crisis, and a crisis it is indeed, a compromise with principle will result only in loss of our own prestige and increase in Soviet expansion. Thank God that our wise and courageous Secretary of State realized that fact and preferred to return from Moscow without a treaty rather than accept a compromise on the position for which we have stood.

In expressing to you my gratitude for giving me the privilege of paying my homage to the gallant Polish people who, unlike the puppet government which has so cynically disregarded its international obligations in the holding of fraudulent elections, exemplify to the world through the support of the Polish Constitution of May 3, 1791, the principles of the freedom of man for which both Poles and Americans fought in the last war.

Mr. Lane's closing remark was "Niech zyje Polska," which translated in English means, "Long live Poland."

Communist Activities

EXTENSION OF REMARKS
OF
HON. THOMAS L. OWENS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 7, 1947

Mr. OWENS. Mr. Speaker, this morning I received a telegram as follows:

Request appointment for delegation of Illinois Communist veterans Friday morning, May 9. Please answer.

I replied, as follows:

The word "Communist" between Illinois and veterans is unbelievable. My answer is "No."

I do not know whether such a message as this, coming at a time when we are debating the Greek-Turkish question, has a purpose to accomplish a result one way or the other. However, I do know that it indicates a type of activity to which we must devote our attention. At the same time, we can also turn our attention to subversive activities in nations adjoining our shore, such as Cuba and other Latin-American neighbors. In Cuba, there are far more Communists than there are in Greece. We would do far better to expend our efforts in that direction within our own orbit than to send our men and our money thousands of miles across the sea to intervene in the affairs of foreign nations and to establish a new-world doctrine.

Home Demonstration Work

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 7, 1947

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Shreveport Journal of May 2, 1947:

HOME DEMONSTRATION WORK

What probably ranks as the world's most far-reaching voluntary on-the-job educational program for women of rural areas is that of home demostration work. Assisted by half a million rural women, the program is placed in farm homes and communities by approximately 3,000 demonstration agents, serving as joint employees of the State land-grant colleges and the United States Department of Agriculture. The women of the agricultural sections lend their assistance to the agents as volunteer leaders, serving without charge for the benefit of the public generally and contributing their efforts particularly for improvement of facilities and progress connected with rural life.

The 4–H Club activities and other phases of cooperative-extension service in farm and home economics, which are vital branches of the home demonstration program, are financed by county (parish), State, and Federal funds. The money is provided by governmental authorities because of the proved worth of this constructive movement, whose benefits are evident in all progressive localities. In the territory about Shreveport, in which the work has been directed with increasing success for many years, there is an abundance of impressive proof of the value of the investment in effort and money. Every branch of rural family life has been helped by the home-demonstration program.

Resultant from the guidance they are given by those trained to be leaders in the movement, rural women study ways and means of forwarding the family's health, comfort, and happiness, as was stressed recently by the agent of one of the northwest Louisiana parishes in commenting on the inestimable value of this forward and far-reaching program. The modernizing of the home and causing the work connected with family life to be less burdensome due to the lessening of drudgery is representative of the progress that is being realized through the lessons learned from those serving in the home-demonstration service. Another of many inroads upon the old methods of meeting problems is the improvement in planning for financial solutions, which comes from taking advantage of the demonstration program.

Because of the great strides that are being made through the conduct of this service, the observance of annual Home Demonstration Week, May 4 to 11, is awaited with interest

throughout the rural areas. This year's program will have as its theme, "Today's Home Builds Tomorrow's World." Throughout the Nation home demonstration club women, whose numerical strength and influence have enjoyed gratifying expansion during the past 12 months, will join in giving appreciative recognition of the far-reaching benefits that invariably come to every home and every community in which the demonstration privileges are made use of energetically and sincerely.

Many Brave Irishmen Fought for Our Independence and Freedom

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 7, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein the following article which appeared in the Irish World of recent date by Maj. Elizur Yale Smith, executive secretary of the Bill of Rights Commemorative Society:

MANY BRAVE IRISHMEN FOUGHT FOR OUR INDEPENDENCE AND FREEDOM

The history of Irish participation in our fight for independence and in the formation of our Union is full of noble deeds, courage, and sacrifices.

Long before the flow of Irish immigration to America many famous Irishmen became intimately connected with the Colony, State, and city of New York. Thomas Dongan, the younger son of an Irish baronet, who later became the Earl of Limerick, came to New York as the royal governor in 1683 and on April 27, 1687, gave the city of New York its famous second charter, the original copy of which is now owned by the New York Historical Society. He was among the best of the Colonial governors. He was a Catholic, but he made no effort to foist his religion upon the Province, which was predominantly Protestant, and Governor Dongan was one of the first advocates in America of religious freedom.

Anthony Duane was another native of Ireland who came to New York as an officer in the British Navy and settled here, prior to 1717. He invested heavily in real estate, both in the city and in the northern part of the State, where he founded Duanesburg. He was the father of the celebrated James Duane, who became a Member of the Continental Congress, assisted in drafting the Articles of Confederation, was a member of the New York Legislature, and who was appointed the first United States district judge for this district in 1789 by President Washington. During the occupation of New York City by the British Army, from 1776 to 1783, there was no mayor in New York, but in 1784 James Duane became the first mayor after independence and served until he was appointed a Federal judge in 1789. Today we have a street and a hotel named after him.

Gen. George Washington was a friend of the Irish for the notable and courageous loyalty they displayed in the Revolution. One of the most famous generals on his staff was Maj. Gen. Richard Montgomery, who was killed at the Battle of Quebec. He was born at Swords, near Dublin, served in the British Army for 16 years, but came to America in 1772. He married a Livingston, from Livingston Manor on the Hudson; captured Montreal for the American Army and was killed leading an assault at Quebec on the last day of 1775. His body was carried off the field of battle by Col. Aaron Burr, under fire from the enemy, and through deep snow. Buried first at Quebec his remains were brought to New York in 1818 and deposited in a vault under the altar of St. Paul's Chapel, on Lower Broadway. A monument to his memory is under the portico of the chapel.

Under the leadership of Jeremiah O'Brien and his brothers, sons of a native of Ireland, the first armed British schooner, the *Margareta*, was captured off the coast of Maine during the Revolution. The O'Briens fitted out their own privateer. Andrew Jackson was one of the three Presidents of the United States who saw active service in the Revolution, and he and John C. Calhoun were sons of Irish immigrants. New York City has had the Emmets, the McCormicks, Dominick Lynch, Michael Hogan, William Mooney, William Edgar, Hercules Mulligan, Hugh Gaine, printer, bookseller, and founder of the New York Mercury, and other substantial citizens of the post-Revolutionary period.

In other parts of the United States, Thomas Lynch, Jr., from South Carolina, and Charles Carroll, of Carrollton, Md., were of Irish descent, while Matthew Thornton was born in Ireland. All three were signers of the Declaration of Independence. One of the foremost patriots of the Revolution was James McHenry, who came to the North American Colonies in 1771, from Ballymena, County Antrim, as a youth of less than 20 years, and had just completed a course of study in medicine under the famous Dr. Benjamin Rush, of Philadelphia, when the War of Independence broke out. As a surgeon in the Continental Army, a prisoner of war, a member of General Washington's personal military staff, and an aide-de-camp to General Lafayette, McHenry saw service throughout the entire conflict and at its close became a legislator as a member of the House and Senate in Maryland. In 1783 to 1786 he was a delegate to the Continental Congress, and in 1787 was a deputy to the Federal Constitutional Convention, and signed the Constitution. He was at Valley Forge with Washington and in charge of the Flying Military Hospital. In January 1796 President Washington asked him to become the second Secretary of War, to succeed Gen. Henry Knox, and he served in that capacity throughout the balance of Washington's second term and also under President John Adams until 1801. The famous fort near Baltimore, which was the inspiration of the writing of Francis Scott Key's Star Spangled Banner is named after him. From the time he volunteered his services to the Congress at the beginning of the Revolutionary War, throughout the period of his active military and political life, he was the intimate friend of the leading men of the country, including Washington, Adams, Jefferson, Hamilton, and others. Next to Hamilton he was a closer friend of, and more beloved by Washington than any other man of his time.

Another illustrious son of Ireland was Charles Thomson, born at Maghera, County Derry, in 1729, and who settled in Newcastle, Del., at the age of 12. The Thomson family consisted of young Charles and his three sisters who had their own industry; they sent the young lad to a private tutor and in a few years he was teaching in the Friends' Academy. Later he went to Philadelphia and gained the friendship of Dr. Benjamin Franklin. He became a great friend of the Indians and was adopted by the Delawares who gave him the name of The Man of Truth. Thomson negotiated several Indian treaties. Being a classical man, he translated the Bible from the Greek into four volumes, and was the author of other cultural works. He was awarded the honorary degree of LL.D. by Princeton College.

Dr. Thomson married Hannah Harrison, a daughter of Richard Harrison, of Maryland, and a member of the famous Harrison family that came to Virginia before 1633 and gave us two Presidents. His greatest work for the cause of independence was as Secretary of the Continental Congress during this legislative body's entire lifetime, from the first day the Congress met in Philadelphia, on September 5, 1774, until his resignation was accepted by President Washington, on July 24, 1789, here in Federal Hall, on Wall Street, when he turned over to the President "the books, records, and papers of the late Congress, the Great Seal of the Federal Union, and the Seal of the Admiralty." The Continental Congress overlapped the First Congress under the Constitution, although no legislative business was transacted after the Government under the Constitution went into effect on March 4, 1789.

Charles Thomson kept a careful record of the transactions of the Continental Congress for nearly 15 years. After the ratification of the Constitution he helped to organize the new form of government. He had the profound respect and confidence of George Washington and when the first electoral votes were counted, on April 6, 1789, and it was found that George Washington was elected our first President, Dr. Thomson was chosen by the First Congress under the Constitution to proceed to Mount Vernon and officially notify General Washington of his election. He lived to be 94 years old, dying near Philadelphia in 1822.

The Irish general officers in Gen. George Washington's Continental Army were eminently brave and susceptible to discipline. Records show that they furnished much of the military skill and training needed at that time. The Moores, Rutledges, Jacksons, Polks, Calhouns, and many other able Irishmen distinguished themselves in the Carolinas. Gen. John Sullivan should not be overlooked. He had a distinguished career in the Army, became the President of New Hampshire and then a United States Federal Judge. Others who greatly distinguished themselves during the Revolution were Gen. Henry Knox, who became the first Secretary of War under Washington; Capt. John Brady, the famous scout; Timothy Murphy who turned the tide of battle at Saratoga; Matthew Lyon, of Vermont; and patriots in other sections of the country named Fitzgerald, Fitzsimmons, Gibbons, Shields, Sheridan, Emmet, O'Connor, Gilmor, Logan, Fulton, Gorman, Geary, Cavanagh, Lynch, Gregg, O'Neill, and others. When Capt. William O'Neill and his gallant troops held in check an entire British regiment at the Battle of the Brandywine, General Washington tearfully said: "God bless you boys; I thought I should never see you again."

In speaking of the early Irish settlers in America, President Theodore Roosevelt once said: "The immigrants from Ireland and those alone, boldly pushed through the settled districts and planted themselves as the advance guard of the conquering civilization on the border of the Indian-haunted wilderness. The Irish people here proved themselves a masterful race of rugged character—a race the qualities of whose womanhood have become proverbial, while its men have the elemental and indispensable virtues of working hard in times of peace and fighting hard in times of war."

Liberalism Versus Socialism

EXTENSION OF REMARKS
OF
HON. JACK Z. ANDERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 7, 1947

Mr. ANDERSON of California. Mr. Speaker, under leave to extend my re-

marks in the RECORD, I wish to include the following brief, timely, and thought-provoking speech given by Dr. Robert Gordon Sproul, president of the University of California:

Day by day, at every meeting of the United Nations, of the foreign ministers, and of the Security Council, a persistent, frustrating conflict of political philosophies takes the center of the stage and usually obstructs the play. At stake in the conflict is the whole system of free government, private property, respect for human personality, consent of the governed, representative authority, and legal checks and balances for which the English-speaking world has struggled during 300 years. At least a hundred years after it was thought that liberty had been established in western civilization, the very opposite philosophy of the meaning and objectives of government has arisen to deny every principle that Americans have been taught to regard as liberal and progressive.

Our country was founded and has grown great on the philosophy of liberalism. Challenging the substance and reality of the gains of liberalism is the philosophy of socialism; to be more precise, the philosophy of a totalitarian, regimented society. The liberal philosophy holds that government is an agent of its citizens, the Socialist philosophy, that it is their master. The first philosophy would limit the exercise of political authority to the restrictions of constitutional law, and so preserve some humane consideration for individuals and minorities. The second mocks at this "legalistic" theory of the state, and holds that it is the function of government to remove all disabilities to anybody's enjoyment of a life of material abundance, to substitute for the consent of the governed the economic demands of pressure groups, supported by physical force. The Liberal philosophy holds that there are certain necessary truths about the good life, to which individual and social behavior ought to conform. The Socialist philosophy holds that such truths are mere ideologies—i. e., they are merely a way of making people believe whatever is deemed expedient that they should believe in the struggle for the material advantage of a class or political party.

At first the Socialist philosophy seemed innocent enough, even if utopian. It was only a humanitarian siding with the underprivileged. It meant the brotherhood of man; it would substitute economic liberty for the masses in the place of mere political and civil liberty. It would substitute cooperation for cutthroat competition, and would justly distribute the material wealth of society. But it has become clearly evident with the passing of the years and the accumulation of data that the radical movement—socialism in its original and broadest sense—is the wolf in sheep's clothing. Dictatorships, secret police, concentration camps, contempt for human personality, and military conquest are not the accidents of the movement; they are essential to its realization.

Call it what you will, every socialistic movement means (1) the destruction of a government of checks and balances, of principles, of rights, of parliamentary meeting of minds, and popular suffrage; (2) it means government by decree, bureaucratic planning, and concentrated, irresponsible authority; (3) it means the regimentation of the population by means of the expropriation of employing capital and the taking over of the ownership of the wealth of the nation by a class of successful professional politicians; finally, (4) it means the end of the system of free enterprise.

Such, in brief, are the major conflicting philosophies of the modern world. In the dust of their conflict it is difficult to discern, much less understand, what is happening in the world today, even in these United States of America. We Americans hear much about national preparedness for war, but what can arms and munitions—even atomic bombs—avail if our hearts and minds are open to the very subversive influences against which our ports and borders are closed? The best answer to the world challenge of communistic socialism is the recognition, for what they are, of all the steps that lead toward an imposed planned economy and totalitarianism, and the regeneration of the society of opportunity for all, which is our heritage. Let Americans oppose dictatorship at home by taking the lead in a moral and political housecleaning. Thus we shall prove that we are still worthy of the liberties our fathers won for us, and need have no fear for the outcome of the conflict of philosophies in the world beyond our borders. If we are unwilling or incapable of realizing these truths and acting upon them, the coming decades may well visit upon us the sad fate of our European contemporaries.

Office of International Information and Cultural Relations

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 7, 1947

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein two editorials concerning the proposal to abolish the Office of International Information and Cultural Relations; one from the New York Herald Tribune of May 6, 1947, entitled "Police or Principle?" and one from the New York Times of May 6, 1947, entitled "Mr. Marshall to Congress."

I believe it would be a mistake not to appropriate money for this important agency of our Government. The situation is ably discussed in the following editorials from two of the greatest newspapers in our country:

[From the New York Herald Tribune of May 6, 1947]

POLICE OR PRINCIPLE?

Mr. J. Edgar Hoover told the House Appropriations Committee that the Communists have penetrated "every field of endeavor in this country" and that there are more Communists per capita in the United States today than there were in Russia in 1917; in the result he got every cent of his requested appropriation for the police activities of the Federal Bureau of Investigation. Secretary Marshall told the committee that the State Department's cultural and information program, largely designed to meet the Communist challenge on the plane of ideas, purposes, and facts rather than on that of police work, is "an integral and essential part of the conduct of foreign relations." In the result the committee gave him nothing whatever for the information program and slashed the State Department request by $60,000,000, or 22 percent below the budget estimate.

Unless we are ready to abandon the field and put our main trust in police instead of principles, this simply doesn't make sense. The whole campaign against the State Department's information activities has been, as a matter of fact, on a low level of obscurantism and irresponsibility. The program is by no means above criticism. It should have been above the kind of criticism which has belabored it, on the one hand, as propaganda and, on the other hand (because it has tried to disseminate a balanced picture of both the blemishes and the virtues of this country), as not being propagandistic enough. It should have been above the cheaper sneers which have been thrown at it. It should have been above the facile arguments about "getting the State Department out of the news business," when the whole purpose of the program was to spread American ideas into those areas which are inaccessible to the normal commercial media of news and information.

In an effort to save at least the short-wave broadcasting part of the program, Secretary Marshall has backed Mr. William Benton's proposal for establishing a public corporation to take over the existing private transmission facilities and to operate them outside of direct State Department control. The suggestion is an interesting one which might meet some of the criticism of the present arrangement. It would still (because there is no possible commercial basis for broadcasting into such areas as Russia or the Near East) have to be supported by public money and operated ultimately under Government direction. It would not relieve the Congressmen from facing up to the issue, which they have not so far faced, as to whether they want to sustain the American system by ideas or by the FBI, by principles or by the police.

[From the New York Times of May 6, 1947]

MR. MARSHALL TO CONGRESS

The State Department's Division of Information and Cultural Relations will be completely wiped out, at a "saving" of $31,381,220, if Congress sustains the action taken yesterday by the House Appropriations Committee. The Division's program, conducted under its present auspices since January 1, 1946, grew out of the wartime work of OWI and the Office of Inter-American Affairs. Where possible, it includes documentary films, libraries of information, the use of representative material in the fields of the arts, and, with Latin America, the exchange of students, professors, and technicians. Since December 15 its radio program has been going to the Balkans, since February 17 to Russia. In countries in which news is heavily censored we have been able to reply to suppressions and distortions.

To Secretary Marshall, who made a special appeal before the House committee and another one yesterday to a group of congressional leaders, the program seemed "an integral and essential part of the conduct of foreign relations." The House committee thought otherwise. The issue now goes to the floor, along with that of other blind cuts in departmental budgets. Congress will have to decide whether a nation which spent $330,000,000,000 to win a world war can afford to spend about 25 cents a year per capita on an important part of its effort to defend democracy and prevent war.

Make Canada a Member of the Pan American Union

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 7, 1947

Mr. KEATING. Mr. Speaker, in our commendable expenditure of unlimited patience, time, and effort in an attempt to understand the aims and objectives

of those countries which seem to differ with us on fundamental issues, we should not lose sight of every opportunity to cement the ties and bind ourselves ever closer to those who have demonstrated over the years their close friendship to the United States.

The geographical border between the United States and the Dominion of Canada is probably unique in the entire world. Nowhere else is to be found such an extensive imaginary line on both sides of which the peoples live in complete harmony and friendship. Both politically and commercially these two countries are finding newer and ever stronger common bonds.

To further this mutually desirable trend I have introduced a concurrent resolution expressing the sense of the Congress that the Dominion of Canada should be extended an invitation by the Pan American Union to join that body and take full part in its activities. In a recent address the Canadian Under Secretary of State for External Affairs indicated that Canada might now welcome and accept such an invitation. Although we are only one member of the union it seems appropriate that we should assume the lead in insuring that steps are taken to extend this gesture of friendliness and warm regard to our neighbor on the north. I hope this action may have the generous approval of the House.

Address by Lt. Gen. R. A. Wheeler, Chief of Engineers

EXTENSION OF REMARKS
OF

HON. WILLIAM M. WHITTINGTON

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 7, 1947

Mr. WHITTINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Lt. Gen. R. A. Wheeler, Chief of Engineers, United States Army, delivered at the thirty-seventh annual convention of the National Rivers and Harbors Congress, May 2, 1947, Washington, D. C.:

When I received the invitation to address this assembly—your first convention since 1944—I accepted it with a great deal of satisfaction and eagerness. I have already had the pleasure of meeting many of you, and the sincere interest being shown by you at this time in our common objectives is both impressive and stimulating. And let me assure you that I am most anxious to maintain the cooperative and cordial relationship that has always existed between the Corps of Engineers and your Nation-wide organization, with its long lists of contributions to the development, and proper control of our water and land resources. I am certain that we shall continue to work closely together in the task of examining and recommending Federal activities which will insure the soundest development of our valuable port and waterway facilities, and provide the most effective means of flood control.

Now that you are able to meet again after a 3-year postponement of conventions—due to the war—I looked forward to a resurgence in all your activities. This definitely includes your Projects Committee, whose independent studies afford an additional means of public discussion on the merits of proposed projects, and enable you, as an association, to give the Nation the benefit of your expert opinion on the relative values of the suggested improvements. Your 2-day deliberations by State, local, and association representatives from coast to coast cannot help but have an important influence on public understanding of the stake which the American people have—and their individual responsibility—in a continued development of our water and land resources, and in a continued effort to provide protection for American lives and property from recurring floods.

From so widespread and diversified an attendance at your convention, it is natural to expect an equal variety of opinions. This is not undesirable. In fact, it is clearly in the American tradition. As a democratic nation we have always laid great stress on the opinions of the individual citizen. I like to think that the expression of a different point of view is not so much conflicting as complementary. It gives a well-rounded view to the picture. We encourage it in all our Corps of Engineer investigations and hearings.

In our approaches to the basic question of river and harbor development and flood control, I think we agree that, while our ultimate objectives are the same, there is plenty of room for a variety of opinions as to methods, or to priorities and degrees of importance—all of which may have true merit. By a sound appraisal of them all, we can come out with the best answers. This is the tested American way. It is the way Congress has wisely decreed Federal improvements shall be made to our waterways, and increasing protection provided for our people against the dangers of floods.

We all have a share of responsibility under this democratic procedure. You who come from the smallest localities, as well as you who represent large communities, have the privilege of initiating applications to Congress for an investigation of the merits of a proposed improvement, and of appearing at hearings during the investigation. This convention also presents an ideal forum for the expression of your viewpoints on common objectives. You who are leaders in constituent associations, as well as you who formulate the recommendations of this waterways congress, have the responsibility of lending your influence, or denying it, to some particular river and harbor improvement or flood-control project that has been brought to your attention for association action. The Corps of Engineers, in its traditional role as consulting engineers to the Congress of the United States, gives impartial consideration to all viewpoints, using the best engineering skill available in its deliberations before making recommendations to the Congress. Our national legislative body then makes the decisions as to what improvements are to be made, and annually decides the amount of public money to be spent on them. We all have an important role in this democratic way of life.

When we think of the vast network of improved ports and waterways we have in this country, rated the most extensive in the world—when we think of the chain of flood-control facilities that has been provided for the protection of the American people and their property—we recognize the soundness of the procedure prescribed by Congress for obtaining any changes or additions to these important Nation-wide facilities. The Federal Government has spent to date over $2,000,000,000 on improvements to our harbors and waterways—and dividends are returned every day by way of tangible contributions to the security and prosperity of our people in peace, and to our ability to continue invincible in war. The Federal Government has also spent to date over $1,000,000,000 in flood-control facilities. Here, too, dividends are returned to the American people each day in giving them constantly increasing means of protection from flood waters that continue to annually take a toll of life and property at many points over our country.

I think we can continue from such a gratifying beginning and recognize that—while we do not minimize the existence and value of local pride and local efforts in seeking local improvements to waterways or needed local flood protection at Federal expense—we must strive for a basic unity of purpose. Wherever possible, we must work out our plans on a comprehensive, basin-wide scale, interconnected wherever possible, and all coordinated in a national whole. Our long chain of coastal harbors—our navigable channels in those ports, and in our rivers and other water routes—must be planned as a whole, if they are to achieve their greatest usefulness. The same type of broad planning must go into them as we find in our systems of railroads and highways. Just as railroad traffic would be crippled if we had rails of different gages in various sections of the country, requiring repeated transfers to smaller or larger equipment to complete an extended journey, so do existing differences of channel depths and widths—and in some instances, the absence of connecting facilities—handicap the maximum use of our waterway facilities for navigation.

On our principal inland waterways we have navigation channels that generally range from 6 to 12 feet in controlling depth. In our presently constructed intracoastal waterways along the Atlantic Ocean and Gulf of Mexico, there are important missing links, preventing the maximum potential use of these protected water routes. More navigable arms into the inland areas are also needed on both of these intracoastal waterways, and on the great Mississippi River and its tributary system. Some of these suggested needs have already been authorized by the Congress. In the over-all planning, however, it is important to keep in mind the advantages of standardization of depths and bottom width channels, and of interconnecting facilities, wherever the traffic warrants these improvements. Only in this way can our modern barges and other freight-carrying vessels extensively traverse the water highways of the country without having to switch cargoes to other craft or other means of transportation. Moreover, water transportation firms would be encouraged to add more services and schedules if the needed navigable channels are added.

Similarly, in our ports we have varying channel depths. As it is shown to be economically sound, more port channels should be improved, not so much from the viewpoint of standardization, as in the case of our waterways, but rather to meet each port's individual requirements for the present or immediate future. In many cases increases in channel depths are desirable to keep pace with the trend toward larger design in tankers and other vessels. In all cases, the aim would be to correct port bottlenecks that prevent the widest possible benefits to the areas which they serve.

In flood control, there is also a challenging need for a continuation of our efforts, if we are to provide protection and other benefits desired—and required—on a Nation-wide scale. Floods continue to sweep over many parts of this country. Easter week-end, still fresh in our minds, was turned into a nightmare for large numbers of American families, as flood waters rolled over areas of Michigan, Illinois, Nebraska, western Pennsylvania, and western New York. No doubt you read the newspaper headlines, stating that 15,000 persons had been temporarily isolated or made homeless, and millions of dollars worth of damage had been done, by the floods.

The plight of those persons caught in this spring flood was dramatized to the whole

Nation when reports of the death of Henry Ford on April 7, told of a scene reminiscent of decades ago. Electrical service was disrupted by the surrounding floods, and the Ford homestead was dimly lit by kerosene lamps and candles, as the great American industrialist passed to his reward.

In the last calendar year for which official figures are available—the year 1945—the loss of property from floods in the United States is provisionally placed at $178,000,000. There were also 73 lives lost. Here in our midst is an enemy that has to be fought with the same grim determination and the same unity that Americans show when faced with a foreign foe. Wherever it is economically feasible to have flood-control facilities—this economic test being wisely required by Congress, so that public money is not spent on uneconomic projects—the National Rivers and Harbors Congress can continue to do a notable public service in advocating projects that will strengthen our offensives against this domestic enemy.

In preparing our recommendations to the Congress on flood-control projects and on navigation improvements the Corps of Engineers seeks to develop each unit as an integral part of a basin-wide program, with each river basin, in turn, a larger unit of a Nation-wide whole. By this plan the widest possible use can be obtained for the projects constructed, and all the secondary benefits obtained where possible. To this end we include in our reports to Congress all potentialities for development of hydroelectric power, irrigation, recreation, pollution abatement, the restoration and preservation of fish and wildlife, and water conservation in the interests of domestic, municipal, and industrial use.

To facilitate the greatest possible coordination in the development and control of the water resources of the Nation, the Corps of Engineers consults regularly with the other Federal agencies concerned with these resources, as well as with State and local officials, and with interested groups, such as your own. Supplementing these consultations, which occur at all levels of our investigation and planning—that is, district, regional, and national—a Federal Inter-Agency Basin Committee meets regularly each month in Washington. On this committee are representatives of the War Department, Department of the Interior, Department of Agriculture, Federal Power Commission, and the Department of Commerce. There are a number of subcommittees on technical matters, such as benefits and costs, sedimentation, hydrologic data, and power. In addition, the idea of standing inter-agency committees has been extended to the field. Presently, we have two such committees, one for the Columbia River Basin, the other for the Missouri River Basin. Others will be created as the need arises.

Up to this point, I have emphasized the important function performed by citizens, by local interests, and by associations, such as the National Rivers and Harbors Congress, in the development and control of our national water resources. I have indicated the great amount of work already done by the Federal Government in the improvement of our rich heritage of ports and water resources, and in providing needed protection for our people against recurring floods. Let me here broadly point out that these civil works projects—the improvement of our vast system of waterways for modern navigation, flood control, power, and other purposes—have an intrinsic value to the Nation beyond the generally considered—and highly desirable—peacetime benefits.

They have a military value that cannot be overemphasized and should not be forgotten. A strong America is a peaceful America—and the proper development of our rivers and harbors is an essential quality of our strength. Let me illustrate:

Declaration of war against the Axis Powers in 1941 brought a period of feverish activity to the navigable rivers and, for that matter, to every other form of transportation in the United States. We had to produce—and in a hurry—training camps, munitions plants, mechanical equipment of all kinds, guns, explosives—in short, practically everything necessary to prosecute a successful war. Steel was at a premium, and you can readily imagine the demands that were made on the plants in the highly industrialized Ohio Valley sections particularly. Towboats, handling long strings of heavy barges, pushed thousands of tons of coal, coke, ore, and limestone to fill the gaping maws of the huge blast furnaces which, in turn, supplied the great steel furnaces with the necessary ingredients for producing the urgently needed steel.

Manufactured products, forestry, agricultural and food products by the thousands of tons, were handled by the rivers, the barges carrying everything from crude oil to breakfast foods; from chinaware to portland cement; 24 hours a day. It is hard to conceive the amount of aid furnished the war effort by our river-transportation system. Boats, for instance, were manufactured on a large scale at inland cities and floated down the rivers to the sea. To illustrate: Between January 1, 1942, and September 30, 1945, there were manufactured on the Mississippi River system, a total of 4,031 craft of various types, all of which were sent down the Mississippi to the sea. They included everything from aircraft rescue vessels to landing ships, medium.

But the Ohio, the Mississippi, the Illinois, and other waterways throughout the Nation, in addition to helping solve transportation problems, played another important role in the war effort. Experience gained by engineer officers in handling civil-works projects prepared them for the task ahead—it enabled them to teach other engineer officers the basic principles of speed in construction—the use of heavy equipment and other features which gained them recognition as the finest body of engineers in the world. It was this unpredictable ability—this uncanny speed at getting the job done that astounded the Germans and Japanese—and much of this ability was the result of training on peacetime civil-works jobs. Most, if not all, top-flight engineer officers in the war received training on civil-works projects. There is an old saying that a high-water fighter can fight anything.

Field action in the late war, in turn, has taught the Army engineer new methods which are valuable in peacetime activities. These new ideas and techniques are bringing improvements in the handling of the immense program of rivers and harbors and flood-control work which confronts the corps. You may be interested to know that during the current fiscal year, which will end June 30, the Corps of Engineers has started or resumed construction of 85 of the 153 flood-control projects for which Congress has appropriated funds since the end of the war. The remaining 68 of these projects are now scheduled to be started this spring or early summer. These projects are, of course, in addition to our regular maintenance, operation, and care of previously existing projects, both for navigation and flood control.

We have a long list of river and harbor and flood control projects which have been authorized as integral parts of the national program of inter-basin and coastal waterways development, but for which money has not as yet been appropriated by Congress. Their estimated construction costs aggregate $3,660,017,634, and include projects in every section of the country. The flood control backlog is $2,001,017,634. The river and harbor backlog is $1,659,000,000. From this you will see that a tremendous amount of work is waiting to be done, if we are to provide the people of this country with needed flood protection, and improve our rivers and harbors for navigation—work which the Congress of the United States has found needed and economically sound and has authorized. I should again remind you, however, that the rate of actual construction is dependent upon the appropriations which Congress in its studied judgment sees fit to make.

As many of you know, the Corps of Engineers recommends only those civil works that are judged to be economically sound. The average annual benefits of a project must exceed the average annual costs—and costs include interest and amortization, as well as maintenance and care. In this way, Congress guards against any additions to our networks of river and harbor and flood control facilities that would be economic white elephants—and, as such, a waste of the people's money. This policy is particularly an important consideration at this time, when, quite properly, Federal expenditures are under close scrutiny following the necessarily huge outlays for war purposes.

In addition to maintenance, the budget recommended by the President for the 1948 fiscal year calls for work on 75 flood-control projects and 36 river and harbor projects. Exclusive of funds for the lower Mississippi River, the President has recommended that a total of $290,350,000 be appropriated for the coming fiscal year and that of this amount $188,356,000 would be for flood control, and $101,994,000 would be for navigation. These recommended expenditures are for the continuation or completion of those projects for which Congress has previously appropriated funds. They also include funds for certain preliminary examinations and regular maintenance work. It should be noted that no provision is made for beginning any new project.

These are only recommendations—made by the President in his budget report of last January. The exact extent of our civil-works program during the 1948 fiscal year will be determined by the Congress, whose committees are at present engaged in studying the recommended expenditures. As Congress approves and directs we will proceed with work on a list of projects in various parts of the country, as well as continuing essential maintenance, operation, and care. The list of projects on which work has already begun include such important units as the Garrison Dam and Reservoir in North Dakota, the Harlan County Dam in Nebraska, and the Fort Randall Dam in South Dakota—all three projects being units in the comprehensive plan for flood control, navigation, and irrigation in the Missouri River Valley; the Fort Gibson and the Wister Dams in Oklahoma—units in the Arkansas River Basin plan; the Bull Shoals Dam in Arkansas, an important unit in the White and Mississippi River Basin programs; the Whitney Dam and reservoir in Texas, which will provide flood protection in the lower Brazos River area; the Fall River Dam in Kansas, affording protection for agricultural and urban areas in the Verdigris River Valley; the Center Hill in Tennessee, the Bluestone in West Virginia, and the Wolf Creek in Kentucky—all three dam units in the extensive Ohio River Basin; the Clark Hill Dam and Reservoir in Georgia and South Carolina, an integral unit in the Savannah River Basin plan; the Allatoona in Georgia, to provide protection for the city of Rome and lower Etowah River Valley; the Buggs Island project in Virginia and North Carolina, to provide protection in the Roanoke River Basin; the Conemaugh River Dam in Pennsylvania, a key unit in the system for protection of Pittsburgh; the Almond project in New York, an integral unit in the plan for the upper Susquehanna River Basin; the Lookout and Dorena Dams in Oregon and the Big Dry Creek Dam in California, to provide important protection from floods on the Pacific coast.

For flood control in the alluvial valley of the Mississippi River, the Bureau of the

Budget has recommended that $24,000,000 be appropriated for the fiscal year 1948. It has further recommended that this total sum be divided equally between new work and maintenance. Obviously, essential maintenance on a program that encompasses the vast lower valley of the Mississippi must be provided for first out of any new funds that may be appropriated. New construction must be given a second priority, and be limited to whatever balances may remain after essential maintenance is taken care of. Approximately half of the total money, as recommended, must be devoted to the maintenance of existing revetments and the construction of new revetments, if the 2,000 miles of controlling levees are to be protected from caving banks, subjecting millions of alluvial acres and numerable prosperous communities to direct overflow from the river—if the integrity of the lower Mississippi River flood-control program, on which millions of dollars have been expended, is to be retained. The next largest portion of the funds recommended would be devoted, respectively, to dredging and to main Mississippi River levees. The balance of new work funds would be spread over projects in the St. Francis, White, Yazoo, Tensas, and Atchafalaya River Basins, and would be devoted almost entirely to the completion of detailed plans and studies and to survey work. From this short summary you can see that the $24,000,000 appropriation recommended in the budget—divided $12,000,000 for new work and $12,000,000 for maintenance—permits a very limited program on the lower Mississippi River and its tributaries during the fiscal year 1948, consisting only of the most urgent main river work and of nondeferrable maintenance.

In river and harbor improvements, the President's 1948 budget recommendations call for continued work on the New York and New Jersey channels to improve navigation facilities at New York Harbor; further improvement on the Mississippi River at the Chain of Rocks bottleneck near St. Louis; extensive work on the Missouri River; important early-stage work on the great McNary Dam on the Columbia River, and extension of the main channel of the Gulf Intracoastal Waterway below Corpus Christi, Tex., and Dam B for the Neches and Angelina Rivers in Texas.

These are only a partial list of important current projects. Naturally, I cannot say at this time whether they will be definitely a part of the program during the next fiscal year, as finally determined by the Congress of the United States, which, as I have said, has that responsibility.

This I can say with all assurance: We of the engineers will carry out the waterways program exactly as directed by the Congress, through the Secretary of War—and we will do this with the same care, efficiency, and dispatch that have been the traditions of the Corps of Engineers during the 172 years of its proud history.

Peabody, Mass., Goes All Out To Reduce Prices

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 7, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a telegram I have received from the Peabody, Mass., Chamber of Commerce, concerning the merchants' sincere and most serious efforts in conforming with President Truman's program to reduce prices. The merchants of the city of Peabody, Mass., are determined that every effort possible will be made to obtain favorable action on this Nation-wide movement. Business interests of that city I know will be complimented and congratulated by each and every Member of Congress in their determination to lower the cost of living.

The telegram follows:

PEABODY, MASS., *May 3, 1947.*

Congressman THOMAS LANE,

House of Representatives:

Peabody merchants have banded together and have forced prices down on about everything except fair trade items under a promotion of devaluation days from May 1 to May 10. Business has been very brisk in spite of inclement weather. Consumers have reacted very favorably to the plan but they realize that this program cannot be on a permanent basis without reductions first coming from the source of supply. Merchants, under the chamber of commerce, have gone all out with banners, newspaper advertising, radio, street signs, and sound trucks. Merchandise has been reduced 10, 20, in some instances 50 percent. We are the only city in your district who is putting on this plan. The buying public is thankful to these merchants for their answer to President Truman's request for lower prices.

PEABODY CHAMBER OF COMMERCE,
THOMAS E. CYRS.

Soil Conservation in Louisiana

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 7, 1947

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of L. A. Borne, president, Police Jury Association of Louisiana, in the Louisiana Police Jury Review, April 1947:

Fellow members of the Police Jury Association of Louisiana, we, as members of the Police Jury Association of Louisiana, have many important duties to perform. We are faced with many problems in which we share a responsibility to solve, and which must be corrected in order to protect and promote the health, safety, and general welfare of our people.

Louisiana ranks high in the need for preservation of its natural resources. Exploitation of these is leaving its scars in practically all sections of the State. The soil, our basic natural resource, is being depleted at a rapid rate. Soil erosion in the hill sections and lack of drainage in the alluvial sections is costing millions of dollars annually in crop losses. Every man, woman, and child is dependent on the soil, either directly or indirectly for a livelihood. Every citizen shares a responsibility in its preservation. Our future prosperity is measured largely by the way we take care of our soil today.

A great step forward was taken when the Louisiana Legislature enacted a law to permit the organization of soil-conservation districts, whereby farmers could organize to apply conservation to the land. Of the 29,000,000 acres of land in Louisiana, approximately 26,000,000 are now within the 24 soil-conservation districts. The mere placing of the entire 29,000,000 acres within the limits of a soil-conservation district, however, will not solve the problem. To solve the problem we must take the millions of acres of hill land and do the necessary terracing, contour planting, crop rotations, cover crops, pasture development, reforestation, etc., to stop erosion and increase production. We must take the millions of acres that need drainage and apply adequate drainage and other conservation measures in order to place these acres into fruitful production.

Until we do these things, the job of soil conservation will not be complete. A good foundation has been laid and a good start has been made, but there is still a big job to be done.

The supervisors of the soil-conservation districts have done a good job of laying out the programs and coordinating the work of soil conservation in their respective districts. The Extension Service is doing a fine job of assisting the districts with their educational program by informing the people of the need for soil conservation and how they can secure assistance in this work through soil-conservation districts. The United States Soil Conservation Service is doing an excellent job of assisting districts by rendering on-site technical assistance in all phases of soil conservation including farm drainage. The State Department of Public Works is rendering a tremendous service, through the parish police juries, in providing outlets for farm drainage while the United States engineers are working on the major channels and final outlets.

The Louisiana Legislature at its last session appropriated $500,000 to soil-conservation districts for purchase of equipment and to employ assistants to carry on this important work in the State. Although this is a small sum of money in comparison to the size of the job to be done, it has been a tremendous help.

Many of the parish police juries have contributed directly to this work by providing free office space to the Soil Conservation Service where they have assigned personnel to assist the districts.

By all working together we can achieve our goal by applying conservation to each acre of land in the State, but the job needs to be done now and within the shortest period of time in order to prevent further depletion of fertile farm land. To do the job rapidly, the districts need funds with which to purchase equipment and employ assistants. The Louisiana Legislature should be requested to provide districts with ample funds to do the job quickly and do it properly.

We should all remember that when the land fails, the man fails, and when the man fails, the communities fail; when the communities fail, the States fail; and when the States fail, the Nation fails.

The Story of New Haven's Industries

EXTENSION OF REMARKS

OF

HON. BRIEN McMAHON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Thursday, May 8 (legislative day of Monday, April 21), 1947

Mr. McMAHON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the Story of New Haven's Industries, written by Henry H. Townshend, and published in the Journal of the Union & New Haven Trust Co. This is a very fine account of

the development and growth of a great city of Connecticut and of New England.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE STORY OF NEW HAVEN'S INDUSTRIES

(By Henry H. Townshend)

A substantial number of the founders of New Haven, and certainly the most influential ones, were London merchants. Some of them had occupied positions of considerable importance in the commercial life of that town. Theophilus Eaton had been a deputy governor of the Fellowship of Eastern Merchants, an association trading with countries surrounding the Baltic. Having spent their entire lives as merchants, they expected to make their livelihood here by trading and commerce.

So when the men who chased the remnant of the Pequot Indians from the Great Swamp Fight in Rhode Island to their extermination in the Swamp in Fairfield reported to New Haven's ultimate founders in their temporary abode in Boston the finding of a "fair harbor" and "goodly meadows" about halfway between the settled colonies of Massachusetts Bay and New Amsterdam, it seemed an advantageous place for settlement. They brought with them considerable capital for those times, and they planned their town with regularly laid out streets and a market place in the center as befitted a place of trade, not a straggling frontier settlement; and Eaton, Gregson, Malbone and later Allerton—built themselves pretentious houses as befitted prosperous merchants.

As soon as the pressing business of getting settled was completed they turned to the one activity they knew most about, trade and commerce. As early as 1639 they were trafficking with the older colony of Virginia and its ever merchantable tobacco; shortly after with Barbadoes, Bermuda and the Azores in boats of 12, 17, and 20 tons, and always with Massachusetts Bay, where exchanges were made for European goods. In all cases it was either a matter of barter, or bills of exchange on London were acquired with what commodities they had to offer, and European goods purchased.

OPA 300 YEARS AGO

An OPA was established in 1641 limiting profits at retail in European goods to 3 pence in the shilling above what they cost and charges, and to a lesser amount at wholesale. At first it was furs that were the principal exportable product and later grain, beef, hides, and lumber. It did not take long for them to discover that in native resources their immediate surrounding had little to offer.

By 1641 they were looking further afield, and the rich furs that found their way down the long reaches of the Delaware and Susquehanna Rivers tempted them. For 60 pounds certain individuals as a private venture purchased all the land from Cape May to the mouth of the Delaware and started a trading post. The Dutch and the Swedes already there resented these trading Yankees. The Dutch burned their buildings. The Swedes on the western side arrested Lamberton and the whole venture collapsed, standing for a loss of about $1,000. It was New Haven's disaster No. 1.

In 1646, possibly to eliminate the expense of the middleman, a ships fellowship was formed to send a venture direct to England. A ship of about 100 tons was built or purchased in Rhode Island, loaded with peas, wheat, hides, beaver skins, planks and some of their precious silver plate, a cargo worth perhaps $5,000 and supposed to represent about one-fifth of the total wealth of the settlement.

It was January before she was ready to sail. They cut a channel for her through the harbor ice. On board were about 70 souls, some of them among New Haven's most prominent men and women, and she set sail with the prayers and blessings of those left behind, never again to be heard from save to come down to us in legend and story as the phantom ship. This was New Haven's disaster No. 2, and a far greater one than that on the Delaware.

A spirit of almost absolute discouragement settled down on the colony. Some left the settlement. Cromwell offered to transfer them to Ireland, that had just come under his yoke, and he also suggested the Island of Jamaica. Both offers were refused, and New Haven settled down to making the best it could of what the situation offered.

By this time, in spite of losses, some increase in population had occurred and considerable land had been cleared. The exportable amount of agricultural products—grain, beef, hides, pork, and lumber—had increased. Isaac Allerton came down from Massachusetts Bay and put what today you would call pep into the situation. He was a member of the Mayflower Company and had left Massachusetts Bay under somewhat of a cloud. The Pilgrims thought his trading activities were a bit shady, and as their agent accused him of spending too much of the colony's money.

So he found it more convenient to come to New Haven, where he took first rank as a merchant without greatly disturbing the equanimity of the founding fathers, built a fine home and storehouse and died a bankrupt. H. T. Blake claimed he was buried near the flagpole on the green. A great deal of flax was raised, as flaxseed became a valuable export, and we find a record of a cargo of flax fiber going to Ireland, the ship returning by the way of the West Indies with the usual importation of sugar and molasses, a round trip long known as the Southern Passage.

It is easy to understand why the traffic with the West Indies was the chief source of New Haven's commercial activity. We produced the foodstuffs that they needed and could not grow. Their sugar, molasses, and tropical products were something we wanted and could not obtain elsewhere. It was mutually advantageous and freighted with rich rewards. This form of commercial activity continued to be the settlement's chief enterprise and grew slowly without much great prosperity until around 1763.

TRADE WITH THE WEST INDIES

We are told that for about 60 years prior to 1740 the whole navigation out of New Haven consisted of two coasters and one West India vessel, while from 1740 to the Revolution some 30 vessels annually were engaged in foreign voyages. Benedict Arnold owned at least three of them and commanded one. This decade saw the heyday of New Haven pre-Revolutionary commercial activity. Then came the Revolution and the ships were taken up the Quinnipiac, the East Haven, and the Housatonic Rivers, dismantled and laid up.

The war over, trade picked up and the arrival and departure of ships averaged 70 yearly. Ships became larger, more firms engaged in foreign and coastwise trade. The New Haven Bank, the New Haven Marine Insurance Co., and the New Haven Chamber of Commerce were started. Long Wharf, which had been begun in the 1600's by conscripting the labor of male citizens from 16 to 60 for 4 days a week, was added to and completed. Ships like the *Neptune*, the *Oneida*, and the *Hope*, of 350 and 200 tons, sailed around the Horn to China and came back laden with tea, silk, nankeen and porcelain; to the East Indies and came back with spices; to Europe and came back with European goods. This trade with the Orient did not depend on native produce.

Take the most famous of these ships, the *Neptune*. She was outfitted for $48,000 and in 1796 sailed for the Falkland Islands, where same sealskins were obtained and cured on the "New Haven Green," as a beach in Patagonia was named. She proceeded around the Horn to the Seal Islands of the Pacific, Juan Fernandez, and the St. Felix Islands, where more seals were taken, then to Canton where the skins, some 80,000 of them, were disposed of for $3.50 per skin; 3,000 chests of tea were purchased, also 54,000 pieces of nankeen, large quantities of silk, and 547 boxes of chinaware.

THE FABULOUS NEPTUNE

She came back to New Haven after an absence of about 3 years, paid $74,000 in custom duties and divided among those who took a venture in the voyage, the captain, officers, and crew $220,000, an enormous sum for those days, and she took no cargo from New Haven. Other ships tried the same procedure, but none was ever able to equal it. New Haven ships visited nearly every European port, carrying agricultural products or lumber either for New Haveners or under charter to outsiders. Until the embargo of 1808 fully 100 foreign-bound ships paid in customs duties an average of $150,000 annually.

The water of the harbor then came up to where the Yellow Building now is, and the head of Long Wharf was in the area where George, State, and Water Streets now are. This was known as Custom House Square. No part of New Haven has made a greater physical change than this area. The offices of the shipping firms, Prescott & Sherman, Kidston & Bishop, H. Trowbridge & Sons, Bradley & Mulford and perhaps 10 or 12 more stretched along Long Wharf all the way from Sperry & Barnes, across where the railroad tracks now are and around the Square, which had a liberty pole in the center. In addition to this dominant business activity there was a host of minor ones—carpentry, rope walks, blacksmithing, tanners and shoemakers, brick makers, plasterers, weavers, tailors, gunsmiths, millers, bakers, coopers and potters—some of which had existed from the first days of the settlement, conducted by many artisans in many small establishments.

Our picture of these first 150 years is enlivened by characters of strong individuality thrown on their own resources. The second and third generation still retained the vigorous initiative that characterized the first settlers, who unless they had possessed it never would have left whatever of comfort their European homes had to offer. These traits continued down into the new age inaugurated by the advent of the 1800's, but the subjects on which they exercised their talent changed.

The Revolution and the embargo of 1808 had aroused their resourcefulness. While shipping still continued, especially with the West Indies, well down into the middle of the nineteenth century, the emphasis changed from commerce to the workshop and the factory. Harassed by the decrees of Napoleon and Great Britain, by the embargo of 1808, and the War of 1812, New Haven depended less and less upon the coming and going of its ships.

THE BEGINNINGS OF INDUSTRY

The next picture is a very difficult one to treat briefly, the canvas is so crowded with characters and activity. Almost coincident with the founding of the Colony a grist mill was constructed at the only spot offering water power—where Mill River falls over the trap-rock barrier at the Whitney Lake Dam—and by 1655 bog iron was transported down the Quinnipiac from North Haven to a forge at the outlet of Furnace Pond in East Haven, now known as Lake Saltonstall. Flax was raised in considerable quantities, and there was hand weaving in pre-Revolutionary times.

These and the trades already mentioned were primarily performed by individual craftsmen. Not until about 1780 did this

craftsmanship take on a more pretentious aspect than catering to the wants of the local inhabitants and assume some of the aspects of a growing economy. A curious individual, Abel Buel, who started his career as a forger and counterfeiter, perfected a machine for stamping out metal coins and started a mint in Water Street in 1785, where he made pennies for the new Federal Government and for local merchants. There was no United States mint.

He also brought over a Scotchman, William McIntosh, to manufacture cloth by the new power loom. President Stiles of Yale and the Connecticut Silk Society were busy introducing a silk industry; some of the old mulberry trees you see today stand as a hoary memorial to their effort.

THE DETROIT OF CARRIAGES

By 1794 John Cook had started the carriage industry on its career. Jonathan Mix's invention of the elliptical spring in 1807 and James Brewster's decision to locate here in 1809 and apply factory methods to carriage construction accelerated the spectacular rise of that industry until it dominated all others. With its highly skilled workmen and allied industries of carriage hardware, New Haven was what Detroit now is, minus the CIO and A. F. of L.

There were close to 50 concerns making vehicles of all sorts that went to all parts of the country and to foreign lands, and the factories were scattered all over the town from Newhallville to East Street. As late as 1888 carriage building accounted for $2,000,000 of New Haven's total manufacturing income.

Eli Whitney came back from the South, which he had enriched with his cotton gin to his own financial loss, and plunged into the Government's first rearmament program, contracting to deliver 10,000 stack of arms in 2 years. He failed to meet his commitment but invented new machinery and became the father of mass production with his new conception of interchangeable parts.

His nephew, Eli Whitney Blake, in order to make Whalley Avenue something more than a streak of dust in summer and a river of mud in winter, invented the stone crusher to utilize the trap from West Rock. Ithiel Town, besides adorning New Haven with his architecture, designed the first successful truss bridge and sold the right to use it all over the country at $1 a foot.

Sparks of the spreading surge of inventions and manufacture that was sweeping the Nation fell in New Haven and fired the local talent. For the remaining years of the century this initiative and energy continued, clouded only by the Eagle Bank failure in 1825, New Haven's disaster No. 3, the panics of 1837 and 1857, and other years of lesser depression. We are now at the 1820's. Henry Clay's American system was already overcoming the Jeffersonian and Jacksonian philosophy to shape the course of events for the next eight or nine decades, and New Haven profited by it.

THE COMING OF THE RAILROAD

Strategically located geographically as a communication center, the town, again to be disappointed, was buoyant with the prospects offered by the Farmington and Northampton Canal; but by 1838 it was the terminus of one railroad and by 1848 of another, and hopes and expectations were as lively as ever. The 1830's and 1840's and 1850 came with their increased tempo and rising tide of optimism. Persons engaged in manufacture are said to have increased 127 percent between 1820 and 1840 for the country as a whole.

New Haven shared in this increase. Joseph Parker, noting the discarding of cotton waste as refuse by the mills, used it to make the first American blotting paper, a most successful venture for many years. And his neighbor in Westville, Aaron Beecher, not only began making matches but perfected special machinery for their production, a business continued until absorbed by the Diamond Match Co. in our day.

Charles Goodyear's fortuitous discovery in a nearby town led L. Candee and my grandfather to apply it to the manufacture of rubber footwear, the first successful venture of its kind. Locks and household hardware were being made by the predecessor of the Mallory Wheeler of our day and by 1888 accounted for $2,500,000 of New Haven's industrial income; and G. F. Warner brought over the malleable iron industry from the Naugatuck Valley.

Chauncey Jerome moved his clock factory here where, after many vicissitudes, it became with the help of Henry English's father the New Haven Lock Co. of our day. All this was in the early 1840's. This bustling activity not only grew richer in variety and more animated in character as the decade lengthened into the 1850's, but also an interest in city improvement was aroused.

GAS, WATER, TELEPHONES, ELECTRICITY

Benjamin Silliman, Jr., as civic-minded as he was academic-minded, was active in introducing the new lighting from the distillation of coal, and all New Haven turned out to see his home on Hillhouse Avenue illuminated on Thanksgiving eve, 1848. Oliver Winchester, a shirtmaker in Court Street, bought the Volcanic Repeating Arms Company of Smith and Wesson, and after a try in Bridgeport settled down here to making the Henry rifle, an important arm in the Civil War. This company became the Winchester of our day and after absorbing the old Whitney Arms in 1888 was absorbed in turn by Olin Industries.

So the Civil War found New Haven a place of many industries. The activities during those 4 years were but a repetition of your more recent experiences, minus governmental limitations and restrictions; but the boys who were fortunate enough to come back found their city with more improvements than do the GIs of today. After 10 years of bitter controversy the citizens had absolutely refused to have a municipal water supply. Eli Whitney 2d almost singlehanded undertook the project and the first water came through the pipes in December of 1861.

The city hall was built and the Fair Haven & Westville Horse Railroad got as far as Broadway by the fall of 1861 and stopped because of the scarcity and cost of iron. The Civil War drawing to a close, J. B. Sargent moved from New Britain and brought along his friend, O. B. North. The old paper box concern of Henry Gladden became that of P. J. Cronan Co., which I think developed into the National Folding Box. The corset industry, later to employ 20,000 hands, and the organ and piano industries came and now, as the 1870's open, meat packing, plumbing supplies, rolled iron, and dyeing.

From the 1850's, at least, machinery and machine tools had been one of our activities. Some of the earliest milling machines and lathes in the country were made here at the corner of Audubon and Whitney Avenue, and now Mr. Bigelow added boilers to his engine and machinery output. George W. Coy, listening to Alexander Graham Bell in Skiff's Opera House on Chapel Street in 1877, used his experience as a telegrapher, the wires from his wife's hoop skirt and $500 of H. P. Frost for the first telephone switchboard in the world; and so the Southern New England Telephone Co.

Late in 1881 the same Mr. Frost with Morris Tyler, Wilbur Day, and Charles Mitchell had vision and initiative enough to install two of Weston and Maxin's dynamos in the C. Cowles & Co. plant on Orange Street near Crown, and persuaded the Cowles engineer to keep steam up after hours to run them, a project that after many vicissitudes and under the careful nursing of James English became the United Illuminating Co.

All ages are only relative, but it is not inappropriate to look back on the 1830's, 1840's, and 1850's as an age of awakening a silver age, and the 1870's, 1880's, and 1890's as a golden era of accomplishment. There were financial disasters, poverty, misfortune, but there was also an underlying feeling of confidence in the fundamentals of the business world, the rules that governed it and the possibilities of success. At no time in our history has the right of Government to regulate been questioned. While this period after the Civil War saw more of it than any prior one, it was on the whole more in favor of than detrimental to industry.

Labor had been organized, was being organized, and there were some bitter fights, but its organization was loose, its outbreaks sporadic and consequently the more controllable. The stimulation of new business ventures and exciting inventions fired the imagination, the aspirations, and the hopes of men. All this was part of the New Haven picture.

THE OYSTER INDUSTRY

There is one activity not yet mentioned that must not be neglected. It does not come under any of the categories already touched on, but it is the oldest, the most continuous, and the one that, through all the centuries, has added a distinctive note to our commercial drama. I refer to the oyster industry.

Long before the white men, Indian tribes from far inland annually came here to partake of its bounty. The first settlers depended on it for sustenance. Until 1800 it was pretty much a free-for-all proposition. Nature provided, man simply garnered; and to Fair Haven and Fair Haven East it brought great activity, monetary reward, and a place in the sun.

By the 1850's the Quinnipiac, in season, was a forest of masts. Its shores swarmed with men, women, and children catching, unloading, opening, and packing oysters in kegs, loading them on wagons to be peddled all over the countryside and as far north as Massachusetts, New Hampshire, and Vermont. By the 1860's propagation and cultivation had made it a year-round occupation. While laws, regulations, modern business methods, and modern transportation ruined the picturesqueness of the animated scene around John Rowe's Tavern, they have not destroyed oysters as an important New Haven industry.

There is neither the time nor the need to portray the 1900's. You here are part of the picture. It can be drawn with a few bold, broad strokes.

The pattern of the closing years of the 1890's, highlighted by the prosperity that followed the war with Spain, was the pattern of the opening years of the 1900's to at least the close of World War I. Most of the older firms were still functioning even though business was not very good just prior to 1914. New ones, small perhaps in size but of considerable value in the aggregate, were being added, a trend that has continued to our day. So in the place of a few dominant industries we now have over 400 listed activities, from razor blades and insulated wire to precision instruments and mechanical toys and a newcomer of considerable importance, the garment industry, all of which is in my opinion a change for the better.

Another trend, especially since the end of World War I and perhaps not quite so pleasing to our native pride, has been the gradual absorption of the older firms by outside interests and a lessening of local management in others. I wonder, however, if the extent of this in the over-all picture has not been exaggerated by the fact that it has principally occurred in the larger concerns. With the growth of the oil industry and increased shipments of coal the harbor has reclaimed some of its strategic importance, a matter for sincere congratulations; and the industrial area has stretched beyond the actual city limits, a necessary component of growth and therefore encouraging.

A GROWING INDUSTRIAL AREA

Where the value of manufactured products was only $188,000 in 1811, it rose in the following 70 years to about $30,000,000 in 1888. We were keeping our end up during this long period of industrialization, which for Connecticut did not get well started until about 1830. By the early 1900's it was around $50,000,000 and, eliminating the distortion of the war years 1914–19, it was in 1935 about $80,000,000 and in 1940 around $100,000,000.

I use these estimates with considerable hesitancy, for I am uncertain as to how many industries are included in each period, or whether the same area is covered in each case. In this hasty survey I have always had in mind not the corporate limits of the city but the territory purchased by Eaton and Davenport from the Sachems, Momauguin and Montowese. That is the real commercial New Haven. These estimates can, however, be taken as a rough approximation as to what has been and is taking place in our local commercial community. While they do suggest a certain slowing down, the broader view offered by our metropolitan district should give us a picture of a growing, not a dying, organism.

Putting the Pressure on Congress

EXTENSION OF REMARKS
OF
HON. GEORGE D. AIKEN
OF VERMONT
IN THE SENATE OF THE UNITED STATES

Thursday, May 8 (legislative day of Monday, April 21), 1947

Mr. AIKEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Putting the Pressure on Congress," written by Richard L. Strout and published in the Christian Science Monitor of May 7, 1947.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PUTTING THE PRESSURE ON CONGRESS—AN INTIMATE MESSAGE FROM WASHINGTON

(By Richard L. Strout)

WASHINGTON.—Ten big organizations listed their financial expenditures for lobbying, under the new Federal Regulation of Lobbying Act, as $532,588, in the first quarter of 1947. Besides this top 10, 114 other organizations filed financial statements saying they were trying to influence or exert pressure on Congress, the total expenditures amounting to $928,022.

Many organizations did not file financial statements on the ground that their "principal" activity was not influencing legislation. Among this group were the American Federation of Labor, the Congress of Industrial Organizations, the National Association of Manufacturers, and the United States Chamber of Commerce.

It can be conservatively estimated that at least $5,000,000 is spent annually for direct, first-line influence on Congressmen in Washington. Some 500 organizations are now responsible for 745 listed lobbyists. Many of these lobbyists are working for exactly opposite things.

First-line lobbyists in Washington only begin to tell the story, however. Take the case of the National Home and Property Owners Foundation, fifth among the big 10 spenders in the first quarter. This group spearheads the fight against the Taft-Ellender-Wagner housing bill and in favor of ending rent controls. Organ of this influential body is a monthly, the Property Owner. This periodical carries on effective presentation of its views, and the current number paints Senator ROBERT A. TAFT, Republican, of Ohio, as a rather radical fellow, surrounded by "a strong left-wing faction."

The magazine shows the kind of work that an energetic group can undertake. For example, it explains that 14 members of the Ohio congressional delegation, "accompanied by 40 prominent Republicans," were mobilized recently for what was described as "a secret caucus in Mr. TAFT's office." The statement continues:

"When the meeting ended there was little doubt in the Senator's mind that the 'thinking majority' was in open revolt against him. Mr. TAFT may yet mend his ways."

The Property Owner likewise noted that its spokesman had been asked to appear before a closed session of the Senate Banking and Currency Committee. "Of the dozens of organizations fighting the Federal housing bill, only the National Foundation has been requested to attend the closed-door session."

There are all sorts of ways of trying to persuade Congress. In its antitrust suit against western railroads, started last week, the Justice Department introduced a letter from R. V. Fletcher, then vice president and now president of the Association of American Railroads, explaining an effective procedure. Incidentally, the well-organized AAR helped get the Bulwinkle bill through the House recently after a brief 40 minutes' debate.

"All of us have long recognized that the only effective way to influence congressional action is to convince the influential men in each congressional district that the public interest and the interest of the railroads coincide," explained Mr. Fletcher.

"I have the impression that most of the Congressmen, particularly those living in the smaller States and in rural districts, depend for their support upon a comparatively few men in each county in their respective districts."

Mr. Fletcher sketched his program for card listing not merely Congressmen but the important men back home who assist them in their campaign—such assistance presumably including campaign contributions. It frequently happens, he said, that a Congressman from a smaller State occupies a "key position in connection with some measure pending in Congress." As worked out, the Fletcher organization was not designed to work directly on a Congressman but at second-hand, upon his important campaign backers.

A program like this does not, of course, present Congressmen in a very favorable light. For our purpose it merely shows how relatively unimportant the $5,000,000 annual expenditures for Washington lobbyists may be. Much bigger sums are probably spent in individual districts with the Washington headquarters merely signaling the plays.

Aid to Greece and Turkey

EXTENSION OF REMARKS
OF
HON. ROBERT J. CORBETT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 7, 1947

Mr. CORBETT. Mr. Speaker, there are four compelling reasons why I will cast my vote for the pending legislation.

First. The program is in the mind of the world a fact accomplished. Not to pass this bill substantially in its present form would constitute a retreat—a retreat that could be interpreted in no other light than as an abandonment of free people everywhere to whatever fate may befall them. The President by his action and the Senate by its majority support have left us with little choice except to go forward or to abjectly retreat.

Second. It is desirable that we should go forward because the people of America favor this action. I know it has been stated here that the people of America oppose this loan and that no polls of opinion record the public as being favorably inclined. These statements I dispute. As most of you know, I conduct frequent scientific polls to ascertain public opinion in my district on national issues. My district is a fairly typical one as regards economic activity and levels of financial well-being. The registered voters in the district are numerically almost exactly divided between Republican and Democrat. Very recently the district was polled on the simple question "Do you favor the proposed loan to Greece and Turkey?" According to the signed replies 60 percent of the Republicans voted "yes" and 55 percent of the Democrats voted "yes." Even allowing for a margin of error, I submit these figures as convincing evidence that the public favors the passage of this bill.

The third reason I favor the approval of this loan to Greece and Turkey is, because it is a measure of national defense. Everyone now recognizes that science and technology have combined to shrink the world into a unit so small that serious trouble in any part of the world affects all other parts. We likewise know that insecurity anywhere means insecurity everywhere. Does anyone doubt that the seizure of Greece or the Dardanelles would not bring us to the brink of war or actually plunge us into war? I know what many others think, but I sincerely believe that this proposed action pushes back the threat of war and provides necessary time for the reconciliation of differences between the great powers. Therefore, I believe that this loan is in reality an act of national defense and self-preservation.

Fourth, and of greatest significance, the inclusion of the Vandenberg amendment changes the whole complexion of our action. Without the Vandenberg amendment, which in effect gives the United Nations a veto power over the exercise of our policy, the United States could be charged with imperialism, power politics, and even aggression. In this situation such charges should not deter any affirmative vote, but charges of this kind are vaporized by the Vandenberg amendment. This amendment in effect makes the United States simply the instrument of the United Nations to stop the threat of aggression and to maintain the security of nations in the Mediterranean area. It is not too much to hope that by this act we will establish a precedent that will result in the future in international action to stop aggression anywhere in the world at any time. It is not too much to hope that our action now will be the forerunner of a series of similar actions later that will finally establish international security and lasting peace.

Therefore, being firm in my conviction that the loan to Greece and Turkey will serve the best interests of this Nation and of the world I will cast my vote for this measure and urge my colleagues to do the same.

Greek Relief

EXTENSION OF REMARKS
OF
HON. HUGH D. SCOTT, JR.
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 7, 1947

Mr. HUGH D. SCOTT, JR. Mr. Speaker, nearly 100 years ago there was one who saw very clearly the unchangeable and unchanging direction of Russian policy and who warned the world against the consequences of its future developments. It is ironic that this prophet has since been virtually canonized in certain countries. On April 12, 1853, he wrote of the danger of Russian aggression in the Near East:

The vital interests should render Great Britain the earnest and unyielding opponent of the Russian projects of annexations and aggrandizement. England cannot afford to allow Russia to become the possessor of the Dardanelles and Bosporus. Both commercially and politically, such an event would be a deep, if not deadly, blow at British power. Let Russia once come into possession of Constantinople * * * in that case the Black Sea would be * * * a Russian lake * * * Trebizond would be a Russian port, the Danube a Russian river. * * * But having come thus far on the way to universal empire, is it probable that this gigantic and swollen power will pause in its career?

Circumstances, if not her own will, forbid it. * * * With Constantinople she stands on the threshold of the Mediterranean. * * * With the Albanian coast * * * she is in the very center of the Adriatic. * * * It would appear that the natural frontier of Russia runs from Danzig or perhaps Stettin, to Trieste. And as sure as conquest follows conquest, and annexation follows annexation, so surely would the conquest of Turkey by Russia be only the prelude for the annexation of Hungary, Prussia, Galicia, and the ultimate realization of the Slavonic Empire.

The arrest of the Russian scheme of annexation is a matter of the highest moment. In this instance the interests of * * * democracy and of England go hand in hand.

Are you curious as to the name of this clear-sighted gentleman who was then the European correspondent for the New York Tribune? Well, many Soviet citizens are told that only those who have accepted the teachings of Karl Marx enjoy the absolute power of judgment. I am inclined to doubt whether this particular warning by Karl Marx, of which he wrote in 1853, is given any extended circulation within the Soviet confines.

The trouble with attempts to appease the demands of expanding and dynamic communism is simply this: The demands are followed by still greater demands and those by greater still and ultimately the time will surely come when aggrandizement shall have to be opposed by force.

But our hope of peace lies much more surely in the other direction in a firm stand now in a "thus far shalt thou go and no farther" attitude. Our hope lies in a continued program to convince the Third International that we do not fear the conflict of the two ideologies when the people may choose for themselves without fear or coercion; let us tell the Soviets that we intend vigorously to maintain from now on out that principle of free choice.

No man can say which way, beyond dispute, lies the sure way of peace, but I do believe that we follow after the things that make for peace when we assert our beliefs in justice, fair dealing, and free will.

As the ancient poet Menander wrote about 2,000 years ago; "We live not as we would, but as we must," and so, although we would live undisturbed by a concern for our relation with the rest of the world if we can, it should be obvious now that we cannot. We live as we must; which is to say that we live within a world community with obligations which we cannot ignore and which we must assume notwithstanding our traditional reluctance.

The onward sweep of events has made impossible for us a policy of inertia upon this madly spinning globe. We go forward into a new and revolutionary way of life. Let us pray God to attend our enterprise, and grant us wisdom to see and to follow the right as He gives us to see the right, to follow after the things that make for peace.

State Department Encourages Foreign Competition With American Industries

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 8, 1947

Mr. REED of New York. Mr. Speaker, the letters which I am inserting under leave to extend my remarks furnish a typical example of the bureaucratic mind now engaged at Geneva in bartering away our United States products and pay rolls. It is not only ceramic products which the State Department seeks to eliminate from our economy in favor of foreign low-cost producers but also United States agricultural products. Industrial products are on the auction-block at Geneva including, of course, the pay rolls of our laboring men.

The letters follow:

DEPARTMENT OF STATE,
Washington, March 19, 1946.

Mr. HOMER LAUGHLIN,
American Domestic Pottery Manufacturing Co., East Liverpool, Ohio.

DEAR MR. LAUGHLIN: We are seeking your assistance in the selection of two ceramic engineers to serve as advisers to the chief of the economic and scientific section of the military government and control activities in Japan regarding technical problems of the Japanese ceramic industry.

We do not have full details regarding the duties but we understand that these positions require highly qualified technicians with a broad experience in the various fields of ceramics. The salaries will range up to $7,800 per annum.

All positions in the military government activities are, of course, under the jurisdiction of the War Department. In accordance with a cooperative arrangement, however, the Department of State is responsible for recruiting and recommending personnel for certain specialized positions such as these. The minimum period for an assignment of this nature is 9 months, though it is hoped that an appointee may remain for an indefinite period. Transportation is provided at Government expense, and living costs are exceedingly low since the Army provides living quarters and meals similar to those of officers at a nominal charge of approximately $40 per month. Families cannot accompany civilian appointees at present, but there is a fair prospect that they may be able to follow later on in the summer or fall.

We would greatly appreciate any suggestions which you may be in a position to make regarding personnel who may be qualified for and interested in these positions.

Very truly yours,

T. M. BREWER,
Recruitment Officer, Special Recruitment Section, Division of Departmental Personnel.

NEWELL, W. VA., *April 1, 1946*

Hon. JAMES F. BYRNES,
Secretary, the State Department,
Washington, D. C.

SIR: Several days ago I received a letter addressed to Mr. Homer Laughlin, American Domestic Pottery Manufacturing Co., East Liverpool, Ohio, and signed by T. M. Brewer, recruitment officer, Special Recruitment Section, Division of Departmental Personnel.

The letter requested that we recommend two experienced and competent ceramic engineers for service in Japan at the expense of the State Department, to teach the Japanese how to improve and increase their production of ceramic products.

This is the most brazen example I have yet encountered of the State Department's consuming desire to spend our people's tax money to take their jobs away. It is particularly galling that the beneficiary of this incredible plan should be the vicious, bloodthirsty Japs, who were responsible for the killing and maiming of so many thousands of our fine young men—many of them from our ceramic industry. Just what answer can there be to our question, "Why does our Government spend our money to make jobs for the members of this despicable race, which will mean that our men, who fought and suffered in defeating them, will be walking the streets jobless?"

Now, please don't insult my intelligence by dragging out the old and absurd bromide that we must buy their competitive merchandise so that our workmen will have employment in making the things they will buy from us in return.

Let us take a single simple example and see how we Americans make out. First of all, as you are well aware, the Department of Commerce, in reporting the balance of trade figures, uses the indefensible and wholly fallacious method of balancing imports at foreign values against exports at American values. So we accept a thousand dollars' worth of china dinnerware (Japanese value) to balance a thousand dollars' worth (American value) of automobiles, business machines, farm machinery, or what have you. In manufacturing the china dinnerware in an American factory, that such an import displaces, there would be paid out in wages to American workmen more than twelve hundred dollars. The wages paid out for producing the balancing export of automobiles or what not would be less than $200. And you ask us, as though it was a patriotic duty,

to assist you in spending the pottery worker's tax money to improve and increase the dishes made in Japan for export to the United States! Fantastic!

You will admit, I am sure, that it is inconceivable Great Britain or any other of the United Nations would give a moment's consideration to a plan so prejudicial to the welfare of a large number of its nationals, as is this. Is our State Department, then, the only one that is right and all the rest of the world wrong?

Another question. On what information, and by what reasoning, did the State Department determine that American ceramists could teach anything to the Japanese potters? Before the war they were making and selling in this country just as fine chinas as any made here and at less than one-half the American cost of production. At that time, according to the Tariff Commission reports, Japan was shipping more than 80 percent of all of the china dinnerware used in the United States. England furnished about 15 percent and, of the balance, only 3 percent was produced in American factories.

If the State Department must spend money on ceramic technicians would it not be the most ordinary kind of common sense to pay them to work with the American potters in an effort to produce china that could compete in price with the imports? But I presume it would be pure isolationism to suggest that the State Department should show some remote interest in job opportunities for the people who supply the funds to carry on its activities.

It is probably too much to expect that this letter might actually reach your hands, Mr. Byrnes; but, if it should, will you please advise Mr. Brewer that his request is respectfully but very definitely refused.

Very truly yours,

THE HOMER LAUGHLIN CHINA CO.,
J. M. WELLS, *Secretary-Treasurer.*

Charles L. Gerlach

EXTENSION OF REMARKS
OF
HON. JOHN C. KUNKEL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 8, 1947

Mr. KUNKEL. Mr. Speaker, on Wednesday evening, May 7, the Bristol Courier printed the following editorial upon the life and service of our beloved colleague the late Representative CHARLES L. GERLACH. Inasmuch as this editorial clearly shows the appreciation of his achievements and his great service to the Nation and the community, by those who knew him best, I am including it in the RECORD under permission to extend my remarks:

CHARLES L. GERLACH

The death of Congressman CHARLES L. GERLACH has removed from the Bucks-Lehigh District a man who will be missed both for what he was and what he did.

America was truly the land of opportunity during the times when men could rise, as Congressman GERLACH did, lifting themselves by their own bootstraps out of poverty and obscurity into financial security and responsible public position.

Mr. GERLACH was born poor and died an officer in a well-to-do business which he had helped to found. He grew up with little schooling and died a well-read man, with a broad knowledge of the world and its works. He built, out of the wreckage of three successive defeats, the political strength to wrest the office of Congressman from an entrenched opposition and hold it successfully through five elections in a row.

The day of his death the National Congress paused for an hour to hear eulogies of a man who, had he been content to live the life into which he had been born, would have never been heard of beyond his own neighborhood.

Flags at the National Capitol fluttered to half-staff for a man who refused to be dismayed by early discouragements—who found the open doors of his native land and carved out his own niche in life.

A delegation of fellow Congressmen was officially designated for the funeral of a man who had started out as an obscure apprentice in a steel plant.

The energy, independence, and stick-to-itiveness of Mr. GERLACH was shown equally well in his personal affairs and his political career.

When still a youth, he began as machinist's apprentice in the Bethlehem Steel Co. plant, Bethlehem, and later at the Traylor Engineering Co. in Allentown. So well did he fit himself into this work that he rose to assistant superintendent.

But working for someone else did not satisfy him. From his savings he became a cofounder of a hay, grain, and feed concern which, through the years, gradually expanded into other lines and became a flourishing business. He was serving as treasurer of this concern at the time of his death.

His political career began with his interest in a Republican club in Allentown, where he became an officer. In 1925, in 1931, and again in 1935 he made unsuccessful bids for various Lehigh County offices.

Three such defeats in a row might have taken the steam out of another man, but Mr. GERLACH was not discouraged. He made his bid again in 1938, this time for Congressman.

Those were dark days for his party. Only 2 years before, the New Deal had swept all the Nation except Maine and Vermont. The little New Deal was entrenched at Harrisburg. The congressional seat of the district had been held for 3 terms by a Democrat.

Nevertheless, Mr. GERLACH was victorious. He was part of the Republican shock troopers of that year who, on Pennsylvania soil, turned the tide against the New Deal and since have steadily advanced their party in national power and until with Mr. GERLACH'S last reelection, it regained control of both Houses of Congress.

As a Congressman, Mr. GERLACH'S position was that of independent Republican. He rarely joined in floor debates on the various issues, but was known as extremely active in Washington on behalf of his district and his constituents.

His campaigns were straightforward and businesslike. He indulged in no personalities. Even in the campaign of last year, when he was singled out for especially vicious attacks on the basis of garbled versions of his voting record, he made no attempt at a rejoinder in kind.

He staked his chances for reelection on the proposition that his record itself was sufficient reply. In his words:

"In the 8 years I have been in Congress, I have honestly and sincerely voted, after careful study, for what I believe to be the best interests of the majority of my constituents and of the people of the United States."

Vindication of both his record and his unwillingness to get into a "smear" campaign came when the votes were counted, and he was found to have swept the district by 14,000 votes.

Death of Hon. Charles L. Gerlach, Representative, Eighth District, Pennsylvania

EXTENSION OF REMARKS
OF
HON. SAMUEL K. McCONNELL, JR.
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1947

Mr. McCONNELL. Mr. Speaker, the death of my colleague, Representative CHARLES L. GERLACH, was a shock to me in spite of the fact that he has been in poor health for the past 2 months.

His district adjoins mine, and naturally we shared some of the problems together. Frequently, our mail crossed back and forth over the district lines. It is natural that frequent consultation on mutual community needs, over the past few years since I have been a Member of Congress, developed a friendly association which will now be terminated suddenly by his death. His departure leaves a void which will be more pronounced because of that past association.

CHARLES GERLACH had a firm and profound belief in the principles which were responsible for the development of this country from a wilderness to its present position of eminence in the world. He was a stanch supporter of those ideals which he believed essential to the continuance of a free America, and he abhorred any compromise which he felt would undermine them.

My deepest sympathy goes forth to those who were near and dear to him, and I sincerely hope that time will ease the shock and the pain of his departure from their midst.

Fascism, as Well as Communism in Any Form, Should Be Stopped—KKK Form of Fascism

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1947

Mr. PATMAN. Mr. Speaker, the Ku Klux Klan during the 1920's represented fascism in its worst form. However any form of fascism is bad. During my 26 years of public service I have always opposed every form of fascism and communism.

When I was a member of the legislature in the State of Texas in 1921, a resolution was introduced in the house of representatives, of which I was a member, providing that the hall of the house of representatives could be used that evening by a prominent minister from Atlanta, Ga., to address an audience. I knew that this prominent minister was a lecturer for the Ku Klux Klan, and would address a KKK meeting right

there in the State capitol if the resolution passed.

When the resolution came up for consideration I opposed its adoption and gave my reasons. I considered the Klan un-American and destructive to our form of government. Fascism was not talked about at that time a great deal, but we can now look back and see that if the Ku Klux Klan had not been restrained, and had progressed to the extent of running the country, it would have been the worst kind of fascism; just as bad as Hitlerism.

The resolution was defeated on a record vote, and this famous lecturer met his audience that night on a vacant square, privately owned, near the capitol, and I was roundly denounced by him and those present for being opposed to the Ku Klux Klan, and for leading the fight to prevent the minister from making an un-American speech in the hall of the house of representatives in the State capitol at Austin.

My desk at the State capitol was broken into and my papers examined, many of them stolen. Fortunately the most incriminating evidence I had against the Klan was stored in another place and later exposed by me on the floor of the house, very much to the embarrassment of Klan defenders.

I did not stop the fight there, but continued to sponsor bills which, if enacted, would have successfully broken up the Klan in that State. By carrying on a vigorous campaign with other people in the State, we succeeded in stopping the progress of the Ku Klux Klan without the enactment of a law. My life was often threatened, if I did not cease and desist my active opposition to this organization which was very strong in our section at one time.

The narrowest escape I have had in politics during my entire career was the next year in 1922 when a Ku Klux candidate opposed me, and used the tactics for which such an organization is noted. In 1922, a large percentage of the office-holders in Texas were elected with the support of the KKK. It was dangerous for any candidate to openly oppose the KKK as they worked in the dark, behind bedsheets and voted solidly together. I have been honored by the people by election to two terms in the Legislature of Texas, two terms as district attorney of the fifth judicial district of Texas, and 10 terms as a Member of Congress from Texas. The solid KKK opposition in 1922 gave me my closest race. In fact, very close.

The remnants of the Klan have continued to oppose me at every election since 1921, when I made the fight against them, up to and including the year 1946, and will always oppose me.

KU KLUX KLAN FORM OF FASCISM

Fascism includes such organizations as the Ku Klux Klan, the Columbians, and all others of that type. There is a strong undercurrent of fascism in our country today. It must not be permitted to grow and progress. We must continue to be on the alert against fascism just as much as we are on the alert against communism or any other destructive force.

I am inserting herewith excerpts from letters, telegrams, and cards I have received concerning House Resolution 83, which provides for the printing as a public document of the book which has been prepared by the Legislative Reference Service of the Library of Congress, with the little assistance I was able to render in connection with its preparation. These communications come from every section of the Nation. This resolution, I am informed, is expected to be passed on by the Committee on House Administration next Wednesday, May 14. I hope the committee recommends the resolution favorably to the House of Representatives for passage. I am impressed that there is a universal demand for the publication of this document, and it is my hope that it will be printed without further delay. They are as follows:

I urge you to carry on the fight for publication of Fascism in Action.

House Resolution 83 must be passed if America is to continue to function as a democracy. All we fought for is in vain if the people do not know the forms that fascism can take even in this country.

DEAR SIR: I am looking forward to the day when I can read your book called Fascism in Action. I have read Communism in Action, and want to compare both. I hope you get authorization from Congress to print it soon.

Wish you success in your House Resolution 83, to publish Fascism in Action. This country has more to fear internally from native Fascists than Communists.

I want to add my voice to the fight for the publication of Fascism in Action. This manuscript is another bulwark in our defense against antidemocratic tendencies in America.

Just a word of encouragement and support for your action in trying to get Fascism in Action printed. There is certainly a great need for public enlightenment in this field.

As a student of American history, who expects to be teaching it before long, I am much interested in the document called Fascism in Action which you have been instrumental in preparing. I am told that you have encountered difficulties in getting it published. I very much hope that you will succeed in doing so, and if so, I am most anxious to obtain a copy.

I feel that it is very important that this pamphlet be printed at once and made available at a cheap price through the Superintendent of Documents. I know of many people who would be glad to buy copies and who feel that it is as important to understand fascism as communism.

I hope that you are successful, because we need a book of that kind to explain what fascism really is.

I am pleased to know that some people are aware of other subversive and un-American groups than the Communist. The country has lost sight of almost every un-American group other than Communist because our press uses the Communists as their whipping boy and I believe they do so to distract attention from the native Fascist and other isms.

Communism should be exposed and treated as any other subversive ism and so should any anti-American group. I believe we are in more danger from fascism in America today than from communism, it has stronger backing. It appears under patriotic names and associates with the best society. It is more subtle.

I understand there is a companion study to Communism in Action that has been prepared by a committee under your chairmanship—to be entitled "Fascism in Action." Since the teachers under my supervision wish to make a companion study, may I have an idea as to when the second report will be available to the public at large. I found your first study extremely readable and instructive.

Will be happy to receive a copy of Communism in Action, Government publication.

Will also be happy to receive copy of Fascism in Action, Government publication.

I think it imperative that Fascism in Action be published. I have just finished preparing a term research paper on the American press and am now more convinced than ever that at the present time fascism is much more, and undoubtedly so, a menace to this country than communism.

Its been just about 2 years ago that I returned from fighting a war against fascism overseas; must we face it again, this time right at home.

My husband and I are strongly in favor of your resolution, H. R. 83, calling for publication of Fascism in Action. We think it would be a dreadful mistake not to make this information available to the public.

In this country we spend much time, and rightly so, exposing communism and Communists. But let's not forget it was fascism which we fought in the war just ended.

The book on fascism, Fascism in Action, should be published without further delay, and every American really interested in the survival of democracy is behind your House Resolution 83, authorizing publication of this document.

I say that every true American is behind you, but I must qualify that and say that every true American who knows about it is behind you. If the fact of attempted suppression of this study were widely known, public pressure in favor of publication could not be resisted.

In the matter of House Resolution 83 offered by Representative WRIGHT PATMAN to require publication of Fascism in Action, prepared by the Legislative Reference Service, the agency which also prepared Communism in Action.

The spread of any "ism" is a threat to democracy and the Congress is to be commended for having ordered 500,000 copies of Communism in Action printed for circulation. However, it is disturbing to learn that now Representative PATMAN must fight to compel the issuance of Fascism in Action.

Early release for publication of this agency's facts on fascism will dispel the belief harbored by some that the Congress is not seriously alarmed over this growing danger.

The publication of this work will be a great contribution to the cause of democracy and peace. The American people are being stampeded into fascism under the guise of anticommunism, and they must be awakened to the fact that what happened in Germany is happening today in America.

These lines are not from one of your constituents, but I want to congratulate you for your truly splendid efforts to expose the imminent danger of a Fascistic trend made responsible by certain groups and individuals.

The writer is a fellow American 73 years young and is as much a foe of communism as he is a foe of fascism, believing in a truly democratic form of government, as was guaranteed to us under the Constitution and the Bill of Rights by the founders of these great documents.

Just as the threat of communism was publicized and the book thereon was made available to the people of this country, so should the threat of fascism, as described in your book, Fascism in Action, be made available and be otherwise publicized.

Perhaps there is little that I can do to help you to prevent the tabling or bottling up of your resolution, House Resolution 83. I want you to know that I shall be happy to do my share, feeling that I am only performing a duty as a fellow American.

It seems ironic that after fighting the most costly and devastating war in history, a war against fascism, a report which would reveal the very fundamentals of fascism is being suppressed. Ironic is not the word. It is a tragedy.

The menace to our democracy stems from fascism and Fascist-like sources, aided and abetted by all other phases of reaction. Unfortunately, too, a large mass of American sentiment, which is basically liberal and democratic, is misled into acceptance of reactionary dogma by the same kind of fears and prejudices which were nurtured by the Nazis.

The public is entitled to know about the methods of fascism. This book should be published without delay.

Congratulations for your sponsorship of the report, Fascism in Action, and for your continuing efforts to have said document published.

The threat of fascism is particularly menacing in that so many Americans fail to recognize fascistic propaganda when they encounter it. It is my belief that documents such as the above will prove helpful in demonstrating to more people the dangers to democracy inherent in the activity of our native Fascists, even as they have been awakened to the dangers of communism.

Greek-Turkish Aid

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 7, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following portion of a radio address by Don Pryor and four letters:

Mr. PRYOR. I used to believe that Rome had nothing to learn in the field of corruption and official venality. But I've just arrived here from Greece. By comparison, the atmosphere in this unhappy country is sweet and pure. Here in the original home of fascism a traveler from Greece feels suddenly free, wonderfully free. Just before I arrived, eight people were killed in a vicious massacre. Harmless men, women and children. Thirty-three were injured, another one died last night. A boy of 12. And that is politics in Italy—harsh, vicious, explosive. But in Greece, violence and terror are a national policy. Corruption is the rule. Ordinary honesty is a form of weakness. No place in the world, perhaps, is more depressing for any man who tries to find the truth. This is what some of our people began to learn this week, and this is the greatest obstacle we shall have to overcome if the aid we propose to give to Greece is to be effective.

The State Department is certain of its ground, however. And for better or worse, our program of aid to Greece actually got underway this week. Our Ambassador, Lincoln McVey, returned to Athens fully confident that Congress would pass the Greek aid bill. He set to work immediately to prepare the ground for the American mission which will move into Greece within the next week or two. He brought with him a bright, young economic expert, William Roundtree, who was a member of the Porter mission. He is now working out details of the agreement that is to be signed by the Greek Government as soon as Congress acts.

And, if present plans are carried out, this agreement is going to be a bitter pill for the Greek Government to swallow because we are going to insist on strict controls over the spending of American money. Not only that, but the American mission intends to supervise the entire Greek economy to see to it that the nation's own resources, for the first time, are used for the benefit of all the people. And that will be something new.

This is Don Pryor in Rome, I return you to CBS in New York.

BROOKLYN, N. Y., *May 4, 1947.*

DEAR REPRESENTATIVE SMITH: All of our lives members of this household have supported the Republican Party; we have opposed communism in America, particularly those hiding under the skirts of the Democratic Party. We are opposed to military loans to either Greece or Turkey. Our frank opinion is that President Truman is willing to blow in $400,000,000 of our cash to erase from next year's campaign the telling blow our party gave to the opposition when it reiterated Pravda's support of the PAC last election. Truman doesn't want to be caught again; but how can our party members swallow the bait?

Reading John Fischer's article in Harper's magazine for August 1946 (Reader's Digest, October 1946), the Scared Men in the Kremlin, Russia has good grounds for fearing aggression. During War I she was attacked by practically all her former allies; 14 times since 1800 has she been invaded; some of her cities have been occupied over 100 times. I would like to know how we can draw up a working agreement with her, when we boldly intend arming a neighboring country, Turkey, on her weakest frontier.

Reading the Standard Oil Co.'s (New Jersey) report for 1946, pages 8–9, convinces me that Middle East oil exploitation by Texaco, Standard Oil of New Jersey, Standard Oil of California, etc., has a great deal to do with sudden State Department et al. interest in Greece and Turkey. While Great Britain has exploited southern Iranian oil to the limit, and we have been bribed to defend her interests by being cut in on the exploitation, Russia is being fought tooth and nail to obtain like concessions in northern Iran. All of this doesn't square with the Atlantic Charter.

All of these loans are, furthermore, inflationary; while our party is trying to fulfill its campaign pledge to reduce taxes this year (Truman wants any surplus to reduce debt this year, and taxes next year by him in an election year), it is piling up further loads on the taxpayers by all these external loans—gifts.

TAFT tells us that the President has committed the country to all of this, and we must back the President in his dickering with Russia. Is this the function of an opposition party, to back the leader, however wrong he may be? Truman had no qualms about freedoms of peoples when he permitted American soldiers to shoot down revolting natives in Indochina.

I am simply against our party backing up those loans.

FRANK MOCK.

ITHACA, N. Y., *May 3, 1947.*

The Honorable LAWRENCE H. SMITH,
Member of Congress from Wisconsin,
House of Representatives,
Washington, D. C.

MY DEAR MR. SMITH: This is written to convey to you my appreciation, encouragement, and support for the fight that you are making against the pending bill for military intervention in Greece and Turkey. I believe that full three-quarters of the people are opposed to this revolutionary and unnecessary program, which may very well end in bankrupting the United States. I also believe that the bill would confer upon the executive department such tremendous power that it will become impossible for citizens to withstand the mobilized pressures which the administration may bring to bear in behalf of any demand that it may make in the name of this un-American program. In view of the unlimited ramifications, foreign and domestic, of the plan, it may lead to a form of executive dictation that would practically destroy the check-and-balance feature of our Government, and that separation of powers which is so essential to the preservation of the liberty and the internal stability of the country.

With many thanks for the stand you have taken, and with best wishes for the success of your efforts, I am,

Yours sincerely,

CURTIS P. NETTELS,
Professor of American History, Cornell University.

JACKSON, MISS., *May 5, 1947.*

Congressman LAWRENCE H. SMITH,
House Office Building,
Washington, D. C.

DEAR MR. SMITH: As one who has taught history in college and university and has written a comprehensive history on Turkey, may I suggest the following facts concerning the Turks.

To arm Turkey will be a great danger to the peace of the world and to the best interests of the United States, on account of the past Turkish history and character. This undoubtedly will invite war and perpetuate wrongs Turks have committed and this is exactly what the Turks are aiming at.

The Turks have made a scrap of paper of every treaty they have signed.

England and France helped the Turks before the First World War; but the Turks treacherously waged war against them.

During the Second World War they were under treaty obligations to help the Greeks but left them to the tender mercies of the Axis Powers.

What guaranty do we have that the Turks, armed, fed, and trained by us, will not turn against us?

The Turks' nefarious designs and insidious intrigues are aimed to instigate a war between the United States and Russia and not to protect us against communism.

The proposed "gift" of $150,000,000 to the Turks can be used by us for the purpose, but surely not by the Turks if it is given to them.

In case of war with Russia we can easily occupy the Dardanelles and Asiatic Turkey and paralyze any Turkish move and forestall any Russian advance.

We cannot make the Turks the guardians of our ideals in the Near East. Historically, politically, and economically such a procedure will put the United States alongside of international intriguers and bandits.

Communism is an idea, and we have to fight that idea with a stronger and a better idea. Guns never stopped an idea.

The Turks do not deserve any help whatsoever.

The Turks cannot be trusted. They are playing a diplomatic double game which will eventually benefit only the wily Turk.

The Turks received from us as lend-lease more than $26,000,000 but did not shed a drop of blood for the cause of the United States. And now some deluded persons propose to extend them some more help. What a folly!

Under the cloak of neutrality, they helped materially our enemies and sold us goods at outrageous prices, thereby accumulating a gold reserve of $200,000,000.

The bolstering up of Turkey will never work. Turkey is a cancer on the body-politic of the world. Only amputation—that is, division of Turkey in three distinct parts—will remove the cancer of the world: (1) Make a state of Constantinople, including European Turkey and a generous slice of Asiatic Turkey, governed internationally; (2) free President Woodrow Wilson's Armenia from the yoke of the Turks; (3) make the remainder of Turkey a purely Turkish state, so she cannot play one nation against another as she is now doing.

Arming Turkey will be an open challenge to Russia which eventually will result in a conflict.

Helping the Turks will not help fighting communism for there are no Communists in Turkey. The ignorant Turk does not even know what is communism. This is all a pretense and a sham on the part of the Turks.

It will be a great injustice to the American people to take away their honestly earned money and donate to the dishonest Turks, as it is proposed by Dean Acheson, Acting Secretary of State.

Records show that the Turks robbed and massacred since 1915, Armenians, Greeks, Kurds numbering not less than 4,000,000 victims.

The Turks deliberately ruined the noble and self-sacrificing American missionary work of a century in Asiatic Turkey during the First World War.

Thank God, we're strong enough to protect ourselves and our interests in the Near East, or anywhere in the world without the help of criminal Turks.

With admiration and applause for your courageous crusade against the intrigues and machinations of the Turks, I am,

Yours very respectfully,

JOHN G. MOSKOFFIAN.

HARTFORD, CONN., *May 3, 1947.*

HON. LAWRENCE H. SMITH,
Washington, D. C.

DEAR MR. SMITH: As a citizen who is greatly disturbed at his Government's proposal to undertake this Greek-Turkish adventure, I want to express my appreciation for the intelligent and strong fashion in which you have opposed this ill-considered legislation.

Of course, I am not directly one of your constituents, but on a matter of this importance I am assuming it in order to communicate with any Congressman and I am taking the liberty of writing to you.

While the Senate has passed this measure, I—and a great many of my friends—count upon the Members of the House, those who have most recently come from election by the people, to bring a little more light into this controversy. Certainly, the Senate passed the legislation without enthusiasm, and merely as the choice between two terrible evils. I deny that there are only two alternatives, and I see no reason why we cannot give every possible economic assistance to Greece (Turkey doesn't need this), under such supervision, for instance, as the American Friends Service Committee might render, or directly through the United Nations (which, in turn, might act through the AFSC).

But, under no conditions, should there be the chance of a military imbroglio, and I surely hope that you will continue to use your splendid influence to prevent the passage of this bill. The whole thing is absolutely silly, or would be, if it were not so desperately serious at the same time. We are talking of the U. S. S. R. as if it had all the power in the world; yet our own Government knows perfectly well that Russia is most emphatically not able to offer more than token resistance to anything. There are a thousand confirmations of this; in our Hartford Times, on May 1, for example, there is an article by Cecil Dickson, just returned from Russia; Mr. Dickson is very conservative, and is probably not opposed in the least—neither is his paper—to this Greek-Turkish incursion of ours. Yet the facts in this article offer some of the best possible proof of the stupid straw men we have been building up. I am enclosing article herewith.

Thank you again for your leadership.

With deep appreciation, I am,

Sincerely yours,

CHARLES P. JERVEY.

Portal-to-Portal Pay

EXTENSION OF REMARKS
OF
HON. ELBERT D. THOMAS
OF UTAH
IN THE SENATE OF THE UNITED STATES

Thursday, May 8 (legislative day of Monday, April 21), 1947

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a letter, which has already been made public, addressed to the President of the United States, concerning the portal-to-portal pay bill. This letter, with the character of the signers, is of such historical and general public interest that I feel justified in making this request.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MAY 3, 1947.

THE PRESIDENT,
The White House,
Washington, D. C.

DEAR MR. PRESIDENT: On May 1 the Congress enacted H. R. 2157 entitled "An Act to define and limit the jurisdiction of the courts, to regulate actions arising under certain laws of the United States, and for other purposes." The measure is now before you for consideration. We most earnestly urge you to veto it.

The background of H. R. 2157 is, of course, well known. Congressional interest was stimulated a few months ago by the filing of a number of lawsuits involving large claims for portal-to-portal pay. Many of the suits have since been abandoned and others appear to be without merit. But the mere institution of these legal actions aroused fears of economic dislocation. As a consequence there was insistent demand that employers be protected against unanticipated liabilities which had been incurred without negligent disregard of the protective provisions of the Fair Labor Standards Act of 1938, the so-called wage-hour law.

If H. R. 2157 related only to this issue, its significance would be narrow. But in truth, the bill deals with much more than portal-to-portal-pay suits and profoundly affects the whole national effort to maintain minimum working standards not only under the Fair Labor Standards Act, but under the Bacon-Davis and Walsh-Healey Acts as well.

The major objections to H. R. 2157 are these:

1. The bill loses sight of the fact that the wage-hour law is intended to protect over 9,000,000 unorganized workers against oppressive working conditions and to guard the great mass of honorable employers against unfair competition of unscrupulous business rivals. To impair the enforceability of the Fair Labor Standards Act and the two other acts mentioned above is to destroy the standards themselves. Enforceability of these acts would be greatly impeded if H. R. 2157 were to become law, and to that extent ethical employers and necessitous employees would be exposed to the pressure of substandard producers.

2. The bill imposes a 2-year statute of limitations upon all claims arising under these acts. This is an unduly short period. The process of inspecting pay rolls and detecting violations is necessarily a lengthy one. Too brief a statute of limitations puts a premium on attempts to violate the law, for even a conscious violator would be immune from the consequences of his wrongful acts if they remain concealed for 2 years. All the leading industrial States have much longer periods of limitation than H. R. 2157 proposes: New York, New Jersey, and Pennsylvania, for example, allow 6 years for the bringing of suits to recover past-due wages. Nothing less than 3 years can be deemed fair or workable.

3. H. R. 2157 makes an employer's duty to pay the wages prescribed by law turn on subjective rather than objective tests. At present an employer is liable, as he should be, to pay wages for time spent by employees in his service, for his benefit, and under his direction. If H. R. 2157 were to become law, he would be relieved of liability if his failure to pay was consistent with his own past practices or if he believed in good faith that he was not liable. To establish liability by these tests would be a task of major dimensions. Moreover, this provision would legalize unfair competitive advantages in interstate commerce which it was the very purpose of the Fair Labor Standards Act to eliminate. Thus, for example, if an employer had never paid for inspection time, although it was the prevailing industry practice to do so, he would by this bill be excused from paying in the future, as well as excused from liability for past delinquencies in this respect. But employers who had always scrupulously observed the requirements of law would be under a duty to continue their proper course of conduct. Hence those who had in the past been least attentive to the statutory command would be rewarded instead of penalized, for they would be given a future competitive advantage over more conscientious employers.

4. The new definitions plus the new and untried language with respect to compensable activities, such as "postliminary" and "good faith," makes future enforcement speculative. Certainly years of litigation will be required in order to bring about a working understanding of the language of the amendment and to give any degree of certainty either to enforcement or compliance.

Time has by no means fully eliminated the evils which called forth the Fair Labor Standards Act of 1938. Too low pay and too long hours can now, as then, blight the lives of the workers immediately involved, the fortunes of ethical employers who must face unscrupulous competition, and, ultimately, the national economy. The present law safeguards what were deemed in 1938 to be minimum standards of decency. Assuredly those safeguards cannot be lowered in 1947 without destroying a statute which for nearly 10 years has proved its worth.

We oppose H. R. 2157 because, whatever may be its professed purposes, we believe it will have this destructive effect. Accordingly, we join in requesting you, most respectfully, to withhold your approval of the bill.

Very sincerely yours,

Mary Anderson, Washington, D. C., former chief, Women's Bureau, United States Department of Labor; Mrs. John B. Andrews, New York, N. Y.; Sarah Gibson Blanding, Poughkeepsie, N. Y., president, Vassar College; Charles Bolte, New York, N. Y., president, American Veterans' Committee; Elizabeth Brandeis, Madison, Wis., professor of economics, University of Wisconsin; Emily Brown, Poughkeepsie, N. Y., professor of economics, Vassar College; Charlotte Carr, New York, N. Y., social worker; Mrs. Allan K. Chalmers, New York, N. Y.; Edwin L. Clark, Winter Park, Fla., Rollins College; Morris Llewellyn Cooke, Philadelphia, Pa., consultive engineer; Grace L. Coyle, Cleveland, Ohio, professor of group work, School of Applied Social Sciences, Western Reserve University; Hartley W. Cross, New London, Conn., professor of economics, Connecticut College; Merle Curti, Madison, Wis., University of Wisconsin; Mary W. Dewson, Castine, Maine, former member, Federal Social Security Bank; Mrs. Dorothy Douglas, Northampton, Mass., professor of economics, Smith College; Paul H. Douglas, Chicago, Ill., professor of economics, University of Chicago; Clark Foreman, Washington, D. C., president, Southern Conference for Human Welfare; John A. Fitch, New York, N. Displaced Persons of Europe

EXTENSION OF REMARKS

OF

HON. J. HOWARD McGRATH

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Thursday, May 8 (legislative day of Monday, April 21), 1947

Mr. McGRATH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very fine editorial entitled "People Without Countries," which appeared in the New York Times on May 2, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PEOPLE WITHOUT COUNTRIES

In the displaced-persons camps of Germany and Austria, in the deceptively serene hillside villages of the American zone and the shelled barracks that once housed the SS, and in the Allied Commission Camps of Italy, live the new race of DP's, as the euphemism goes, people who once had a country. Numerically, as a human group, they are small—some 834,000 former nationals of Estonia, Lithuania, Latvia, Poland, Hungary, Rumania, Polish Ukraine, Czechoslovakia. Psychologically, they represent the greatest living challange to the purposes for which the UN was created—"to reaffirm faith in fundamental human rights, in the dignity and worth of the human person."

Their one immediate hope for decent living rests on the establishment of an International Refugee Organization. In less than 2 months UNRRA, which has administered the camps and provided some sort of organized activities and schooling for the children, closes down. Yet no organization is equipped to continue UNRRA's humanitarian work. The IRO, whose Preparatory Commission met in Lausanne yesterday, will probably become a reality with the accession of China and the expected accession of Australia. These adhesions, when ratified, would provide the required 15-nation membership and the required 75 percent of the proposed operating budget of $151,060,500. But 11 countries, including the United States, have joined, subject to ratification. There will, therefore, be some delay before IRO can become a going concern.

Even so IRO provides nothing concrete for the DP's resettlement. Nor can it do so unless immigrant-receiving countries are willing to open their doors. As a world power the spotlight falls most unpleasantly on the United States.

Immigration to this country, regulated by quotas, is limited to 153,929 aliens each year. Britain still is assigned 65,000 of these numbers (which she never uses up) and Germany-Austria 26,000. The remainder are sprinkled among threescore countries—Poland, for instance, 6,524; Estonia, 116; Lithuania, 386; Latvia, 236. Quotas are not cumulative and expire at the end of each year. Except for 1939, the number of unused quotas each year since 1931 has exceed 100,000; in the years 1945–46 less than 20 percent of quotas were used. The President has asked Congress to show leadership "in the form of new legislation" to admit displaced persons, saying, "I do not think that the United States has done its part."

At least three bills buried in congressional committees—the Stratton bill to admit 400,000 DP's over a 4-year period, the Ives and Javits bills to admit DP war orphans of 14 years and younger—deserve a better fate. There is a way for America to induce other countries to take new settlers—by showing an example and opening her doors to a fair share.

Lucas Offers a Tax Plan

EXTENSION OF REMARKS

OF

HON. BRIEN McMAHON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Thursday, May 8 (legislative day of Monday, April 21), 1947

Mr. McMAHON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a thought-provoking editorial entitled "Lucas Offers a Tax Plan," from the Chicago Sun of Sunday, May 4, last.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LUCAS OFFERS A TAX PLAN

Senator LUCAS has introduced a tax bill which he urges the Senate to adopt as a substitute for that passed by the House. With President Truman, the Senator says he is against cutting taxes now. But if the Republican leaders twist his arm, he offers a more equitable method of proceeding with the tax cut.

First of all, Senator LUCAS would make the cut effective next January 1 instead of July 1 or last January 1. This, in itself, would be a major improvement. Postponing the cut would cushion the loss of revenue to be sustained by the 1947–48 budget, which Congress has not yet succeeded in trimming significantly. It would permit high 1947 incomes to be taxed, as they should be, and yet would come into effect at about the time mass purchasing power will most need a boost.

The ideal way to handle this problem would be with an optional date, permitting the Treasury to put the cut into effect whenever it would produce the greatest beneficial effect on the national economy. But a Republican Congress is not going to hand President Truman such a politically pleasant perquisite as that. Indeed, it will be reluctant to take advice from any Democrat, lest the precious boon of lower taxes shed its Republican auspices. Nevertheless, the Lucas plan has high merit for its greater fairness

to individual taxpayers and greater contribution to economic welfare.

Instead of a modified flat-rate cut for everybody, as proposed by the House, Senator LUCAS would increase personal exemptions from $500 to $600 a person, and reduce surtax rates by two points in each bracket. As he says, this would cut taxes, roughly, in the same way they were raised, whereas the House plan would benefit most the most well-heeled. In addition, LUCAS would eliminate a long-standing inequity by permitting a husband and wife to split their income for tax purposes.

The net effect of his plan is to give the greatest proportionate tax relief to those in the lowest income brackets. While reducing revenue by about the same amount as the House bill, it would eliminate nearly 5,000,000 persons in the lower brackets from the tax rolls. Those are the people who do most of the buying in the consumer markets.

Senator LUCAS' proposal that husband and wife be allowed to divide their income for tax purposes is an outgrowth of a situation arising from community property laws now existing in nine Western States. It was an old Spanish custom to regard a husband's property as 50 percent owned by his wife. States which have adopted this system treat income in the same way. Consequently a man earning $50,000 in California pays Federal taxes as if he earned $25,000 and his wife earned the same amount. At present this would mean a tax of $18,164. In Illinois the same man, same income, same wife pays a tax of $24,795.

The direct and fair way to deal with this obvious inequity is to compel families living in community-property States to pay the same Federal taxes as those living elsewhere. There is a legal fiction involved in pretending that part of a man's income is his wife's when it is not. But the fact is that the community-property States do so pretend, and the fact is that Congress for years has declined to abolish the pretense. As an alternative to permitting nine States to become a tax haven, it would be distinctly preferable that all families in all States be placed on the same footing.

No doubt the Republican leaders of Congress will look down their suspicious noses at the Lucas plan, since it has the implied sanction of the Treasury. But if they insist on cutting taxes they can do so far more fairly with his plan than with the House bill.

St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. GEORGE D. AIKEN
OF VERMONT
IN THE SENATE OF THE UNITED STATES

Thursday, May 8 (legislative day of Monday, April 21), 1947

Mr. AIKEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "St. Lawrence Seaway," published in today's Washington Post.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ST. LAWRENCE SEAWAY

Final agreement on the St. Lawrence seaway project seems to be closer than it has ever been before. Supporters of the project have evolved a new plan calling for self-liquidation that should remove one of the most formidable objections previously raised. Canada is said to have agreed to this principle and a bill to put it into effect so far as the United States is concerned now has bipartisan support. With such stalwarts as Senator VANDENBERG, chairman of the Foreign Relations Committee, and Senator BARKLEY, minority leader, behind it, and with the added approval of the State Department, the legislative authorization of this great project should at last begin to move forward.

Development of the proposed 27-foot navigation channel connecting the Atlantic Ocean with all the Great Lakes, with accompanying facilities for the generation of electricity up to 2,200,000 horsepower, has been delayed for many years. Much of this delay, however, has been unavoidable. Certainly it would have been unwise to divert large resources of manpower and materials into such a long-range undertaking during the war years. Even now it would be premature to start the actual construction because of numerous shortages resulting from the war. But it is not too soon to pass the necessary legislation and complete the agreement with Canada so that the project may be undertaken within the years ahead. In the case of an undertaking of this sort careful planning and the achievement of a meeting of minds conducive to its success are more important than speed. We have little doubt that the end result will be more satisfactory because the plans have been so extensively discussed and revised over a period of years.

How a Lobby Tricks

EXTENSION OF REMARKS
OF
HON. GEORGE D. AIKEN
OF VERMONT
IN THE SENATE OF THE UNITED STATES

Thursday, May 8 (legislative day of Monday, April 21), 1947

Mr. AIKEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "How a Lobby Tricks," written by Thomas L. Stokes, and published in the Washington Daily News of May 3, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HOW A LOBBY TRICKS

(By Thomas L. Stokes)

Why are the railroads so successful in getting what they want from Congress?

There is considerable illumination on this subject in exhibits submitted by the Justice Department in the antitrust case started a few days ago in the Federal district court at Lincoln, Nebr., against 47 western railroads, the Association of American Railroads and others.

They show the clever technique by which was developed the powerful lobby that has operated here. Its current objective is passage of the Bulwinkle-Reed bill to exempt railroads from the antitrust laws and thus reinforce the monopoly which already is so costly to consumers.

The efficacy of this lobby was demonstrated in the last Congress by the ease with which the Bulwinkle bill was rushed through the House after only 40 minutes debate. It was checked in the Senate only by threat of a filibuster by foes of the measure. Early this session again it was pushed through the Senate Interstate Commerce Committee by its sponsor there, Senator CLYDE REED, Republican of Kansas, and now is awaiting Senate action. It must also go through the House again.

The railroad lobby technique, developed by officials of the Association of American Railroads in the middle thirties, is explained in a letter from R. V. Fletcher, then AAR vice president, now its president, to E. E. McInnis, general counsel of the Atchison, Topeke & Sante Fe Railway dated September 27, 1934. Here are excerpts:

"All of us have long recognized that the only effective way to influence congressional action is to convince the influential men in each congressional district that the public interest and the interest of the railroads coincide.

"I have the impression that most of the Congressmen, particularly those living in the smaller States and in rural districts, depend for their support upon a comparatively few men in each county in their respective districts. If we could reach the men upon whom a Congressman depends for advice and assistance in his political campaign, we could go far toward having the problem solved.

"I have visualized a type of organization with which we could assemble here in Washington information as to who are the influential men in each congressional district. I am, of course, aware of the dimensions of such a task and we can only approximate complete success. * * *

"We could then be in a position to suggest to railroad officers, local attorneys, railroad security owners, and others with whom they might discuss these matters, so that our influence would be felt. It frequently happens that a particular Congressman occupies a key position in connection with some measure pending in Congress.

"If at that time we could call upon a hundred of his influential constituents in his congressional district and persuade those persons to write or wire him their really sincere convictions on the question, I think the influence would be almost immediately felt."

None of this, of course, is flattering to the Congressman who is represented as rather a dupe. But important men back home who assist him in his campaign, which presumably includes campaign contributions, unquestionably do have influence with him.

This organization was worked out, as proposed, with dossiers on Members of Congress and names of those who were regarded influential with him. It is such a commentary on our supposed democratic process that its development and how it was used to check legislation the railroads didn't want will be disclosed subsequently from correspondence of those who perpetrated it.

Odyssey of a Jewish Partisan

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 8, 1947

Mr. JACKSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Josef Sigelbaum, from Plain Talk for May 1947:

ODYSSEY OF A JEWISH PARTISAN

(By Josef Sigelbaum)

On June 4, 1943, the New York Times carried a long dispatch from London announcing the suicide there of Szamul Zygielbojm, Jewish labor leader and member of the Polish National Council. It was a story which went around the world, even at the height of the war, because the suicide had left a moving letter which showed his act to be a last resort to shake world apathy in the face of

the unprecedented mass slaughters of Jews. In it he charged that "the responsibility for the crime of murdering all the Jewish population in Poland falls in the first instance on the perpetrators, but indirectly also it weighs on the whole of humanity, the peoples and governments of the Allied States, which so far have made no effort toward concrete action for the purpose of curtailing this crime."

(Mr. Zygielbojm died in the belief that his whole family had been wiped out. He did not know that his son, the author of this exciting outline, had survived, and had joined first the Red partisans and then the Red Army to fight against the Nazis. Josef Sigelbaum (anglicized spelling) attained the rank of captain, was wounded twice and was repeatedly decorated for bravery in action, having been awarded the Order of the Red Star, the Medal of Moscow, the Medal of a Partisan of the War for the Fatherland, first class. In spite of a promising career in the Soviet service he found life unbearable under the Communist dictatorship and made his way to Poland, thence to Germany where he landed in a concentration camp. He finally reached a DP camp in the American zone. He arrived in the United States last December, and published a series of articles on his experiences as a Red guerrilla in the Jewish Daily Forward. He is now writing the story of his 7 years' Odyssey under the title of "The Bleeding Earth," some highlights of which are presented below.)

I close my eyes and I can see the entire terrible nightmare which was my life during the last 7 years—and I can hardly believe that all of it is already part of the past; that I go on, living; and that I am in a free country, that the people around me are free people, that I can truly tell—tell without fear, without danger to my life—all that has happened to me during these blood-drenched 7 years.

I was in Russia for almost 6 years. In September 1939, when Hitler struck, I was one of the horde of 600,000 Jewish refugees who fled from Poland eastward, in the direction of the Soviet Union, in the hope that there all our sufferings would end. When I first heard that the Russians had crossed the Polish border I naturally assumed that they were coming to help the Polish Army in the fight against Nazi Germany. What a shock it was to learn that both the Fascists and Communists entered Poland as aggressors.

I reached Brest Litovsk, normally a small city, where 250,000 human beings were encamped. Soldiers and refugees were all over, wherever there was a bit of space to stretch or a corner to huddle in. Here I met two of my closest comrades in the Socialist movement, who had been schoolmates of mine and were still under the impression of an astonishing scene they had witnessed.

On September 19, 1939, the day when the Germans had handed over the city to the Red Army, there was an impressive military parade. A reviewing stand had been erected in the main street of Brest Litovsk and was decorated with red banners and swastikas. High Nazi officers stood side by side with high Soviet officers while first the German and then the Red formations passed in review. A military band played the Horst Wessel song first, then the International. Photographs of the ceremony appeared in the German press.

The populace, particularly the Jewish onlookers, were dumbfounded by the spectacle. A few days later large-scale arrests of both inhabitants and refugees began. The NKVD struck first at those known to be Socialists. It was here, while I was still in town, that the Jewish leader, Henryk Ehrlich, whose wanton execution together with Victor Alter aroused world-wide protest, was arrested. Here I saw many of my comrades for the last time.

I moved eastward and arrived at Gomel with a large transport of Polish refugees. The Soviet administration received us in a very friendly manner.

I found employment at a peat works, about 12 miles from Gomel, as a lathe operator. I did piece work aiming at the best quality, but soon found that it took me longer and my earnings were correspondingly less. I recall how the foreman of my group told me smilingly, "We work here differently than in capitalist Poland."

The following morning I went to watch one of the Soviet lathe operators. I stood in front of his bench for almost 2 hours—and I could not help staring at him in utter amazement. He turned out triple the amount of work I was doing. I checked the bearings which the operator was producing with lightning speed. About 70 percent of them were faulty—they simply fell through the holes in the wheels. When I showed it to the operator he merely took a sharp hand tool, made a few notches on the outside of the brass bearing, and forced it into the wheel. "Ready," he said, and laughed heartily.

"But in three more days the wheel will have to be repaired again," I said with astonishment.

"That is none of my business," he said with a smile, "in the meantime we'll make money * * *."

Once, long before the war, I had read in a newspaper that Soviet locomotives had to be completely overhauled every month. I could understand the reason for it now.

I finally quit my job and went back from White Russia to the occupied Polish regions. I was arrested in Lida in the course of the mass round-ups of refugees. My wife and I spent 3 months in the prison. We were freed, but our new passports contained the stipulation that we were forbidden to live in larger cities and within 60 miles of the border. Eventually I came to Baranovichi, where after many difficulties I was granted permission to live and work.

All this took place during the first half of 1941. Then came Hitler's sudden attack on Russia, followed by terrible months in the ghetto of Baranovichi, where we felt the full force of German brutality.

* * * * *

Joining the underground resistance movement, I smuggled arms into the ghetto. We learned to use them in cellars and in specially constructed subterranean passages. Floggings, hangings, and shooting of Jews for the smallest offense were a daily occurrence.

My wife and child were betrayed, and slain by the Nazis. Already as a full-fledged guerrilla, I later caught up with the traitor to avenge their death.

This period of my life was spent with a band of partisans fighting the Nazis in the Pripet marshes of Polesye.

From there I was sent with another man across the front lines to establish contact with the Red Army. We were looking forward with joy to our reception. Instead, when we arrived on the Soviet side, we were seized as spies, and narrowly escaped being shot.

I was then sent to a military school at Moscow, where I was trained for sabotage and reconnaissance work. We were dispatched for a brief but difficult assignment amidst the snowfields of Murmansk, Kandalaksha, and Petsamo. Then, for several months, we took part in the defense of Moscow.

* * * * *

In October 1942 I was one of 10 Red Army officers parachuted by a Soviet airplane behind the German lines in Yugoslavia. All of us were graduates of the sabotage academy of the secret section of the NKVD. Our mission was to instruct the raw troops of the partisan chief, Josip Broz, better known to the world as Tito.

We were expected. Seven fires on the ground marked the spot. I jumped into the strangest, most intensive adventure of my war experience. A crowd of rough-hewn partisans greeted us enthusiastically. Among them I recognized Tito—I recognized him as one of the Yugoslavs who had attended our school in Moscow.

The same night a group of 10 British officers were dropped at the same spot. All of us, Russians and Britons, were attached to the personal staff of Tito; I was one of those who shared a dugout with him during the first few weeks.

Thereafter we were deployed among different partisan divisions. Mine was stationed in the hills between Split and Sarajevo; a British officer, John Scott, was also attached to my division. My special assignment was to train the partisans in reconnaissance and sabotage activities; Scott taught them mass attack and strategy.

For nearly 8 months I shared the life of a Red partisan. One of my first undertakings, at the head of a fine lot of courageous fighters who seemed contemptuous of death, was to ascertain the German positions on the Sarajevo-Zagreb railway. It was during this episode that we ran into a large group of Chetniks, at the grave of the legendary national hero Milosh, in the Jancharn hills. They greeted us with the cry, "Long live free Yugoslavia." Among them was a stocky man with a thick, gray-streaked beard, wearing horn-rimmed glasses. Later I learned that it was the fabled General Mihailovich. Such bloodless meetings of partisans and Chetniks became rarer with every passing month.

Early in 1943 the Germans surrounded our territory. Tito was cornered and wounded in the hand in the course of the fighting. We understood later that he was rescued by a daring Soviet air mission which made a miraculous landing under the most difficult conditions.

I was in the thick of the great partisan offensive in the spring of 1943. My group captured a small town on the river Vrbas. In the abandoned German staff headquarters I picked up a copy of the Berlin paper, Voelkischer Beobachter. Casually I glanced through its pages. Suddenly my own family name caught my eye in a headline.

It was a cynically written report of the suicide of my father in London.

When my unit returned to Moscow, I was assigned once more to guerrilla warfare behind the German lines. I spent the last 2 years of the conflict operating as a partisan in the vicinity of Pinsk, Baranovichi, and Brest Litovsk, and rose to the rank of captain in the Red Army. During reconnaissance raids we often crossed the Bug River and met Polish partisan bands. We also encountered and sometimes joined forces with Jewish partisans from Slonim and Volkovysk, fraternizing with Jewish heroes who had distinguished themselves in battle against SS and Gestapo troops.

I visited scores of cities and towns and villages where the mass of Russia's Jews had once lived. It was impossible not to realize that although officially anti-Semitism is forbidden in Russia, nevertheless one feels it in daily life, in the factory, in the office, and most of all, in prison.

Conversations with Russian Jews on the subject would almost invariably strike the note of praise for the Communist regime, although the speaker might have been suffering acutely. The reason for it became clear. It is generally believed that a third of the adult urban population serves the NKVD. Brother fears brother, a father fears his son. Each high official, each officer, has his aides in the NKVD, and these in turn are watched by other informers and operatives.

The powerful machine of the NKVD sees to it that no vital news from abroad penetrates the cage which is Russia. The youth of the country does not know any other life and has no conception of how workers, for instance, live in America.

I once saw a picture in a Soviet newspaper designed as propaganda against the United States. The picture showed a group of tramps. The legend underneath it read: "This is how American workers live."

I left for good the Soviet "land of promise" where a great career beckoned, to return to my native Poland. Here I met comrades who had fought in the ghettos, and lived to tell their tales of horror.

Columns of refugees streaming back from Russia to Poland looked like people from another world. Their experiences still form one of the great untold chapters of our times. These were survivors of the hordes which had been deported to do forced labor. They had died by the thousands at their tasks, in their bunks at night, of typhus and malaria. They had died on the roads, and no one cared.

Of the 600,000 Polish Jews who had escaped to Soviet Russia during the war, only 200,000 had come back by the end of 1946, according to the official figures published in Warsaw. The remaining 400,000 perished, not in gas chambers and crematoria, but in the forests of Siberia and the wastelands of central Asia. They died building "socialism" on the Soviet pattern, creating "the happy life" according to Stalin.

Appropriation Cuts

EXTENSION OF REMARKS
OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 8, 1947

Mr. BEALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Cumberland News, Cumberland, Md., May 6, 1947:

EVERY APPROPRIATION CUT BRINGS BUREAU PROTESTS

Expanding on our editorial of yesterday dealing with how bureaus and agencies of the Government are squealing like stuck pigs because a Republican Congress is determined to reduce the cost of Government through Budget slashes, it has come to our notice that free-spending bureaucrats are raising a hue and cry because a House committee has killed an appropriation of $31,381,220 to maintain and expand the State Department's new program of "cultural diplomacy."

Secretary of State Marshall is endeavoring to have this appropriation restored to the Budget and to that end held a conference of Congressmen and diplomats last night at his office, with a proposal that the "Voice of America" undertaking be removed from his Department and placed in the hands of a committee, comprised of civilians and representatives of broadcasting companies.

This appropriation, like every other item in the budget, has its friends who call it indispensable. But is it worth $31,381,220 to the taxpayers? We doubt it. This operation is one of the war babies that survived demobilization. It has continued without authority of Congress, by virtue of a Presidential decree, which is not a practice to be encouraged in peacetime. It includes, among other things the so-called Voice of America, which has 36 radio outlets overseas.

Contention that this Voice, the cost of which represents about half the total appropriation, is on the air in various languages for some 400 hours a week, means little when we don't know how many listeners the program reaches. Even good propaganda is valueless if no one hears it. And we aren't satisfied that ours is good propaganda.

The Voice, on February 17, began hour-a-day broadcasts to the Soviet Union. Reception in Moscow was not good at first. Later, it was reported as moderately good to unsatisfactory. For one period, the program got off the beam and was heard in Latin America, where the Russian-language production must have caused some mystification.

It has been established that the Voice is heard in our Moscow Embassy, and in the Kremlin itself, for it has provoked criticism there. But surveys by American reporters in Moscow disclosed little evidence that it had any general audience among the Russian people.

Reliable statistics as to potential listeners on all of the program's outlets should be demanded by Congress before seriously considering a revival of the Voice.

The State Department was at the point of adding Greek and Turkish broadcasts when the appropriation was eliminated. Were surveys made to determine whether there were enough receiving sets in those countries to warrant the effort? There are no iron curtains in those areas, so such check-ups would have seemed practical, and certainly they were essential.

A study of the broadcasts themselves would be in order once the potential audience for the 36-language Voice is determined. But let us hold up on the money until both studies can be made, because, to reiterate: $31,381,220 is a lot of money to spend if it isn't getting results.

Hospitals, Now

EXTENSION OF REMARKS
OF

HON. THOMAS G. ABERNETHY

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 8, 1947

Mr. ABERNETHY. Mr. Speaker, of all the legislation enacted throughout these many years in behalf of the veteran, that which means most to him is the authority given the Veterans' Administration to construct, maintain, and operate hospitals wherein he may secure relief from his ailment and disability. America's first duty is to the veterans beset with disease or disability.

Ample authority for expansion of the hospital program was carried in the GI bill enacted by the Seventy-eighth Congress. Unlimited appropriations were authorized to put the program into effect. But construction is lagging and lagging badly. The situation is deplorable. No effort and no appropriations should be spared. I hope that everyone charged with responsibility and authority in this program will spare no time nor effort in speeding constructions and that the Congress will make unlimited appropriations available.

As a part of my remarks, Mr. Speaker, I would like to include an editorial taken from the Disabled American Veterans' Semi-Monthly of April 29, 1947. Every Member of Congress should read it and then make an earnest effort to do something about it. The editorial follows:

HOSPITALS, NOW

What has halted the construction of the veterans' hospitals which have been authorized by Congress?

Who is responsible for this sorry and contemptible piece of negligence on the part of our Government?

Wounded and disabled veterans of World War II, 10 times in numbers of our comrades of World War I, are awaiting and in need of adequate hospitalization and treatment—the kind of hospitalization, treatment, and modern methods of healing and rehabilitation envisioned by General Hawley and not only promised but approved by unanimous congressional action. Yes; we have said it before, and we say it again: This failure to meet the medical needs of the men and women who have actually saved this country from destruction has reached the proportions of a national scandal.

We learn that some Congressmen propose to postpone construction of all veterans' hospitals in the name of economy. What kind of economy is it that will disregard the responsibility of relieving the pain and misery or lengthening the lives of these American youths who gave so much in America's wars against oppression?

Why is it possible for private enterprise to construct a great 20-story modern hotel in a great city, a hotel which was started and will be completed within 12 months, while in the same community not a spade full of dirt has been turned over toward the construction of a much-needed 750-bed veterans' hospital authorized months ago? Why the construction of great, new race tracks, new night clubs, new everything, everywhere, but no new hospitals with needed beds for the men who brought back from the jungles of Africa and the fever-ridden swamps of the South Pacific tropical diseases which need immediate treatment now, unless the victims, American war heroes, are to become chronic invalids beyond the help of modern medical science and a charge on their people and their country the rest of their lives?

Sure, some think the temporary shacks or frame barracks thrown together during the war emergency are good enough for the hundreds of kids now dying of the dreadful tuberculosis picked up during the stress and strain and the exposure of war. Well, we of the DAV don't think they are good or safe enough, and as we write this editorial on behalf of our comrades we of the DAV welcome the opportunity to tell Congressmen and Senators of every State in the Union and from both great political parties that the people of America, the real people of whom these boys are a part, don't think these temporary and makeshift buildings are satisfactory, either.

Let us forget the humanitarian phases of this disgraceful situation. Let us forget America's promise to these kids who have returned from northern Africa, Salerno, Normandy, the Philippines, Guadalcanal, or Iwo Jima, and who are dying in these temporary barrack hospitals. Let's get just as cold-blooded as the gentlemen who want to interrupt the further construction of veterans' hospitals in the name of economy. What kind of economy is this? Will it save this country one dime to deny proper hospitalization and treatment to America's battle casualties now? Is there any real economy in refusing hospitalization and treatment which might not only improve the condition of the war casualties but possibly cure them? What kind of economy is it to deny proper neuropsychiatric treatment to battle casualties who came out of combat with their minds gone? Hospitalization and treatment now may fully restore thousands to normal healthy lives. The lack of it will only insure the permanency of the condition, and as a result the veteran who is refused treatment because no hospital bed is available will draw full compensation for the rest of his sorry miserable life. Yes; this war hero will live, a sad care on his loved ones and a charge against his Government because that same Government, the richest and most pow-

erful in the world, could not afford to try to get him well.

Daily, we of the DAV read of the miseries and woes of Europe's displaced persons. We listen or read of the charge that we, as Americans, are responsible for their welfare and rehabilitation. Indeed, we are at times urged to tears by some who feel that our former enemies should be wholly forgiven and that we as Americans must accept the task of feeding, clothing, and fully restoring them to their former place in world affairs. Perhaps a great majority of our comrades of the DAV carry no hate in their hearts for any people. We feel safe in saying that these men and women, Americans all, who have already proven their charity and generosity in peace to be as great as their bravery and zeal in war—these DAV's—will be the first to subscribe to a program of restoration to friend and foe alike. But we are not fools. We are awake enough to know the needs of these, our comrades, who have suffered most because we have sacrificed with them. Indeed, we would be cowards all, if we failed to demand that this country do first things first, and in this instance we mean for our sick and broken and failing comrades the finest hospitals and the best medical care and treatment that the richest and most powerful country in the world, their country, can afford. Remember always for whom we speak and then ask, "Is it too much?"

A Consistent Foreign Policy

EXTENSION OF REMARKS
OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 8, 1947

Mrs. DOUGLAS. Mr. Speaker, this House is now engaged in one of the most critical debates in its long history. The ultimate decision on the Greco-Turkish loan will affect the future course of this Nation and the lives of every American citizen for generations to come. On this decision hinges our relations with individual foreign governments and our participation in the United Nations.

Whatever the outcome, it must be clear. We cannot say one thing and do another. Our actions must not becloud the issue. We cannot merge our destiny with the world's destiny and, at the same time, withdraw from the world. Our policy as a nation must bear the stamp of certainty, not of contradiction.

At this hour of decision it is ridiculous to talk about buying security for $400,000,000 while, at the same time, deliberately cutting ourselves off from all communication with the countries behind the "iron curtain" by abandoning the State Department's overseas cultural and informational program. The OIC is the only way of projecting American thought into these countries.

The new relationships which any decision of the House will establish between our Government and the Governments of Greece and Turkey demand that OIC be continued. The Greeks and Turks must know what our foreign policies are, how they were determined, and what they mean to people other than American citizens. We cannot help them nor can they help us unless they know the nature of this cooperation and the reasons for undertaking it. It is impossible to acomplish this vital task without the Department's factual information program. The Greek and Turkish peoples—all the peoples of the world—know us by our deeds. If we maintain our OIC libraries and institutes, if we go on giving them the full news of our Government, if we continue to show America to them through OIC's documentary motion pictures, if we continue to present America over the Voice of the United States of America, if we continue to support the interchange of students, technicians, and others—then, this will be concrete evidence to all peoples that we intend to honestly and courageously participate in world affairs. If we jettison the essential functions of OIC, there can be only one conclusion drawn by the peoples of foreign countries—that we are withdrawing from our world contacts; that our country has erected a new intellectual wall of China, bounded by New York Harbor and San Francisco Bay.

Our foreign policy calls for consistency from this Congress. If we are to participate in world affairs, we must do so wholeheartedly. OIC must be continued if we are to effectively implement our foreign policy as exemplified in the Greek-Turkish loan.

EFFECT OF ELIMINATING INTERNATIONAL INFORMATION AND CULTURAL ACTIVITIES OF DEPARTMENT OF STATE

The immediate effect of the action recommended by the House Appropriations Subcommittee, if approved by the Congress, would be:

First. To silence the Voice of America now broadcast by short-wave radio in 26 languages, more than 56 hours a day, to Europe, the Far East, and Latin America. The daily broadcast to Russia would cease.

Second. To deprive our embassies and legations abroad of the daily wireless bulletin which keeps them informed of what is going on in America and which carries the full texts of important public statements, official documents, and so forth.

Third. To close American information libraries in 70 foreign cities. During the past year more than 3,000,000 people have used these libraries for source material about America, our scientific and technical knowledge, and our way of life.

Fourth. To stop the flow of documentary and educational films which are now being shown to eight or ten million people monthly in other countries.

Fifth. To reduce drastically the program of Government aid for exchange of students, professors, and specialists between the United States and Latin-American countries.

Sixth. To strip our embassies and legations abroad of a trained staff of 350 information and cultural officers who are serving in the Foreign Service Reserve or Staff Corps at 115 Foreign Service posts.

FACT SHEET ON OIC

The Office of International Information and Cultural Affairs (OIC), was established in the Department of State on January 1, 1946, under a Presidential directive to present "a full and fair picture of American life and of the aims and policies of the United States Government" to other parts of the world. OIC functions are carried out through the media of radio, press, motion pictures, libraries and the exchange of students and specialists.

In terms of present personnel and appropriations, OIC represents about one-seventh of the over-all functions of the Department. Out of the Department's total budget of $128,008,752 for this year, $20,207,038 is devoted to OIC. The 2,861 OIC employees in the United States and abroad are among a total of 20,000 employees of the Department, including the Foreign Service.

Of the total OIC personnel, 1,070 are stationed in Washington and New York, and 1,781 at 86 posts in 67 foreign countries. The domestic staff is made up of 460 persons in Washington and 610 in New York, most of the latter engaged in the short-wave broadcasting activities of the Voice of the United States of America.

The overseas staff is made up of 337 trained American personnel in charge of OIC activities under embassies or legations, with routine tasks performed by 1,454 aliens employed at relatively low prevailing local wages. OIC activities overseas are known as the United States Information Service (USIS). A typical USIS office consists of a public affairs officer, an information officer, a cultural officer, a confidential secretary, and about 20 alien translators, motion-picture operators, clerks, messengers, and service employees.

The OIC program is carried out by the office of the director through five area divisions corresponding to the political desks of the Department, and five operating divisions listed below. The area divisions, for Europe, Near East, and Africa, Far East, American Republics, and Occupied Areas, guide the activities of the operating divisions affecting their areas, and supervise the programs of USIS offices overseas.

For the fiscal year 1948 OIC requested a basic budget of $25,213,220 and 2 additional sums that bring the total to $37,181,220. One additional sum was for $6,168,000 for the erection of 2 new radio transmission relay centers to step up the power of voice broadcasts to the Balkans and Middle East. Another item of $5,800,000 was included for the Interdepartmental Committee on Scientific and Cultural Cooperation. This committee, with a membership of 22 Government agencies, was authorized by Congress in 1941 to carry on a coordinated program of Government agencies for sending technical experts to Latin America and bringing trainees to the United States to study industrial techniques.

The OIC budget request for 1948 was one-tenth of 1 percent of the total Federal budget. It compares with a British overseas information budget this year of about $45,000,000, or about three-tenths of 1 percent of the total British budget. No figures are available on Soviet expenditures for overseas information but Soviet activities in this field are estimated at far in excess of the

United States and Britain combined. Other countries engaging in overseas information activities on various scales include France, Argentina, Canada, Australia, and China.

Of the increase of about $5,000,000 in the basic OIC budget, $2,333,000 represents obligations for salary and allowance increases provided for by Congress in the Foreign Service Act of 1946, plus increased costs of materials and contractual services, and higher wages for alien personnel in inflationary areas. The remainder was for a moderate expansion of short-wave broadcasting in additional languages and for the establishment of missions in additional countries overseas.

Here are brief outlines of the activities of the five OIC operating divisions:

INTERNATIONAL BROADCASTING (550 EMPLOYEES)

Produces and transmits short-wave voice radio broadcasts in 25 languages to Europe, Latin America, and the Far East, over 36 transmitters on the east coast, Midwest, and west coast of the United States. Also sends recorded programs overseas for distribution to local broadcasting stations by OIC foreign missions. The IBD budget for 1947 was $7,570,579 and a total of $8,632,098 was requested for 1948. This total includes $2,873,323 for salaries. The remaining $5,758,775 was for equipment, maintenance, and contractual services, including the leasing and operation of short-wave facilities.

INTERNATIONAL PRESS AND PUBLICATIONS (128 EMPLOYEES)

Produces and transmits to all countries a high-speed daily 7,000-word Wireless Bulletin of textual and official material for use by the foreign press and for the information of United States and foreign officials, and factual articles and photographs on United States life and developments for press use and public display overseas. Also publishes Russian-language magazine Amerika, and assists foreign journalists in gathering background information about the United States. The INP budget for 1947 was $896,387 and the request for 1948 was for $1,733,217. The increase was principally for the magazine Amerika which has been expanded from 6 to 12 issues a year and from 10,000 to 50,000 circulation through arrangements with the Soviet Government.

INTERNATIONAL MOTION PICTURES (77 EMPLOYEES)

Procures and distributes documentary films in 20 languages to be shown in schools and exhibition halls abroad through OIC missions overseas. The division also advises on production, by all Government agencies, of documentary films on American life, industry and accomplishments to be shown abroad. The 1947 budget was for $2,678,010 and the request for 1948 was for $3,041,822. This total includes $2,041,281 in contractual services for new productions, and for the adaptation in foreign languages of documentary films acquired from private companies at no cost to the Government.

LIBRARIES AND INSTITUTES (69 EMPLOYEES)

Maintains 75 United States Information Service libraries in principal countries of the world with collections of American books, periodicals, newspapers, and documents. Also maintains 24 cultural institutes with 47 branches, which sponsor classes in English and lectures on American industrial and cultural developments. The 1947 budget was $423,091 and the request for 1948 was for $977,933. The largest item of increase—over $200,000—was for the purchase of comprehensive collections of reference books and Government documents for the libraries.

INTERNATIONAL EXCHANGE OF PERSONS (78 EMPLOYEES)

Arranges for the international exchange of students, professors, and specialists between the United States and other countries and maintains contact between American and foreign private organizations in the fields of science, the arts, and professions. The budget for 1947 was $223,000 and the request for 1948 was for $425,010. The increase was largely for carrying out the Fulbright Act to finance a greatly increased exchange of students and professional leaders through the sale of United States surplus property overseas.

Where Do We Go From Here?

EXTENSION OF REMARKS
OF
HON. GEORGE D. AIKEN
OF VERMONT
IN THE SENATE OF THE UNITED STATES

Thursday, May 8 (legislative day of Monday, April 21), 1947

Mr. AIKEN. Mr. President, I have received from a constituent, Harold C. Patch, of Perkinsville, Vt., an original poem expressing the feelings of one who is being flooded out for what is supposed to be the public good. I ask unanimous consent that the poem may be printed in the Appendix of the RECORD.

There being no objection, the poem was ordered to be printed in the RECORD, as follows:

WHERE DO WE GO FROM HERE?

They are going to flood our homesteads,
So the good folks down the line
Won't get water in their cellars.
That will be just simply fine

For those who get the benefits
From modern flood control;
But as for us Vermonters,
Well, it leaves us in the hole!

They tell in calm statistics
Of the loss to our fair State
In acreage and quarts of milk.
Before it is too late

Let's give some consideration
To the folks we're losing, too!
When we're driven from our homesteads
What are we supposed to do

For another place to live in
That will really take the place
Of the one we're booted out of,
Through governmental grace?

Oh, yes, no doubt they'll give us
What they think is a fair price;
But what good will that do us?
Think it over once or twice!

Can you build another homestead
For that same "fair price," today?
Or buy some other fellow's home
Without you're giving—say

Twice or three times the money
They gave you for your home?
I doubt it, friends! We'll just pack up
And sadly start to roam

With all the present homeless throng
We read about each day;
And some will leave their native State
To find a place to stay.

For years "a housing shortage!"
Has been dinned into our ear.
Vermont, our parting song must be;
"Where Do We Go From Here?"

—From One of the To-be-dammed

Greek-Turkey Loan Favored by Minnesota United Nations Association

EXTENSION OF REMARKS
OF
HON. GEORGE MacKINNON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 8, 1947

Mr. MACKINNON. Mr. Speaker, under leave to extend my remarks, I include a telegram from the chairman of the Minnesota United Nations Association in support of the loan to Greece and Turkey:

MAY 7, 1947.

HON. GEORGE MACKINNON,
House of Representatives,
Washington, D. C.:

Speaking for entire State membership, we ask your vote in favor of loan to Greece and Turkey with Vandenberg amendment. United Nations has no funds nor military power to stabilize Greece. If bill fails it will be green light to Soviet to dominate and communize Europe.

MINNESOTA UNITED NATIONS ASSOCIATION.

Report on New England

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 8, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Laurence F. Whittemore, president, Federal Reserve Bank of Boston, secretary, New England Council, at the New England congressional dinner, sponsored by the New England Council and chambers of commerce in New England, Washington, D. C., April 28, 1947:

I am keenly aware of the fact that I cannot expect on this occasion to add much to the knowledge of this distinguished audience on the affairs of the day. Those Senators and Representatives here assembled are in a much better position to know what is going on in the world at large and in the United States in particular than I. My remarks, therefore, I think should be limited to answering the question (to use the name of a popular song), How Are Things in Glocca Morra, or a report on conditions in New England. I am assuming that the nostalgia expressed in the song is not unfamiliar to New England people away from home. Perhaps in addition to this I may be forgiven if I seek to point out the effect of some of the proposed and recent legislation on our New England economy. I do not claim that my opinions or my observations are sacrosanct, but as such they are intended to be a careful analysis of what things look like from my seat in the grandstand.

Contrary to the opinion of some crepe hangers within New England and some wishful thinkers outside, New England's economic position today is good. This statement can be supported by accurate statistics and I submit that the past can only be analyzed, the present weighed, and the future charted by the use of pertinent statistics, honestly compiled and thoughtfully interpreted.

There was some discouragement about New England's prospects before the war; partly because we did not have complete information. We were discouraged because in the manufacturing and mechanical industries employment had dropped 7 percent between 1920 and 1940. We did not think the problem through far enough to realize that what really counts is total employment. The total number of persons gainfully employed in all lines increased over 14 percent during that same period. What happened to account for this difference? It was a matter of an increase in our standard of living which was accompanied by more jobs in services, trades, and professions. These jobs more than made up the loss of jobs in manufacturing. We do not know what the increase in total employment has been from 1940 up to this date because nobody is presently collecting the statistics, although some are promised by one of the Federal agencies if it is able to collect them within the budget limitations not yet determined.

We do know what has happened to employment in manufacturing up to date. Our factories are now giving jobs to 39 percent more people than they employed in 1939, 24 percent more than in 1929, and 3 percent more than at the highest peacetime peak in our history in 1919.

The nature of our New England economy has greatly changed since before the war. In 1939 we were primarily a non-durable-goods-manufacturing area producing textiles, leather, shoe, paper, and the like. Two-thirds of our people worked in non-durable-goods industries. Now our employment is about equally divided between the making of durable and nondurable goods. Such lines as electrical and other machinery, iron and steel products, and transportation equipment have been responsible for most of the new jobs. The growth in our metal-using industries should be kept in mind when we consider the impact on our future of such projects as the St. Lawrence waterway and others, having in mind the opportunity now presented by the discovery of significant iron-ore deposits in Labrador and other foreign areas, as well as the possible development of the manganese deposits in Maine.

To measure our prosperity by the number of jobs afforded is not the whole picture in measuring our economic progress. Our income is at least as important a measure. New England's income per capita has run on the average about 27 percent above the national average, according to figures supplied by the Department of Commerce. It has been argued that, measured by what has happened to our per capita income, New England's position deteriorated during the war. The Nation's per capita income rose 113 percent between 1939 and 1945; New England's rose only 89 percent. But our per capita income rose almost the same number of dollars as did the Nation's per capita income. The difference in percentage is caused by the fact that we started at a higher level.

What we have in this case is somewhat the same as what happened in a Maine logging camp. There were 50 loggers employed and 2 women cooks. One day a logger married one of the cooks. The camp superintendent soberly reported to the management that 2 percent of the men had married 50 percent of the women.

We have compiled at the Federal Reserve Bank of Boston many other figures which show that New England is, as it always has been, a region of growth and opportunity. It will have its ups and downs as the country has its ups and downs. We will probably have some readjustments in the months ahead when the inflationary balloon we have been riding comes to earth again; but the indication is that New England will fare as well in such readjustment as the country as a whole.

We may never regain the relative position in industry which we enjoyed a half century ago. Our percentage of the Nation's people, of its employment, and of its income has declined. That was to be expected as the rest of the country grew in population and in industry. This Nation, now containing about half of the world's industrial production, must expect to decline percentagewise also in production as the other nations of the earth get back into the race and improve their standards of living. What New England must be sure of, and what the Nation also must be sure of, is that even though it gets a narrower slice, that slice will be cut from a bigger pie. New England and the Nation cannot prosper merely by maintaining a relative position; we prosper by growth. The Nation and New England alike have grown and will continue to grow. That is what counts.

The more we study New England's economy, the more we are impressed with the fact that it has forged ahead despite a long history of Federal aid to other sections of the country. Our part of the country grew up and reached a high state of industrial development during that period of the Nation's history before Federal aid became fashionable and before the means to finance it—primarily the corporate and personal income tax—were available. We built our railroads without Federal grants, developed our water power with private capital, and our economy in each separate situation rose and fell under the free exercise of competition based on the laws of supply and demand.

In progressive social legislation and in our treatment of labor we led the Nation, sometimes at the expense of our own pocketbooks. Partly because of a tradition of self-reliance and partly because we had already attained a high state of industrial development, we have not in recent years led the raids upon the Federal Treasury for aids and subsidies of every type and description.

We have paid and paid heavily for Federal assistance to other areas. In 1945, the latest year for which figures are available, we find that only one other area, the Middle Atlantic States, contributed more per capita to the Federal Government, and only one other area, the Central States, received less per capita in Federal payments than New England. Direct payments to individuals from the Federal Government made up only 12 percent of New England's per capita income. In contrast, such payments accounted for 23 percent of the per capita income in the Southeast.

This taking from the haves for the benefit of the have-nots is not something to be entirely deplored. We are one Nation and one people. If we can assist other areas to develop their resources and to raise their standard of living, then New England's contribution to the process may be repaid. We will, over the years, get back more than we gave if we succeed in developing markets in areas in the country whose purchasing power is increasing. We cannot deny within this country the same principles for which we stand firmly committed in our relations with other countries. It is not the principle, but the method, that bears criticism.

Let us take an honest look at Federal aid. New England industry has received some protection from the tariff. Our industries receive less of such protection now than they did formerly, and the tendency seems to be that we will give up more of such assistance in the future. But there is a vast difference between, on the one hand, the levying of a tariff either for revenue only or for protection as we have known it for over a hundred years in this country and, on the other hand, the latter-day type of subsidy now so prevalent. The tariff, placed by the central Government on the importation of goods from foreign countries and paid into the Federal Treasury, is vastly different from the subsidies now being paid out of the Federal Treasury. The tariff gave help to all regions in relation to their accomplishment in developing manfacturing. Under the provisions of the Constitution as originally ratified, the tariff applied to all sections of the country equally. The subsidy by its very nature is discriminatory; that on cotton can only benefit those areas capable of growing cotton. Nature's idiosyncrasy rather than man's ingenuity determines who gets the subsidy. Moreover, a subsidy must be paid to individuals and it is not one of those matters which individuals determine for themselves. This means that the Government decides who gets what subsidy and how much.

We have an example of what this "who gets what" principle means in the case of the potato-support-price program. To insure that the support prices do not lead to excessive production, potato planters must limit their acreage. During the war the most efficient producing areas—Maine, California, and Long Island, for example—increased their production more than the rest of the country. Maine, to take only one case, had an average yield for the past 10 years of 277 bushels to the acre compared with an average of 126 bushels for the other 17 States producing a surplus of late potatoes. The "who gets what" principle requires that acreage be reduced. So acreage is allotted on the basis of production in past years. The high yielding areas, which expanded most during the war because they could produce most efficiently, are being cut back most. The consumer pays more for potatoes, the Government subsidizes inefficient areas, and you worry about how to cut the budget. Feather-bedding in agriculture is just as reprehensible as feather-bedding by labor unions or suppression of competition by businessmen.

We all want lower prices and we all want to cut Government expenses. Someone should ask a few pointed questions about how we are going to accomplish these things, for instance, if the public continues to be fleeced for its wool. We used to urge that the lion lie down with the lamb; now the lamb wants the lion's share.

I am talking about our wool program. The Government bought wool at prices averaging 31 percent above parity from 1943 through 1946 to make sure we could have enough for military purposes. Despite wool prices now 70 percent above prewar and the highest since 1920, we have only two-thirds of the number of stock sheep on farms that we had 5 years ago—the number is lower than at any time since 1867.

Despite a domestic stock pile of wool equal to 6 months domestic consumption and a foreign stockpile which, if used here, would keep American mills running for nearly 5 years at the 1946 rate; despite the fact that Britain must sell us something to repay her debt to us, and she has wool to sell; despite the fact that the Government has obligated itself to support major farm commodities at only 90 percent of parity—what is proposed for wool?

The Senate has already passed—let me emphasize, it has passed—a bill which would guarantee until the end of 1948 to support domestic wool prices at the 1946 level, which was 120 percent of parity and which now stands at about 100 percent of parity. That isn't exactly what the bill says, but that is what it means. Wool is to receive far more favorable treatment than other basic farm products, which are supported at only 90 percent of parity.

Since the market will support no such price, the CCC would be authorized to liquidate the domestic stock pile at whatever price is necessary to compete with imported wool. It is estimated that the Government has already taken a loss of $37,000,000 on its wool program; the CCC has a reserve of

$55,000,000 for additional losses. Perhaps because it fears even greater losses, the House Committee on Agriculture has voted to empower the Secretary of Agriculture to impose a fee on imported wool.

If we are to handle our international responsibilities and our return to a free-enterprise economy by methods comparable to that proposed for wool, we are on the road to state socialism and international anarchy.

What I have just said illustrates the unpleasant fact that for more than two decades our Government has been influenced to a considerable extent by blocs—groups representing relatively small sectional interests. They sometimes, it seems, are concerned more with using Government to their small sectional advantage than to the advantage of the economy of the country as a whole.

The domestic wool growers, producing a commodity worth only $118,000,000 at the farm in 1946, are protected to the detriment of the manufacturers and distributors of wool clothing on which 140,000,000 American consumers spent an estimated $4,800,000,000 in 1946.

We saw another determined bloc last year get a guaranteed price for silver, although the value of silver production was in 1946 estimated to be only $26,000,000. In contrast, it is estimated that the value of silverware and silver-plated ware at the factory was at least $150,000,000 in 1946, or almost six times as large as the value of the silver produced by our mines. Numerous examples of special-interest legislation which harms a far larger part of the economy than it helps could be cited.

There has never really been a New England bloc in Washington unless the uniting of the New England delegation in the Congress for the purpose of defending us against these sectional raids can be called such.

New England is not asking its Senators and Representatives in Washington to form a bloc which sets up our area as a section, the interests of which are to be forwarded at the expense of the rest of the country. We ask no advantage to accrue to us in New England at the expense of the country as a whole. We do welcome fair competition and expect your help in protecting, within reason, our economic position and our opportunity for fairly meeting such competition.

We do not expect, and to the glory of New England do not want, special privileges for ourselves to the injury of the economy of the country, but we do expect you to fight against the efforts of such blocs as may be formed in the Congress by the representatives of those sections whose thinking may not have matured sufficiently to make them realize that aggressive sectionalism on the make is a danger to our form of government.

It now happens that New England, owing to the statesmanship and prominence of its Senators and Representatives here assembled, stands in a strategic position with reference to the present and future trend of Government policy. We are proud of the fact that, and we have confidence that, you will act as Senators and Representatives of the United States of America, broad-minded enough, as are the people whom you represent, to think of the Nation as a whole.

New England during the course of its long history has often held a preeminent position in material, cultural and spiritual matters. We have often led the Nation in matters of wise Government policy and tolerance, and our standard of living has in the past reflected and does now reflect our preeminence according to our size in manufacturing and trade. As other regions developed we lost our relative position in each field, it is true, but I cannot fail to point out with pride the fact that little New England with 2.2 percent of the land area of the Nation, with 6.4 percent of its population, produced over 9 percent of the commodities necessary for the war effort.

There is an opportunity for the New England Members in the Congress of the United States to forward policies which are for the benefit of all the people. If we can maintain leadership in this field we can look forward with firm confidence to New England's future in a Nation dedicated to world leadership.

Prejudices

EXTENSION OF REMARKS
OF
HON. GEORGE MacKINNON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 8, 1947

Mr. MACKINNON. Mr. Speaker, when the labor bill was under consideration on the floor of this House it must have been as apparent to other Members as it was to me that those who profess to be the great proponents of eliminating racial and religious prejudice were the most active in sponsoring class prejudice. I believe that prejudice is indivisible and that the way to eliminate it is to strike at all prejudices in whatever form they appear. We cannot do a piecemeal job.

Because of its very penetrating observations of the actions in this respect of some in the House, under leave to extend my remarks, I include an editorial from the Christian Science Monitor of April 29, 1947, entitled "Labor's Opportunity":

LABOR'S OPPORTUNITY

Ten days ago we censured an outburst in the House of Representatives which revealed an undertone of economic class consciousness every thoughtful American should regret. It took place at the time the House passed overwhelmingly the restrictive Hartley labor bill.

Today we have before us a recent issue of the CIO News vigorously attacking the Hartley bill and all the labor bills before the Senate. Interwoven with and overshadowing some rational arguments are shopworn appeals to emotion and to prejudice—photographs of Newport-like palace, swanky dinner party, top hat, and ermine cape; cartoons of money-grabbing tycoons, contrasted with the smoky bleakness of a steel mill.

Thus some gentlemen of Congress and some gentlemen of labor echo each other. And the sound does not make cheering music for America.

Some of the pressure on Congress has come, no doubt, from reactionary quarters with which we have no more sympathy than does union labor. But organized labor must know by now that it is going to be regulated. It needs to understand that such regulation is backed not merely by big business but also by millions of farmers, professional people, little businessmen, and unorganized workers.

These people don't want unions destroyed. They do want them brought under controls which balance things up a bit and which will discourage the kind of private wars which can paralyze a whole nation. They do not wish laws which would undermine their own or anyone's civil liberties.

Wouldn't the CIO do better to fight now for the wisest regulation than to battle futilely any regulation at all? Wouldn't it get a wider public hearing were it to point out how to correct whatever real threats to freedom may lie in the wording of the bills instead of shouting slavery and fascism to everything?

The AFL, in its newspaper ads, says it will analyze the bills. We hope for the best. Both big unions muffed one chance to give Congress constructive advice. It will help no one if they miss another.

Execution of Rev. Dr. Joseph Tiso

EXTENSION OF REMARKS
OF
HON. SCOTT W. LUCAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Thursday, May 8 (legislative day of Monday, April 21), 1947

Mr. LUCAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Another Victim," dealing with the execution of Rev. Dr. Joseph Tiso, wartime President of Slovakia, which was published in the Messenger, official publication of the diocese of Belleville, Ill.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ANOTHER VICTIM

Rev. Dr. Joseph Tiso, wartime President of Slovakia, went to his death on the gallows 3 days after the Slovak National Court had pronounced sentence against him. Dr. Tiso prayed while he walked up the gallows steps and was accompanied by a Capuchin priest who had spent the night praying with him.

Thus another noble character who opposed Red Russia pays the penalty with his life. Dr. Tiso is one of millions who has suffered the same fate at the hands of a godless atheistic country. Stalin and his cohorts may feel satisfied and gloat over their victories but with the apostle, St. Paul, we can say: "O grave, where is thy victory?"

Future Western Development Depends on Control and Use of Stream Flow

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1947

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therein an address by John W. Haw, director of the department of agricultural development for the Northern Pacific Railway Co., at the annual meeting of the Western Snow Conference on April 22, 1947, in Portland, Oreg. This address contains much factual information and is an excellent presentation of an important subject worthy of study by all Members of Congress and others interested in the development of the resources of our country.

The address follows:

If the potentialities of the Western States ever are completely exploited—if their land, timber, and mineral resources finally are to be capitalized fully for the welfare and prosperity of this country—it will be as a result

of complete control, and use for the highest purpose, of the waters of western streams. Water is now the principal limiting factor in slowing down industrial and agricultural development. Finally it will be absolutely controlling. Every drop that falls, regardless of form, must be held, hoarded, and harnessed to many jobs before it is allowed to escape to the sea. I do not know of any western group unwilling to make this the paramount goal in long-time planning. In no other way can the Western States fulfill their ultimate national destiny.

The responsibilities of those in attendance at this convention are of primary importance in this connection. To you we look to preserve a condition on the watersheds which will result in retention of precipitation. To you we look for the records and data essential to the wise location and sound design of the structures which harness the streams. To you we will look for the forecasts which control the releases from storage structures and to gage how much and when users may make their demands upon that commodity which finally never will go around—water. The spotlight is turning slowly your way. Still I fancy you do not as yet fully appreciate the intensity with which it will be focused on you or on those who inherit your responsibilities 25 or 50 years hence. When the last second-foot becomes supremely important to some irrigated acre, some machine powered by electricity, or some person who wants a drink or a bath, then, and then only, will there be a full recognition of the importance of the role you play in the western scheme of things.

There are, as you know, five stream basins in the Western States in which the problem of capture and use of water is of importance—the Columbia and Missouri in the Northwestern States and the Rio Grande, Colorado, and the rivers of central California in the Southwestern States. The degree of importance attached to complete capture and use on these streams and their tributaries widely differs at this time. But ultimately the scramble for the waters of the Missouri and the Columbia will equal that recently witnessed on the Colorado. I suspect that as we approach complete utilization, California may be up in the Columbia Valley securing rights to divert water from its mouth near Astoria through a pipe line down the coast.

It happens that the company I represent and its subsidiaries, the S. P. & S. and the C. B. & Q., have a rather intimate acquaintance with two of these major western streams, i. e., the Missouri and the Columbia. The acquaintanceship with one, the Missouri, and its tributaries, the Big Horn and Yellowstone, frequently has been too intimate for comfort. In any event, we of the Northern Pacific have lived, though not always in peace and quiet, alongside these two streams since 1880. They are a great team, though very, very different. The Missouri, a totally unpredictable, unbroken bronco, the Columbia a reliable, substantial work horse of a stream. We yield to no one in our interest in a goal of their full regulation and use. We know of the part played by the services with which you are connected and we have endorsed and supported them on many occasions. May I add that we are anxiously awaiting the day when your releases not only will give full and accurate information on the water reserves in the snow pack on every mountain course, but the time when you can calendar the melt with information on when, for how long, and how high the floods are to be in the streams on whose banks we live. That one is indeed a "toughy," and I fancy it will perplex you for many years to come.

A railroad's interest in these streams is primarily to put them to work irrigating acres and turning the wheels of industrial machinery. There was a time, not too long ago, when it was thought that our trains might some day be powered by electricity generated by them. But that was before the Diesel-electric locomotive. Today electrified sections of some railroads are being violated by Diesels running over them without tapping their readily accessible power lines. As the need arises to rebuild and modernize existing rail-electrification facilities completely, the decision is very apt to be, first cost and maintenance considered, to forget electrification and go to Diesels. At the moment, Northwest rail lines are consequently not interested in the generation of abundant, low-cost power as a means of moving trains. That, however, is not to say we do not fully comprehend the implications trafficwise of irrigation development and power production. It is largely on the build-up of revenue freight directly resulting therefrom that the northwestern transcontinental carriers stake their hopes for future solvency. Assuming increasing incursions into the existing volume of traffic in this area by highly subsidized air, water, and highway carriers, that which could be held to rail haul would be insufficient to maintain existing rail lines as profitable enterprises, at least not without what would appear to be a burdensome and wholly unacceptable upward revision of rail rates. Indeed, there is informed opinion to the effect that further agricultural, industrial, and population growth may not come soon enough to provide the traffic volume required for future profitable operation.

Yes; it is both short as well as long-sighted selfishness which dictates our interest in, and encouragement for, the elaborate plans now under study for complete control and beneficial use of western streams. The Northern Pacific's interest has been manifest in many ways, as those familiar with our part in these developments well know. As for myself, my friends in St. Paul speak of me as a congenital reclamation enthusiast. I'm not sure just what that means but am told that it's something that cannot be cured in one of my age.

But what bothers me and will constitute the main theme of my discussion is the approach which we of the West may use to convince Congress that it is sound national policy and smart business to furnish the funds to fashion the expansive harness which will put these streams to work.

As basin-wide plans begin to take form and shape after years of investigation and study, a discussion of the magnitude of the engineering and economic problems and the over-all cost is causing Nation-wide reverberations. Accustomed as we have become to dealing in large figures, the cost estimates are arresting. Authorizations and, finally, appropriations are quite obviously not to be had from the budget-balancing representatives of a tax-conscious public without the most careful appraisal and detailed scrutiny of every item. We should not ask or expect it to be otherwise. It does make it our immediate obligatory job to marshal, arrange, and publicize a clear justification of the funds requested.

Let me refresh your memory with a few figures. To do a complete job on the Colorado, Secretary Krug now says it will cost $2,158,442,000 more than has already been spent. In the report on the Columbia released recently the sum estimated as still to be required is $5,600,000,000. Consummation of the joint Army-Bureau program for the Missouri was estimated in 1944 to cost $1,739,245,000 over and above the huge amount already spent at Fort Peck and for canalization and flood protection below Sioux City. We may as well be realistic and admit that similar estimates have proven serious underestimates in the past. Perhaps, therefore, it would be smart to proceed on the basis that those now made are similarly in error. On these three streams we are, therefore, recommending that the Federal Government invest the tidy little sum of $9,497,687,000, which in turn means an extraction of about $65 from every man, woman, and child in the country. Our case for such expenditures had better be good and, fortunately, it is good. But it must be told in the right places to the right people. We are just naturally running low on water to prime the pump.

In the February 22 issue of the Saturday Evening Post a lead article by Edward Churchill is entitled "Shall We Spend $2,000,000,000 More on the Colorado?" If you have not read it, you should. It merits a place on your list of must reading. Mr. Churchill refers to the Colorado as a "muddy, turbulent, screwball torrent knifing its way from Colorado to the Gulf of California" and fittingly labels it as "The Lifeline of the Southwest." He quotes an engineer who is familiar with the river and the economy of the Southwest. The statement is particularly significant to the subject of this paper.

"Within the foreseeable future industrial and agricultural expansion, and even population, will be limited because there isn't enough water in the Colorado. The country fed by its lower reaches has no other supply to which it can turn."

He apparently had not thought about diverting the Columbia into California. This statement might also appropriately be made, with certain qualifications, of the other great streams which drain the arid and semi-arid West.

Now, referring back to the need for marshaling, arranging, and publicizing the justification for Federal expenditures on these streams, for the balance of time available to me I shall endeavor to state a few of the cogent arguments which will, in my humble judgment, be persuasive in the examinations made by Congress of the proposed plans for these rivers.

First, they are self-liquidating except as to allocations of cost for such historically nonreimbursable public purposes as flood control, navigation, fish and wildlife propagation, and abatement of salinity and silt. I have purposely omitted from this list recreational benefits. It is difficult to assert that the general American public should at great cost provide recreational facilities, local in use, to a country originally endowed by nature with a great wealth of just such facilities. Such claim is, in my opinion, a weak link in the chain of argument. Although by tortured reasoning it might be included, I believe it renders our case vulnerable to attack. Arguments could similarly be conjured up that certain scenic, spiritual, and esthetic values of national significance result from these multiple-purpose projects. As a group these intangible benefits should be discarded even though a finely spun argument can be improvised by the nature lovers and the sociologists. The point is we don't need these fanciful, nebulous, nonreimbursable factors in order to write down costs to a point where the irrigation water user, municipal water user, and consumer of power can amortize the remainder if easy terms are granted, and proper allowances are made for other provable national benefits.

If, to spin on such reimbursable basis as is prescribed by law, it becomes necessary for a project to secure substantial write-offs to general public benefits, such allocations should be susceptible of clear proof and accurate evaluation. It should be proven that such benefits clearly exist, that they are of general public value and, finally, that the allocation is strictly in line with a sane, practical estimate of the value of these benefits to the general American public as well as the local region. It is easily possible to dissipate the public good will built up so assiduously over the past 45 years for arid land reclamation and more recently for generation of hydroelectric power by inflating the values of subsidiary functions performed by multiple-purpose projects.

Projects remaining to be built are huge, expensive affairs made increasingly costly by the recent precipitous rise in prices of materials and wages. Construction agencies of the Government appear reluctant to depart from the level of power rates and irrigation water right assessments which had taken shape in the prewar years. Today no one is able to argue that we are not dealing in thinly diluted dollars. Most students of this country's fiscal affairs contend that such dilution must continue into the dim future, although they differ as to the degree, if we are to service the enormous national debt and live up to our responsibilities as the dominant world power. If this be so, are we not being unrealistic in contending that prewar rates are the limit which can be assessed against the user of power and irrigation water? Primarily it is this contention which has resulted in a frantic attempt to draw in and overvalue the project benefits that have the color of nonreimbursable general public values. In order to stretch the feasibility tent over any and all of these projects those who draft the reports have been forced to draw heavily on their imagination and in so doing have already alienated the support of important groups in this Congress.

I fully recognize that what I have just said will be unpopular in this western country. It does become necessary, notwithstanding, for someone to state, as it were, "the facts of life" regarding the future financing of these projects out of the general treasury. As a friend of both irrigation and hydroelectric power development I conceive this to be a necessary duty, albeit a disagreeable one.

In this connection I am prepared to risk the condemnation of many of my western friends by asserting that the recent upsurge in industrial growth in the west coast area is certainly not wholly, and perhaps not importantly, the result of low cost electric power. This is not to say that available electric power was not important, indeed even controlling, in the location in this western area of many huge industries during the war years. Available power from Coulee, Bonneville, Boulder, Parker, and Davis Dams was the weight in the scales that finally tipped them in favor of large scale industry developed on the west coast. That power rates were most attractively low was extremely helpful. My point is that the exact level of rates was not controlling and I suspect that this may be even more true in the future.

My experience with industry scouts leads me to believe that there is a long list of factors that must be assayed and calculated in arriving at a decision as to where in a peacetime economy industries will locate. Each industry has its own score card of weights to apply to these several factors. To many it is proximity to raw materials and to the consumers who buy the finished product. Transportation charges on raw and finished products are important. To others it is wage scales, for as to many finished products labor costs are of extreme importance, ranging upward from 40 percent of the cost. Involved in labor costs, as you well know, are food costs, housing and climatic conditions. To others a plentiful, potable water supply would rate even more controlling than fuel or power costs. Need I mention the importance of local tax rates or the attitude of local government in labor disputes?

I do not intend here to disparage the importance of power at either low or comparatively reasonable rates, but let's view the entire picture in true perspective. I strongly suspect that what we in the West popularly refer to as low-cost power has become a veritable fetish among some individuals and groups seeking to induce industries to a western location.

For emphasis, I wish to review my thoughts on point 1 of this discussion. Above all things we must retain the confidence and the good will of the country, as represented by Congress, in these great water control and use projects. The strongest, most compelling argument favoring their authorization is that they are wholly or in large part self-liquidating as to capital cost and that as to power features interest is returned to the Federal Treasury to offset the interest which it in turn pays on the money borrowed from its citizens. To validate this claim it may become necessary to raise somewhat the yearly assessment for provision of an irrigation water right or the rate at which power is merchandized in order to establish these projects as a national investment rather than an expenditure. That this is preferable to congressional refusal to carry forward the program of western stream control further must be apparent.

The situation described above is pointed up by the present impasse between the Interior subcommittee of the House Appropriations Committee and the Bureau of Reclamation with respect to funds required in the 1947–48 fiscal year.

Second, their contribution to national defense is now one of the strongest arguments for the completion of these projects. It has not been given sufficient emphasis heretofore. In fact, military and naval men, while zealously regarding the provision of ships and implements of war, trained men and fortifications, fail to be impressed by the need for strengthening and knitting together this Nation's domestic economy so necessary to back up our fighting forces. I recall the disparagement launched when this argument was presented in the early thirties. I had some part in formulating the grounds for this contention. I was told that most weak proposals for expenditures on public works finally drag in the national defense angle by the shirt-tail. Such presentation was, therefore, considered to weaken rather than strengthen the case for reclamation proposals. It was considered that the great potential threat to world peace was Germany, as this was prior to World War II, and that any war, if it came, would be fought over the Atlantic Ocean and from the east coast. The West was a hinterland to be affected lightly if at all by such a war.

Now, and in the distinguishable future, it is Russia and the countries in its orbit which are a threat to the peace of this country and the world. If such proves the case, it seems inevitable that World War III, if it comes, will be fought over the Pacific and to a major extent from the west coast. In such a situation this country faces a tremendous disadvantage if its war-making potential in food and industry remains, as at present, so largely concentrated east of the Mississippi. Even in the last war when military and naval activity shifted after VE-day from the East to the West, expeditious prosecution of the war almost completely bogged down in the space of a few months. Why? Because of lack of close-up food supplies, industrial facilities capable of conversion to a war supply basis, inadequate transportation (particularly rail lines), housing, communications and port facilities. I speak with some knowledge when I say that at the time of Japan's surrender transcontinental rail lines were so jammed with traffic that only with long, heartbreaking delays could freight be moved at all.

Full expansion of our western economy is urgently needed if we are to be ready for war with a country whose attack will be launched directly at our west coast. The growth of industry, agriculture and of transportation facilities in this area must be aided substantially and encouraged if we are to gird ourselves in advance for a conflict in the Pacific theater. It cannot be satisfactorily accomplished with the enemy at our throats, perhaps armed for immediate atomic warfare.

Indeed, the smart planners of the future economy of this vast country are insisting that regional economic balance is essential to sound prosperity in the intervals between wars. They bemoan, and I believe rightly so, the industrial economy of the East, the cotton economy of the South, the wheat economy of the Plains States and the natural resource exploitive economy of the West. While time is not available fully to develop the reasons why these unbalanced and highly specialized types of regional economy are not in the national interest—why they lead to violent swings of prosperity and depression, to lack of full and satisfactory employment conditions and intermittent political upheavals, I leave with you, nevertheless, the thought for development on some future occasion. For my own account I have come to the conclusion that to the extent permitted by conditions over which we have control, it is wholesome for the geographically separated regions of this country to maintain a balance between industry and agriculture and to capitalize fully all the existing possibilities for a stable employment base for the country's expanding population. It is sound in peace and it is essential for defense in time of war that the country be well knit together with self-sufficient regional areas. We could be dismembered easily and rendered defensively impotent if our great geographical regions are highly interdependent.

I pose this question to you. How can we convince the great population masses of the Midwest and East that self-sufficient regional areas are desirable? How can we convince them that funds derived from taxes which they largely pay should be used to capture and put to work our rivers upon which to rear a sound, self-reliant western economy?

Third, and last, may I discuss briefly my feeling that we are neither regionally nor nationally secure as to future food and fiber supplies without full development of the West's irrigation possibilities. If this is true, it should be a telling argument with the public and with Congress.

At the moment we live in the midst of plenty surrounded by a hungry, or more accurately a starving, world. Authorities differ as to whether 50,000,000 or 500,000,000 of the earth's 2,200,000,000 of people were in 1946 actually dying of starvation. Certainly the figure of 500,000,000 is conservative as to the number subjected to such malnutrition as to retard normal growth and development. Some even place the figure at two-thirds of the earth's population as suffering a nutritional handicap. It is a recognized fact among students of world population that growth in population takes place up to the limit of the food supply. The fact is not well known that world population increased 200,000,000 in the 10 years immediately preceding World War II. The increase in world population of 563,000,000 between 1900 and 1940 may well have set the stage for both World Wars I and II. Throughout all history, pressure of population on the food supply has been one of the great underlying causes of war.

So it will continue to be even in the case of Russia. We are accustomed to thinking of Russia as an agricultural surplus country. Its huge size and expanses of comparatively undeveloped areas give rise to the view that its agricultural resources are only in part developed. This is far from the fact. Much of Russia's area is too far north or too arid or with soils too thin to permit of productive agriculture. Russian population is increasing rapidly. In 1940 it was 170,467,000 as compared to 134,000,000 in 1920. At present, its yearly excess of births over deaths per thousand is 18.6—the fourth highest of any country in the world, exceeded only by Formosa, Mexico, and Puerto Rico in the order named. This increase may be compared with a 6.3 rate in the United States.

Even at the moment information is seeping out from behind the iron curtain that starvation has exacted a heavy toll in parts of Russia during the past winter. Something of the world struggle for adequate food supplies is indicated by the fact that China now irrigates one-half and India one-fourth of all cropped land. One-fourth of the world's people not only live on irrigated land but are both fed and clothed almost exclusively by the products produced on these lands. India's population has increased 50,000,000 in the past 10 years and to ward off famine the country is desperately striving to bring more acres under water.

These facts are recited for the purpose of indicating the wisdom of endeavoring to maintain in the United States a situation for the long pull of self-sufficiency or self-containment as to food and fiber supplies. In the March issue of Population Bulletin is this significant statement:

"In countries where there is a favorable relationship between number of people and natural resources, we find peace and prosperity, and personal liberty is an attainable ideal. Where there is an unfavorable relationship between these factors, we may expect poverty, social unrest and a threat of aggression."

We have been lulled into a false feeling of security and complacency by the huge exports of foodstuffs from this country during and since the late war and the current discussions of some agricultural surpluses. This situation is partially due to favorable weather and freedom from plant disease outbreaks, with resultant phenomenal crops of wheat and corn.

Little is being said about our continued imports of agricultural products. In 1946 they exceeded any year since 1929–30. The blunt fact is that immediately before the war the value of our agricultural imports exceeded our exports. In 1946 agricultural imports were valued at 1.8 billions while agricultural exports were 2.8 billions.

This point is worthy of special stress. If population overtakes our domestic food supply or, put another way, if aggregate consumption overtakes aggregate supply and we are forced to bid against other countries in a world where malnutrition and starvation are an ever present threat, what price may we be forced to pay and what will be the adverse effects upon our relationship with other more critically needful nations? I commend to you a closer study of what, for want of a better term, may be called population dynamics as related to supplies of foods and fibers in a world of increasing population and we hope—higher standards of living.

May we now focus down on this problem from the standpoint of the United States and then to the western United States.

The population of this country was 105,710,620 in 1920; today, 27 years later, as estimated for January 1, 1947, by the Bureau of the Census, it is 142,656,000—an increase of 36,945,380. In the decade between 1920 and 1930 the increase was 17,000,000 and between 1930 and 1940 it was 8,900,000. It will come as a surprise to those who do not follow these statistics that between April 1, 1940, and January 1, 1947—an elapsed interval of 6 years and 9 months—this country's population increased 10,986,725, or 2,000,000 more than in the preceding 10-year interval. Even more arresting is the population increase of 1,225,000 in the 5-month interval between August 1, 1946, and January 1, 1947.

This phenomenal upsurge in population since 1940, and which at least momentarily appears to be gaining momentum, may be—no doubt is—capable of several explanations, all of which fortify the belief that it is transitory. Just how transitory it is, no one can positively say. In my view it depends to a major extent on continued full employment at good wages. I have yet to talk to a young couple who would not like to have a family of three or four children, if they could afford it, and if domestic help were procurable. But be that as it may, there still remains the far-reaching implications of an infusion of 11,000,000 more people into this Nation's population bloodstream in the space of the past 6 years and 9 months, a major World War and increasing automobile fatalities notwithstanding. I direct your attention to the fact that, statistically, it requires about 2½ cropped acres per capita to supply food and fiber requirements at present levels of consumption in this country.

Turning now to population shifts of important concern regionally within this country. In the 11 Western States which begin on the east with Montana, Wyoming, Colorado, and New Mexico, the census estimate of January 1, 1947, shows these States with a population of 17,656,000 as compared to 13,824,000 in 1940—a gain of 3,832,000, or 27 percent in 7 years. This 27 percent gain for the West should be contrasted with a gain of 7.3 percent for the whole country, or nearly four times as great. Stated another way, these States now contain 12.5 percent of the entire population instead of 10 percent in 1940.

The story in the three Pacific Coast States is even more arresting. Washington shows a percentage population gain between 1940 and 1947 of 30 percent, Oregon 26 percent, and California 39 percent. Actually, 3,517,000 more people live in these States today than 7 years ago in the spring of 1940.

Starting with the premise—which I believe is unassailable—that it is sound policy for this country to be in a high degree self-sufficient as to fibers and the staple foods required by our high level of diet and that regional economic balance is desirable and perhaps necessary, what are the facts as to prospective food supplies?

The facts are that cropped acreage has in recent years declined nearly 18,000,000 acres in the country as a whole and also there is a similar percentage decline in the western region. Apparently we are not again to see in this country the 367,000,000 acres that were planted to crops 15 years ago, in 1932. If such an area could be cropped profitably it certainly would have been as a result of high prices and the world-wide appeal for food during the war and since. Actually only 349,000,000 acres were cropped in 1946, or 18,000,000 less than 15 years ago.

Now I am not so naive agriculturally as to believe that cropped acres are the only measure of food production. Shifts from extensive to intensive crops as well as higher acre unit yields must also have consideration. As to both of these factors some progress has been made in the past 15 years. I am aware of the figure of a 34 percent greater output of farm products in the all-time banner year of 1946 as compared to the 1935–39 average. But I am likewise aware of the fact that 1946 was tailor-made climatically from Maine to California for high production. I know that it is unsafe to figure into the future on a continuation of such climatic conditions. I know that by erosion, by weeds, and by loss of fertility less, rather than more, acres will be available for profitable crop production as time goes by, and this in spite of some gains through irrigation, clearing, and drainage. I know that the cushion of horse-feed acres released for production of human food has just about run out. And finally I know that the tremendously stimulating effect of record price levels for farm products cannot reasonably be expected to continue.

The long-time outlook nationally is that only by heroic methods can we keep production of farm products ahead of an increasing population demanding an ever-rising standard of living. There is reason for alarm over the rate at which these demands are outstripping production west of the Continental Divide. An ever-increasing list of commodities, in ever-increasing volume, must be moved westward from the Mississippi Valley States to fill the vacuum created by recent phenomenal western population increases.

Current rates of population migration westward will not subside. Too many young people were exposed during the war to the seducing influence of the soft, healthful western climate, the scenic beauty, and the nearby opportunities for recreation. Too many older people believe they can piece out their lives a few years longer by living in the temperate atmosphere and filtered sunshine of the west coast. Excellent highways, fast air lines, and comfortable rail travel have moved up the West to within easy reach of the densely settled East. No longer is the East, East, and the West, West, and never the twain shall meet. They have already met and the consequences are well known.

Earlier I said that in seeking the assistance of the Federal Government and in making requests for appropriations on the basis that it will prove a sound investment, the West has a good case for full development of its scanty water resources. Industrial development is keyed closely to abundant, reasonably priced power, to adequate nearby food supplies, and to a plentiful, potable water supply, all of which hinge on further development of western water resources. Complementary agricultural development similarly depends on the same program of river-control works.

The question still remains whether we can convince the 87.5 percent of the stockholders of these United States who live east of the one hundredth meridian that they should sink billions of their tax dollars in this western development over the next 25 years. Can we convince them that as long as this country's natural resources remain untapped, standards of living continue to rise and population to increase that calculations for the future must be predicated on a dynamic, not a static, economy; that the area with the greatest potential in this respect is the West?

When you are measuring the snow courses of the Rockies, the Bitterroots, the Cascades, and the Sierra Nevadas, keep always in mind that you are in reality gaging the future of this western country. Water will finally determine the last man this western country can support.

Furthermore, bear in mind that western development, of immediate and crucial importance to the Western States, is also of great national import. The endurance of our institutions and liberties in a troubled world will be substantially enhanced by an employment base resting on balanced regional economies well integrated one with another. We face up to a challenging task in securing an extension of our generous good-neighbor policy to include the country west of the one hundredth meridian in years to come. But in so doing it, it be understood we are asking for credit, not charity.

The New Deal's Propaganda Forces Continue To Be at Large

EXTENSION OF REMARKS

OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 8, 1947

Mr. CURTIS. Mr. Speaker, it is my opinion that the essential Government services can be carried on and that worth while internal improvements such as irrigation and flood control can be made, and at the same time efforts can be put forth to eliminate extravagance, unnecessary spending, and waste.

Neither the American people nor the Congress should take the position that they must accept gross extravagance, waste, and the continuation of unnecessary activities of Government in order to have adequate Government services and public improvements.

I have received a letter which illustrates the confusion that is being dispensed by the New Dealers. That letter is as follows:

I am a Republican. But I have been informed that the Republicans are trying to make it hard on the present administration, particularly in the Post Office Department. I understand that the reason we do not receive two deliveries of mail per day as we have been accustomed to for many years is because the funds of the Post Office Department have either been cut or in some way something has happened to prevent the usual postal service. I understand that on one day we received no mail delivered by the postman because of that reason.

Can this really be true? If so, I protest it. If not, I would appreciate a correct answer.

I have taken this matter up with the chairman of the Subcommittee on Appropriations charged with the responsibility of providing funds for the Post Office Department. His reply is as follows:

Your letter of May 2, with enclosure regarding the postal service and appropriations therefor, has been received.

As you correctly pointed out to your constituent, the Post Office is presently operating under appropriations passed by the Seventy-ninth Congress, although the Department has already come before the Eightieth Congress with requests for deficiency appropriations, both of which have been granted. This is an interesting observation, inasmuch as there were speeches made on the floor during the debate on the 1948 Treasury-Post Office bill by Members of the minority assailing the fact that the cut in post office appropriations for 1948 was not as great as the cut made by the Seventy-ninth Congress. We did not strive to match last year's action because we did not want to force curtailment of any service or to make it necessary for the Post Office to make several requests next year for deficiencies.

The committee therefore recommended, and the House unanimously approved, an appropriation containing a reduction of only 1 percent. In the specific instance to which you refer, city delivery service, the House allowed $295,300,000, which is $7,300,000 more than was available for this service in the current year. The amount approved is only $338,000 less than requested, so the Department can obviously provide full and complete service.

The First Assistant Postmaster General has made the following statement about city delivery service:

"During the war it was the policy of the Department to restrict the city delivery service to the minimum requirements that would meet the bare needs of the public. Following the termination of the war the Department has been restoring this service to prewar standards as rapidly as practicable. Indicative of this is the fact that the number of regular city delivery carriers increased from 57,993 as of June 30, 1945, to 65,770 as of June 30, 1946, an increase of 7,777."

Restoration of prewar delivery service is receiving active consideration at the Post Office Department, and efforts are being made to restore it as rapidly as possible, not only because it is a convenience to the public, but also because when there is only one delivery a day, mail must be stored overnight in the post offices, and there are not enough facilities for such storage in most post offices.

The Appropriations Committee in the House is cooperating with the Post Office in this matter, which is one of the reasons why the amount allowed for city delivery service was increased in the 1948 bill even in the face of the Nation-wide demand for economy. I believe that you can safely assure your constituents that ample money has been provided to restore full delivery service and that no curtailment of any essential service was made necessary by the action of the House.

Trusting that this information will be helpful to you, I remain, with kindest regards and best wishes,

Very sincerely yours,

GORDON CANFIELD,
Member of Congress.

Main Street Musings

EXTENSION OF REMARKS
OF
HON. GEORGE MacKINNON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 7, 1947

Mr. MURRAY of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Iola (Wis.) Herald:

MAIN STREET MUSINGS

President Truman continues to make statements that prices must be reduced to prevent inflation. It seems to us that instead of talking so much about reducing prices, Mr. Truman should do something toward reducing the "price" of government and cutting taxes. That's where he can really make a contribution to the battle against inflation.

The article may have been inspired by the fact that the dairymen of this community have already seen milk prices reduced by one-third. In fact the price of milk is lower than the support price is supposed to be under the Steagall amendment, even though the producers pay 20 percent more for what they buy and a 10-percent increase over 1946 in farm-labor costs.

Rural Electrification

EXTENSION OF REMARKS
OF
HON. GEORGE MacKINNON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 8, 1947

Mr. MACKINNON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted by the Minnesota Legislature:

Concurrent resolution memorializing the Congress of the United States to continue its appropriations in support of the rural-electrification program and to refrain from enacting any legislation adverse thereto

Whereas the rural population of the State of Minnesota is vially interested in the benefits and conveniences afforded by the Rural Electrification Administration; and

Whereas there should be sufficient appropriations of the Rural Electrification Administration as approximately only 55 percent of the rural population of Minnesota is served by this program; and

Whereas the rural population of Minnesota is anticipating the time when rural Minnesota will be 100 percent electrified; and

Whereas rural electrification has proved a good investment to the Government by reason of the fact that it has met its obligations, both principal and interest, in advance: Now, therefore, be it

Resolved by the house of representatives, the senate concurring, That the Congress of the United States shall continue to provide funds for the expansion of rural electrification where such construction is economically feasible and likewise to refrain from passing any legislation adverse to the Rural Electrification program; and be it further

Resolved, That a copy of this resolution be forwarded to the President of the United States, the Vice President, the Speaker of the House of Representatives, and to each Congressman and Senator from the State of Minnesota.

LAWRENCE M. HALL,
Speaker of the House of Representatives.

C. ELMER ANDERSON,
President of the Senate.

Adopted by the house of representatives, the 4th day of February 1947.

G. H. LEAHY,
Chief Clerk, House of Representatives.

Adopted by the senate, the 6th day of February 1947.

H. Y. TORREY,
Secretary of the Senate.

Labor Legislation

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 8, 1947

Mr. KLEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

THE NATIONAL BOARD OF THE
YOUNG WOMEN'S CHRISTIAN
ASSOCIATIONS OF THE UNITED
STATES OF AMERICA,
New York, N. Y., April 18, 1947.

Representative FRED A. HARTLEY, JR.,
House Office Building,
Washington, D. C.

DEAR SIR: The public affairs committee of the national board of the Young Women's Christian Association has been following with interest the progress of labor legislation through your committee to the floor of the House, and the final action of the House.

Recognizing that the House and Senate will have to reach agreement before the measure becomes law, we nevertheless feel that we must register with you our feeling about this type of legislation and its possible implications.

We are interested in seeing industrial peace maintained in the Nation. Our national convention, in March 1946, reaffirmed its belief in collective bargaining and in labor-management cooperation. We seriously question whether passage of such legislation as that now being considered will reduce industrial strife, because it does not strike at the roots of the causes of unrest among the working people of the Nation.

It is difficult to see the value of abolishing the present National Labor Relations Board and setting up entirely new machinery. The present Conciliation Service should be strengthened through additional funds and personnel. It should, with additional strength and prestige, be able to encourage voluntary arbitration of disputed questions. In disputes affecting vital public services every effort should be made for conciliation or voluntary arbitration. As a last resort, but only as a last resort, the Federal or State governments should seize the struck industries and enforce compulsory arbitration. Workers in public utilities and other public services which are privately owned should not be treated differently from other workers in their basic rights. Their basic needs are the same and must be provided for.

The YWCA, which numbers thousands of employed women in its constituency, has always been interested in seeing that high standards of employment and efficiency are maintained. This is one reason why we feel that industry-wide bargaining should not be outlawed. Standard labor conditions should be maintained throughout an industry. An employer who recognizes a union and maintains high standards should not be compelled to compete with other firms in his industry where nonunion labor has been hired at cheaper wages. The same is true in industries where closed-shop agreements have been in operation for many years. Shops could hire nonunion members and place the union shops in the same industry at a great disadvantage. In many industries through closed shop or union shop and by means of industry-wide bargaining, conditions have greatly improved and the small businessman greatly benefited. To change these through sweeping legislation would again result in a lowering of standards throughout the industry. Likewise, some forms of secondary boycott are employed in an effort to maintain standards.

From the practical standpoint of enforcement, we question the usefulness of such restrictive labor legislation. Flagrant cases of violence and racketeering can and should be dealt with severely and could under present law be handled with increased vigilance of the police and courts.

However, new Federal legislation would be costly to administer both in terms of time and money. Small businessmen and manufacturers could not stand the costs of endless litigation. For larger manufacturers the time wasted in court trials would be costly. For the Government it would be far better at this time to appropriate the necessary funds to strengthen the National Labor Relations Board, the Conciliation Service, and the Department of Labor so that they can obtain the skilled personnel they need.

Basic economic needs of people must be met to prevent unrest and industrial strife. Many leading businessmen and manufacturers have spoken out recently on behalf of the dignity of the worker and the necessity for improving human relations in industry. The Government should not remove from organized management and labor their responsibility for dealing with each other in ways that will improve living conditions, and maintain high standards of employment and efficiency. Leaders of labor and management must feel equally their responsibility in peacetime, as they did during the war.

If they are "frozen" by laws that will be difficult, at best, to enforce, they will not be free to carry forward the production of vital goods and services the people of this country need. The time and money of management, labor, and the Government are needed for all-out programs to maintain employment and production.

We urge, therefore, that you and your committee bend your efforts to the strengthening of present machinery for handling labor disputes, and to passage of positive legislation to meet the basic economic needs of the people.

Sincerely yours,

Mrs. ALFRED E. MUDGE,
Chairman, Public Affairs Committee.

Hon. Charles L. Gerlach

EXTENSION OF REMARKS
OF
HON. ROBERT B. CHIPERFIELD
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1947

Mr. CHIPERFIELD. Mr. Speaker, it was with deep regret I learned of the passing of my friend and colleague, CHARLIE GERLACH. I came to know him very well as a member of the Foreign Affairs Committee of the House. It was my privilege to have had him as a companion on an inspection trip to Europe for that committee.

To know Charlie was to respect and admire him. He was most sincere and had the capacity for true and abiding friendship. He never disappointed anyone who placed confidence in him. Charlie had an abundance of sound, common sense, and he was always faithful to the principles in which he believed. There never was any austentation about him. He was a man of absolute integrity. His unfailing kindness made him beloved by all who knew him.

The people of his district have lost an able public servant who regarded his office as a public trust, and we all suffer a deep personal sorrow at his passing.

The Chamber of Commerce and Communism

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 8, 1947

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein a brilliant and provocative speech by my illustrious predecessor, the Honorable Clare Boothe Luce:

Grateful as I am for your friendliness today, I know that you know this is no day for an honest speaker to waste time exchanging compliments with the chamber of commerce. This is May Day, the international holiday of world communism. The word "holiday" once meant "holy day." And this is a holy day of vast account to millions of people everywhere on the march under the blood-red banner of the hammer and sickle. As a religion of mass salvation, communism increasingly appeals to the stricken and dispossessed and bombed-out all over the world. That is as it must be, for the history of all mankind proves that civilization cannot subsist without a dynamic religion. Let us note in passing that communism, as a religion of mass salvation, has not succeeded because Christianity has failed in our times, but because Christianity has not been tried in our times. Saying which—the only thing of importance that can be said on May Day—let me lurch back to my subject, the chamber of commerce and communism.

The problem which faces an honest speaker on May Day is this: How to talk to the chamber of commerce about communism without helping the Communists. If this time is spent telling you what a monstrous, cruel, and fallible system communism is, compared to democracy, only one effect may be achieved: To send you all away feeling delightfully complacent about democracy in general, and the chamber of commerce in particular, as the gallant custodian of the brightest jewel in its crown—the world's highest living standards. And the one fatal attitude in times of danger is complacency. Neither saints, nor heroes, nor patriots, nor even very good businessmen are products of the complacent mood. But our times call for such men: men of humility and courage, and mercy and lucidity. Complacency is pride grown fatuous and senile. It is the death of these vigorous and necessary virtues. It is for this reason, today, you would not want your speakers to increase your self-esteem.

Then let's ask, in a mood of wholesome uneasiness, why things have come to such a doleful, bloody pass with this generation. For we live in an age of hideous human disorders and intellectual confusions. Is there not at least one fact about that confusion which is plain to any lucid mind? There is—the fact that everybody blames somebody else for it.

For example, abroad whole nations blame other whole nations for a large part of their domestic troubles, and all of their international troubles.

We, in concert with the 55 United Nations, lately blamed Hitler and the Nazis as the sole authors of World War II. Now we have crushed the Nazis. And Hitler rots in ignominy. And yet our troubles continue, indeed grow worse. Whom shall we blame for them now? Whom, in the words of the journalists, shall we flay, flail, and lash out at? Why, by popular demand, of course, the Commies. Communism abroad and subversive elements at home are now held responsible for everything and anything that sours, or stinks, or hungers or thirsts or bleeds anywhere.

What shall we say of this astonishing and melancholy state of affairs, in which the men of every nation point the finger of judgment at their neighbors? I think one thing we can say is that the Devil has a very big bag of tricks. (You will see at once that I intend to blame things largely, though not exclusively, on the Devil.)

Baudelaire, the French poet of the nineteenth century, said, "It is the Devil's cleverest trick to convince us he does not exist." And this was the trick he practiced all during the last century, with what ghastly success our own suffering century now shows. In the nineteenth century, the majority of rational men had come to the happy conclusion there was no such thing as a force of evil. There was only blind nature, which presently would be overcome by clear-eyed science—science, the master of inexorable progress, the god of the approaching millennium. All that man called evil would presently yield to benevolent science; poverty, disease, unsound economics, poor communications, the lack of recreational, educational, and plumbing facilities. And perhaps certain pituitary and other glandular deficiencies. The worst of these—old age—might even be remedied by the grafting of monkey glands. Who knew? Man, who had swung down from the trees as an ape, might soon swing up to the stars as a god—with a liberal injection of his simian forebear's gonads. Science was the nineteenth century religion of mass salvation.

But science is neither good nor evil in itself. Science is simply a tool, or a technique, to be used by man for good or evil. This we found out when we saw how Hitler used it. He built great roads, hospitals, schools, maternity centers. He eradicated slums. He bred literate children, plumped up with vitamins. His chemical, physical, medical laboratories were the busiest in all Europe. With applied science, Hitler plunged the nineteenth century world, which believed in inevitable progress, into chaos and barbarity. Then once again, as so often happens in history, the world was confronted by the visible existence of the power of evil, which can come to capture and control all things thought, or invented, by man—including science.

Let us note again in passing that, in order to unleash his fury on the world, Hitler had first to destroy, by scientific methods, any allegiance to any higher authority than that of the state in the minds and hearts of the German people and their scientists. He had first to persuade, or seduce, or condition, or breed out of them the notion that they were personally responsible to their consciences before God for every day's actions. Then we witnessed, under Hitler, in an age of science such monstrous crimes against human flesh and spirit as would have made Caligula and Genghis Khan pale.

By the time the holocaust of Hitlerism had spread upon the earth the Devil could no longer remain incognito. Discovered, he played his trump card. He convinced us that Hitler himself was the Devil. Not, mind you, the Devil's puppet, which Hitler certainly was, but His Satanic Majesty in person. In short, the Devil's smoothest trick was to convince us that the force of evil was the other fellow's leader.

Then we finished off Hitler. Whereupon shame, cruelty, greed, and corruption still stalked the world. That might have been a bad moment for Old Scratch if he had not had Stalin handy to fill Hitler's place in the minds of the majority of the world's democrats and possibly in the minds of the majority of the members of the chamber of commerce.

At any rate, with communism on the rise and democracy on the defense, the spirit of evil has at long last surely concocted the perfect recipe for chaos—the world is divided in two and each half thinks the other half is the Devil. For capitalism all the forces of error are now more and more personified in communism and its leaders. For communism the forces of evil have long been personified in capitalism and its leaders. And should each decide to demand louder and louder, as the only price of peace and truth, the destruction of the other, this could lead to only one result—mutual extermination, atomic destruction, the obliteration of man.

What, then, is the answer? Surely one of the answers is for us to begin by admitting the fact that the Devil helps us to conceal from ourselves: that some of the blame for the present world mess can be laid at the door of America and faulty—no evil—American policies.

For example, does any of us say that Stalin is a murderer? That his hands are red with the blood of thousands upon thousands of his own countrymen? Shall we say that the rosy stain on the hands of some American statesmen is just the red ink which diplomats must use in balancing the economic books of war? But it isn't. That, too, is blood: the blood of the Poles, and central Europeans, and Koreans that we sold out to Stalin when we dishonored the Atlantic Charter. Do we abhor and fear Stalin's victories abroad? Let us remember to say, then, that Stalin's victories were not achieved in spite of all we are and do—but in spite of what we have failed to do and be.

At this point I am constrained to ask you very frankly if you do not think I sound very much like Mr. Henry Wallace? For this is precisely what he has been saying in Europe. Wherefore he has become the scorn of many men who call themselves "100-percent Americans." But have Mr. Wallace and I really said the same thing; do we share the same attitude in this matter?

May we hold a consideration of that question in abeyance for a moment while we review a little congressional history?

A little over 4 years ago, a newly elected Member of the House of Representatives—myself—rose to make a speech about the need to plan then—even in the midst of a World War—for a vigorous American peacetime civilian air policy. The policy advocated by that inexperienced Member, although bitterly attacked from all sides at the time, has since been adopted by this Government. What had then prompted the Congressman to advocate this now-accepted policy was the projected plan of Mr. Henry Wallace—a powerful Roosevelt Cabinet member—to internationalize all American airports and throw them open to the planes of every other nation on a wholly free-trade basis. Today, this idea would seem idiotic if for no other reason than that the Russians have for 4 years, as predicted by that Congressman, refused to drop the "iron curtain" in any sphere of world-trade cooperation. But then it was being seriously considered. In that speech—and now I quote accurately—the Congressman, attacking specifically these air policies of Mr. Wallace, said:

"I am a great admirer of some of Mr. Henry Wallace's ideas" such as feeding Europeans and helping to rehabilitate the war-torn world. But "Mr. Wallace's warp of sense and woof of nonsense is very tricky cloth out of which to cut the pattern of a postwar world. He has a wholly disarming way of being intermittently inspiring and spasmodically sound, and says much that all men of good will must agree to. But much of what Mr. Wallace calls his global thinking, is, no matter how you slice it, still 'globaloney.'"

Today I tell you that the "globaloney" of our times is the insistence by any nation that all error, all blame, and all responsibility for failure rests exclusively in any one capital or economic system. And I repeat, this is—or seems to be—exactly what Mr. Wallace is saying. Or is it? Or is Mr. Wallace saying something else which makes his utterances so distasteful to many men of good will and honest purpose? Well, it is not that he accuses his own Nation of faults and sins. A patriot is frequently commanded to do so by his patriotism; and Wallace serves us wonderfully well to point out our faults. It is not that in accusing America of so much, he seems to excuse Russia of so much worse; that in making a great deal of the crimes of imperialist leaders he makes nothing at all of the blood-soaked hands of Stalin. When we have reviewed—honestly—our own crimes, we are in much better shape to combat worse ones, in others. What is it then, that repels us in the personal attitude of Mr. Wallace? Is it not this: That while he blames all other living statesmen, he loudly professes the impeccability of his own political record, and the pristine purity of his own personal motives? Is our real resentment not born of his prideful insistence that complacency, greed, inertia, indifference, compromise, selfishness, ambition, evil, are harbored in every political heart but the heart of Henry Wallace? Is it not, in short, his failure to take any personal responsibility for the mistakes of the past, the very core of what we dislike most in his utterances?

But, is it not precisely this lack of personal humility, of self-criticism, that makes Wallace, for all his excellent criticism of others, the very tragic symbol of our times? Which makes him, even while he says some true and useful things, still the Devil's advocate?

If it is, then let us remember, when we see him, many of us are seeing ourselves, as it were, in a mirror, blaming everything on the other fellow, and finding excuses for none, save those who are at that moment agreeing with us.

For example, at home: The Government blames business for all failures of domestic policy. Business blames labor and Government. Labor blames Government and business. The people—failing to see they are all three—blame all three. Look or ask where you will, no individual, group, organization, or party but calls another largely culpable—and, therefore, responsible—for the many failures which on all fronts devour our hopes of peace and prosperity. And few will take personal responsibility.

Today we see many of our statesmen refusing to stick their necks out, fearful of personal consequences, if they whisper in public what they bellow in private about countless matters. They are afraid to inform public opinion, until public opinion is formed. They consult the Gallup poll as once the Roman senators consulted the entrails of geese.

We see the American citizen clamoring that his Nation halt the spread of communism and yet refusing to pay for either armaments, or foreign loans, or relief shipments out of his own pocket. We see him demanding in one and the same breath that the Government balance its budget, cut taxes, and increase in a wide variety of fields, his own hand-outs from the public Treasury.

But also, we hear the mournful holler of the American businessman that he can't do anything until Government gets out of business, rhythmically drowned out by the holler that he can't do anything until the Government gets into business to control the unions, and so forth. Above all, we hear the average businessman deplore the loss of self-reliance in the average American, and his unwillingness to take any risks.

This is the question to ask of yourselves today: Which of you is self-reliant; who among you will take risks today without waiting to see what happens to his neighbor?

Who says here, it may be that I, the person, am at the very bottom of all this: I have done wrong. I will act to do right. I will risk. I will begin to establish a chain reaction of self-criticism and self-reliance in my group. Does no one say it? Are we then mass-minded men, totalitarian hearted like our enemies. Trembling puppets of an all powerful state? Men who dare not take the risk of doing what they believe to be sound, just, merciful, right? Is this then the Devil's last terrible trick: to make us become like the thing we claim to despise?

Now here you are, generally supposed to be a most powerful group of businessmen. What power do you really have to save yourselves, or our Nation, from communism or catastrophe? As an original group, very little. For as an organized group all you probably will ever be able to agree upon is to pass a resolution that somebody else has done wrong; somebody else has to mend his ways, or act first, before your group can "take effective democratic action." But as persons—John and Jim and Joe and Bob and Herbert—you are all-powerful.

If each man here took the risk tomorrow to increase production, or cut prices, or raise wages—whatever your conscience tells you—you would be doing the one thing you could do to defeat communism: accepting personal responsibility to avoid that American depression which you know and I know is the one temporal circumstance that must make world-wide communism inevitable.

How do you begin accepting personal responsibility? You begin by kicking the one who tells you that you don't need to, or you can't, square in the teeth; that's the Devil. And, in case I forgot to mention his precise locus up to now, it is not only Moscow and Berlin and London and Washington. It's right in the chair, not next to you but with

you. And right here, on this platform, prompting me, as he so often does, to some uncharitable or prideful utterance.

For example, I am a retired politician. And yet I dragged in by the heels an example of my own political astuteness in the matter of our air policy as though it mattered. And I succumbed to the temptation to berate Henry Wallace before the chamber of commerce, which is on all points and at all times completely prepared to condemn him. Yes; the Devil is not only everywhere, he was here, imbuing me, even as I attacked him, with the very same devilishly messianic windbag spirit that afflicts poor Henry Wallace.

And now to answer the question: How can the members of the chamber of commerce help to reverse the present global trend towards identifying the Devil as the other fellow, a trend which must result in atomic war and unspeakable desolation. It is very simple. But it is not easy. We can reverse it when we begin to hold ourselves as persons responsible for it. And as we, as persons, take action every day, cost what it may at the hands of state or society, according to the dictates of our personal conscience. A sense of one's neighbor, of personal responsibility, and of liberty is the 3-in-1 sense without which freedom must perish.

In the final analysis, there is no other solution to a man's problems, even in the year 1947, but the day's honest work, the day's honest decisions, the day's generous utterance, and the day's good deed.

We are Americans. We think we are different from the Communists. In what does our difference lie? Only in this: We are each of us still free to do what our conscience dictates to us, and what is suggested to our minds and hearts by courage and charity. Let us do it. For, as Walt Whitman said, "The American compact is altogether with individuals."

General Housing Bill

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 8, 1947

Mr. KENNEDY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following portion of a newspaper article from the Boston Herald and several letters:

VETS PRICED OUT OF NEW HOMES, GI LOANS TO DROP, BANKERS TOLD

(By Arthur Stratton)

High construction costs have priced out the veteran from purchasing his own home and will mean a considerably lessening volume of GI home loans this year, the National Association of Mutual Savings Banks was informed yesterday.

The highest authority on the subject, T. Bertram King, director of the loan guaranty section of the Veterans' Administration, told members of the association at its annual conference at the Hotel Statler that "present-day costs have taken the price of new housing far beyond the ability to pay of the average veteran purchaser."

SIX THOUSAND DOLLARS VET'S LIMIT

"There just isn't any sizable group of prospective veteran buyers that can carry loans above $6,000. And how many will prove to be anxious to buy when they see what they can get with their $6,000 loan?"

King reported to representatives of 531 mutual savings banks throughout the country that construction costs, figured on the basis of a standard, six-room frame house, have risen about 10 percent since November. He added that "new starts" for the first 3 months of this year totaled only 133,000, as compared with a total of 160,000 for the first quarter of 1946, when materials were in shorter supply and controls were on.

EAST BOSTON SOCIAL CENTERS COUNCIL,
Boston, Mass., April 29, 1947.

Hon. JOHN F. KENNEDY,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN: This is an appeal from East Boston to you to do what you can to get the Taft-Ellender-Wagner general housing bill passed.

You know East Boston and you know what sort of housing we have in some sections here. Our people deserve a better break, and we believe the passage of the above bill would help a lot.

Thanking you.

Very truly yours,

S. MAX NELSON,
General Director.

CAMBRIDGE POST NO. 35,
JEWISH WAR VETERANS
OF THE UNITED STATES,
Cambridge, May 1, 1947.

Hon. JOHN F. KENNEDY,
Congressman From Massachusetts,
Washington, D. C.

MY DEAR CONGRESSMAN: At a regular meeting on Monday, April 28, 1947, the Cambridge Post No. 35, J. W. V., strongly urges you to support the Taft-Wagner-Ellender housing bill and favor passage of same.

Obediently yours,

Dr. M. SCHERTZER, *Adjutant.*

Can American Dollars Thwart Kremlin Aims?

EXTENSION OF REMARKS
OF
HON. GEORGE MacKINNON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 8, 1947

Mr. MACKINNON. Mr. Speaker, under leave to extend my remarks I include an editorial dated May 4, 1947, by one of the famous editorial writers of the Minneapolis Sunday Tribune, Carroll Binder, on the important question as to whether it is possible for the United States to stop the spread of communism by the United States furnishing assistance to the Communist-threatened countries:

CAN AMERICAN DOLLARS THWART KREMLIN AIMS?

(By Carroll Binder)

How much is the United States spending for foreign relief, rehabilitation, and political stabilization? How much would American taxpayers have to provide during the next 5 years to make good on the Truman policy of supporting menaced free governments? How would a major American economic depression affect this program?

These questions are being discussed at home and abroad as Congress debates appropriations and tax reduction and as the Kremlin speculates on a major crash of the American and British economies.

Russia's refusal to join with the western democracies in making decent peace settlements and Russia's behavior toward non-Communist countries arise out of the Kremlin's conviction that the United States and other capitalistic countries are heading for unavoidable economic catastrophe.

As times get harder in the United States, Russia and Marxians in other countries calculate, American taxpayers will be increasingly reluctant to provide funds for the Truman program.

When American financial assistance dries up, Russia expects the countries enjoying or anticipating American aid to be far more responsive to Communist pressure.

To make sure that its predictions come true, Russia is offering increasing opposition to creation of an international trade organization.

Russia wants the entire program of international economic cooperation, symbolized by the International Bank, the International Fund, and ITO to fail, so that the anticipated depression will attain maximum proportions and leave the United States too weak and discredited to stand in Russia's way.

RUSS SELF-DECEPTION

In anticipation of that development the Kremlin is engaging in some fancy self-deception.

In a significant article to aid the agitator and propagandist Pravda, on April 28 declared there are 5,700,000 unemployed in the United States. Unemployment and strikes are assuming an extensive and steadily increasing scope, resulting in an increasingly tense internal situation.

There were 2,300,000 unemployed in the United States in March, and 2,500,000 in February, but statistics, as Pravda long ago observed are an instrument of the class war.

The House last week appropriated $200,000,000 to aid Austria, Hungary, Poland, Italy, Greece, and China. The Senate Foreign Affairs Committee previously had unanimously approved a $350,000,000 appropriation for this purpose, but a tax-reduction-minded House cut that figure by $150,000,000.

REPLACES UNRRA AID

This appropriation is in addition to $400,000,000 previously voted to assist Greece and Turkey along lines laid down by President Truman. It is designed to relieve acute distress incident to the discontinuance of UNRRA.

This also is independent of $500,000,000 worth of assistance the United States is committed to give the people of the American-occupied zone of Germany during the next 3 years; $600,000,000 worth of assistance General MacArthur feels must be given the people of Japan during that period; several hundred million which will be required if we are to make a success of our occupation of southern Korea, and almost as much to carry out our responsibilities in Austria.

BRITAIN MAY NEED MORE

This list does not take into account the possibility that Great Britain may have to ask the United States to assume at least part of the commitment to provide $500,000,000 worth of assistance to Germany which Britain undertook last December at our behest.

Uncertainty as to the extent of present and prospective American commitments has prompted Representative HERTER, of Massachusetts, to introduce a resolution in Congress authorizing the creation of a select committee on foreign aid. Its object would be to make a continuing study of the best way to relate our expenditures abroad to our resources and objectives.

Pending the findings of such a committee, we have only a series of informal estimates and reports to guide us.

WHAT UNITED STATES HAS GIVEN

On the basis of official reports of 16 Government agencies, Senator JOHN MCCLELLAN, of Arkansas, says that between July 1, 1945, and July 1, 1947, the United States will have allocated money or goods for foreign relief

and assistance in the amount of $16,788,091,000. This is exclusive of the $600,000,000 for Greece, Turkey, Italy, China, etc.

This includes the British loan, lend-lease, Export-Import Bank, World Bank, International Monetary Fund, UNRRA, foreign liquidation, and a variety of other disbursements.

Beardsley Ruml, former Chairman of the Federal Reserve Bank of New York, thinks the United States could afford $3,000,000,000 in foreign gifts and loans beneficial to the American economy. Any money sent abroad for world reconstruction would have to come back to the United States because there is no other place to spent it, Ruml argues.

CLAYTON'S ESTIMATE

Under Secretary of State Will Clayton has expressed the opinion that it would take $20,000,000,000 to finance the Truman policy during the next 5 years.

He believes a country with a national income of $165,000,000,000 a year should be willing to devote some of its surplus to the assistance of free countries.

Henry Wallace topped everybody by proposing a $50,000,000,000 American contribution to world reconstruction, with $10,000,000,000 to $17,000,000,000 allocated to Russia if Russia agrees to a settlement of the German and perhaps other problems.

In addition to the sums sent or expected to be sent abroad by the United States Government, generous Americans have donated large sums through private-relief agencies and as personal gifts.

Only the future will tell whether our attempts to alleviate distress and facilitate recovery by gifts and loans will be more effective than Russia's attempt to foster economic collapse in shaping the postwar world.

Only the future will tell whether our foreign assistance has spared us a major depression or weakened our ability to withstand economic decline, as isolationists contend.

Monopolies Great Concern of Small Businessmen

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1947

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks, I include a forceful and timely address by Mr. Ed. Wimmer, editor of Forward America and vice president of the National Federation of Small Business. His address was delivered over radio stations WHIO and WSAI on April 29, 1947. The address merits the consideration of everyone interested in thwarting the march toward monopoly and centralization of economic power. The address is as follows:

ANNOUNCER. Abraham Lincoln said of the free market, and I quote: "The prudent, penniless beginner in the world labors for wages awhile, saves a surplus with which to buy tolls or land for himself, or a small business—then labors on his own account for another while, and at length hires some other beginner to help him. This is the just, generous, and prosperous system which keeps the way open to all, gives hope to all, and conserves energy and progress and improvement of conditions for all."

This quotation from the life of Lincoln, ladies and gentlemen, is the theme of a talk you will now hear from Mr. Ed. Wimmer, editor of Forward America, and vice president of the National Federation of Small Business.

Mr. WIMMER: Every Tuesday night at this time, ladies and gentlemen, it has been my purpose to challenge your patriotism and thought with certain statements pertaining to national and international developments now affecting the lives of all people in all nations. Most of my arguments have been centered about the subject of concentration of power in the hands of the few, and I have endeavored to prove that such concentration has not only caused all the great wars, but that power in the hands of the few is now laying the groundwork for a third world war.

There is, of course, a way in which we can minimize the threat of too much power in the hands of the few, and if this goal can be reached, we can usher in the longest period of prosperity ever known, and end, so far as this generation is concerned, the threat of another world conflict. The remedy is simple. It can be applied scientifically, with no real loss to any, but with untold gains to the many. The remedy for curing the evil of which I speak—centralization of power in the hands of the few—is decentralization. If we do not apply this remedy—American democracy is doomed—and the social, religious, economic, and political conflagration which would follow such a disaster needs no picturization.

I shall make no attempt to prove this entire statement in this evening's broadcast, but I will prove certain things to your entire satisfaction, which should remove from your mind any complacency you may feel about the present trends to centralization.

During the past several weeks I have been urging support of the Kefauver-O'Mahoney bill, now pending in Congress, which would prohibit any future merging of competing corporations, and I promised to give you a more detailed report on what we hoped to accomplish through the passage of this legislation. Broadly stated, the bill to outlaw mergers between competing corporations, and known as the O'Mahoney-Kefauver bill, has been prepared with a view to prohibiting unlawful restraints and monopolies, and to prevent certain trade practices not covered by existing antitrust laws. The Congress did pass antimerger legislation in 1914, which was intended to halt the trend toward monopoly, so evident during that period, but, like all important laws, this one had its loophole for those who wanted to find it. The law was known as the Clayton Act, and section 7 of this act specifically stated in clear-cut language that no corporation could acquire any part of the stock or share capital of another corporation where the effect of such purchase would tend to lessen competition or tend to create a monopoly.

Every corporation lawyer who studied the legislation knew that the intent of the Government was to prevent too few corporations from getting too much control, and the merger trend should have slowed down as a result of this knowledge. The lawyers of the larger corporations, however, discovered a loophole in the law, which was the omission of a prohibition against the acquisition of the properties and physical assets of competing corporations, and as soon as these corporations found that they could evade the intent of the law by purchasing the properties and other physical assets of competing corporations a new wave of mergers got under way, and each year there has been an increase in their number.

Let us look at a few startling figures to see just what has, and is still happening to us. Statistics of the Bureau of Internal Revenue reported in 1919 showed that "200 leading corporations had assets of $43,000,000,000." The assets of these corporations had doubled in the years beginning in 1909 and ending in 1919. By 1929, the assets of these same 200 corporations jumped from "forty-three to eighty-one billion dollars," and by 1935, "one-tenth of 1 percent of all corporations owned 52 percent of the assets of all corporations." Less than 5 percent of all corporations, in other words, "owned 87 percent of all assets of all reporting corporations," and "one-tenth of 1 percent of the corporations reporting in 1935 * * * earned 50 percent of the earnings of all corporations."

By 1941, there were 32 corporations in America with assets of $1,000,000,000 or more. By 1943, the number had jumped to 41, and today this figure has been almost doubled.

In the boom year of 1929, there were 1,245 mergers of competing corporations, all of which were in violation of the spirit of the antitrust laws. All through the depression, the merging continued, with the bigger corporations buying out competitors at their own price.

The Federal Trade Commission recently reported that a total of 1,800 mergers took place during the years from 1940 to 1946. During the war, 107 big companies absorbed 300 smaller competitors in the food industries. Six distillers acquired 49 independent distillers and other kinds of businesses, the larger distillers gobbling up virtually all of the country's supply of liquor barrels, forcing the smaller company to sell out because it could get no containers.

One big dairy combine has nearly 500 separate enterprises, and sits astride as much as 60 percent of the dairy business of some of our largest cities. This same dairy combine controls at least 55 percent of the cheese business, 21 percent of the ice cream business, 12 percent of the fluid milk business, 8 percent of all butter sales, and it is operating in many other fields entirely foreign to the dairy industry.

In the tobacco industry, in agricultural implements, in the chain-store field, in banking, and in every other phase of our national economy, the story is the same, and it is this monopolistic trend to merging of the economic resources of the Nation under the control of a few boards of directors, that has led to monopolistic practices of labor unions, and to the growth of big, bureaucratic government.

The whole tendency in this direction is destructive to American ideals, and foreign to all of our ideas of what constitutes the free market. James H. McGraw, one of the leading industrialists of the country, said not long ago, and I quote: "Competition requires independence of action, free access to markets, and no large degree of control by any buyer or seller. The more the sellers, the more easily the buyer can shift from one seller to another."

Henry Luce, publisher of Life, Time, and Fortune magazines, said in 1935, and I quote: "If neither business nor government make any move in the direction of breaking down business into smaller, more compact, more mobile units, if bigness is allowed to remain as the standard concept of our economy, then the American businessman and the American politician, and in fact, all American citizens, must prepare themselves for a different order of things; an order in which the powers of government are not limited, in which the right to risk and profit is not clear, and in which the making, selling, and even the buying of the products of the biggest show on earth, are all mysteriously controlled from above." End of quotation from Fortune magazine, the publication of big business, and written by Henry Luce, its publisher. After reading this sensational statement, I bombarded Life, Time, and Fortune magazines with literature and letters. From time to time, articles did appear, especially in Fortune and Time magazines, and then in 1943, under the title of "America and the Future," John K. Jessup, one of the top men among Luce publications writers, stated: "Many businesses are too big for their own good.

No government can ever locate that point at which a business reaches its exact optimum size, but ours can at least make a start. We can oppose unnecessary gigantism and make corporations prove that they need to be as big as they are." By no other course can we escape socialization of banking and industry within the next few years, which would lead us straight into the arms of the Communists.

I told you before that I had testified in behalf of the Kefauver bill, which I believe is the first step we can take this year to lay the foundation for a real decentralization program. There is no doubt in my mind that the bill will be reported out of the Judiciary Committee, but indications are that it will take a fight to bring it up for a House vote.

If the bill should pass the House I believe it will go quickly to passage by the Senate, where Senator JOSEPH O'MAHONEY, the sponsor, and other top Senators are already making a real fight.

Mr. KEFAUVER's bill is known as H. R. 515. I am not going to ask that you wire or write your Congressman, but I do urge you to consider well what little thing you may do to keep the monopoly issue the hottest issue in America. We have been shadow boxing with phantoms long enough. It is time that we challenge the real enemy of the American way of life: centralization of power in the hands of the few.

Poland

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 8, 1947

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address made by me over Station WHDH, Boston, Mass, on May 3, 1947:

On this day dedicated to the glory and greatness of the Polish Nation, I am very highly privileged, as Congressman from the Third Massachusetts District, to participate in this most appropriate and impressive program in tribute to an outstanding nation and a noble people. Americans of every race, class, and creed join today with all our fellow citizens of Polish descent in commemorating the stirring events of the founding of this inspiring nation and paying our humble homage to the historic achievements of the Polish people.

No nation in history has sacrificed more for freedom. No people in history have suffered more in the name of free institutions. From time immemorial down to the very present moment the Polish Nation and the Polish people have struggled with tremendous faith, unyielding tenacity and unsurpassed courage to serve the cause of self-determination and human liberty, yes, and to serve the cause of the living Christ.

During the recent war the Polish people and Americans of Polish blood gave living proof of their devotion and loyalty to the eternal principles of freedom and democracy. In their own land, suffering under the lash of an unspeakable tyranny, stricken more cruelly perhaps than any other single nation, the Polish people waged an unflinching battle against overpowering odds and against a ruthless enemy which laid waste their beautiful country, ravaged their homes, slaughtered the helpless and the innocent, and threatened all free institutions throughout the world.

At home here in America our own brave Polish-American sons in the armed forces by gallantry and heroism unexcelled by any group proved to us and to the world that there is no braver, no stronger, and no more courageous American than the Polish-American. Grateful as we all must be for the opportunity to live as citizens of this great free Nation, they demonstrated that they were prepared to discharge in full the debt which they owed to our own beloved country, because they believed, like all of us believed, that they were fighting to preserve democracy and fighting to defend the principles of freedom and justice, upon which all democratic institutions are based.

They believed, as all of us believed, that our Nation and the nations associated with us in the devastating world-wide conflict were fighting for the doctrines set forth in the Atlantic Charter and the "four freedoms." They had every reason to believe, once our enemies were crushed, that the promise of speedy liberation and self-determination for Poland and other small nations, reiterated so often during the war, would be kept, that the guarantee of a free, independent Polish nation set forth in the Atlantic Charter and pronounced in many other wartime declarations would be respected, that the right of the Polish people for self-government and self-determination would be redeemed and enforced, that their birthright of freedom and independence, for which so much blood had been spilled throughout the ages, would be recognized.

Yes, my friends, these were the solemn promises made to the Polish people, made to all other small nations. But these promises have not been kept. These guarantees have not been fulfilled. These rights have not been enforced. Instead, through a series of shameful compromises, concessions, and appeasements at Tehran, Yalta, and Potsdam in which, I am ashamed to say, our own Government took a leading part, the Atlantic Charter was thrown overboard, the "four freedoms" was consigned to the scrap heap, and the Polish nation was thrown into shackles and slavery under the domination of Godless, antidemocratic communism—a system of government and a condition of servitude just as detestable and obnoxious to the liberty-loving, peace-seeking Polish people as the brutal tyranny of the Nazis and just as detestable and obnoxious to all the decent, right-thinking peoples of the world.

On this day dedicated to the glories of the past of this ravaged Nation, I desire to declare that there is no crime in all the annals of history perpetrated against any nation more ghastly, more horrible, or more perfidious than the high international crime which unconscionably cast the God-fearing peoples of Poland into slavery under a Communist puppet government. This crime cries to the American people, not only for redemption, but for correction. The cruel betrayal of the Polish people, a betrayal without hardly a counterpart in all human history, must be corrected. The great wrong that has been done to this noble people must be righted, if the United States of America and the United Nations are to maintain self-respect and the respect and confidence of lovers of freedom and justice throughout the world.

The Polish people are not seeking special favors from anyone or from any nation. They are merely seeking their God-given right to be restored to their previous status, to be released from cruel, inhuman serfdom and to be permitted to live as free citizens of a nation ordained and developed under the same principles of self-determination upon which our own Nation is based and in the name of which and to perpetuate which so many Polish and American sons and sons of other free nations fought, bled, and died.

The moral sense and the conscience of the loyal American people have been deeply shocked and aroused by the plight of Poland and they will insist that the Polish people shall be released from bondage and accorded the right, so dearly won, to maintain their own form of government free from the brutalizing shackles of communism. The cause of Poland is and will be the one great test of whether or not this Nation and the United Nations will be able to carry out the great basic principles for which we fought the war of establishing freedom and liberty on a secure foundation or whether we, on the other hand, will sit back in craven submission and appeasement and surrender to the accomplished fact of communism on a world-wide scale.

As we observe the steady pressure against the aspirations of the Polish people and other peoples who have a right to be free, as we observe the spread of infiltration and control beyond the gateways of western Europe into practically all parts of the world, and especially into the very heart of western democratic civilization, thinking Americans must be gravely disturbed at the expanding and ominous power of the mighty octopus of Red fascism which is so ruthlessly spreading its deadly tentacles over so many free democratic nations.

If the freedom our sons fought for is to live, if the rights of nations, small and large, to ordain their own form of government are to be preserved, if the dignity and liberty of the ordinary human being is to be recognized, then it is the sworn duty of every American who believes in the basic truths and doctrines of his own Nation to rally to the cause of Poland, and indeed to rally to the cause of every helpless, inarticulate nation, beaten down, suppressed, and struggling to be free from oppression and tyranny.

Our sons have fought and died for freedom and the very least we can do is to stand for and strive to fulfill the ideals for which so many of them paid the supereme sacrifice and offered their all. Poland must and will be free or else the cause of democracy, which she symbolizes so nobly, will be submerged under the wave of totalitarian dictatorship and the world will ultimately revert, as it has in dark times of the past under conditions very similar to the ones which now confront us, into brutality and barbarianism.

And so, my friends, on this glorious Pulaski Day that typifies some of the noblest and most inspiring chapters of man's struggles for freedom and light, which exemplifies so magnificently the devotion and sacrifice of Poland and the Polish people, I am proud to pay my humble tribute. And I am proud to pledge my continued and my unflinching efforts to the sacred cause of Poland and human freedom.

Yes, my friends, Poland must be free. With God's grace and with the help of the millions of patriotic people of our own great Republic and liberty-loving peoples the world over, may Polish freedom soon come to pass.

Search Without Warrant

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 8, 1947

Mr. JACKSON of California. Mr. Speaker, in a 5-to-4 decision handed down by the Supreme Court this week, a decision marked by a bitter minority dissent, the right of search without warrant was pronounced.

By reason of my votes in several instances during the course of this session,

I have been attacked as a "reactionary" and a "Red baiter," both of which terms I consider ridiculous. I have stood, and shall continue to stand for what I believe to be the constitutional rights of all American citizens, whether those rights take the form of control of one's own property, as in the case of rent control, or whether it be the right of management to have a voice in the conduct of legitimate business, as in the case of the labor bill.

I do, however, view the decision of the court as an attack on the constitutional right of an American citizen to be free within his own home from search and seizure at the whim of law enforcement agencies great and small.

I deplore the decision as a step away from liberty and freedom of the individual.

Assistance to Greece and Turkey

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 8, 1947

Mr. FULTON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following correspondence regarding a Soviet-Yugoslav agreement:

DEPARTMENT OF STATE,
Washington, May 5, 1947.

The Honorable JAMES G. FULTON,
House of Representatives.

MY DEAR MR. FULTON: I refer to a telephone conversation between Miss Cameron, of your office, and an officer of the Department of State, asking whether the Department had any information regarding a Soviet-Yugoslav agreement whereby the Soviet Government agreed to give certain assistance to the Yugoslav Government.

There is enclosed a communication which I believe covers the matter in which you are interested.

Sincerely yours,
DURWARD V. SANDIFER,
Acting Legislative Counsel.

[Enclosure: Telegram from Moscow, June 11, 1946.]

DEPARTMENT OF STATE,
Moscow, June 11, 1946.

SECSTATE,
1834, Eleventh:

Soviet press June 11 announces Soviet-Yugoslav communique recent negotiations between Stalin, Molotov, and Mikoyan on one hand and Yugoslav Government delegation headed by Tito on other. Substantive provisions are translated as follows:

Questions were reviewed of interest to both sides in regard to Soviet-Yugoslav treaty of friendship, mutual assistance, and postwar cooperation of April 11, 1945, and full agreement was achieved on all questions involving economic collaboration, trade, supply of material to Yugoslav Army, and close cultural and political collaboration.

Government U. S. S. R. agreed to supply Yugoslav Army with arms, munitions, etc., on conditions long-term credit, and also to assist in reestablishment Yugoslavia's own war industry.

Trade negotiations conducted between both governments terminated successfully with conclusion agreement on mutual deliveries of goods. Soviet Government responded to fullest extent to requirements Yugoslav economy, both in regard to raw materials and to technical and other materials.

Decisions were adopted regarding close economic cooperation between both friendly countries.

Negotiations transpired in atmosphere of cordiality and complete mutual understanding.

Repeated to Belgrade as 29.

SMITH.

Record of Republican Congress Reveals Positive Redemption of Campaign Pledges—Republicans Get Fast Action on All 10 Major Preelection Promises

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 8, 1947

Mr. MUNDT. Mr. Speaker, Abraham Lincoln once said, "Calling the tail of a cow a leg does not prove that a cow has five legs." It is equally clear that the mere fact that a few lame-duck columnists and commentators who are carryovers from the heyday of New Deal ascendancy continue to mouth the fallacy that the Republican Congress has not met its responsibilities does not prove that fallacy to be a fact. In fact, Mr. Speaker, the exact opposite is demonstrable from the printed record of accomplishments.

Such discerning and objective columnists and commentators as Fulton Lewis, Jr.; Richard Harkness, Frank Kent, George Sokolsky, Westbrook Pegler, and David Lawrence have pointed out over and over again the exact and specific manner in which the Republican majority in the Eightieth Congress has acted to redeem its campaign pledges and to restore sensible and solvent Government to this Republic. Mr. Speaker, the record of achievement is as clear as the path to the country school house. All that is required by any analyst is the time and patience to study the record of events which has transpired since the opening of the eightieth Congress last January plus the election-stimulated pronouncements coming from the executive departments during the interim between the great Republican victory on November 5 and the opening session of Congress when the Republicans organized the legislative branch of Government with complete control of it for the first time since 1930.

Once upon a time, Mr. Speaker, a great and good Democrat by name of Al Smith offered a blunt proposal for dispelling such fictitious propaganda as that which the New Dealers of this country have attempted to foist upon the American public in connection with the achievement record of the Eightieth Congress. Al Smith put it well when he said, "Let's look at the record." We Republicans echo the words of Al Smith. We urge our fellow citizens to follow this maxim. "Let's look at the record" for January, February, March, and April. It is a record of which every Republican in America may well be proud and one for which Americans of every party affiliation may well give thanks, since it has headed our country away from the shoals of disaster toward which it had drifted so long and so dangerously.

It is important that objective students of government, and partisan enthusiasts as well, should keep certain stern facts in mind when they endeavor to evaluate the record of the Eightieth Congress down to date. Let me enumerate a few of these stubborn, irrefutable facts, Mr. Speaker, before spreading on the record the achievement score of this Republican Congress. Here are some facts which nobody can deny and which nobody dare dispute:

First. The Eightieth Congress was faced with the necessity of reorganizing and modernizing the functional machinery of the legislative branch of Government in the first major remodeling job of that nature undertaken in many generations. The mandate for this streamlining procedure was provided by the Seventy-ninth Congress, and the Eightieth Congress kept faith with the people by faithfully reorganizing the new Congress in conformity with the terms of the Reorganization Act. It took time to complete this prodigious task and it necessarily slowed down the early activities of Congress. Nonetheless, the Republican majority faced up to the job and Congress is now rapidly making up for the time lost in the difficult problems of reorganization.

Second. The New Deal Democrats maintained their complete control of Congress for something over 720 weeks. We Republicans have been in control for slightly over 20 weeks. It would be a prejudiced jury, indeed, which would expect the Republican Party to correct all of the abuses and excesses of the preceding New Deal majority in less than one-thirtieth of the time it required the New Dealers to write their pattern and their philosophies into law. After all, ordinary common sense and elemental justice require that it will take longer than 20 weeks to free America from the entangling legislative strings which the New Dealers required over 720 weeks to fabricate.

Third. Inasmuch as the Presidency and all of the executive departments and agencies are still in Democratic hands it is impossible for the Republican Congress to move as far or as fast as it could if the Republican Party were in control of both the executive and the legislative branches of Government. The full force and power of New Deal patronage and propaganda emanating from hundreds of executive offices is being used to defeat and distort Republican proposals. After 1948, it is indicated the Republicans will be in charge of both the White House and the Congress; when that occurs, reforms can be both more speedy and more substantial.

Fourth. Under the New Deal pattern of performance, legislative proposals were largely fashioned in the White House and handed down to the controlled congressional committees in the form

of must legislation. That is no longer true. Under the Republican congressional majority, committees devise their own legislation and perfect it through public hearings and following numerous conferences. It is obvious that a deliberative legislative process of this type moves more slowly than the shot-gun wedding technique employed by the New Dealers. It is also obvious, however, that this Republican technique is more representative of the people's views and more reflective of the concepts upon which America's Government was founded.

Mr. Speaker, as written testimony evolved by following the admonition, "Let us look at the record," I now offer the following article which was written by me for the April issue of the Republican magazine, published in Chicago, Ill. It should be kept in mind that this article was written early in April. Since it was written, substantial additional progress has been made in the matter of freeing America from administrative controls, writing foreign policy by bipartisan action, and effecting reductions in the President's budget. However, even this brief review of achievements by the Republican Congress up to the first part of April provides an effective answer to those who carelessly contend that the Eightieth Congress is not getting results.

On the basis of the following record, Mr. Speaker, it is clear that the Republican majority in this Eightieth Congress has established a performance pattern of redeemed campaign pledges which is almost without precedent or without parallel in congressional history.

[From the Republican magazine of April 1947]

THIS MONTH IN WASHINGTON

(By Hon. KARL E. MUNDT)

The brilliance of Washington's famed cherry blossoms is rivaled these days by the blushing faces of embarrassed critics who prematurely criticized the new Republican majority in Congress for "not living up to campaign promises."

Discerning Washington observers with long memories say that they cannot remember any Congress, since the turn of the century, which has done so much in so short a time to vindicate its pledges to the American voters as has the Eightieth Congress.

To demonstrate that the foregoing analysis is not merely the unsupported opinion of a few observers and that this writer is not engaging in hyperbole in bringing you the Washington rating of the Eightieth Congress, let us review the record.

The Republican Party made 10 specific promises to the American public during the last campaign. These pledges were not weasel-worded generalities nor ambiguous platitudes. They are in the files of every metropolitian newspaper of the country and are a matter of public record.

Here is the list of 10 specific promises. After each pledge follows the performance record which is already a matter of actual achievement after only 90 days of Republican leadership in Congress.

COMMUNISM MUST BE CURBED

1. Republicans promised that they would compel the administration to remove the Communists which it had been admitting to the Federal pay roll for more than 14 years.

Performance: Speaker JOE MARTIN of the House of Representatives made the demand that "Communists must be fired from the Federal pay roll," the major theme of his address on the opening day of Congress. The House Committee on Un-American Activities, operating with a Republican majority for the first time in its history, recommended specific legislation providing for a loyalty test of all Federal employees. A Republican-controlled Appropriations Committee denied public funds entirely to one administration agency dominated by subversive fellow travelers. On March 22 the President threw in the sponge and issued an Executive order, providing for a loyalty purge to remove the Communists from the Federal pay roll. Thus, the Democratic administration which had appointed them to office, and which had resisted all efforts to drive them out for more than 14 years, was compelled by Republican action to yield to the growing demand.

WASTE MUST STOP

2. Republicans promised to put an end to wasteful extravagance and endless confusion in the administrative agencies.

Performance: Every appropriation bill proposed by the President and his subservient Bureau of the Budget these first 3 months has been sharply reduced by the House. Millions of dollars have already been saved the American taxpayers. The biggest cuts are yet to come in the most excessively padded budgetary proposals, which are scheduled for congressional action in April, May, and June. By eliminating unnecessary agencies, the march back toward orderly government has begun.

THE GOP WILL DECONTROL AMERICA

3. Republicans promised to free this Republic from the shackles of oppression and unneeded restrictions, restraints, and regulations in order that production might replace shortages.

Performance: Confronted by a determined Republican majority in Congress, the New Deal and wartime agencies of the administration have bowed to the inevitable. There has been a noticeable slow down in the stream of directives flowing out of Washington. Some of the reforms were made voluntarily by bureau chiefs who sensed the trend. In some cases appropriations were denied, pledges to decontrol America were exacted in others before administrative agencies were allotted the public funds they required. As a result, clothing, food, automobiles, tires, plumbing supplies—the materials America needs—are becoming available again.

GOVERNMENT BY EDICT MUST END

4. Republicans pledged their countrymen that a Republican Congress would turn America away from the road toward one-man government.

Performance: Notified by the Republican congressional leadership that his wartime powers would not be extended, President Truman saved what face he could by issuing his declaration "that hostilities are at an end." By such a declaration, made just ahead of congressional action, many of the presidential powers to issue edicts were terminated. Others are being ended by congressional action. Congress is once again the legislative authority in America.

WILL PROMOTE PRODUCTION

5. Republicans promised production. They pledged themselves to work out labor legislation and tax laws which would give labor and management the opportunity of working together for maximum production; that they would retain enough of what they earn to serve as a spur to far greater production.

Performance: Congress has already acted to stop the portal-to-portal pay fiasco which was the direct result of New Deal maladministration. The House has acted to reduce taxes up to 30 percent in the lowest brackets and to 10.5 percent in the highest brackets; the Senate may have acted on the tax legislation by the time this article is printed. By mid-April, a comprehensive "bill of rights for labor and management" is promised from Congressman HARTLEY'S hard-working House Labor Committee. Strikes had been reduced to a new minimum during the first quarter of 1947. Unethical labor bosses can no longer threaten the American public.

FOREIGN AID MUST BE RECTIFIED

6. Republicans promised that our aid to countries overseas should be used to provide relief from suffering rather than political fuel for rival ideologies.

Performance: The Republican Congress announced that UNRRA must be liquidated due to the sorry record of ineptitude, inefficiency, and waste. In its place has come a new formula for foreign relief—largely the program of Herbert Hoover, former Republican President. Our foreign relief will henceforth be supervised by American citizens rather than foreign Communist leaders. It will be used to extend relief to human suffering. Any assistance extended above the level of that required to prevent abject starvation or slow death will be provided only to areas where the precepts of freedom are permitted to function. No longer will American taxpayers provide fuel for the torches of totalitarianism.

THE GOP WILL DEVELOP AMERICA

7. Republicans promised to support rural electrification, to aid veterans, to develop American resources, to try to force the administration once again to direct the flow of American substance so as to strengthen America from within as well as to safeguard it from without.

Performance: Republicans have kept that pledge. In three short months, in addition to putting into practice a streamlined Congress, the Republican congressional majorities demonstrated their determination to press for the internal development of American resources. Such projects as REA, reclamation, soil conservation, veterans' aid, flood control, and the like are receiving favorable consideration. Waste is being eliminated where evident. By adding another $500 to the tax exemptions of folks over the age of 65, the Republican members of the House Ways and Means Committee provided immediate aid to America's elder citizens. By scrutinizing our foreign commitments carefully, the Republican majority is making more money available for immediate domestic objectives.

BUREAUCRACY MUST BE REDUCED

8. From Maine to California, Republicans promised that they would reduce bureaucracy—would separate from the Federal pay roll thousands of unnecessary chair warmers.

Performance: Separating a bureaucrat from his bounty in Washington is numbered among one of the most difficult acts in American political experience. But it is happening. Already 200,000 of the political extras have been severed from the taxpayers' pay roll. Many more are to go. Several investigating committees under such able Republican leadership as that of Representative ED REES, Kansas, chairman of the House Civil Service Committee, and Representative CLARE HOFFMAN, Michigan, chairman of the House Executive Expenditures Committee, are now making a careful examination of this problem. On the Senate side, such Senators as BRIDGES, of New Hampshire; BREWSTER, of Maine; FERGUSON, of Michigan; and WHERRY, of Nebraska, are taking a leading part in purging the pay rolls.

THE FBI MUST BE FREE TO ACT

9. Prior to last November Republicans pledged themselves to "prevent the FBI from being brought under the domination of the White House." J. Edgar Hoover's early public service in the crusade against communism had exposed him to the vindictive attacks of political progressives who were White House favorites.

Performance: Republicans have kept that pledge. J. Edgar Hoover has been given to

understand by Congress that he is a free agent. He may attack subversive forces in this country wherever he finds them. The Bureau of Investigation can count upon the full financial and political support of the Republican majorities. The FBI will be instructed by Congress to follow through on the loyalty purge without fear or favor. It will be asked to report its results to Congress. Legislation is now in the hopper to make the FBI an independent agency of Government, completely out from under the Attorney General's political control. It is certain to be passed at the first sign of executive interference with the FBI. Last month the Attorney General permitted J. Edgar Hoover to testify for the first time before the House Committee on Un-American Activities—an indication of Republican pressure.

FOREIGN POLICY MUST BE OURS

10. Republicans promised to cooperate with the White House and the State Department in the development of an American foreign policy based on realism and honest reciprocal cooperation among the nations of the world * * * designed neither to appease nor antagonize any nation but rather to promote the peace for all."

Performance: Probably in no other single aspect of our national affairs has the Republican influence been more emphatically noticeable than in our American foreign policy. Early in January the Senate Committee on Foreign Relations and the House Committee on Foreign Affairs held conferences with Secretary of State Marshall, with the President, with Under Secretary Dean Acheson, and with important administrative figures in the field. Republicans insisted that the era of the cringing and continuous appeasement of Russia, which marked Roosevelt's foreign policy from 1941 until his death, and continued to earmark our foreign policy under President Truman, must end.

Republicans told the administration that the formation of a bipartisan American foreign policy was a joint undertaking—that it involved more than Republican support for Democratic suggestions. Republicans proposed that the secret agreements at Yalta, Tehran, and Potsdam should now be made public; that international control of the atom bomb must be expedited; that there must be an end to the pattern of vengeful death by starvation which Morgenthau had sold Roosevelt for Germany. Republicans demanded that consistency become the guide lines of American foreign policy rather than political spite.

The President's speech to the joint session of Congress on March 12 was a recognition of Republican insistence that we begin the formation and functioning of an American foreign policy consistent with American principles and expressed with the candor of American tradition. The era of appeasement for Russian communism which began with Roosevelt in 1941, and even earlier, ended on March 12, 1947, with President Truman's address to Congress on the challenge presented by the conditions in Greece and Turkey. Realism has once again replaced reckless opportunism as the basis upon which to build an intelligent and understandable American foreign policy. The reason for the change was the strength of the Republican influence flowing from the victory in the November elections.

EXCELLENT PERFORMANCE RECORD

On all 10 of the major Republican preelection promises America has witnessed in a short period of 3 months a greater degree of postelection performance than in almost any similar period of our national history. In the months ahead Americans and all the world will continue to reap increasing dividends as a result of the wise decision which John Q. Public made last November behind the curtains of the secret voting booths in this greatest and freest of republics.

Hon. Charles L. Gerlach

EXTENSION OF REMARKS
OF
HON. WILSON D. GILLETTE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 5, 1947

Mr. GILLETTE. Mr. Speaker, I join my colleagues in expressing my feeling of genuine sorrow over the passing of our friend, CHARLIE GERLACH. In the death of this fine gentleman, his family has lost a cherished member and his community has lost an exceedingly valuable citizen. He was a good man, quiet and sincere, and he will be missed by his friends, the State of Pennsylvania, and in Congress. To those he leaves behind, I want to extend my deep and heartfelt sympathy.

Don't Sink the Navy!

EXTENSION OF REMARKS
OF
HON. EDWARD H. JENISON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1947

Mr. JENISON. Mr. Speaker, because of the interest there is, or ought to be, in the needs of our country insofar as the armed forces are concerned, I ask unanimous consent to have printed in the Appendix of the RECORD an informative article presented in the current issue of Liberty Magazine as a part of an informative debate entitled "Navy Versus Air Force on How to Fight the Next War." The author of the Navy point of view is the Honorable H. Struve Hensel, former Assistant Secretary of the Navy. Ably qualified to speak, and free to do so without the restrictions of current Government service, Mr. Hensel has this to say:

DON'T SINK THE NAVY! PUTTING ALL ON AIR POWER WILL WRECK OUR SECURITY, WRITES H. STRUVE HENSEL, FORMER ASSISTANT SECRETARY OF THE NAVY

The Army Air Forces did a wonderful job during the war. But if the more radical spokesmen for air power in general and the Army Air Forces in particular make headway with the public, it will endanger our national security. It is time some of the wilder statements were challenged.

An example was the extravagant clamor attending the advent of the new B–36 bomber.

The B–36 was widely advertised as having a 10,000-mile range with 10,000 pounds of bombs, and as capable of carrying an atomic bomb to any inhabited region of the world and returning home without refueling. The manufacturer may have estimated 10,000 miles, but on combat missions it is necessary to allow for such things as take-off, climb, possible head winds, and a fuel reserve. Aeronautical engineers tell me a practical combat radius for the B–36 would be about 3,000 miles. This would allow us to bomb London and return to New York. From any other possible take-off point in the United States, including Alaska, no strategic target could be attained.

Talk about rockets by the less restrained Army Air Forces spokesmen has grown so absurd that the War Department tried unsuccessfully to stop it. Gen. George C. Kenney, head of the Strategic Air Command, sent spinal shivers through the Women's Patriotic Conference on National Defense in Washington recently by predicting that the next war would open with an attack on us across the north polar basin, made by both piloted and pilotless aircraft, by radio-controlled missiles, by rockets—all loaded with atomic bombs, superexplosives, superincendiaries, bacterial weapons, or other means of mass destruction.

"The result may be a casualty list of 25,000,000 men, women, and children in the first 24 hours," he told them.

A few weeks earlier, General Eaker predicted that any of the principal industrial nations "can, by 1950, develop a super-rocket with a range of from 3,000 to 5,000 miles which can travel at a speed of 1,000 to 3,000 miles an hour * * * and deliver 10 to 20 tons of explosives with great accuracy."

Many of these aerial wonders may come to pass some day. But that day is still beyond the ability of practical scientists to predict. As a matter of fact, the secret of how to guide missiles even 1,000 miles has not yet been discovered. Dr. Vannevar Bush, the distinguished scientists who heads the Joint Research and Development Board, publicly deplored not long ago that sort of exaggeration of push-button warfare. He declared that it warped public thinking about present problems. Some of it is a lot of hooey, he said.

We might think the AAF had already invented a plane that would fly over a jungle-infested Pacific island, drop its landing field from the sky (thereby automatically destroying all the enemy in the area), land, and then pull its bombs and supplies down from the skies. Unfortunately, the self-operating air strip and the floating gas drum have not yet been invented. In the meantime it doesn't make sense to drop the bone we have for the reflection of one in the water.

Intemperate AAF enthusiasts, forgetting the job the Navy did, heap ridicule on its ships, its aviators, and its marines. The Marine Corps was inelegantly described by an AAF general at a public dinner in Norfolk a few weeks ago as "a small bitched-up army talking Navy lingo." His remarks, as quoted to me by half a dozen auditors, were unusually frank. He continued, "We're going to put those marines into the Regular Army and make soldiers of them."

The Navy has never claimed it won the war unassisted, and never will. Its function is to dominate the seas by excluding all enemy transportation, maintaining our own lines of supply and communication, and carrying—and keeping—the war in the enemy's own area. This function will remain vital as long as sea transportation is important, and there are no planes on the field or on the drawing boards at present capable of taking over the job. Another Navy function is to help both the air forces and the ground forces establish bases. Furthermore, the Navy has no mean offensive power of its own.

The President's plan for unification, announced on January 16 with the approval of the Secretaries of War and the Navy, recognized that the Navy and ground forces have important roles in our defense, and will have until and unless they are outmoded by inventions of the future.

As for the past, some of the AAF's advocates tend to oversell the excellent job it did in Europe. Take pin-point bombing, for instance. The impartial civilians of the United States Strategic Bombing Survey had difficulty in telling precision from area raids. In the AAF's bombing of German oil plants, the survey found that only 12.6 percent of the bombs landed within the plant fences.

The score chalked up for the Pacific by the strategic bombing survey wasn't very high. During the first 3 months that the B–29s bombed Japan from the Marianas, less than 10 percent of the bombs hit the target areas. They were dropped from about 30,000 feet.

Later, the survey notes, accuracy increased "and averaged 35 to 40 percent within 1,000 feet of the aiming point in daylight attacks from 20,000 feet or lower." By contrast, the low-level attacks by carrier planes got at least 50 percent hits within 250 feet of the aiming point.

Iwo Jima, less than 20 square miles in area, was bombed heavily for 2½ months, but the Japs were still using its airfield at the end of that time. And despite the Seventh Army Air Force's 10-week attack, it took 26 days at a cost of 20,000 lives for the marines to conquer the island.

If the AAF's record against land targets is not flattering, its score against shipping is even less so. In the Battle of Midway the B–17s made 62 sorties and, according to Japanese survivors, made no hits at all.

The classic example of AAF optimism was the reported sinking of the Japanese battleship *Haruna* off Luzon in the first week of the war. According to Japanese naval officers, she was not in that area and none of the Jap ships attacked suffered any damage. The *Haruna* was actually sunk by naval carrier aircraft in July 1945 in the anchorage at Kure.

AAF spokesmen take it for granted that in the event of future war, coastal aerial antisubmarine forces will be provided from their own land-based units. This summary dismissal of the intricacies of antisubmarine warfare may be contrasted with the record in World War II: Naval aircraft sank 83 German submarines to the Army's 14, and 20 Japanese submarines to none for the Army.

General Kenney told a Senate committee that the AAF under his command in the Southwest Pacific alone sank, probably sank, or heavily damaged about 3,000,000 tons of shipping. The Bombing Survey credits the entire AAF with 907,800 tons (10.2 percent) of Japanese merchant shipping sunk or seriously damaged, and with the sinking of 55,000 tons (4.2 percent) of warships in the carrier, battleship, cruiser, and destroyer classes. As only 444,000 tons of smaller military vessels were sunk by all arms, General Kenney seems to have used a multiplier of at least two.

Navy and Marine aircraft accounted for 11 times as many tons in the major warship class as did the AAF, and more than twice the merchant tonnage. Navy mines (mostly dropped by Navy-trained AAF B–29s) took 9.3 percent of the merchant tonnage, or 827,700 tons. The submarine was of course the greatest killer, being credited with more than half the Jap Navy and merchant shipping losses.

High officials of the War Department, civilian and military, show plainly by their public statements that they do not understand the functions of sea power—on, under, and above the sea. The keynote was struck by former Lt. Gen. James H. Doolittle in testimony before a Senate committee that "the battleship has been obsolescent for the last 20 years and obsolete for the last 10. * * * The carrier is going into obsolescence." He forgot that without the submarine, the carrier, and even the battleship and the marines, the B–29's could not have come within a thousand miles of Hiroshima.

General Spaatz is quoted as having said at a dinner last year that "to talk of fighting the next war on oceans is ridiculous."

No navy opposed ours at Okinawa, in the longest and bloodiest battle of the maritime war. The Fifth Fleet was there to support the ground and air forces. It concentrated 1,450 ships, under incessant attack by Japanese land-based planes. We lost 36 ships, and naval gunfire and fighter planes brought down 4,500 enemy aircraft. Most of the Navy's job in the war was putting enemy ground installations out of business, putting troops ashore, and protecting them there.

Maj. Gen. Leslie R. Groves, former head of Manhattan Project, said recently that with the advent of the atomic bomb the need for a navy has passed. Maybe times have changed, but the B–29 which dropped the atomic bomb on Hiroshima flew from a base in the Marianas captured by sea power, flew on gasoline delivered in a Navy tanker, and parts of the bomb it dropped had been transported by the Navy.

At the Norfolk dinner attended by high officers of the armed services, the general was outspoken about the AAF's intentions. In substance, according to his auditors, he said, "The AAF no longer is going to be a subordinate outfit. It was a predominant force during the war and it is going to be a predominant force during the peace, whether you like it or not.

"The AAF is going to run the show. The Navy is going to end up by only supplying the requirements of the Army air and ground forces."

The more generous of these spokesmen would keep certain ships for heavy freight, and perhaps would allow some armament to protect that freight. But the less generous would apparently be not at all more reluctant to sink the whole fleet.

Many of the uninitiated who listen to the aerophiles must believe that in the event of another war it will merely be necessary for a few AAF planes to take off from the United States with atomic bombs and obliterate the enemy cities, after which other AAF planes will ferry paratroopers over to effect occupation.

Unfortunately, it won't be as simple as that. We shall need the integration of all our defensive agencies—Army, Navy, Air, industry, manpower, natural resources, and diplomacy. And the integration can't be brought about merely by having the AAF take everything over.

By the President's plan, the Navy would retain its Marine Corps and its own aviation, which are vital to it. The AAF would get the autonomy which it has been demanding, and parity with the ground forces and Navy under a Secretary of National Defense. But if the views of some of its generals prevail, we may doubt that the AAF will long be content with mere party.

The AAF's worship of the heavy bomber blinds it to certain facts. It likes to think of Japan as having surrendered without an invasion. "The Navy had the transport to make invasion possible," said General Doolittle. "The ground forces had the power to make it successful, and the B–29 made it unnecessary."

But Japan was invaded, in the sense that even Japanese inland waters were completely dominated by our surface fleet and naval air. Iwo Jima was invaded by the Navy and Marines. Okinawa was invaded by the Navy, Marines, and Army. We might as well deny, if an enemy took Seattle and San Diego, that the United States was invaded, just because these cities are so far from Washington.

Ours is an island continent. We must have warships to gain and hold control of the oceans and to protect convoys. We must have cargo ships to carry troops and their supplies and to transport short-range aircraft, with fuels and spare parts, to distant bases or beachheads, if we are to keep war at arm's length from us. The length of that arm is the radius of the Navy's ships and airplanes.

The public is beguiled by such statements as that of Maj. Gen. F. L. Anderson, made recently before a veterans' group that "it may well be that the next war will be fought by air forces alone." Gen. Jacob L. Devers, commanding the Army Ground Forces, recently spoke of plans to fly every infantry division to future battles, and of planes being developed so large that 300 of them could transport a division. He even envisioned flying 60-ton tanks to battle. To realize this dream we should need to build and protect greater airfields at home and near the scene of battle than exist anywhere in the world today. And we should need an aircraft industry on a scale far greater than we had in World War II.

Within the foreseeable future, we need the fleet. To defend itself against hostile submarines, aircraft, and warships, our fleet must be armed with all the types of airplanes that experts in sea power deem necessary. It must be protected by land-based search and patrol planes under its own control. And it must be able to man its aircraft with pilots and crews who know not only aerial fighting but the tactics of surface ships and submarines.

The pilot of a naval plane must understand what he is attacking, what counterattack to expect, the points of greatest vulnerability on his target, the speed and turning radius of, say, an enemy destroyer, and the diving angle of an enemy submarine. In short, he has to be a naval officer in the air, not merely an air officer flying over water. Naval aviation is not just a small bitched-up air force, and its men must know more than Navy lingo.

If future attacks, as predicted, come across the polar icecap by air, I think all will agree that the way to dispose of the transpolar rocket is to destroy it at the factory or the launching platform in the enemy country. Here the Navy can help by carrying the war to the aggressor. Its battleships and submarines will be equipped as launching platforms for V2-type guided missiles with their known range of hundreds of miles. Its carriers can send aloft medium bombers, using jets to help them get off the decks. These bombers need not even be piloted, as they can be directed and protected by fast fighters sent aloft with them.

Without any more antiaircraft protection than they had against the kamikazes at Okinawa, task forces equipped with these modern weapons could dominate all Europe and the Near East from locations in the North Sea, the Persian Gulf, and the Mediterranean. There would be a vast saving in fuel and time over attacks from more distant points.

Guided missiles will be increasingly potent weapons for the future, and at least in our time they will have to be guided from points not too far from the enemy. A 500-mile-an-hour jet fighter is itself a recoverable guided missile—guided by the pilot. Arm it with self-contained, radio-equipped shells having directional fuses, and what chance has a lumbering 350-mile-per-hour bomber? There is, incidentally, no bomber that fast yet in existence.

The future of the heavy bomber is, indeed, uncertain. If the enemy has any aircraft, the bomber has to be protected by fighters. These must come at present from near-by airfields or from the movable bases which the carriers provide. Unless we can develop a fighter with normal range three times the bomber's (so as to allow for excess fuel consumed in combat), long-range operations may be impossible. At any rate the bomber's death knell is likely to be sounded by the ground-launched rocket fitted with directional fuse.

If another war comes, the man in the street and the housewife in the kitchen will be as much the target as the soldier and the sailor. To meet the danger, we need a true coordination of all our forces, military, civil, and private. We need friendly competition between the branches of the service to produce the most effective weapons. But more than that, we need mutual confidence and understanding. Army, Air, and Navy must know one another's capacities, appreciate one another's problems. And the wild assertions of intemperate spokesmen are of equal disservice to all branches, in delaying our equal task of achieving full cooperation.

John Taber's Birthday

EXTENSION OF REMARKS
OF
HON. CHARLES A. PLUMLEY
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 8, 1947

Mr. PLUMLEY. Mr. Speaker, Monday, May 5, was the anniversary of the birth of the Honorable JOHN TABER, of New York, chairman of the House Committee on Appropriations. On that day the Appropriations Committee paused to observe the occasion and to honor this great man, our friend and distinguished chairman, JOHN TABER.

Under permission heretofore granted, I would like to insert in the RECORD the tribute paid to Mr. TABER on his birthday by the Honorable EVERETT M. DIRKSEN, of Illinois:

Mr. Chairman, before the committee undertakes consideration of the appropriation bill for the Departments of State, Justice and Commerce, let me intrude a moment to say that this is a state occasion in more ways than one and that justice requires that we put aside the cares of commerce for a moment to observe with fitting ceremony the sixty-seventh birthday anniversary of our distinguished chairman, the Honorable JOHN TABER.

JOHN TABER was born 67 years ago in the city of Auburn, N. Y. I do not remember whether this is the sweet Auburn which Oliver Goldsmith had in mind when he wrote The Deserted Village, but I do know that JOHN TABER still lives there. That is indeed testimony to his stability and firmness of character. Lindbergh may fly the ocean, Admiral Byrd may make frequent pilgrimages to Little America. Others may succumb to the fever of mobility, but JOHN TABER lives and serves the place where he was born.

In 1880, when he was born, Rutherford B. Hayes was the occupant of the White House. Down through the years and in the course of JOHN TABER'S lifetime, Hayes was followed by Garfield and then came Arthur, Cleveland, and Benjamin Harrison. Later there followed McKinley, Theodore Roosevelt, Taft, Wilson, and Harding. Then came Coolidge, Hoover, Franklin D. Roosevelt, and Truman. The fruitful life of JOHN TABER spans through the administrations of 14 Presidents of the United States.

When JOHN TABER was born the Forty-sixth Congress was in session. Samuel Randell of Pennsylvania was the Speaker and Thurman of Ohio was the President pro tempore of the Senate. It was in 1902, the year after the assassination of President McKinley at the Buffalo Exposition, that JOHN TABER graduated from Yale University and then went to the New York Law School, where he completed his studies in 1904. He has been a practicing attorney and a member of the bar for nearly 43 years.

It was in 1922 that he first gave attention to public service and was elected to the Sixty-eighth Congress. Frederick Gillette of Massachusetts was then Speaker of the House and Albert Cummins of Iowa was the President pro tempore of the Senate. Calvin Coolidge was serving as President of the United States.

It is rather interesting to go back now and then and to note the names and the accomplishments of the men who were John Taber's colleagues in the Sixty-eighth Congress. There was Hayden of Arizona, Barkley of Kentucky, White of Maine, Tydings of Maryland, Schall of Minnesota, Hawes of Missouri, Burton of Ohio, Gibson of Vermont and Connally of Texas, all of whom graduated to the United States Senate and most of whom are still there. Among other of his colleagues, William Bankhead of Alabama became Speaker of the House. Tilson of Connecticut was a candidate for the leadership, Crisp of Georgia was one of the great parliamentarians. Madden of Illinois and Wood of Indiana both served as chairman of the same committee over which our distinguished chairman now presides. There was also Haugen of Iowa who was reputed as one of the great farm leaders. Another colleague was Ramseyer of Iowa to whom we still pay testimony when we invoke the Ramseyer rule in our deliberations. There was also the distinguished Nick Longworth of Ohio, Pou of North Carolina, Vare of Pennsylvania and Hawley of Oregon. Still another distinguished member of the House in those days was Cordell Hull of Tennessee, who later became Secretary of State and John Garner of Texas who became Vice President. Other interesting members who left their names upon the pages of history were Victor Berger, the eminent Socialist for Wisconsin and Fiorello LaGuardia, who has served in so many public capacities since that time.

The roster of Senators who were Members of the Senate when JOHN TABER came to the Sixty-eighth Congress was indeed a distinguished group and included among others Underwood of Alabama, Robinson of Arkansas and Johnson of California. There was also Borah, the Lion of Idaho, McKinley of Illinois, and Jim Watson of Indiana, whose familiar face is still manifest occasionally on Capitol Hill. There was Albert Cummnis of Iowa and Curtis of Kansas who later became Vice President. Henry Cabot Lodge was there, grandfather of the present Senator LODGE and of our own distinguished colleague, JOHN DAVIS LODGE of Connecticut. There was also Pat Harrison of Mississippi and Jim Reed, the master of sarcasm from Missouri. There was Tom Walsh, the great investigator from Montana, and Norris from Nebraska. George Moses of New Hampshire was there, who coined that intriguing phrase "the sons of wild jackasses." Our present and distinguished colleague, JAMES WADSWORTH of New York was then a Member of the United States Senate. There was also Overman of North Carolina and Simeon Fess of Ohio. Charles McNary of Oregon was then in the Senate and later became candidate for the Vice Presidency. Others whose names were household words include Pepper of Pennsylvania, Smoot of Utah, Glass of Virginia, Elkins of West Virginia, and La Follette of Wisconsin. Also in the Senate in those days was Swanson of Virginia, who later became Secretary of the Navy.

JOHN TABER is serving his twenty-fourth year in the Congress. It is indeed a long and distinguished record of steadfastness and devotion to every American ideal and American tradition. He was here in those feverish and tumultuous years which followed World War I and had first-hand experience with the boom and bust results of that era. Today he serves in the postwar period that follows World War II and the American people may well be glad for his stability, his devotion to high purpose and his forthrightness as we meet the challenge of the postwar period and seek to find solutions of a durable character for the problems which presently beset us.

I have been here for 15 years and I cannot recall a single instance in which JOHN TABER ever stepped out of character or departed from those principles which have won for him the respect and admiration of every Member of the House who has ever served with him.

Mr. Chairman, I know I bespeak the sentiment of every member of this Appropriations Committee when I say to you with sincerity and joy—happy birthday to you.

Jewish National Home

EXTENSION OF REMARKS
OF
HON. GEORGE MacKINNON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 8, 1947

Mr. MACKINNON. Mr. Speaker, under leave to extend my remarks in the Appendix, I include a resolution of the Minnesota Legislature calling upon the Federal Government to support the long established and officially declared policy of our Government favoring the establishment of the Jewish national home in Palestine and the immediate opening of the doors of Palestine to large Jewish immigration.

This resolution, in general, conforms to the unanimous position taken by the Minnesota delegation in Congress in a letter addressed to the Secretary of State, under date of March 20, 1947, copy of which letter is also included:

Concurrent resolution memorializing the President, Secretary of State and Congress of the United States to direct our Representatives in the United Nations to support the long established and officially declared policy of our Government favoring the establishment of the Jewish national home in Palestine and the immediate opening of the doors of Palestine to large Jewish immigration

Whereas at the 1945 general session of the legislature of the State of Minnesota a joint resolution was adopted approving the establishment in Palestine of a Jewish national home as called for by the Balfour declaration and the mandate entrusted to Great Britain by the League of Nations and calling for the abrogation of the white paper restricting Jewish immigration into Palestine and limiting the purchase of land in Palestine by Jews; and

Whereas, since the adoption of said resolution, said restrictions have continued, and the displaced Jewish persons of Europe have been prevented from finding in Palestine the home which had been promised to them by 52 nations of the world, including the United States of America; and

Whereas the attainment of a just peace and the maintenance of a peaceful world requires a righteous and equitable settlement of the Palestine question to the end that the hundreds of thousands of homeless Jews of Europe may, as of right, be afforded the opportunity to enter Palestine and there reestablish the Jewish commonwealth; and

Whereas the United Nations, at the request of Great Britain as the mandatory power, is convening a special session of its General Assembly to consider the Palestine matter on April 28, 1947: Now, therefore, be it

Resolved by the House of Representatives of the State of Minnesota (the Senate concurring therein), That the Government of the United States, through the State Department and the President, direct our representatives in the United Nations to support the long established and officially declared policy of our Government favoring the establishment of the Jewish national home in Palestine and the immediate opening of the doors of Palestine to large Jewish immigration; be it further

Resolved, That copies of this resolution be sent to the President of the United States, the Secretary of State, the Senate and the

House of Representatives of the United States of America.

C. ELMER ANDERSON,
President of the Senate.
LAWRENCE M. HALL,
Speaker of the House of Representatives.

Passed the senate the 23d day of April 1947.

H. G. TORREY,
Secretary of the Senate.

Passed the house of representatives the 23d day of April 1947.

G. H. LEAHY,
Chief Clerk, House of Representatives.

MARCH 10, 1947.

Hon. GEORGE C. MARSHALL,
Secretary of State, Washington, D. C.

DEAR SIR: On numerous occasions since May 1939, the members of the Minnesota delegation have expressed to the State Department their support for the establishment of a Jewish homeland in Palestine and urged every possible effort to bring about an equitable and amicable conclusion to the problems confronting the Jewish people.

On May 24, 1946, we again communicated with your Department in behalf of the immediate admission to Palestine of 100,000 displaced Jews.

We regret to note that no satisfactory conclusion has been reached and that none appears to be in sight. In view of this, and in view of the disturbed conditions now existing in Palestine and the fluid conditions in the Near East, we respectfully urge a fresh effort by our Government to bring the parties together to work out a solution of the problem of succoring the displaced Jews of Europe, and bring about a realization of the long-promised Jewish homeland in Palestine.

We appreciate the involvements, but believe that a fresh effort by our Government, wherein we would actively participate and offer to assume our share of the responsibility, would aid materially in bringing about a satisfactory solution.

Respectfully yours,

EDWARD J. THYE, United States Senator; JOSEPH H. BALL, United States Senator; AUGUST H. ANDRESEN, First Congressional District; JOSEPH P. O'HARA, Second Congressional District; GEORGE MACKINNON, Third Minnesota District; EDWARD J. DEVITT, Fourth Minnesota District; WALTER H. JUDD, Fifth Minnesota District; HAROLD KNUTSON, Sixth Minnesota District; H. CARL ANDERSEN, Seventh Minnesota District; JOHN A. BLATNIK, Eighth Minnesota District; HAROLD C. HAGEN, Ninth Minnesota District.

A Bulwark of Democracy

EXTENSION OF REMARKS

OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Friday, May 9 (legislative day of Monday, April 21), 1947

Mr. ROBERTSON of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech which I delivered at Natural Bridge, Va., on yesterday evening.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is an honor as well as a great pleasure to welcome to Virginia this distinguished group which has dedicated its talents to the improvement of the American home. That the United States is a Nation of home owners is no idle boast. No nation in the world approaches our percentage of privately owned homes, and in that accomplishment we have demonstrated the efficacy of free enterprise operating in a capitalistic system.

The first English settlers who came to Virginia 340 years ago came primarily to secure homes of their own. Those homes of hewn logs in the wilderness were crude. But in their building the founders of our Republic experienced the inspiration of freedom of action, the stimulating influence of private enterprise and learned, by stern necessity, that the foundation of democracy is personal responsibility.

Under the English common law, as well as under our own law, a man's home is his castle. Our traditional love of that tangible evidence of our personal freedom is expressed in the old refrain: "Be it ever so humble, there is no place like home."

When the Confederate gray and the Federal blue were blended into the khaki of the 1917 American doughboy, they marched to battle with the song on their lips, "Keep the Home Fires Burning."

I recall giving a ride to a soldier in the fall of 1943, who told me he was on his last leave pending the overseas movement of his outfit. When I asked him how he felt about the war against Germany he promptly replied: "I would rather die than to have those Germans drop a bomb on my mother." That was the spirit of the boys who won a great victory for us on the battlefield.

In two global wars we have fought to preserve the principles of our founding fathers and yet the world peace for which we sacrificed blood and treasure eludes our grasp. Instead of a world made safe for democracy we find the totalitarian and anti-God ideologies of communism feeding on the measureless misery of war-torn countries of Europe. Many of our own people have so lost faith in the fact that God governs in the affairs of men that they think another conflict is inevitable.

After the atomic bomb test at Bikini Admiral Blandy said: "Civilization faces the choice of living under God or of living underground."

The development of the atomic bomb and the supersonic plane, which defies interception, has made it crystal clear to us that democracy in the world cannot be preserved by force.

In full consciousness of the fact that in the event of another global war there would be no victor, our Nation sponsored an International Conference at San Francisco to outlaw war and to build a new world founded upon the Christian principle of mutual understanding and mutual cooperation. But we made the mistake of placing too much dependence upon a blueprint for peace, and in our war weariness and in our eagerness to be relieved of war sacrifices we demobilized the greatest military force the world has ever known before United Nations had an opportunity to function successfully. Our war ally, Russia, for whom and with whom we fought to destroy one type of totalitarianism in Europe, took advantage of that situation to block the proposals of all other members of United Nations, except Russian satellites, to agree upon treaties of peace with the Axis powers.

As a result of that action we distrust Russia and Russia distrusts us and the recent Four-Power Conference in Moscow involving a settlement of problems with Germany and Austria was to a large extent a failure.

Tonight, in discussing the problem of peace which confronts us, I speak only for myself and without the benefit of secret or confidential information concerning our future plans.

We are proceeding, I believe, on the assumption that the Lenin philosophy of world revolution has been altered to contemplate world domination, either directly or by means of controlling Communist-dominated states. We assume that the Soviet Union wants to take advantage of confusion and chaos in Europe to extend its influence wherever possible. We fear that the complete domination of Europe and large segments of Asia by Communist-controlled governments would constitute as great a threat to democracy as a similar control under the leadership of Adolf Hitler.

With a view to carrying out the provisions of the Charter of United Nations we have taken a firm stand against the demands of Russia in Germany and Austria and our President has promised aid directly to Greece and Turkey and indirectly to other nations whose opportunity to enjoy the form of government they prefer is being threatened by external aggression. As amended in the Senate the President's proposal will be subject to the approval of United Nations.

While the immediate areas of conflict between us and the Soviet Union are in Germany and Austria, they will ultimately concern eastern Europe, now dominated by Russia; the Near East, where there are vital oil supplies, and the Far East, now torn by civil war. They also involve, of course, our proposal, to which Russia refuses to agree, for international control of atomic power.

The peaceful solution of these differences between us and Russia is handicapped by mutual fear and mutual distrust. We have no occasion to fear an immediate war with Russia. In the last war she not only lost millions of men but the property destruction in Russia leaves her at present without the potential production essential to make war. In addition to that, we and our democratic allies control 85 percent of essential raw materials and their processing facilities, while Russia and her satellites control only the remaining 15 percent. Our fear of Russia, therefore, must of necessity be based upon the strength which Russia may develop 10, 15 or 20 years from now, plus the fact that within that period she will undoubtedly discover the secret of the atomic bomb.

In our own Government there is a difference of opinion as to whether Russia's fear of us is real or simulated. We have done everything humanly possible to convince the Russian leaders that our supreme desire is for peace and, by refusing to demand territory or economic advantages and by pouring out our treasure to feed the starving, clothe the naked and rehabilitate war-torn countries, we have attempted to demonstrate to Russia and the world that we are actuated by the highest ethical principles.

Yet, because of a real fear or for the purpose of delaying a peace program while they drain the resources of Germany and Austria for the rebuilding of Russia, the Russian leaders point to our possession of the atomic bomb, our air forces in Central Europe, troops in the near East and unilateral control of Japan as evidences of imperialistic designs essentially offensive rather than defensive.

No man is wise enough to know the answers to all the problems which confront us and no man can lift the veil of the future. In steering a safe course for our ship of state the first fundamental fact for us to recognize is that we can furnish neither moral nor material leadership to the world unless

we make our own democracy work, thus demonstrating its superiority over the conflicting ideologies of either communism or fascism.

We must meet the threat of an inflation to be followed by a possible deflation by increased production. Such a program involves changes in our labor laws to make the rules of the game fair. It also calls for mutual cooperation between management and labor to be characterized on both sides by more charity and less selfishness.

The Glasgow, Va., carpet factory of the James Lees & Sons Co., which you visited today, offers an illustration of how such cooperation can be achieved and how our Nation can make democracy work. This plant received five Army and Navy E awards, and in the postwar period both wages and output have continued to increase.

We must carefully and cautiously plan our international program of relief and rehabilitation in a manner that will not exhaust our Treasury and ultimately reduce us to the state of bankruptcy of those we seek to help.

We must frankly recognize the fact that, for the present at least, the choice of the presently dominated countries of Poland, Yugoslavia, Bulgaria, Hungary, Rumania, and Albania, has been between communism and fascism. The leaders of those countries are either extreme right or extreme left and the people have no clear conception of the meaning of democracy. The futility of our efforts to bring together the warring factions of China as the first essential of a program of postwar rehabilitation has already been clearly recognized.

Physical science has taught us that we are living in one world, but man's progress in the physical sciences has outstripped his progress in the social sciences. If, in spite of our best efforts, Russia refuses to live with us in one world, our next best hope for peace will be through a firm alliance with the Christian people to be found in the Western Hemisphere, in continental Europe, Great Britain and her dominions. That will be a last resort if Russia violates the covenants and wrecks the program of United Nations.

I have attempted to indicate that the greatest handicap to the peace of the world is the conflicting ideology of democracy and communism. If you accept that premise as true it necessarily follows that in this crisis in world affairs we, as a Christian nation, can make a major contribution to the cause of world peace if we practice what we preach.

Only about 2 percent of the people of Russia belong to the Communist Party and in the entire world there are only 18,000,000 party members. In this country alone there are 72,000,000 members of Christian churches and the 140,000,000 people of this Nation are being led by a President and a Secretary of State whose supreme ambition is to prevent another war.

It has been my happy privilege to know our distinguished Secretary of State, George Marshall, for a quarter of a century. We in Virginia are proud of the fact that he was educated at Virginia Military Institute, which you delegates to this conference will visit tomorrow. We are proud of the fact that General Pershing regarded him as his ablest subordinate in World War I. In World War II we trusted him as the leader of the largest and most powerful military force ever sent into battle. He emerged from that victorious conflict as the leading military figure in the entire world. We trusted him then. I appeal to you to trust him now, because, like Stonewall Jackson, who was the idol of his cadet days at VMI, he is a Christian whose life has been motivated by the highest ethical principles.

In his report to the American people when he recently returned from Moscow, Secretary Marshall said: "We must not compromise on great principles in order to achieve agreement for agreement's sake."

In war we have always recognized our fundamental principle of individual responsibility. A distressed and war-torn world now looks to us for leadership in winning the peace. If we are to meet that challenge, we must rededicate ourselves to the faith of the founding fathers, sharing Jackson's reliance upon God and adopting as our motto the injunction of Robert E. Lee:

"Duty is the sublimest word in the English language."

Editorial Tribute to Wendell Berge

EXTENSION OF REMARKS
OF
HON. GLEN H. TAYLOR
OF IDAHO
IN THE SENATE OF THE UNITED STATES

Friday, May 9 (legislative day of Monday, April 21), 1947

Mr. TAYLOR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial tribute paid by the St. Louis Post-Dispatch to the Honorable Wendell Berge, retiring Assistant Attorney General in charge of the Antitrust Division of the Department of Justice.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WENDELL BERGE RETIRES

A quiet public servant quit his troubled desk in Washington and yesterday went back to private life. He is Wendell Berge, who has been head of the Antitrust Division of the Justice Department. In that important post, Mr. Berge sought to restrain the growth of corporate enterprise beyond legal limits. Believing fully with the late Justice Brandeis in the "curse of bigness," he worked long hours for relatively little financial return without too much support in the administration as a whole.

The measure of his success is not so much the apparent accomplishment (which is not too large), as it is in a consideration of how much more monopolistic our economic life might be were it not for those who believe and work as Wendell Berge has done.

Mr. Truman and the United Nations

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Friday, May 9, 1947

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Robert L. Norton, distinguished special writer of the Boston Post:

ROBERT L. NORTON COMMENTS ON MR. TRUMAN AND THE UNITED NATIONS

WASHINGTON, March 16.—Nothing could be further from the truth than the assertion of Pravda that the President bypassed the United Nations in his historical message to Congress, assuming British obligations in Greece. The position taken by Mr. Truman is strictly in accordance with the terms of the United Nations Charter to which Russia is bound, even if it be only giving lip service and in practice doing everything possible to undermine the functions and powers of the World Parliament.

DELAYING TACTICS

The Charter of the United Nations distinctly provides that the "members shall refrain in their international relations from the threat or use of force against the territorial integrity or political independence of any state." The facts as rehearsed by Mr. Truman speak for themselves, and it is hardly disputable that the Charter has been violated by the Soviet in seizing control of the governments of various nations without resorting to democratic processes and consulting the choice of their peoples.

It is merely another illustration of the Soviet policy of confusing the issue and creating a diversion so as to kill off or postpone all positive action on all imperative issues pending before the Moscow Conference and the United Nations.

As an illustration, Mr. Molotov attempts to interject the Chinese situation into the Moscow deliberations, and at Lake Success Mr. Gromyko spends hours stalling reference to the committee on the matter of atomic energy, quibbling over the abstract issue of whether a convention or a treaty is at stake. It is all part of the Soviet program to delay while Russian gains throughout the world are consolidated.

DISREGARD POLICE FORCE

Also, in view of attempted Soviet aggression in Turkey, the demand for adjacent provinces and control of the Dardanelles, the assertion that Mr. Truman is threatening the integrity of Turkey is ridiculous on its face. Before the President's message was delivered we had taken occasion to warn Russia that its attempt to dominate the Dardanelles would be resisted. Turkey has been obliged to keep an army of 600,000 in the field, and the enlargement of the United States Fleet in the Mediterranean has its significance.

But, on the matter of bypassing the United Nations, nothing could be further from the thought of Mr. Truman. Rather, the President, Congress, and the American people would welcome the possibility of the UN handling the Greek and all related problems, including Germany and the whole question of world peace. The truth is that Russia is bypassing the UN by steadily and persistently opposing the extension of power, originally contemplated when the Charter was formulated at Bretton Woods and San Francisco, by the use of the veto on trivial questions, by blocking international inspection of atomic energy, and by refusing even to remotely consider the setting up of an international police force.

UN LACKS MONEY

Furthermore, the Soviets have refused to join in many of the social, economic, and cultural aims of the UN. They have also refused membership and responsibility in the International Bank. In view of these irrefutable facts, can there be any question but that it is the Soviet, and not the United States, which has bypassed the UN?

Positive action was needed in the Greek crisis with the near economic collapse of Britain, and this was supplied by President Truman. Attention should be called to the fact that much of the talk of conflict between the program to aid Greece and Turkey and the UN comes from persons who are known to be sympathetic with the policies of Soviet Russia. There is no such criticism from those who are responsible for our foreign policy, as for instance, Mr. Austin, or Mr. VANDENBERG in the Senate.

It is quite possible that considerable misunderstanding exists over the power and responsibilities of the United Nations. The UN will not be able to really function until some semblance of world peace is restored

and after the preliminaries are agreed upon, until it is determined what is to be the future control in Germany and Japan. In the meanwhile the UN has no money of its own to spend on relief, economic construction, nor has it any authority to loan to foreign nations.

There is, however, nothing to preclude transferring ultimately supervision of affairs in dispute in Greece or Turkey, or in any other country, for that matter, where world peace is threatened. Such is the basic purpose of the United Nations. But this desirable status will never be reached if the Soviet persists in its present policy of blocking the fundamental objectives for which the United Nations was conceived and organized.

ARE WE WILLING?

If there is any doubt as to how our own representatives in the UN feel about the Russian charge of bypassing, then it is only necessary to consult the declaration of Senator Austin. He said:

"Prompt approval by Congress of the President's proposal would be a new and effective action by the United States in supporting with all our strength our policy in the United Nations."

Today the UN offers no antidote to power politics or war, due to lack of Russian cooperation. As Congress gets into action this week and explores the whole situation opened up by the message of the President, aside from the immediate question of aid to Greece and Turkey, it must get down to the basic problem of whether we are going to face what it takes to oppose Soviet expansion and also whether the American people are willing to pay the price of creating world economic and financial stability. Thi is the real underlying issue.

Aid to Greece and Turkey

EXTENSION OF REMARKS

OF

HON. HENDERSON LANHAM

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1947

Mr. LANHAM. Mr. Speaker, I am in favor of H. R. 2616 and hope it will be passed by the House without crippling amendments. I am in favor of this bill because I think it is fundamental and essential to our national security and safety.

It has been hailed as a bill to fight communism and to aid the freedom-loving people of Greece and Turkey to maintain their freedom. It has been hailed as a bill to prevent the spread of communism. It is all these things, of course, but fundamentally it is a measure designed to maintain and protect our own freedom and security. In its consideration I think we ought to keep this fundamental idea ever in mind.

As I have listened to the general debate on this bill and to the debate under the 5-minute rule in considering amendments thereto, it has seemed to me that our thinking has been somewhat confused because we have not properly defined our terms. It has been said in opposition to this bill that we cannot fight communism with bullets or any other kind of force. It has been several times repeated that the only way to fight communism is to demonstrate that our American way of life under a Christian democracy offers more to the peoples of the world than communism. This is, of course, true but it is right here that the confusion in our thinking about this bill is most apparent.

Used in this sense, communism is an idea based fundamentally upon the philosophy and doctrine of Karl Marx and as such, of course, it can be fought only as all ideas must be fought, that is, by the proof and demonstration of higher and better ideas and ideals.

Peter Howard has written a book entitled "Ideas Have Legs." The title might more aptly have been Ideas Have Wings. Communism is such an idea and as such it has truly spread its wings and taken its flight to every corner of the world. Communism is even more than an idea and ideal—it is a religion to those who have accepted it. This ideal is based upon the pagan philosophy that the state is God and that the human, the individual life, is of no value save as it is sacrificed on the altar of the state as God. There is little difference in the philosophy behind communism and that behind the nazism of Hitler and the fascism of Mussolini. In one the state is set up as the ultimate goal while in the others, the human heads of the state, Hitler himself and Mussolini, were the objective of the veneration and worship.

So it is seen that the real threat to democracy as an idea and as an ideal with its Christian philosophy of the worth, dignity, and value of the individual life and personality, is from communism as an idea.

Communism considered as idea and ideal appeals to men and women who are cold, hungry, and miserable. It brings a ray of hope to the oppressed of the earth, and while we know that it is a false hope, it is a ray of light in the darkness and men in their misery turn to it. In many countries of Europe today, especially in Greece and Italy, in Hungary, and Austria, and in France, men are turning to communism because they are hungry and miserable.

We, who know that our Christian and democratic ideal is superior to, and greater than the communistic idea and ideal, are faced with the tremendous task today of proving to the downtrodden, and the underprivileged of the world that our idea is superior to the communistic idea. Out of the hearts and minds of men are born the issues of life, and it is there that the battle against communism is to be won or lost.

Therefore, it is true as so many have said during the debate on this bill that we in Congress today are challenged to make democracy work for the masses of our people instead of the privileged few. If we do not—if we continue to try to turn the clock back to the days of special privilege and big business and the wealthy, if we fail in our efforts to prevent inflation and the depression that is bound to follow, we are doomed to lose our fight against communism as idea and ideal.

The Communists believe, and say, that the great weakness of the free enterprise system that we love so well, and that is at the very heart and center of our democracy, is that alternating periods of depression and inflation are inevitably a part of such a system. They see one just ahead of us, and believe that when the reaction comes, and a greater depression than America has ever known is upon us, our miserable and unemployed and hungry people will turn to communism as their only salvation.

To be ready for this depression which the Communists say is an inherent and unavoidable part of our free enterprise system, Communists have infiltrated into our economic life and even into public office. Our great President has declared war upon this communistic infiltration and has instructed every department of our Government to purge from its pay rolls any who are believers in, and followers of, the communistic idea. Our Un-American Activities Committee in Congress and the FBI are doing a great job in bringing to light the facts about such infiltration. And the Congress has authorized the expenditure of $50,000,000 to fight this sort of communistic penetration into our national economy and national life.

While this bill providing for aid to Greece and Turkey will in a measure be used to help fight the communistic idea as such, and while it will hearten and encourage the freedom-loving peoples all over the world who realize the falsity of the communistic ideal, its main purpose is to fight the spread of the Red fascism of Russia. We oftentimes refer to the "communism of Russia." I think that is where our confused thinking begins. Today there is no real communism in Russia. The Union of Soviet Socialist Republics is a dictatorship as bald and bold as that of Hitler or Mussolini. I think we understand the situation better to call the present government in Russia and the idea behind it, "Red fascism," instead of communism. This description of the Russian system is not original with me but was used first, I believe, by J. Edgar Hoover, Director of the FBI.

It is apparent from Russia's acts since the end of the shooting war that she intends to dominate the world with her iron-fisted dictatorship. She has absorbed already Lithuania, Latvia, Poland, Bulgaria, Rumania, Yugoslavia, Albania, and other of her so-called satellite countries and now threatens to absorb Greece and Turkey without striking a blow. If Greece and Turkey fall to the Red menace of Russia, Italy and France will soon follow. Germany will be next. Eventually, unless this bill is passed, Iran, Egypt, and all of the Near East will come under Russian domination without her ever striking a blow. With Iran and the Near East will go the greatest deposit of oil in the world.

At last our great President has determined to stop the Red fascism of Russia before it can engulf the Near East and eventually Asia and Far East as well as the balance of Europe. It means that at last the United States is determined to help and defend the freedom-loving people of the world from the Red menace of dictatorship and oppression from Russia.

Always America has stood as the champion of oppressed peoples and as the defender of freedom and liberty. But after all, in this instance it is done for our own protection.

Our Government stands as the only bulwark against dictatorship and oppression. Already the President's appeal for the money for Greece and Turkey has strengthened freedom-loving and democratic peoples throughout the world. France has stiffened her fight against the Communists and Italy will be heartened to continue her fight against Togliatti and the Italian disciples of Russia.

As I see it, this courageous and positive stand that we take if we enact this bill, will lead to peace and not to war. Those who know, say that Russia could not now fight a war and would not dare attack us. If we allow her to go her way unmolested, thereby permitting her to take over the weakened and hungry hordes of Europe and Asia, she will soon be strong enough to fight. Appeasement leads to war as we have found to our sorrow. It did at Munich when we appeased Hitler. It did when we let the Japs march into Manchuria without once raising our voice against their aggression.

Mr. Speaker, I heartily favor the passage of this bill and shall vote for it because I think it will lead to peace instead of war.

Workers Entitled to Individual Freedom, Incentive, and the Pursuit of Happiness

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 9, 1947

Mr. McDONOUGH. Mr. Speaker, Mr. Manchester Boddy, the capable editor and publisher of the Los Angeles Daily News, has written one of his illuminating and informative editorials on the incentive of workers in their daily tasks. It is vitally important to the future welfare and economy of the Nation that workers be happy and contented and that they enjoy to the fullest extent the freedom of individual initiative they are entitled to. This should be a warning to both labor unions and management. Labor unions have been subordinating their members to many regulations which they accept unwillingly but feel obligated to accept because of loyalty to their unions.

Management has also been guilty of forcing many undesirable regulations on their employees which the employees cannot avoid. Both of these attitudes reduce individual interest and incentive to a minimum.

Congress has been studying this problem, seeking a solution to it by appropriate legislation.

I favor restoring individual incentive and freedom, and have supported the labor legislation submitted by the present Congress to bring this about. I shall always defend the individual worker from oppressive regulations imposed by either labor unions or management.

Here is Mr. Boddy's editorial:

Even in the middle 1800's many observers detected the advent of mass man. One of these was Ralph Waldo Emerson, who wrote:

"Society everywhere is in conspiracy against the manhood of everyone of its members. * * * The virtue in most request is conformity. Self-reliance is its aversion. It loves not realities and creators, but names and customs."

History abounds with the record of tyrannies exercised by minorities over society in general. Since the advent of mass man, however, the situation has been reversed. It is now the tyranny of society over the individual.

A recent survey conducted by Elmo Roper for Fortune magazine to discover what factory workers throughout the United States are thinking, produced these conclusions:

"The impression grows that neither management nor unions are facing the facts. They seem to be trying to cure the patient with cafeterias washrooms, and baseball teams on one side, seniority, shorter hours and higher pay on the other. Whereas the simple fact is that the worker wants to be treated like a human being. He wants to be able to hope for advancement, to have honest effort recognized, and to have an outlet for personal initiative."

In reply to the question: "Which one of these statements comes closest to describing how you feel about your present job?" the answers were given:

	Total	Non-union	Independent union	AFL	CIO
	Percent	*Percent*	*Percent*	*Percent*	*Percent*
My job is interesting nearly all the time	43	48	50	47	35
While my job is interesting most of the time, there are some dull stretches now and then	34	36	28	35	35
Total	77	84	78	82	70
There are a few times when my job is interesting but most of the time it is pretty dull and monotonous	14	11	14	12	18
My job is completely dull and monotonous; there is nothing interesting about it	6	4	3	5	10
Total	20	15	17	17	28

Until the Napoleonic wars ended the "divine right of kings" concept, it was assumed that the masses existed for the benefit of the few. Today it is being argued by totalitarians that the individual exists for the state, society. But there is developing—especially in the United States—a strong demand for more freedom and opportunity for the individual.

The surface picture, the survey discloses, is one of cofidence on the workers' part; but underlying irritations should not be ignored.

"Perhaps young men once tackled their jobs with high hopes, but the young man in the factory today seems sadly resigned not to be getting ahead," Fortune comments. Only 21 percent of those under 40 (compared to 17 percent of those over) think they will ever get beyond a foreman's position. Only 14 percent of those who attended grade school have any hopes of rising higher than foreman. While there are few college people in factory work, it an astonishing fact that less than half of the college-trained expect to be able to push their heads above the crowd. Surprisingly, the length of time a man has been with his company makes practically no difference in his gloomy outlook.

Three hundred thousand little business enterprises that had survived the worst depression in the history of the United States and were in a fairly prosperous condition when the World War broke out, were forced by the exigencies of war to give up in the interest of efficient mass production.

Since the war, America has been called upon to produce more and more for a devastated, starving Europe. When we speak of appropriations running into the billions of dollars for nations overseas, we are talking, really, about exporting the products of our industry. To date at least, we have found it necessary to keep our vast industries working to the fullest possible extent.

As a result, it has been exceedingly difficult for the little business man to engage in profitable, independent enterprise. And, for this reason, we find much of the discontent reported in the Fortune survey.

If the United States is really to exercise world leadership on behalf of economic, political, and social democracy, it must recognize the need—not only in the United States but wherever democracy is to survive—for opportunity for the individual members of society to express their manhood in terms of free, private initiative.

The Greek Government Is a Difficult Client

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 8, 1947

Mrs. DOUGLAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Arthur Krock, from the New York Times of April 1, 1947:

THE GREEK GOVERNMENT IS A DIFFICULT CLIENT

(By Arthur Krock)

WASHINGTON, March 31.—Although the administration has stressed that part of its newly announced foreign policy which provides aid for the Greek people, and played down the aid to Turkey, which is much more strategic from a military standpoint, the attention of critics of the current government in Athens has not been diverted by this tactic.

These critics share the general admiration of the Western World for the gallant Greek resistance to the Axis, and the widespread sympathy for the economic and social plight of the Hellenes. But this has not removed the objection of some to extending the proposed aid while the Greeks are governed as at present, or distracted others from insisting that the projected Turkish intervention shall be weighed more realistically than officially it has been. Senator Austin, for example, in his explanation of the new policy to the United Nations, discussed the Turkish program very briefly indeed.

Questionings of the application of the policy, rather than the policy itself, which have arisen on the above grounds and on the possible consequences to the UN are responsible for the additional amendments to the relief bill which Senator VANDENBERG offered today. They provide for cancellation of the programs in Greece and Turkey at any time a truly representative government in those countries may request it. They make the same provision in the event the request

shall come from a simple majority of the Security Council (which our veto could not cancel) or of the General Assembly of the UN. And they specifically authorize the President to abandon the immediate program if he decides either that its purposes have been achieved or cannot be.

These are three important outs for the administration, for its critics in this enterprise, and for Members of Congress who intend to support the plan with misgivings. They demonstrate once again the skill of the Senator in politics and diplomacy, and his ingenuity in removing the objections of intelligent and honest dissenters and doubters.

A REPORT FROM GREECE

The provision that any government representative of a majority may request withdrawal of the plan in Greece and Turkey is especially designed to meet the point that the government in Athens is neither truly representative nor democratic. The President passed this over lightly in his address to Congress. But nearly every day a report comes to Washington from reliable sources, sometimes brought in person, which suggests that Mr. Truman made an understatement when he said the Greek Government is "not perfect." This correspondent today read a report of this character.

"I feel," this trained observer wrote, "that, while the motives of the President's program to combat communism are the very best, he is repeating the same mistake which lost us Poland and other areas now behind the "iron curtain" and conceivably might even lose us South America. This mistake is in endorsing the worst elements of reaction in Greece and ignoring the center and the non-Communist left."

He continued:

"All responsible and reasonably disinterested Americans with whom I have talked in Greece felt that our money would go down a rat hole unless political stability accompanies economic stabilizing and that any stability is simply unobtainable under the present Government, and possibly not without new elections following a general amnesty.

"Whether or not the last elections were fair, it is still a fact that a substantial section of Greek public opinion feels they were not. In any new election the left stands no chance of winning, which makes denial of the electoral test by the government even stupider.

"The announcement that the United States is going to bail out Greece has served to impede many good things Paul Porter, the President's special ambassador, wanted the Athens government to accomplish on the home front. It was also the signal for a new campaign of repression by the Ministry of the Interior, which is neither better nor worse than the Soviet NKVD or the Yugoslav OZNA (secret police)."

ARRESTS BY NIGHT

This observer, who would not be quoted in this space had he not impressively established his reliability, disinterestedness and capacity to report objectively, further asserted that the Ministry, in its renewed campaign of repression, is following the secret police technique made familiar for years in Nazi Germany, Fascist Italy and Spain, Japan, and Soviet Russia. Arrests of citizens were made between midnight and 5 o'clock a. m., and within 24 hours those seized were deported to a lonely island without a public trial.

"In one 3-day period," he added, "after the United States said it would assume political responsibility, the Greek Government arrested about 600 persons in Athens, mostly professionals—doctors, lawyers, etc.—and sent them away, frankly declaring there was no longer any need to exercise restraint. There is no doubt that the loudest shouters in support of the United States are Athens' 3,000 wealthiest citizens whom the government continues to protect against any direct taxation and who, with their gold pounds, hardly realize there is any inflation. And the rightists and extremists, encouraged by the President's speech, now trumpet that the center is almost as traitorous as the left because it doesn't make humble obeisance to the government."

This observer concluded with the statement that, as much as he detests Communists, he would go to the mountains if he were a citizen of Greece.

North Adams Lower Price Plan

EXTENSION OF REMARKS

OF

HON. JOHN W. HESELTON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, May 9, 1947

Mr. HESELTON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a telegram I received yesterday afternoon from officials of the North Adams (Mass.) Chamber of Commerce, advising me of their effort to reduce inflationary prices by means of a program under the title of "North Adams Lower Price Plan," and my reply to them:

NORTH ADAMS, MASS.,
May 8, 1947.

Hon. JOHN W. HESELTON,
House of Representatives,
Washington, D. C.:

With an honest belief that cooperative effort on the part of all communities is necessary to check the high cost of living we are glad to inform you that North Adams is taking definite steps to do its part in reducing inflationary prices and will be the first city in your district to attempt a program under the title of "North Adams Lower Price Plan" starting May 13 through May 17 which we have strong hopes will be most effective in eventually reducing the cost of living in our community.

NORTH ADAMS CHAMBER OF COMMERCE,
JAMES F. CAMPBELL, *President.*
LINDON N. BROOKS,
Chairman of Retail Division.
VICTOR LAMB,
Chairman of Special Committee.

MAY 8, 1947.

JAMES F. CAMPBELL, *President,*
North Adams Chamber of Commerce,
North Adams, Mass.:

Thank you for your wire. Please accept my congratulations on your constructive effort to meet this important problem, my best wishes for your success, and my assurance of every cooperation.

JOHN W. HESELTON,
Member of Congress.

I understand that more than 100 pledges of support have been received from merchants in North Adams and that the sponsors of the program are confident that at least double that number will participate before the 6-day experiment commences on next Tuesday.

Two wholesalers have notified their local office that they will join in the program and will make price reductions at the source. Mr. Brooks, chairman of the retail division, stated Tuesday "We are asking the local merchants and businessmen to support their Government in its appeal for lower prices by reducing prices wherever they can, and if they cannot do that, at least to endorse the efforts of those who can. We hope this plan will emphasize to the wholesalers and the manufacturers the need for lower prices and a willingness of the retailer to cooperate in any move to reduce prices."

This is a practical and encouraging demonstration of the determination of another New England community to take constructive action in meeting this challenge of increasing prices.

Texas City—Tragedy and Triumph

EXTENSION OF REMARKS

OF

HON. LINDLEY BECKWORTH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, May 9, 1947

Mr. BECKWORTH. Mr. Speaker, under leave to extend my remarks, I include in the CONGRESSIONAL RECORD Texas City—Tragedy and Triumph, a very timely article by Hon. Hubert Harrison, of Longview:

TEXAS CITY—TRAGEDY AND TRIUMPH

The hearts of all east Texans and the rest of the world go out to the brave citizens of Texas City as they bury their dead, bind up the wounds of the injured and prepare to rebuild their shattered city. Suddenly and without warning on an April morning this prosperous and rapidly growing city on the east Texas Gulf coast was rocked by a series of explosions of chemicals and oil. The death list runs into several hundred, the injured total thousands and the property damage amounts to staggering sums in millions.

The fortitude and courage of the survivors, the incredible speed with which they organized relief and rehabilitation and the undaunted will to carry on in the face of this stunning blow, proves that the pioneer spirit of America is not dead. Swift outside aid came from all over the Nation and messages from distant lands which showed that brotherhood and practical kindness still flourish in a strife-torn world.

It seems to take crisis and tragedy to bring out the latent courage in human beings. No doubt there is more abiding local patriotism and love of home town in Texas City now than before the catastrophe. Even before the hot embers cooled, men and women, rich and poor, were at work clearing wreckage and repairing homes. Officials of great corporations gave generously to the families of dead employees and to the general relief fund. Everywhere in town the little people, the unsung heroes, said bravely: "We will rebuild."

A greater, fairer city will rise from the ashes. A new community spirit has been born of travail.

We salute Texas City—with tears for its tragedy and cheers for its triumph.

Statement of Senator Martin to Pennsylvania Members of Communist War Veterans

EXTENSION OF REMARKS
OF
HON. JOHN SHERMAN COOPER
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES

Friday, May 9 (legislative day of Monday, April 21), 1947

Mr. COOPER. Mr. President, this morning a delegation from the Communist War Veterans, meeting in Washington, called upon the junior Senator from Pennsylvania [Mr. MARTIN], himself a distinguished war veteran. I ask unanimous consent to have printed in the Appendix of the RECORD the statement made to them by our colleague, a distinguished soldier and American; and I commend it to the reading of the Senate.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

I have left a busy Senate floor to see you, because you are Pennsylvanians. I have listened to you. Now I want to tell you what I have got to say.

First let me make clear that I respect the veteran and all that his uniform stands for. But when you come here, representing the Communist Party, you have no right to claim the respect and treatment due to veterans. No one can be faithful to American ideals and accept the teachings of communism.

I will not now, nor at any future time, discuss the welfare of our veterans with men who uphold your communistic philosophy, even though you have worn the American uniform. Anything I have to say on that subject will be said to the officers and members of recoganized veterans' organizations, or to other patriotic unaffiliated veterans. And if I want advice about veterans' needs, I shall go to those same groups. They recognize the great gulf between American freedom and communistic dictatorship. They do not straddle. They stand foursquare on the side of individual liberty and the rights of freemen. You are on the other side.

The Russian people can have the form of government they want. We are not trying to force our system on them. I will fight with all my power any effort to foist their system on this country whether it comes from you or anybody else.

I have had over 40 years of service in the armed forces of my country. I love its uniform and its flag. I respect that uniform even when worn by a Communist, but I have no respect for the philosophy you have accepted.

Some of you, I believe, were willing to fight under my country's flag solely because Russia was fighting the same enemy.

As late as June 21, 1941, your party and its members in this country were denouncing Americans who opposed the Nazis as imperialistic and war mongers. At that late date you Communists could find nothing wrong with Adolf Hitler or the things he stood for. I remember well your slogan, "The Yanks are not coming."

The next day, June 22, 1941, the Nazis invaded Soviet Russia. On that day, and not until that day, was your party's hate for the unspeakable Nazi regime born. On that day, and not until that day, did you suddenly decide that fighting the Nazis was a holy cause and the highest form of democracy. Your slogan of the day before was dead.

That is one reason why I don't respect you.

I have some sympathy for those of you who have been misled while in the service or since. It is not too late for you to wake up.

It is inconceivable to me how you can follow the teachings of a nation whose basic principles are violently opposed to everything America's uniform symbolizes.

You men stand here, veterans of the American armed services, but preaching alien communism. You are secure in your right to preach it and to criticize our country only because of this Nation's Constitution.

That is Americanism in action.

Is there any doubt what would happen if men like you convened in Moscow, in Russian uniform, to criticize the Soviet Government? Suppose for an instant you were able to get inside the walls of the Kremlin and to stand before the men who make Russia's laws. Suppose you were to tell them that you don't like the Soviet Union—to attack its leaders—and to say that America's form of government was better than Russia's.

You know what would happen.

The lucky ones among you would be those who faced a firing squad and died quickly. The others of you would go in chains to the slave camps, to toil and starve till you died the slow, hard way.

That is Soviet communism in action.

Yet, you have the colossal effrontery to tell the American Congress how you want things run.

There is a place for those of you who prefer to live under communism. I suggest that you go there and stay there.

If I can help to speed your departure, call on me.

I understand you are returning to your convention this afternoon to carry back my views. To assist you, I have made copies of my stand which you can present to your convention.

Shreveport Municipal Airport

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Friday, May 9, 1947

Mr. BROOKS. Mr. Speaker, I have just received two telegrams from officials of the city of Shreveport, La., regarding the operation of the municipal airport. These two telegrams bring forcibly to mind the action of the Appropriations Committee in cutting budget expenditures and in cutting appropriations generally. The cut complained of in this instance is the elimination of almost $5,000,000, which sum has been used in assisting the municipalities in controlling traffic at the airports throughout the country. As a result of this reduction in appropriations, cities will have deficiencies in their airport budgets.

The proper control of air traffic has commonly been considered a Federal function. From the time the plane leaves the ground until it touches the ground again it is almost entirely interstate commerce. For this reason, in the past, Congress has provided funds to be used in assisting in the operation of airport traffic-control towers. Unless this amount is restored the help which we have been giving throughout the country will be lost.

I think this has been a very useful appropriation, and I hope that Congress will find it advisable to return this amount to the bill. I set forth below two telegrams just received from the city of Shreveport regarding this matter:

SHREVEPORT, LA., *May 8, 1947.*

Hon. OVERTON BROOKS,
Member of Congress, Washington, D. C.:

Have been advised that the House Appropriations Committee have recommended the elimination of funds for the operation of all present CAA-operated airport control towers. Our municipal airport would be included in this recommendation, thereby placing an added operating cost of $40,000 per year. Please do everything in your power to have this fund included in the regular CAA bill for control-tower operations.

LANE MITCHELL,
Commissioner, Public Works Department, City of Shreveport, La.

SHREVEPORT, LA., *May 8, 1947.*

Hon. OVERTON BROOKS,
House of Representatives,
Washington, D. C.:

Paul V. Betters, United States Conference of Mayors, advises that House Appropriations Committee has eliminated all funds for CAA operation of our airport traffic-control tower. This total financial burden will amount to approximately $40,000 per year for the city of Shreveport. Earnestly urge that you use your influence to restore this appropriation. Feel that this is justifiable Federal expense and one that the city of Shreveport can ill afford to assume at this particular time. Your cooperation will be greatly appreciated by our entire citizenship.

CLYDE E. FANT, *Mayor.*

Dangerous Economy

EXTENSION OF REMARKS
OF
HON. OREN HARRIS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Friday, May 9, 1947

Mr. HARRIS. Mr. Speaker, there is much apprehension as to the future of the agricultural program. We recognize that conditions arise from time to time which will inevitably bring about changes in any program. Many are fearful, however, that our agricultural program is about to suffer a radical change and perhaps tremendous handicap.

It is well known that during the war, when farmers were producing the food and fiber for the war, commitments were made to assure them of a continued adequate price in the postwar conversion. It has only been a few months since the emergency was declared by the President of the United States to be terminated. How swiftly the forces of reaction begin and how quickly do we forget the commitments made during emergency. There is nothing that means more to the future of this country, the strength of our leadership, the influence that we have on world peace than the preservation of our soil. Much has been said

and written on the importance of soil conservation. In these days of uncertainty and reconversion when there is evidence of reduction in such a program on the basis of economy, I am sometimes fearful that we propose paring to carry out an objective and in reality accomplish the opposite. In fact, the proposal to tremendously reduce our soil-conservation program has been, I think, appropriately designated as dangerous economy.

The Camden Daily News, of Camden, Ark., carried an editorial under date of April 15, 1947, on dangerous economy. I think this is a very fine editorial and approaches this issue in a most interesting and fair manner. I think it should be of interest to every Member of Congress as we consider this problem, and I include it with my remarks:

DANGEROUS ECONOMY

If Congress takes out of the conservation or triple A program the $100,000,000 that has been put over in proposed budget-paring column, we may pay for it in the health of this and succeeding generations because a sharply-reduced program won't do much good, and the discouraged agency would likely just fold itself up.

Few people but those engaged in farming and in the soil program realize what has been accomplished in its 10 years of rapid progress. This progress, at that, is only a beginning of what can be done in putting back into the soil what we have taken out of it.

We city cousins may say, "We haven't taken anything out of the soil," but we have.

We, our fathers, and forefathers have continually drawn from the "bank account" of natural soil elements. Like any other bank account, the funds are exhausted when we continue to draw out and never make a deposit.

What we eat, what we wear, what we live in came from the bounty of the land. Each time a pound of produce is harvested something is gone from the soil. Each time it rains and dirt washes into streams, each time the wind blows the sand off our acres, something is gone that only conservation practices can replace.

It's only fair that each of us who takes sustenance from the earth should help the farmer to replace the minerals we've used and help him to replace what's seeped into the rivers or gone with the wind.

We should not look on the soil conservation program as a relief program, as many alphabet agencies are. Under the plan of assistance by the Government, the farmer puts out about $1 of his own money to each 50 cents paid by Uncle Sam.

It would be difficult to arrive at a dollars-and-cents value of the improvements resulting from conservation practices in Ouachita County alone—the figure would be unbelievable, no doubt. Use of phosphate, limestone, winter legumes, pasture seeding lespedeza, pond construction, and many other now common practices of our farmers were practically unknown to them in 1936.

Yes, if we expect to continue our standard of life, we should be willing to cooperate with the farmer by bearing a part of the cost of maintaining the fertility of the soil. We cannot depend on him to assume the entire responsibility. The productivity of the soil concerns us all—in the price of food and clothing we buy, in the quality of food we eat.

Money put into a Nation-wide soil-building program could take the vitamins off the drugstore shelf. It could insure the productivity of the land we pass on to our children.

The Palestine Question

EXTENSION OF REMARKS
OF
HON. JAMES W. WADSWORTH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Friday, May 9, 1947

Mr. WADSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters:

HOUSE OF REPRESENTATIVES,
Washington, D. C., April 22, 1947.

Hon. GEORGE C. MARSHALL,
Secretary of State,
Washington, D. C.

Hon. WARREN R. AUSTIN,
United States Representative
at United Nations,
New York, N. Y.

HONORABLE SIRS: Inasmuch as the United States became a party to the international covenant for the establishment of the Jewish national home in Palestine, as contained in the League of Nations mandate to Great Britain of 1922, through the American-British Palestine Mandate Convention of December 3, 1924, we, as Members of the Congress are deeply concerned with the performance of this promise. When Great Britain proposed recently to refer the Palestine question to the United Nations it was reported that the United States delegate, as a condition precedent to the United States consenting to a special session of the General Assembly, insisted that a concrete formulation of the problem must first be made by Great Britain. Accordingly, we would appreciate information on the following questions:

(1) What proposals, or what concrete formulation of the problem, has Great Britain made with respect to Palestine which induced the United States to agree to a preliminary session of the United Nations General Assembly?

(2) In view of the fact that article 79 of the United Nations Charter states that "the terms of trusteeship for each territory to be placed under the trusteeship system * * *, shall be agreed upon by the states directly concerned," will the United States take the position in the United Nations Assembly and in the Trusteeship Council that it is one of the states "directly concerned" in the disposition of Palestine?

(3) Has the United States formulated its policy with respect to the matters referred to the United Nations by Great Britain on the question of Palestine, and, if so, what is that policy?

In transmitting this communication we imply no criticism or direction nor any variance from the bipartisan foreign policy of the United States in respect to Palestine, but we seek only to ascertain what will be done by the executive branch so that we may consider how the Congress can contribute its part in bringing about a just solution.

Faithfully yours,

RALPH W. GWINN, Member of Congress, Twenty-seventh District, New York; ROBERT J. TWYMAN, Member of Congress, Ninth District, Illinois; HORACE SEELY-BROWN, Member of Congress, Second District, Connecticut; ELLSWORTH B. FOOTE, Member of Congress, Third District, Connecticut; DONALD L. JACKSON, Member of Congress, Sixteenth District, California; KENNETH B. KEATING, Member of Congress, Fortieth District, New York; JAMES G. FULTON, Member of Congress, Thirty-first District, Pennsylvania; R. WALTER RIEHLMAN, Member of Congress, Thirty-sixth District, New York; EDWARD A. MITCHELL, Member of Congress, Eighth District, Indiana; THRUSTON BALLARD MORTON, Member of Congress, Third District, Kentucky; JOHN C. BROPHY, Member of Congress, Fourth District, Wisconsin; HAROLD F. YOUNGBLOOD, Member of Congress, Fourteenth District, Michigan; W. HOWES MEADE, Member of Congress, Seventh District, Kentucky; WILLIAM G. STRATTON, Member of Congress, Representative at Large, Illinois; KATHARINE ST. GEORGE, Member of Congress, Twenty-ninth District, New York; FREDERICK A. MUHLENBERG, Member of Congress, Thirteenth District, Pennsylvania; J. CROW, Member of Congress, Twenty-third District, Pennsylvania; THOR C. TOLLEFSON, Member of Congress, Sixth District, Washington; FRANCIS J. LOVE, Member of Congress, First District, West Virginia; GEORGE H. BENDER, Member of Congress, Representative at Large, Ohio; HOWARD A. COFFIN, Member of Congress, Thirteenth District, Michigan; ROY O. WOODRUFF, Member of Congress, Tenth District, Michigan; JAMES W. WADSWORTH, Member of Congress, Forty-first District, New York; WALTER H. JUDD, Member of Congress, Fifth District, Minnesota; CHRISTIAN A. HERTER, Member of Congress, Tenth District, Massachusetts; JACOB K. JAVITS, Member of Congress, Twenty-first District, New York; CHESTER E. MERROW, Member of Congress, First District, New Hampshire.

DEPARTMENT OF STATE,
Washington, May 5, 1947.

Hon. JAMES W. WADSWORTH,
House of Representatives.

MY DEAR MR. WADSWORTH: I have received the letter dated April 22, 1947, addressed jointly to me and to Senator Austin by you and a number of your congressional colleagues with respect to the reference of the Palestine question to the United Nations.

In reply to your numbered questions I may state as follows:

1. In the preliminary discussions which took place between representatives of our Government and the Secretary General of the United Nations, as well as with representatives of the British Government, we gave it as our view that the procedure adopted for the consideration of the Palestine question should be of unquestionable legality, and should be undertaken by the appropriate body of the United Nations at the earliest possible date. In accordance with this position, we were able to concur in the calling of a special session of the General Assembly of the United Nations for the purpose of creating and instructing a committee to prepare for the consideration of the Palestine problem by the General Assembly at its next regular session.

The concrete formulation of the proposal by the government of the United Kingdom bringing the Palestine issue before the United Nations is contained in a letter from the United Kingdom delegation to the Acting

Secretary General of the United Nations under date of April 2, 1947. A copy of this letter is attached hereto.

2. The question of United States policy with regard to article 79 of the United Nations Charter in its relationship to Palestine will not arise unless or until action is initiated to place Palestine, now held under mandate, under the trusteeship system of the United Nations. According to article 77 of the charter, the trusteeship system applies to such territories, including territories held under mandate, as may be placed thereunder by means of trusteeship agreements. Thus, the transfer of territories from the mandate system of the League of Nations to the trusteeship system of the United Nations is a voluntary rather than an automatic action. The trusteeship agreement must then be approved by the General Assembly or, in the case of strategic areas, by the Security Council.

3. The Department of State believes that, as the special session of the General Assembly of the United Nations was called at the request of the Government of the United Kingdom for the purpose of constituting and instructing a special committee to prepare the Palestine question for consideration at the September 1947 session of the General Assembly, it would be premature for this Government to develop its policy with regard to the substance of this question in such a way as to limit the full utilization of that committee's recommendations and its report.

As regards the procedural questions coming before the special session, our attitude is as follows:

(a) We advocate the restriction of the agenda to the single item proposed by the British Government, on the ground that the sole business of this session should be the constituting and instructing of a committee to work on the Palestine problem.

(b) As regards the composition of the committee, it is our view that it should be of a convenient and workable size and might consist of the representatives of 10 countries. We feel that the committee should have neutral character, so that the members would be able to study this complex problem without being bound by any particular point of view, and to weigh the question on its merits.

(c) We consider that the committee should be instructed to give due weight to all facts and information of value in relation to the problem, hear all important and representative points of view which are offered, and present to the regular meeting of the General Assembly several alternative solutions with a statement and analysis of the advantages and disadvantages of each solution, together with recommendations.

I welcome this opportunity to inform you of the Department's position at the present stage of United Nations consideration of the Palestine question.

Sincerely yours,

G. C. MARSHALL.

Turkey Wants Arms, Not a Loan

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, May 9, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, in the debate just concluded on H. R. 2616, the Greek-Turk aid bill, I charged that there was no evidence that Turkey had asked for a loan, but what it wants is military aid and nothing else. No real evidence has as yet been submitted by the committee or anybody else.

Since making my remarks, my statement is corroborated by that outstanding journalist, Constantine Brown. In a column appearing in the Star today he points out the true situation in Turkey. Under leave to extend my remarks I insert his article:

THIS CHANGING WORLD—ARMS, NOT LOAN, IS WHAT TURKS WANT; "OTTOMAN DEBT" IS PAINFUL MEMORY

(By Constantine Brown)

The Turkish Government has instructed its ambassador in Washington to make no move and to have no talk with State or War Department officials which could be interpreted as a Turkish request for American assistance, in any shape or form.

This policy of high Ankara officials springs from the loose talk now current in Turkey to the effect that America may want to tie a loan of $100,000,000 with control of Turkey's financial resources.

The memory of the much-hated "Ottoman debt," an institution which existed for many decades before the republic was established, is still vivid among Turkish politicians. The debt arose when the Sultans borrowed indiscriminately from British and French bankers and placed the country's revenues under foreign control. The "Ottoman debt" was abolished by Kemal Ataturk, who repaid the loans and removed all foreign economic and political influence from the country.

MOSCOW RADIO FANS FIRE

The debates in Congress, which are sketchily reported abroad, gave the opponents of Premier Recep Peker's government ammunition to accuse the administration of selling out to foreigners. Foreign propaganda, principally the Moscow radio and its affiliated stations in Syria and Lebanon, are adding fuel to the fire.

The historical truth about the so-called Turkish loan is that Turkey never actually has asked for any specific sums.

Last October the State Department sent a note to Moscow, with President Truman's approval, stating that the question of the Dardanelles must be settled, not by bilateral discussions, which had failed, but by agreement between all the signatories of the Montreux Treaty. The United States, which was not a signatory of the treaty, would take the place of Japan, which could no longer have a voice since it was one of the defeated Axis states.

PLANES AND GUNS ASKED

The note, couched in polite diplomatic language, was laden with dynamite. There was serious danger that Russia might precipitate conflict by attacking Turkey. The Ankara government was asked what type of military equipment was most urgently needed. We knew that the Turks had a large army, but we also knew that they were deficient in modern defense weapons.

The answer from Ankara was prompt. The Turkish military attaché in Washington presented a long list of materials, which made some of our military experts a little dizzy. But among the many items submitted there were some, such as antiaircraft guns, trucks, planes, radar, and materials for airfields, which the War Department considered of top priority.

Since Congress had not been informed yet that aid for Turkey was being considered, it was believed that some of the essentials could be sent from the European areas, particularly from the stock piles of lend-lease materials still in Britain.

PLAN ALLOWED TO LAG

Either because of a lack of equipment in Britain or because of fear that Foreign Minister Molotov's new friendly attitude might be jeopardized, the plan to reinforce Turkey was not followed up at that time.

When, last March, the State Department and our top military men realized that Russian expansionism had not been abandoned, and secret information was received indicating that the Middle East was still a potential target of Moscow's ambitions, President Truman made his well-known speech asking for funds for Greece and Turkey.

Greece, which was expecting the British to leave within a few weeks, appealed urgently for American assistance. Turkey, however, made no new request. It received the official offer of American assistance with joy, but did not make a fresh appeal, since a list of urgent needs had been presented a few months earlier.

Our Stake in Greece

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, May 9, 1947

Mr. JOHNSON of Texas. Mr. Speaker, under leave to extend my remarks, I include an address, Our Stake in Greece, delivered by Hon. Paul A. Porter, of Washington, D. C., and Kentucky, before the Chicago Council on Foreign Relations at the Congress Hotel in Chicago, May 9, 1947:

I have agreed to talk today to the Chicago Council on Foreign Relations about Greece in the hope that I might make some contribution in the way of information which would serve to clarify opinion about this tremendous issue. It is my assumption that this council is composed of persons who are informed on questions of foreign policy and that membership in this organization is evidence of your belief that Chicago, notwithstanding some local opinion to the contrary, is a part of the world community and cannot secede from the universe.

However, there are many elements in the present picture which tend to confuse. The determined opposition to what has become known as "The Truman Doctrine" by both a former Vice President and one of your local publishers does not contribute to clarity of thinking and the average citizen may be pardoned if he is bewildered by the phenomenon of such strange bedfellows giving voice to similar views. We find many such curious alliances on this issue throughout the country, in the Nation's press, and in the Congress. Some adjudged as liberals discover themselves on the side of their old foes whom they have usually denounced as reactionaries and enemies of progress. And while the public opinion polls indicate popular support of the President's policy, divergence of opinions among those who purport to think for the average citizen perhaps leave him with the unique alternative of having to think this one through for himself. Whatever the unpleasant aspects of this responsibility of citizenship, it is not without its constructive side. We can no longer choose upon the basis of internal partisanship or rely upon our favorite purveyors of opinion and dogma to dish out a neat policy, all ready-made. Apparently, I repeat, we must think this one through for ourselves. And that, I take it, is where the Council on Foreign Relations comes in. Yours is the solemn and difficult responsibility of making things clear. For in the absence of information and understanding on the part of the majority of Americans everywhere, we are truly without a foreign policy and there is real trouble ahead.

Perhaps I can best serve the interests of clarification by talking about Greece in specific terms and then attempting at least to raise a few of the questions which flow from some of the broader implications of our undertakings in this area.

Last January I went to Greece as the head of a small economic mission with instructions to make an analysis of the country's resources and economic policies and further to determine what outside assistance would be necessary in the year ahead for the survival of the Greek people. I have completed this assignment, filed my report, and terminated my official status. Therefore what I have to say are the opinions of a private citizen who has had the recent opportunity in an official capacity to spend 2 months in Greece engaged in an intensive and comprehensive analysis of the country's internal economy.

A summary of the report of the American Economic Mission to Greece has been filed with the State Department and released for publication. It begins with this general observation:

"The people of Greece have an opportunity to move forward to an era of reconstruction and internal peace. Alternatively, if the present policies of drift and expediency are continued, they will result in economic disaster to all her people and perhaps forfeit for a generation Greece's chance to rebuild and to establish a stable economy."

On rereading this generality I have the conviction that its meaning may have a much broader application and that, in fact, upon the success of our venture in Greece depends our own opportunity for security and economic progress. Having assumed this obligation, it cannot be permitted to fail.

A western mind coming for the first time into intimate association with the problems, the habits, and the attitudes of a middle eastern people encounters a number of puzzling phenomena. Yet to generalize about Greece is deceptive. I found the average Greek to be frugal, industrious, and intelligent. Moreover, the people as a whole seemed devoted to basic democratic ideals. What then are their difficulties and why do they need outside assistance? The answer to this question is found in a complex of historical considerations, modern and ancient, political and economic.

At the risk of oversimplification I would summarize the contemporary internal crisis in Greece by stating that after 5 years of dictatorship, 4 years of war and enemy occupation, and more than 2 years of internal strife, Greece's political growth has been retarded, her economic life paralyzed, and her people are thus unable to utilize fully the resources at their disposal.

Add to this the outside pressure of subversive foreign infiltration in a devastated and bankrupt country, and it then appears remarkable indeed that the Greek people have maintained any capacity for embracing principles of self-government. I have admiration for the devotion of these people to the fundamental concepts of human dignity and their determination to maintain their ancient democratic faith in the face of such prolonged adversity.

In considering the Greek problem, it is essential, it seems to me, to constantly keep in mind that for centuries this impoverished country has been a strategic battleground over which great powers have disputed and fought. Those who are sharply critical of Greece's current political institutions and the exploitive economic policies of her dominant commercial groups should remember that the country has really never had a decent breathing spell. Yet, I repeat, her proud people have maintained a fierce and unyielding adherence to political independence and the integrity of their State.

I recognize, of course, that the United States' policy is based upon our own self-interest in resisting the spread of totalitarian methods. But our system and ideals are such that our own interests are identical with the welfare of the masses of the Greek people. I reject therefore the cynical suggestion that we are moved by the commercial designs of classic imperialism in our determination to help the Greek people. I proclaim this policy as one which is based upon the noblest of American purposes and I submit that there is no conflict between the loftiest of democratic ideals and the most practical statesmanship in the world in which we now live. Those who may sneer at this approach as naive are, it seems to me, inviting a rendezvous with extinction.

What are the dimensions of the economic problem in Greece and what do we propose to do about them? First, it is important to bear in mind certain basic facts. Greece is a country of about the area of the State of Illinois, some 50,000 square miles. But only 20 percent of the land is arable. She has a population of about 7,500,000 persons. National income by western standards is abysmally low. Measured in real terms, it is doubtful if it will reach $700,000,000 in 1947. Thus the standard of living has always been dangerously low in spite of foreign borrowing. Even before the war, Greece balanced her trade largely through invisible income such as immigrant remittances, tourist and shipping receipts. The economy of Greece has always been weak, never self-sufficient.

When the Nazis overran Greece after the small Greek army had beaten back Mussolini's "wolves of Tuscany," they inaugurated a systematic and scientific campaign of destruction of the Greek economy. The physical destruction was to come later. For almost 4 years with Teutonic thoroughness, the occupying forces sought to destroy the Greek economy and crush the Greek spirit. One round of inflation followed another. The processes of government and commerce were fiendishly corrupted. Internecine warfare was promoted both by the Nazis and the Allies and the fierce hatreds of this civil strife are still bearing bitter fruit. As the liberating armies approached both from the north and south, the Nazis struck their final, cruel blows. A scorched earth policy, devilishly prepared, demolished the ports, wrecked the railways and highway transportation systems, and annihilated more than 60 percent of the livestock, the basis of Greece's primitive agriculture. Thus the liberators found a ravaged country with only a flaming spirit of resistance to tyranny as its remaining asset.

The tragic events of December 1944, the subsequent supervised election and plebiscite are too well known to warrant repetition. It might have been different and the bloodshed of the past and future might have been spared. There is ample room for difference of opinion on these questions. But I do point out as an obvious fact that Greece did not go the route of her Balkan neighbors and therefore we are considering together today a democratic policy for this part of the Middle East.

Since liberation some $700,000,000 of foreign assistance have been spent in Greece. But, as I pointed out in my report, there is the inescapable conclusion that during the past 2 years, Greece has merely managed to survive. There are exceptions in the revival of agriculture and some of Greece's small industrial enterprises, but by and large the country finds herself in much the same position physically as when the Nazis were expelled 2½ years ago.

I would like to summarize the proportions of Greece's present desperate economic crisis—a situation which she lacks the resources to meet alone. In fact, unless there is prompt foreign assistance, Greece will face widespread suffering and starvation this winter. These are the elements of Greece's current economic predicament, facts which are set forth fully in the report of the American Economic Mission.

(1) The tentative estimated Greek budget, including the expanded military establishment, indicates a deficit of $290,000,000 for 1947, or about three times the amount of currency now in circulation.

(2) Reserves of unrestricted foreign exchange by the end of 1946 were too meager to insure import of Greece's minimum needs, necessitating a severe restriction of basic imports in the absence of immediate outside assistance.

(3) Pressures on the retail price level are severe and further marked increases are indicated unless there are immediate corrective measures.

(4) Wage demands are accumulating as a result of the foregoing factors, adding the threat of wage inflation to the prospect of budget inflation.

In short, it appears that in the absence of substantial foreign assistance and the adoption by the Greek Government of strong control measures, another round of extreme inflation with all of its disastrous economic and political consequences is a certainty.

It is, therefore, apparent that there exists a need for immediate steps if inflation is to be prevented. Recovery and reconstruction in Greece cannot be based upon the present unstable economic foundations.

This raises a question in the minds of most Americans as to what basis do we have for a conclusion that our policies will cause different results from those applied since liberation. This is an appropriate question and one which we should seek to answer to our satisfaction. I believe there is an answer—a hopeful and affirmative answer, both in economic terms and political terms. One cannot minimize the immense difficulties of the undertaking upon which we are about to embark, but I believe solutions can be found to Greece's internal problems with the amount of assistance proposed. And I believe internal peace can be achieved if the United States Government puts forward the proper efforts.

The American Economic Mission to Greece has undertaken to develop a kind of blueprint for Greek recovery. We have sought to chart a course which will avoid previous errors of policy and administration, but which at the same time requires a realistic mobilization of Greece's own resources for recovery. The program, as you know, involves the expenditure of $350,000,000 over a period of 15 months. Of this amount, $200,000,000 is to be expended for relief and reconstruction and the remainder for the military. These sums wisely expended and carefully supervised mean that the Greek people can not only subsist on a diet at the level of approximately 2,200 calories per day, but that in addition many specific reconstruction projects can be begun. But, this can only be done if Greece makes effective use of her own resources.

For example, this program envisages that Greek exports during 1947 will more than double over the previous year. It means that receipts from shipping must be considerably increased and that local taxes will contribute more than in the past to close the internal budget deficit. It assumes further that the present tremendous burden of the military, a disproportionate drain upon the Greek economy, will not be a continuing expenses. It presupposes the resolution of Greece's internal civil war. This is a large order, but I am optimistic that with proper and determined personnel, it can be done.

I will not discuss here the detailed procedures of supervision except to mention one important technique which we have proposed. This is the requirement that the American Recovery Mission to Greece have the obligation, not a permissive right, but the duty to publish periodic reports on the progress of Greek recovery. These reports, either monthly or quarterly, should be made available to the people of Greece, to the people of the United States and to the

United Nations. It is my conviction that informing the Greek people and the world of the details of this program will contribute to the education of Greek people in the process of democratic government as well as constitute an important check upon any efforts to frustrate specific plans for recovery. I do not believe that any government in Greece could long remain in power if it failed to make sincere and determined efforts to utilize what may be its last opportunity for independence.

Two of the principal questions which have been asked me since my return from Greece are addressed first to the British policy since liberation and second to the character and composition of the present Greek Government.

I will deal first with the British participation in Greece since liberation. The British have maintained a substantial complement of armed forces within Greece since early in 1945. These forces have progressively diminished and I understand will soon be entirely withdrawn. In addition, since January 1947, under the terms of the London agreement, His Majesty's Government has maintained in Greece an economic mission and a police mission to train the gendarmerie. The question is repeatedly asked as to what have been the accomplishments of these groups within Greece, particularly the British Economic Mission. This is not a question that is susceptible of a precise or dogmatic answer. I can only volunteer a personal opinion.

During the past year and a half Greece has had a kind of economic stability. The drachma which was pegged at 5,000 to the dollar at the official rate in January of 1946 soon rose on the open market to about 8,000 to the dollar. There have been only insubstantial fluctuations since that time. This currency stabilization was bought at the price of dissipating foreign exchange reserves through the free sale of gold by the Bank of Greece. At the same time, the minister of finance somehow contrived to cover about 70 percent of his budget expenditures through current revenues from ordinary and extraordinary sources. Most of the current income came from the sale of UNRRA supplies as well as Allied surplus property and other miscellaneous extraordinary credits. Nevertheless, the Greek economy has functioned in a relatively stable fashion during the last 14 months. An abstract analysis of the usual factors would lead to the conclusion that a fourth round of ruinous inflation has been long overdue. But in spite of the pressures of a budget deficit, a series of wage increases and a high internal price level, there has been a kind of technical stability. I believe that this achievement even though negative in character is due in large part to the assistance and advice of the British economic mission and the currency committee established under the London agreement. Had it not been for the efforts of these groups, it is my opinion that a complete economic collapse would have occurred early in 1946.

Concerning the composition of the present Greek Government, I feel some reluctance to attempt to catalog the deficiencies of any sovereign power with whom we have friendly relations. I would feel more at liberty to talk about some of the beams in our own eyes. However, the critical question at this time is whether under the proposed program we can work with the existing regime. My answer to this is that we can. President Truman in his message to Congress pointed out that this government was not perfect—the kind of diplomatic understatement which the proprieties require of our Chief Executive. However, it should be remembered that even though an election is long overdue in Greece, the present government does represent some 85 percent of the constituent assembly. Moreover, there is within Greece a vigorous and critical political opposition. There is a free press. The Communist paper is published daily in Athens and each morning in my mail box I received an English translation of the mimeographed bulletin of the EAM bitterly denouncing the present regime. Obviously, the fact that there exists freedom of expression does not justify the shortcomings of any government, but it is my impression that nowhere else in the Balkans can be found this measure of liberty. I regard this as a hopeful symbol.

There are many reforms necessary in the shattered economic and governmental structure of Greece. They run from the necessity for a complete revision of the civil service, its standards of classification and compensation, to sweeping budgetary and tax reforms. A program of reconstruction and reform of this character cannot be put into effect overnight. It is a step-by-step process and must be recognized as such. In my opinion, no enduring political or social reform can be achieved until there is first a restoration of economic health. The first job of the American Recovery Mission is to bring about conditions of renewed economic activity and it is the duty of peoples of democratic faith everywhere to seek a basis for internal pacification within Greece. I am encouraged by the signs of interest on the part of the United Nations on the question of a general amnesty to terminate the present hostilities in the country. Certainly such a program should have the unqualified support of the United States because it is obvious that there can be no real recovery in Greece so long as she undertakes to rebuild and fight an internal war simultaneously.

It has been 2 months since I sat at a little inn at Loutraki on the shores of the Gulf of Corinth and through the Voice of America heard the President's appeal to Congress for legislative authority to come to Greece's rescue. Obviously, such an important issue as this should be thoroughly and carefully debated by the Congress. But all of us should recognize that Greece is living on borrowed time, on the hope of economic assistance from the United States.

The alternative to the Truman doctrine is inaction. Inaction means the swift and certain collapse of Greece. It is my belief that this would produce the kind of chain reaction throughout the Middle East and in western Europe that would not only shatter the structure of the United Nations, but would in addition confront democratic powers with an impossible dilemma. This cannot be permitted to happen. America's responsibility has been proclaimed to the world. It must now be made effective.

I would not undertake to give sweeping assurances as to the success of our policy in Greece. I am convinced that it is technically feasible, that Greece has the resources, the skills, and the will to become a fully democratic society. She cannot do it alone and requires our assistance. I conclude with the observation I made to the House Foreign Affairs Committee that Greece's record in resisting oppression entitles her to that chance.

George Washington University's New Courses Are Designed To Aid Those Seeking State Department Careers

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, May 9, 1947

Mr. HAYS. Mr. Speaker, under leave to extend my remarks, I include the following excerpt from a radio address by David Wills over Station WMAL on May 5, 1947:

With all the expanding interest in foreign affairs and the vast sums being appropriated to finance new adventures in foreign policy, there's sure to be need of many more men and women in the career service of the State Department. George Washington University has decided to do something about it.

Last summer this university ran a summer course for veterans who wanted to take the State Department career examinations; 100 veterans enrolled, 86 took the examination, and 40 percent passed—and that's nearly three times better than the national average. So this year George Washington University has decided to make the course permanent—run it every summer—and not limit it to veterans, which makes George Washington the only university in the country offering such a course.

The course starts toward the end of June and applications for admission have to be made by June 1; information can be obtained from the dean of government at George Washington.

To take the State Department exam, you have to be between 21 and 35 years old, you must have been a citizen of the United States of America for 10 years, and you must not be married to an alien. The rules do not say you have to be literate, but it helps when you try to pass the exams. These examinations are done on the Time magazine current affairs quiz style; check the right answer among four suggested for each question. You have to be able to sling around words like epitonic and etiolated; geoponic and fractious; paralepsis and vaticination. The George Washington summer course aims to set you straight on these and many other matters, and the course takes the students through trial tests at twice the speed of the actual State Department examination—just to make the student feel at ease when he comes to the final test.

The fee for this course is only $188. I mention the figure to show you don't have to be rich or go to expensive prep schools to start a career in the Foreign Service. Of the veterans who took the course last year, the largest single group was composed of sons of farmers, and a big proportion came from western colleges, though they may have been born in the East.

Universal Military Training

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, May 9, 1947

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Hanson W. Baldwin from the New York Times of May 4, 1947:

UNIVERSAL MILITARY TRAINING'S VALUE WEIGHED—EIGHT REASONS WHY UNIVERSAL TRAINING IS OF DOUBTFUL MILITARY WORTH

(By Hanson W. Baldwin)

Peacetime universal military training, soon to be submitted to Congress, stands or falls on its military utility.

Its fair-minded opponents concede that despite its repugnance to the American tradition, universal military training must be supported if it is proved essential to United States security. But the burden of proof, they rightly add, rests upon the military.

The War Department holds, and its official view is probably supported by a majority of Army officers—that universal military training is a vital part, in fact a cornerstone, of our national-defense program.

Some few officers and outside critics are, however, emphatic in their opposition; they charge the War Department with "deception" in insisting that universal military training is essential to national security and flatly deny this assertion.

ON CONTROL OF AIR, SEA

There are extremists on both sides of the argument, but any consideration of all the factors makes it plain that universal military training is a very dubious form of security, if, indeed, it offers any security at all, in this technological and industrial age. Here are some of the factors that tend to minimize its military value:

1. Attack can come to the United States, and we can attack any enemy, only through the air or by sea. In the initial phases of any war of any nature using any weapons what is of primary and fundamental importance is, therefore, control of the air and the sea. Emphasis, therefore, should be on insular strategy as opposed to continental strategy, on air-sea strategy as opposed to mass Army strategy.

2. The problem of United States defense breaks down into time periods, the short-term and the long-term. In the immediate future when the only component of "push-button" war that we have is the push-button—perhaps for 10 years, perhaps longer—the weapons and techniques that won the last war will still have validity. It is in this period, before transoceanic-guided missiles with atomic warheads have been developed, that large ground armies, to follow up and complete offensives launched by sea and sky, will continue to have a very considerable degree of usefulness. But during this period the United States has a reserve of trained manpower (declining in skill and usefulness as the end of the period is reached) already trained far more thoroughly by one, two, four, or more years in the wartime services, than any 6 months' trainee could be.

In the long-term future, when transoceanic-missile war may become possible, initial victory or defeat would not in any case depend upon a mass of semitrained reserves for the ground army. If the war ended quickly, it would be won or lost by our superiority or inferiority in missiles, air power, the atomic bomb, and other new weapons of destruction, and a large ground army could not greatly influence the course of the brief conflict.

TIME FACTOR CONSIDERED

If the war continued without decision, virtually complete control of the air and the sea would be necessary in any case before we could transport large armies overseas by sea or air and time would be required to equip those armies. There would thus be time for training; in fact, training for the ground battlefield is one of the lesser problems of any future war. This is not to say that ground troops will not be necessary; in any future war—clearly they will—certainly for occupation after conquest, very probably to help win the victory. But they cannot possibly influence (except by the firing of projectiles) the initial and supremely vital phases of any push-button war, and if a push-button war devolves into a war of attrition, there will be ample time to train large ground forces, and to train them under wartime incentive far better and with the benefit of higher morale than is possible under a 6-month peacetime system.

3. Today, and even more tomorrow, the offense has such an edge on the defense that the greatest hope of victory or of avoiding atomic attack, is the threat of tremendous and overwhelming retaliation.

In other words, we cannot build any Maginot Line that will protect the United States against all forms of attack, but we can create a mobile, instantly ready striking force, planes, guided missiles, aircraft carriers or fast surface missile launchers, submarines, and small but highly trained forces of airborne troops, which can strike at once against any enemy that attacks us.

This force will need manpower, but it must be full-time highly trained manpower, not half-baked, half-trained reserves. This force will need large numbers of men to launch missiles (it takes several hundred to prepare a single German V-2 rocket for launching), but UMT will not provide the type of training needed.

4. There is need in any future missile war for large forces to provide military or semimilitary disaster control and civilian defense duties on the home front. This should be the mission of the National Guard or some similar force, and it should be specifically trained to that end, but the universal military training program is not pointed toward any such end.

5. A good military case might have been made for extension of the Wartime Draft Act until our occupation duties overseas had ended, but universal military training—limited to training in this country—will not provide a single man for overseas service, and, in fact, will add to the Army's manpower problem by requiring an added 130,000 to 150,000 men for training overhead and cadre.

FLOW TO GUARD, RESERVES

6. Universal military training will provide a flow of manpower for the National Guard and the Organized Reserves, but these civilian components or part-time soldiers cannot possibly be ready for instant action in an emergency, and yet instantly ready forces are the type required in the atomic age.

7. The cost of universal military training—direct and indirect—is likely to be so large as to starve—particularly in this essential era of economy in government—more important aspects of national defense—the diplomatic services; the Regular services which must be instantly ready; intelligence, research, and development; the services' school system; industrial mobilization, etc.

8. Universal military training by its very size and cost may build up the shadow of security without its substance; there is grave danger we may create in our military psychology a Maginot line concept. Air power, missiles, new weapons, sea power must have priority.

In this atomic age the military emphasis—if there is to be any degree of security—must be on Regular forces, highly trained, instantly ready, not on some mass army that may be ready many months after M-day. As Maj. Gen. John S. Wood, wartime commander of the famous Fourth Armored Division, has put it, universal military training "will not produce a single unit ready to fight or a single fighting man for immediate use."

Economic Reform Weapon for Peace

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 8, 1947

Mrs. DOUGLAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following communication from the New York Times of March 19, 1947:

ECONOMIC REFORM WEAPON FOR PEACE

To the EDITOR OF THE NEW YORK TIMES:

The recent recommendations of President Truman in relation to Greece and Turkey can spell success for the cause of world peace only if our Government makes it brilliantly clear by word and deed that we have not accepted war with Russia and Communist domination as the only possible choices before us. Gradually the American mind is being conditioned to believe that there are no real hopes of averting war with the U. S. S. R. This is a disease so terrible in its ramifications that our political leaders must exert every effort to arrest its metastatic growth.

During the war I served in the Mediterranean theater as chief of Balkan intelligence for the Office of Strategic Services. In that capacity I came to realize that the basic problem of the Balkans was the fact that long-overdue revolutions against feudal social and economic systems were occurring at a point in history when external powers were finding it expedient, power politically, to control the governments of these volatile areas.

While worrying about the dangers of Russian expansion, America and Britain have placed themselves in the untenable moral position of clamping lids on the social and economic changes which alone can produce the preconditions of democracy and world peace.

Anyone who views communism in the Balkans as the result of simple Russian machinations is overlooking the centuries of poverty and aristocratic corruption which have characterized those countries.

Instead of recognizing the revolutionary nature of the post-occupation Balkan peoples and attempting to channel their legitimate drives where we had the opportunity, Britain and the United States have backed the remnants of a decaying system.

A peaceful resolution of the impasse in Greece depends upon two things: convincing Russia that any military expansion will be met by force; using every means at our disposal to hasten long-overdue economic and social reforms.

This, then, is a third alternative to war or Communist domination. We must make clear to all weak peoples who need our aid that we are fighting communism not with atomic bombs and strategically backed military dictatorships but with economic reform and social rehabilitation. We must search out those political leaders who until now have been crushed between the millstones of reaction and communism and give them power.

Finally, we must place as much burden as possible upon the instrumentalities of the United Nations in accomplishing these ends. Any unilateral action is bound to be interpreted by the Russians as an overt military challenge. Insofar as we can enhance the prestige of the United Nations we are keeping open peaceful alternatives.

Above all, President Truman and the State Department must drive home to the minds and consciences of the American people that we are engaged in more than world-wide military maneuvers. The answer to Russian arms is American arms, but the answer to communism is democratic reform. We still have time to lick Russia on the playing fields of social amelioration. If we succeed, one of the basic causes of war will have been forever removed.

STEPHEN K. BAILEY.

MIDDLETOWN, CONN., *March 16, 1947.*

Booklet Fascism in Action Should Be Printed as a Public Document

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 8, 1947

Mr. PATMAN. Mr. Speaker, May 14, next Wednesday, the Committee on House Administration will decide whether or not the booklet Fascism in Action should be printed as a public document.

I hope the committee's report is favorable. It is my belief that we should keep wide awake against any force that is being exerted against our splendid form of government. Fascism or communism are two such forces, either of which could be devastating to our form of government. The booklet Communism in Action has been printed and is being distributed free by Members of Congress. It occurs to me we should also have the booklet Fascism in Action to be distributed at the same time.

FBI HEAD ON FASCISM AND COMMUNISM

Mr. J. Edgar Hoover, the head of the Federal Bureau of Investigation, has made speeches about communism and fascism. It will be noticed that in every speech that he makes he condemns both, not just one, although the publicity seems to feature his attacks on communism and very little is said about his attacks on fascism. The statement usually made by Mr. Hoover on these subjects is as follows:

We, of this generation, have faced two great menaces in America—fascism and communism. Both are materialistic; both are totalitarian; both are antireligious; both are degrading and inhuman. In fact, they differ little except in name. Communism has bred fascism and fascism spawns communism. Both are the antithesis of American belief in liberty and freedom.

Mr. Hoover realizes, and has so expressed himself, that our fight against isms that will destroy our country should be directed against all such isms and not just against one.

Correspondents from all sections of the United States write:

I am informed that you are the author of House Resolution 83, providing for the publication of the book Fascism in Action. Myself and many friends here hope that you have success in getting the resolution reported out. Authentic information has long been needed concerning Fascist activities in America.

Certainly no one sincerely interested in our country's welfare would object to giving the public full details concerning any subversive activity.

When Fascism in Action is published, I suppose that it can be obtained through the Superintendent of Documents. I don't want to miss it.

The people must be informed. The dangers of fascism must be exposed. Fascism is a constant threat to the peace and security of our Nation and the public must become aware of this.

We support House Resolution 83 wholeheartedly, and hope that the publication of the manuscript Fascism in Action will be delayed no further. If we want American democratic institutions to survive, our people must understand the tactics and aims of American fascism. We are confident that Fascism in Action may serve as a warning and motivate the people to watch with vigilance its political, social, and economic rights.

A considerable number of Californians are interested in a report that the Legislative Reference Service of the Library of Congress has prepared a manuscript on Fascism in America at your request.

The word "fascism" like the word "communism" is so loosely used that any authoritative definition of it in a Government publication would be of very great value to the common citizen.

May I express the hope that there may be no undue delay in the Government publication of the above manuscript and that when it is ready for distribution the public may be generally informed that it is available.

Support for your resolution, House Resolution 83, to have Fascism in Action published, is highly desirable. I am taking it upon myself to add this letter to what I hope will be thousands of others like it.

You may be sure that once said book has been published, as I am sure it will be, I will do everything in my power to obtain a copy, read it, and preach antifascism to whomever I am able. As I am a sophomore at the University of Wisconsin, attending under the GI bill, you can understand that my sphere of influence is not too limited.

As you know, fascism is the greatest threat to America at present. Our boys did a good job of destroying it on the battlefield, now we should help them to destroy it at home.

We have read of your efforts toward publishing the book Fascism in Action. With the evils of fascism hard at work now to undermine and cause disunity among the American people such a publication would be of the utmost value in enlightenment for all. We must have something to combat the poison propaganda of a Fascist nature spread throughout our Nation every day.

Armed Forces Merger

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 8, 1947

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post:

STIMSON'S ADVICE

Henry L. Stimson's succinct comments on behalf of the armed forces merger are entitled to the respect due the advice of an elder statesman. During two terms as Secretary of War and one as Secretary of State, Mr. Stimson had an opportunity accorded few Americans to see our national interests in long perspective. His personal integrity rules out any possibility of partisanship. When he stands unequivocally for prompt passage of the unification bill now before Congress, he does so because his long experience has convinced him that this unified approach to national security is organizationally necessary in a modern world.

Mr. Stimson uses the phrase "strategic economy" to describe one of the principal advantages he envisions in the merger. He refers, of course, to economy in lives and natural resources in any future war, and he notes that such an element "might well be critical." He cautions that we cannot continue to operate with the "wasteful opulence" that has characterized our efforts in the past. In this connection, the saving in dollars as well as resources cannot be ruled out, especially at a time when Congress has such a penchant for reducing expenditures. A recent report by Lieut. Gen. Leroy Lutes, Army procurement director, adds weight to Mr. Stimson's argument. During the years 1942 to 1945, the Lutes report charges, "duplication and lack of coordination in the supply activities of the Army and Navy" cost the staggering sum of $1,150,000,000. Regardless of other compelling considerations in the merger, the monetary saving alone should make Congressmen take the proposed integration seriously.

Mr. Stimson demolishes the fear expressed Tuesday by Admiral King that the powers of the proposed Secretary of National Defense would constitute a danger. A strong secretary, Mr. Stimson points out, is essential to accomplish the job, but the Secretary of National Defense is only to be delegated some of the authority over the defense establishment that now rests upon the President. Nor is the bill now pending a partisan bill favoring one service over another. Mr. Stimson emphasizes the careful study and the basic compromises and agreements that went into the measure endorsed by leaders of both the Army and Navy. The crux is expressed by Mr. Stimson in this passage: "I would like to stress the importance of considering this organization of the armed forces from the standpoint of fundamentals rather than details. If the basic plan of centralization can be determined upon, hundreds of vexing problems will fall into proper perspective. They will lose much of their controversial aspect and be decided as a matter of specific planning rather than of primary policy." These words should be pondered deeply on Capitol Hill.

Railroad Trusteeships

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Friday, May 9, 1947

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Paterson (N. J.) Evening News:

HIGH-SPEED COMMUTING FACILITIES FOR PATERSON ARE NOW ENDANGERED; CIVIC GROUPS MUST ACT AT ONCE

Mayor Furrey, the chamber of commerce, and every civic organization having Paterson's best interests at heart are now called upon to go into immediate action in opposition to House bill 3237, introduced by Congressman REED and now before Congress.

The purpose of this bill is to bring to an end all railroad trusteeships and hand the roads now under these trusteeships back to the stockholders.

Hearings on this bill are to begin in Washington next week. The legislation emanates from a Western State where stockholders

lost money in an unsuccessful railroad investment and on its face this proposed legislation looks innocent enough.

Paterson, as a city, however, has a very definite stake in seeing to it that every legitimate effort is made to prevent this bill from being enacted into law.

Should it pass the House and Senate and be signed by the President the effect of this legislation would be to hand back the revivified and rehabilitated New York, Susquehanna & Western Railroad to the Erie on a silver platter and wipe out 10 years of hard work and fine results achieved under the able direction of the late Walter Kidde and his successor, Henry K. Norton.

The Erie Railroad owns all of the stock of the New York, Susquehanna & Western Railroad and 10 years ago the Susquehanna had been allowed to deteriorate to a point where it was no longer a factor in commuter travel between Paterson, its suburban area, and New York City.

Then came the trusteeship and without any aid from the Erie Railroad, which at that time enjoyed a practical monopoly on the commuter transportation to New York City, the Susquehanna was revamped and new life was breathed into it. The high-speed streamliners were introduced and put into operation, bringing Paterson to within 45 minutes of Times Square and this service has been continually improved and extended until today its continuance and maintenance is of prime importance to Paterson merchants, businessmen, and to thousands of people who find it necessary to travel back and forth to New York.

The financial condition of the Susquehanna Railroad has been greatly improved and the bondholders can now see an opportunity at long last to realize something on their heretofore dormant investments.

Paterson stands to suffer great loss and thousands of commuters and businessmen untold inconvenience if this bill in Congress passes and the Susquehanna, instead of continuing as a live competitor to the Erie, is handed back to that railroad, lock, stock, and barrel and the commuters from this city and its suburbs again find available to them only noncompetitive service to New York City.

The News urges the Chamber of Commerce and all of Paterson's business and civic organizations to get busy at once. Send protests to Congressman CANFIELD and Senators HAWKES and SMITH against the passage of this bill which would wreak such great damage upon the city.

Time is of the essence and the time to act is now.

Cultural-Relations Program

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 9, 1947

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Arthur Krock, from the New York Times of May 8, 1947:

IN THE NATION—SOURCES OF DISBELIEF IN CULTURAL RELATIONS PROGRAM

(By Arthur Krock)

WASHINGTON, May 7.—Few advocates of the cultural relations program of the State Department, few critics of those Members of Congress who would not appropriate for it at this time or would sharply reduce its proposed budget, have probably taken the trouble to read the hundreds of pages of testimony before the House subcommittee.

On these are based the pending efforts to abandon the program, or economize on it heavily. The volume in which these hearings are published contains 1,068 pages, and they are heavy going.

But those who will read the hearings fairmindedly will discover two neglected facts. One is that the cultural relations program was not examined by a group of hick Congressmen who have no informed views on international policies, only backwoods prejudices.

The other is that the sources of congressional disbelief in the need and effectiveness of what Mr. Benton, the Assistant Secretary of State in charge, is trying to do arise from opinions which are not without substance.

These opinions, as disclosed in the hearings, are:

1. Official statements of our foreign policy have been vague and conflicting; therefore no Government agency can project it effectively in words.

2. Since the Federal budget for fiscal 1948 is certain to be reduced several billions of dollars by resolution, no responsible committee can increase the fiscal 1947 budgets of Government enterprises whose necessity and value have not been demonstrated, and the necessity and value of this program is wholly a matter of opinion.

3. The OIC (which is the State Department unit concerned) is loosely and extravagantly run, and, instead of getting $11,000,000 more in fiscal 1948 as requested, could do whatever it proposes to do at less than the $20,000,000 appropriated for it in fiscal 1947.

4. This extravagance is proved by earnings allowed to a number of OIC employees which exceed the pay of Cabinet members, and by rapid step-ups in the earnings of these same persons in a few months.

5. While the number of aliens on the OIC pay roll has been greatly reduced, there are still too many, and they are too highly paid in comparison with employees who are citizens.

6. The pay roll includes many whose nonpartisanship in domestic politics was challenged on good evidence when they were on the pay roll of the Office of War Information and the Republicans were the minority in Congress.

From the standpoint of practical legislation decision these are formidable objections. And the manner in which they were brought out and discussed by Representative STEFAN, of Nebraska, and his subcommittee was workmanlike and on a high plane, as the witnesses themselves agreed. When this is true of a congressional inquiry, and the management as well as the value of a Federal program is effectively put in question, the debits should be conceded by advocates of the program, and the sincerity and mental quality of the questioners should not be dismissed with an implication that they are blind to or ignorant of the world realities.

A few extracts from the vast record may illustrate the serious and informed nature of the examination:

[By Mr. STEFAN] "Both the Department and I are fully aware of the existing threat of communism, directed by Moscow, to our Constitution and against the political, economic, and social well-being of the American people.

"At this point, however, the Department and I part company. The Department believes that the encroachments of communism upon unwilling peoples and governments abroad can be brought to a jarring halt by the use of cultural and informational fanfare. I believe that these same encroachments can be only effectively stopped by the judicial use of American food produced on American farms and processed in American factories. * * * Such a campaign will cost money. But to me it is far better to spend a large amount * * * and make sure [of protection] from expanding communism than to spend a smaller amount * * * and stand by to see it wasted. * * *

"All of these requests that are being submitted by the various agencies of the Government are higher than their appropriations were at the peak of the war, in 1944. * * * Here are all these [OIC] salaries over $4,000. Here are salaries of $18,000, $17,000, $16,000, $15,000, $10,000, and so on. We wonder where this is leading. Where is the cost of government to go? * * * This Government, this business, this corporation of which we are all stockholders, is broke. We owe close to $260,000,000,000, and we are paying an interest load of $5,000,000,000 every year."

These are not the observations of bucolic legislators or of isolationists, and they are typical of the utterances of all members of this subcommittee. They do not establish—they only offer the opinions of certain Congressmen—that money to foster our international security can be better spent than through the OIC and that, whatever shall be spent by the OIC, the Government cannot afford to increase it now by 50 percent plus.

The contentions are highly debatable. But they are not irresponsible. And, while they dispute the value of such agencies as the OIC to strike at the roots of the world's perils, they do not minimize those perils at all.

School Safety Patrols

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 9, 1947

Mr. DAVIS of Georgia. Mr. Speaker, today in Washington two groups are gathering whose philosophies and purposes are as different one from the other as day is from night.

One is a group of approximately 500 Communists, made up of ragtag and bobtail elements from different sections of the country, meeting here in a brazen effort to aid and assist the aims of the Communist Party, the principal goal and purpose of which is to overthrow the Government. One of the leaders of this treasonable hodgepodge is the United States Communist Party secretary, Eugene Dennis, just a few weeks ago voted by us to be in contempt of the House of Representatives, and now under indictment and awaiting trial in the District of Columbia. This group of avowed enemies to the American form of government are, through a mistaken sense of liberality, tolerated and endured only because of the liberty and freedom provided by the Constitution of the very Government they are trying to overthrow by force.

The other group I refer to is a gathering of some 12,000 American boys and girls who represent the finest traditions of American liberty, freedom, and progress. These are the boys and girls of the

school safety patrols, who, in this area, make an annual sight-seeing tour in recognition of their work with the police departments of their respective cities. These boys and girls during the war patriotically discontinued these annual tours. They are making the trip for the first time this year since the war.

These are the patriotic boys and girls, who, early in life, are training and preparing for the duties of good citizenship. Already, at their tender ages, they have become a recognized potent force for safety, order, law enforcement, and conservation of life and limb, in their respective communities.

This House today is preparing to vote the enormous sum of $400,000,000 to stop the advance of communism in Greece and Turkey. The motley group of Communists who are meeting here, together with their associates throughout the world, are costing us this huge sum, to say nothing of the enormous sums of money they are costing other people, in addition to their destruction of liberty and freedom throughout the world, and their cruel taking of millions of human lives and destruction and appropriation of billions of dollars' worth of property.

Contrary to this program of cruelty, despotism and destruction, these fine boys and girls who compose the school safety patrol represent everything that is the opposite of communistic doctrines. They are proud of the American form of government and are anxious to preserve it. They are here in Washington today to learn more of the lesson of patriotism at the seat of government, and instead of enduring and tolerating them, we extend to them a glad and hearty welcome. It is a matter of great pride to me, as Representative of the Fifth District of the State of Georgia, that approximately 500 of our fine boys and girls are here in connection with this annual tour. It will be my pleasure this morning to welcome them personally and to extend to them during their stay here, every courtesy and attention within my power. I know that this is the spirit in which every Member of the House of Representatives welcomes these groups of boys and girls who are here today. I know that the patriotism and fine citizenship exemplified in these boys and girls will be an inspiration to us in the House of Representatives to continue in the weeks and months to come the fight to preserve our great institutions and ideals for the benefit of their generation and generations to come.

The United States Mail—Action Needed

EXTENSION OF REMARKS

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, May 9, 1947

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I wish to include a very timely article from the Christian Science Monitor indicative of the wide reaction to the recent curtailment in the public mail delivery service. Let us hope, as the article suggests, that this interference with an essential public service will be cleared up by appropriate action in the Bureau of the Budget without further delay.

MAIL DELAY SPANS NATION PENDING CONGRESS ACTION

(By Josephine Ripley)

WASHINGTON, May 7.—Mail deliveries in cities all over the Nation are being curtailed because the Post Office Department's request for deficiency funds is tied up in the Bureau of the Budget.

Clearance is expected shortly, however, and the request will be referred to Congress for action "any day now," according to word from the Bureau.

Meanwhile local postmasters, lacking necessary funds to keep up their present staff of clerks and deliverymen, have had to lay off men and cut back sharply on postal delivery service.

At the Post Office Department it is hoped that the House Appropriations Committee, when it finally receives the request, may take account of the emergency by flashing the green light for the Department to go ahead on the assumption that the funds will be approved.

FIFTEEN MILLION DOLLARS NEEDED

Thus, the cut-back would be only temporary and regular service possible as soon as there is indication from Congress that favorable action and the necessary funds are forthcoming.

What the Postmaster General has informed the Budget Bureau is needed in the way of deficiency funds for the current fiscal year, to July 1, 1947, is $14,000,000 for the payment of clerks, and $1,750,000 for city delivery service.

Deficiency funds are those which are found to be needed by Government departments over and above what Congress made allowance for in budgets approved during the last Congress for the fiscal year 1946–47.

These are made necessary by unforeseen needs and circumstances. Practically all departments have applied to Congress for deficiency funds this year in order to pay the increased salaries for Federal workers approved by Congress during its previous session.

DELAY UNEXPLAINED

The post-office deficiency was caused by increased volume of work during the past year, according to authorities there.

A request for the needed money was submitted to the Budget Bureau in mid-April. No explanation is forthcoming as to the cause of the delay, but it is indicated that some differences arose between the Post Office Department and Budget Bureau officials over the matter which had to be "ironed out."

It is apparent, however, that the hitch delaying the submission of the request to Congress for action has caused considerable agitation in the Post Office Department, prompting a quick warning to local postmasters to watch their funds and keep within present budgets.

QUICK ACTION FORECAST

As one Post Office Department official explained it, "we cannot grant allowances for the expenditure of money which we haven't got and, therefore, we have had to withhold temporarily these allowances for money that is probably badly needed."

In many cities that has resulted in the dismissal of hundreds of employees and a cutback in the number of mail deliveries in residential areas.

It is believed that the curtailment of service will be of short duration. They are hopeful at the Post Office Department that it may not be necessary to wait for final passage of the deficiency bill by Congress before releasing the needed funds.

"We understand that it may be possible for the Appropriations Committee to tell us it is okay to go ahead as soon as they have the measure in hand," said one Post Office official.

ACTION REQUIRED

Formal passage of the request requires action by the House Appropriations Committee, the House itself, followed by similar action in the Senate. In case of disagreement between the two Houses, the bill would require final agreement by a joint conference committee.

Meanwhile, at the Post Office Department optimism is expressed that the things may be "ironed out within a few days" in the Budget Bureau and the request forwarded to Congress.

At the Budget Bureau it is reported that the matter "is moving along and ought to be up on the Hill any day now."

Analysis of Rent-Control Provisions of H. R. 3203

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 8, 1947

Mrs. DOUGLAS. Mr. Speaker, in H. R. 3203 the House Republicans have passed a miracle; they have repealed rent control and succeeded in passing it off as a renewal of rent control. Men who can do this and get away with it could crate and cart away the Washington Monument.

I do not believe they will get away with it. Should the Senate adopt a similar bill and it be signed by the President in the same squeeze that was put on him in the so-called renewal of OPA last year, as the alternative to no control even in name, 50,000,000 people living in rented housing will be gouged with higher rents. Unable to pay higher rents, on top of higher prices for food and other necessities, many will be evicted. This is a formula for inflation, for legalized robbery of housing renters and buyers on a runaway sellers' market. It is a formula for housing anarchy, for division among our people.

Step for step, the Republicans have repeated the job they did on OPA. They proposed to cut the heart out of the enforcement program. Their bill would take out from even the pretense of control all new housing, all old housing not now rented, all reconstructed housing, and the hotels and motor courts which now supply more than 900,000 to 1,100,000 rooms, 30 to 40 percent of them occupied by old people and veterans who cannot afford either to buy a house or to rent quarters large enough to meet the American standard of living. With graveyard humor, the bill arranges for landlords and tenants to negotiate higher rentals. With utter recklessness, it takes off the last controls over the allocation of scarce materials, releasing

them for race tracks, night clubs, and commercial buildings—wherever the biggest quick profit appears.

I wonder where the Republicans think the American wage and salary earners, returned veterans, and old people are going to get the money to live, to buy food, clothing, and shelter. The authors of the so-called rent-control bill have given one answer: Rents will come down before long because taking off controls will stimulate construction to the point where the supply of housing will exceed the demand. That is the same assurance the American people were given by the NAM and the GOP when they were asking Little Red Riding Hood to abandon price controls a year ago. It is just as false. Of course, in the long run, rents and prices may come down, but that will be after the inflation bubble has burst and millions are unemployed and without the income to pay even lower prices and rentals.

H. R. 3203 is an incredible, cruel, and dangerous hoax upon the American people. It threatens our economic and social stability, our hope of continued full employment and prosperity, and therefore peace itself. It must not be allowed to go unchallenged. At least my voice will be raised to cry "stop, thief!" at the lobby of housing profiteers that are today laughing themselves sick at their success.

Under leave to extend my remarks in the RECORD, I include an analysis of the rent-control provisions of H. R. 3203 by the Office of Price Administration, Office of Temporary Controls, as of May 2, 1947:

ANALYSIS OF RENT CONTROL PROVISIONS OF H. R. 3203 AS PASSED BY THE HOUSE OF REPRESENTATIVES MAY 1, 1947

I. EMERGENCY PRICE CONTROL ACT TERMINATED

The bill terminates all the present provisions of the Emergency Price Control Act, so far as rents are concerned. (Sec. 203.) After its enactment, authority for any action of the rent control administration must be found within its four corners alone.

II. THE PERIOD OF EXTENSION OF RENT CONTROL

The bill extends rent control until December 31, 1947, unless before that time the President, by proclamation, declares that rent control be continued beyond that date, in which event controls are extended until March 31, 1948 (sec. 204 (e)). However, it is expressly provided that the governing body of any county, city, or town may in their discretion terminate rent control earlier by a finding that the necessity for rent control no longer exists in their jurisdiction. (Sec. 204 (e)).

Since the housing shortage continues to be acute, and will continue to be acute for some time, there is little likelihood that rent control will become unnecessary by March 31, 1948. But the bill does not even guarantee that rent control will be continued wherever it is needed until March 31, 1948. It gives the present officials of any county, city, or town the authority to remove controls earlier[1] by making a finding that controls are unnecessary. No standards are laid down to guide the governing body in making its decision. There is no requirement that an adequate local system of rent control be substituted. No opportunity is given to the people in the county, city, or town to express their views. And the finding of the local governing body is not subject to review by any other governmental authority.

This provision will make rent control a political football in every locality in the United States. It will particularly affect, seriously, those localities which have experienced a heavy influx of war workers who have not yet acquired voting rights where they now live.

III. RENT CONTROL ADMINISTRATION

The bill requires the President to designate the head of a department or agency of the Government, other than the Office of Price Administration or any other temporary agency, to administer rent control (Sec. 204 (a)). This provision would require the transfer of the rent control function from the Housing Expediter, to whom that function was transferred on May 4, 1947, by Executive Order 9841.

IV. STANDARDS FOR RENT CONTROL

A. General

The bill establishes as the maximum rents for housing accommodations, the maximum rents in effect under the Emergency Price Control Act on the date the bill becomes effective (sec. 204 (b)). The requirement contained in the Price Control Act that established maximum rents be generally fair and equitable is not contained in the bill. No other standard is substituted for the "generally fair and equitable" standard.

However, the bill requires the administrative agency to make such adjustments in the maximum rents as may be necessary "to correct inequities" (sec. 204 (b)). But the bill does not define "inequities." However, Congressman WOLCOTT, chairman of the House Banking and Currency Committee, stated his view of the meaning of the term as follows:

"My own thought is that if the landlord is not receiving rent which covers the cost of maintenance, plus a reasonable return on his investment, an inequity exists which should be corrected" (CONGRESSIONAL RECORD, May 1, 1947, p. 4403).

This is the only explanation of the term contained in the House debates. In accordance with this explanation, each landlord would be entitled to a reasonable return on the fair value of his investment. This requirement would make effective rent control impossible, because rent control cannot be administered in accordance with the concepts employed in fixing public utility rates. There is no satisfactory standard by which fair value of individual rental units may be measured. Market value, tax valuation, reproduction cost less depreciation, or any other standard, would involve the landlord and the Government in protracted dispute and litigation. Whenever in the past such standards have been introduced into State rent control legislation the whole system of administration has bogged down. The staggering administrative burden involved in any determination of a reasonable return on the fair value of each piece of rental property throughout the United States would reduce the whole rent control system to impotence.

If Chairman WOLCOTT's view as to the meaning of "inequities" is not followed, it is difficult to see what concrete meaning can be given that term. Bereft of meaning, it leaves the bill without any standards for general or individual adjustments of maximum rents and raises serious questions as to the bill's constitutionality.

B. Authorization of 15-percent increases under certain leases

The bill provides that if a tenant and landlord, prior to March 31, 1948, enter into a written lease which is to expire on or after December 31, 1948, the lease may fix a rent up to 15 percent higher than the presently applicable maximum rent. (Sec. 204 (b).)

When this provision is considered in the light of all the other provisions of the bill, it becomes apparent that it will impose 15 percent increases on millions of tenants.

The proponents of this provision argue that it does not come into play unless tenants agree to enter into the lease, and that tenants will benefit by so doing, for they will exchange fear of decontrol after December 31, 1947, or March 31, 1948, or by a locality, and resulting sky-rocketing of rents, for the certainty that they will not have to pay rents more than 15 percent above their present rents until December 31, 1948. But it is precisely this fear imposed upon tenants by the bill which will force them to agree to such leases. Additional pressure upon tenants to sign is exerted by other provisions of the bill as well. Under the bill's eviction provisions, a landlord may evict a tenant if he wishes himself to occupy the housing accommodations, or if he has contracted to sell the housing accommodations to a purchaser who wishes to occupy them, or if the landlord wishes to substantially alter or remodel the housing accommodations, or demolish them in order to replace them with new construction. Any tenant who refuses to sign a lease can thus be threatened with eviction.

Under these circumstances, it is difficult to see how tenants will really have a free choice in deciding whether to enter into these 15 percent increase leases.

There will, of course, be some tenants who will resist pressure and refuse to sign these leases. But even assuming the maximum of tenant resistance, the possibility of widespread 15 percent increases is still great. Even in these days, there is a turn-over of tenancies as people move from one city to another or from one apartment to another. It is obvious that as soon as any house or apartment becomes vacant, the landlord will refuse to rent to any new tenant who will not agree to sign a lease providing for the 15 percent increase. For all practical intents and purposes, therefore, the bill provides for a 15 percent increase in rents for any housing accommodations which, for any reason, become vacant after the date the bill becomes effective.

Furthermore, many tenants who will sign these leases may move before the end of the lease's term. There is some basis for construing the language of the bill as providing that the housing accommodations covered by the lease are, under these circumstances, decontrolled, and that the landlord can charge a new tenant what the traffic will bear. Even if the language is construed as tightly as possible, once the tenant-leasee moves out, the maximum rent for new tenants becomes not the old maximum rent, in existence prior to the 15 percent increase, but the old maximum rent plus 15 percent.

Thus, the bill authorizes widespread 15 percent increases whether or not the particular landlords who will require their tenants to sign these leases, need the increases. It makes the fear of tenants of unlimited increases and evictions the criterion for an upward adjustment in rent.

This provision does a particular injustice to veterans for it also applies to new construction for which veterans obtained priority under law. Rents on this new construction are fixed at very liberal levels by the FHA. There has been no claim, even by real estate interests, that these FHA rentals are not reasonable. Yet, under the bill, landlords may increase these rentals by 15 percent by bringing pressure upon veterans to enter into these leases.

V. THE EVICTION PROVISIONS OF THE BILL

The bill permits tenants to be evicted under the following circumstances:

[1] The bill is ambiguous on whether "earlier" means only earlier than March 31, 1948, but not earlier than December 31, 1947, or whether "earlier" means rent controls may be removed locally even earlier than December 31, 1947. There are other ambiguities in this provision. For example, what happens under the bill if a township votes to lift controls, but the county votes to retain them, or vice versa?

1. If the tenant, under applicable State law, violates the obligation of his tenancy, commits a nuisance, or uses the housing accommodations for immoral or illegal purposes or for other than living or dwelling purposes (sec. 209 (1));

2. If the landlord (a) seeks in good faith to recover possession of the housing accommodations for his own use and occupancy, or (b) has in good faith contracted to sell the housing accommodations to a purchaser for the purchaser's own use and occupancy, or (c) seeks in good faith to recover possession of the housing accommodations in order to substantially alter or remodel them, or to demolish them in order to replace them with new construction (sec. 209 (2) (3) and (4)); or

3. If the housing accommodations are nonhousekeeping, furnished accommodations, located within a single dwelling unit not used as a rooming or boarding house, the remaining portion of which is occupied by the landlord or his family.

The provisions for eviction contained in sections 209 (2), (3) and (4), and set forth in 2 above are subject to very serious criticism. In the first place, and most important of all, they permit the landlord to evict the tenant for the stated reasons within the time allowed by local law. This time, in most States, varies from 3 days to 30 days and was fixed to meet the needs of ordinary time and not an acute housing shortage. They will impose serious hardship upon thousands of families who will find themselves on the street without a place to live. Under present regulations an evicted tenant is given up to 6 months to find shelter.

Secondly, they contain no safeguards against spurious sales to purchasers. Under the present eviction regulations, a purchaser is required to make a 20 percent down-payment in cash as an indication of the fact that he is a purchaser in good faith and not merely a tenant who is willing to pay more than the regular rent for the purpose of obtaining a house. The 20 percent down payment requirement is removed by the bill.

Thirdly, these provisions contain no safeguards against the organization of spurious cooperatives in apartment houses, under which the landlord purports to sell apartments to purchasers who are really tenants forced to pay more than legal rents to obtain an apartment. Under present regulations, the administrative agency is given the responsibility to determine when such a cooperative is bona fide and when it is merely a device used to evade rent ceilings. This lack of safeguards will seriously affect the stability of rents in the large metropolitan areas where controls are most needed.

VI. EXEMPTIONS

A. New constructions and conventions

The bill exempts from rent control (1) new housing accommodations completed after the date the bill becomes effective, the construction of which was unassisted by priorities and allocations, and (2) housing accommodations, the conversion of which from existing residential use into housing use providing additional accommodations was completed after the date the bill becomes effective. (Sec. 202 (c) (3) (A).)

There is no discernible reason why these exemptions should be made. As already indicated, rents on new construction are fixed by the FHA at very liberal levels. No evidence has been introduced that these rents have been discouraging new construction. On the contrary, even industry representatives have testified that these rent levels are adequate. The exemption creates a special class of rental units freed from control. Landlords of old units are discriminated against without reason. In large part, veterans will be forced to pay the resulting high rents because they are the largest group seeking a place to live.

B. Accommodations not rented during the period February 1, 1945, to January 31, 1947

The bill also exempts housing accommodations which were not rented during the period February 1, 1945, to January 31, 1947. (Sec. 202 (c) (3) (B).)

In addition to the inequities mentioned above in connection with the exemption for new construction, this provision rewards those people who withheld housing accommodation from the market, and in so doing, in many cases, deprived returning soldiers of a place to live. It works a manifest injustice against those landlords who cooperated with their Government, obeyed the rent regulations, and made their space available to people who needed it.

C. Hotels

The bill exempts all housing accommodations in hotels and motor courts. (Sec. 202 (c) (1) and (2).) It has been estimated that this provision will exempt between 900,000 and 1,100,000 rooms in which permanent tenants live. Clearly, some protection against exorbitant rentals should be afforded to these tenants, many of whom are elderly, retired people, living on modest fixed incomes, who are unable to maintain their own homes.

Furthermore, the permanent tenants now living in hotels who will not be able to pay the higher rents that will be demanded of them will be thrown into an already tight market for dwellings renting at reasonable levels and will create additional, dangerous pressures upon that market.

VII. ENFORCEMENT

The bill provides only two methods by which rent control may be enforced.

1. Suits by tenants: A tenant who is overcharged may sue his landlord in any State or Federal court for three times the amount of the overcharge or $50, whichever amount is greater. (Sec. 205.) Recovery is limited to $50, however, if the landlord can show that the violation was neither willful nor the result of failure to take practical precautions against the occurrence of the violation. The tenant, in such suit, may also recover reasonable attorney's fees and costs.

2. Injunction suits by Government: The administrative agency is authorized to bring injunction suits against landlords who have violated or are about to violate the rent-control regulations. (Sec. 206.)

Analysis of these provisions, in the context of the entire bill, shows that effective enforcement of rent control has been made impossible. In the first place, the bill deprives the Government of its existing authority to bring criminal actions against landlords who willfully violate the rent regulations or treble-damage actions against landlords whose tenants fail to bring such actions. The bill also eliminates the Emergency Court of Appeals and permits the validity of any rent regulation or order to be challenged in any suit brought by the tenant or in any injunction suit brought by the Government. Not only will this deprive the country of the services of a court which has gained invaluable experience in the task of reviewing rent regulations and orders and proved itself admirably suited to that task, but it will greatly discourage suits by tenants. Under present law, a tenant who sues his landlord need only prove that he was overcharged. The landlord in such a suit may not, as a defense, plead invalidity of the rent regulation or order. Any issue of validity of the rent regulation or order must be taken up by the landlord with the administrative agency in the Emergency Court of Appeals and not with the tenant. Under this bill, when the tenant sues the landlord, the landlord may defend on the grounds that (1) rent control is unconstitutional; (2) that the general level of maximum rents in the area is too low; (3) that the maximum rent does not yield him a reasonable return on his investment; or on any other grounds the landlord may think of. These issues involve complicated legal and economic questions, on which landlords will receive the aid of landlords' associations, but which will be beyond the financial ability of individual tenants to litigate. It is not realistic to expect that under these circumstances the right of a tenant to sue his landlord for an overcharge will be anything more than a theoretical right. It will not be an effective weapon in enforcing rent control.

Nor will the right alone of the Government to bring injunction suits be adequate to enforce rent control. The bill deprives the Government of the rights, which it has under present law, to make investigations, to require landlords to keep records, make reports or furnish any information, to inspect housing accommodations, to administer oaths and to issue subpenas. Thus, although the bill gives the Government the right to bring injunction suits, it deprives the Government of any effective way by which it can learn of violations or even prove them when notified of violations by tenants.

VIII. SUMMARY

Taken as a whole, the bill substitutes for the present, effective system of rent control, a system that is inadequate and ineffective and which will not give the American people the protection against rising rents and evictions which it needs so long as the acute housing shortage continues.

The Proposed St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. GEORGE D. AIKEN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Friday, May 9 (legislative day of Monday, April 21), 1947

Mr. AIKEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two editorials, the first entitled "A Self-Liquidating Seaway," from the Pioneer Press of St. Paul, Minn., of May 5, and the other "A Toll Canal?" from the Vindicator of Youngstown, Ohio, of May 4, both in support of the St. Lawrence Seaway project.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Pioneer Press, St. Paul, Minn., of May 5, 1947]

A SELF-LIQUIDATING SEAWAY

At last, the St. Lawrence Seaway project is being put before Congress in a form that prevents further dodging of the issue. Until now, spokesmen for eastern interests fighting that project have hidden their attacks behind arguments about cost. But now Senators VANDENBERG and AIKEN have maneuvered them out of that position. These Senators have done it by including in the legislation provisions for self-liquidation of the capital costs of the seaway through the collection of toll charges.

The two Republican Senators are to be congratulated on this move. As strategy, it is the best that could be devised. It will throw a light on the true nature of the opposition that will be particularly revealing because the eastern rivers and harbors projects serving the ports that have fought the St. Lawrence waterway never have had to pay their way. They have been a straight charge upon the Government. Thus the Seaway to the Middle West is accepting a test

of Government economy which the eastern elements in Congress have never consented to apply to their regional waterways developments.

But while introduction of the self-liquidating feature does constitute an interesting legislative maneuver, it would be of questionable value if it were only that. Actually, it applies a rule of financing which on its merits deserves increased support from the country, including especially the regions which depend on the Government for development of tremendously valuable projects for power, navigation, irrigation, flood control, and recreation. Just how to apportion such costs and to what degree they should be repaid by amortization charges are complex problems to which no uniform answer is available now. But the benefited regions will gain much strength in an economy-minded Congress if they will support the application of the self-liquidating requirements to the full extent that is clearly in the public interest.

In the long run, the seaway should be worth much more than its costs. It can repay a large part of the Government's expense and in addition create public, private, and taxable values tremendously outweighing those costs.

[From the Vindicator, Youngstown, Ohio, May 4, 1947]

A TOLL CANAL?

The St. Lawrence waterway, often rejected by Congress, comes up again this week in a new form designed to win support. Senator VANDENBERG and others will present it with self-liquidating features—that is, as a toll system. The project itself and its new angle may well affect the Lake Erie-to-Ohio River waterway.

Completion of the St. Lawrence project would strengthen the case for the lake-river canal. Once the Great Lakes cities were, in effect, made ocean ports, it would be more desirable to link them with the eastern end of the Mississippi system.

If the St. Lawrence plan goes through as a toll system, Congress probably would ask that the lake-river waterway be presented on the same basis. Its sponsors would have no objection to this. It might, indeed, make the difference between victory and defeat in the long fight for water transport.

Col. Walter E. Lorence, of the Army engineers' Pittsburgh district, will make the new report on the lake-to-river project in about a month. It is expected to show greater benefits than were found in the 1939 survey. These may well make it possible for canal users to pay tolls on their shipments and still have lower freight costs than by rail.

It is true that such a set-up would be an injustice to this district as compared to the Pittsburgh area, which pays no tolls on the canalized Ohio, Allegheny, and Monongahela Rivers. With tolls on the through canal, the cost of assembling raw materials would still be higher here than in Pittsburgh. But the differential would be less than at present, and certainly the canal would be much more attractive to Congress.

The high Federal debt, the expense of foreign commitments, and the necessity of a strong defense system will keep the Federal budget on a tight basis for an indefinite period. As far as one can foresee there will be need for economy. So Congress will hesitate to spend a large sum, perhaps as much as a half billion dollars, on a waterway across a corner of Ohio.

If the project can be made self-liquidating, with the shippers bearing the cost out of their savings over rail freight, the waterway's chances obviously will be greatly improved. Compared to what we have sought it would be half a loaf, but as Senator VANDENBERG and his associates have decided in respect to the St. Lawrence, that would be better than no bread.

Displaced Persons

EXTENSION OF REMARKS

OF

HON. WILLIAM G. STRATTON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, May 9, 1947

Mr. STRATTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star of May 8:

VOICE OF THE DP'S

It has been 2 years, trying years for all of us, since Hitler's legions laid down their arms. But these years have been harder, incomparably harder, for the 850,000 men, women, and children whom we call the displaced persons.

Most of us do not like to think too much about the DP's. For when we do think about them our consciences are troubled by the realization that these miserable people, 2 years after the end of the war, are still sitting in the detention camps of Germany, Austria, and Italy. Yet if we do not think about them, and if we do not do something for them, the chances are that 2 years hence they will be sitting there—just as miserable and just as hopeless as they are today.

Who are these people? About one-fourth of them are Jews, the first victims of Hitlerism. The story of their persecution has been told time and again. Of the others little is heard. But they are also there—driven from their homes in Estonia, Latvia, Lithuania, Poland, Hungary, Rumania, and other states by the oppression of dictatorship whether of the right or of the left. Children make up about one-third of the whole. More than half of them are skilled artisans and professionals, while about 90,000 are agricultural workers.

What can be done for them? Republican Representative STRATTON, of Illinois, a war veteran, has introduced a bill to admit 400,000 of them to the United States at the rate of 100,000 in each of the next 4 years. This is less than half of the immigrants who would have come to the United States during the past 7 years had it not been for the war. The bill is carefully drawn to keep out undesirables and to see that those admitted would not become public charges after arrival. The hope is that such a worthy example set by the United States would persuade other countries to lower their own barriers so that all might eventually find some place to live.

Of course, if we want to do it, we can keep on trying not to think about the DP's. We can try to forget that they exist, for they cannot reach us directly with appeals for help. But the fact remains that we can do for them the things provided in the Stratton bill. If we do not do this much, if we close our hearts and our minds, their voices nevertheless will continue to reproach our consciences for the rest of our lives.

Swiss Formula

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 9, 1947

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to submit an editorial from the New Orleans Times-Picayune of May 7, 1947, as follows:

SWISS FORMULA

As evidence that the democratic way of life can survive and do well in Europe, we are asked to consider the case of Switzerland. In a recent article Dr. George S. Benson, noted southern publicist and president of Harding College, in Arkansas, calls attention to it.

A tiny country without seacoasts, without natural resources, without enough fields to produce her necessary food, and with a nonhomogeneous population comprising French-speaking, German-speaking, and English-speaking peoples, Switzerland, he tells us, pays the best wages known in Europe, maintains the best living conditions and has the highest per capita wealth of any European country. How has she achieved and maintained that fortunate estate? The Swiss formula, as he presents it, may be summarize thus:

Switzerland is a real republic. * * * Political responsibility is a reality and real freedom of opportunity exists. * * * All industry is privately owned and operated. Individual ownership of property is encouraged and protected. * * * Thrift is encouraged by both the local and national governments. * * * Equal responsibility is placed by law upon both labor and capital. Industrial peace is encouraged by local and national government. Industrial cooperation prevails throughout the nation.

Switzerland, Dr. Benson concludes, "is living proof that these conditions will bring prosperity to any country regardless of the quantity of its natural resources." He might have added that Switzerland for centuries has maintained her independence by a system of military training and constant preparedness for defense such as our own Republic needs but historically and expensively neglects—until the arrival of a war usually invited by that neglect.

Congressional Efficiency

EXTENSION OF REMARKS

OF

HON. CHARLES B. DEANE

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 9, 1947

Mr. DEANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article by Peter Edson, paging Messrs. La Follette and Monroney, which appeared in the Washington Daily News on May 8, 1947.

My question: "Had Enough?"—period.

PAGING MESSRS. LA FOLLETTE AND MONRONEY

(By Peter Edson)

If it's the little things that count, Congress is doing fine and more attention should be paid to some of the minor measures which have been passed this year.

This Eightieth Congress has been on the job for 4 months. It has 3 months to go. Its record at bat is truly wonderful.

FOUR MONTHS—45 LAWS

Up to the 1st of May, 6598 pages of the CONGRESSIONAL RECORD have been filled with fine-type debate and miscellany. Five thousand one hundred and thirty-eight bills and resolutions have been introduced—an average of nearly 100 per Congressman. But in these 4 months only 45 of these measures have been passed into law—an average of 1 bill for every 12 Congressmen. Average time for getting these 45 laws passed, from introduction to signing by the President, has been 50 days apiece.

The cost of operating Congress, by the way, has nearly doubled. It ran about $15,000,000 a year before the war. Next year's budget calls for $29,000,000.

Maybe it is time to page ex-Senator Bob La Follette and Representative MIKE MONRONEY again, and start getting serious about this business of reorganizing Congress for greater efficiency.

DIGIT DIGEST

The important measures which have been passed this year can be counted on the fingers of one hand. They aren't so world-shaking, either. Putting OPA out of business June 30. Continuing wartime excise taxes. Passing a constitutional amendment to limit future United States Presidents to 2 terms or 10 years.

Important measures which the Republican leadership has put on its "must" list for passage before adjournment in July include: The new labor-control bill. Bill to provide foreign relief where UNRRA leaves off. Tax reduction. New rent-control bill. Aid to Turkey and Greece.

Since this leaves you your toes to play with, you might as well count up some of the unimportant things which Congress has had time to take care of, just to give everybody full credit:

SWISS GET $425.88

There was a bill to authorize the War Department to transport the Boy Scouts to their jamboree in Paris this summer, and to provide them with free passports. This takes care of the international situation in fine shape.

In the way of big financial tranactions, there was a law passed to pay Switzerland $425.88 for the loss of food stored aboard the Japanese ship *Awa Maru*, when it was sunk in the Pacific.

Among the important things about which nothing really constructive is apt to be done this year are: Unification of the armed services. Universal military training. A long-range housing bill. Federal aid to education. A national health insurance program. Minimum wage and social security law revision.

Write your Congressman.

The Way Out of Inflation

EXTENSION OF REMARKS
OF

HON. GLEN H. TAYLOR

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Friday, May 9 (legislative day of Monday, April 21), 1947

Mr. TAYLOR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject the Way Out of Inflation, by the Senator from Montana [Mr. MURRAY], broadcast on Sunday, May 4, from Station WPIK, of Alexandria, Va.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. PARMER. Greatest fear for all of us—and our greatest problem at home is inflation. Is it here? Well, you and I can answer that. So—what's the way out? What is the future for all of us? This afternoon, I have the honor of bringing to this microphone a national leader who is thoroughly qualified to answer, United States Senator JAMES E. MURRAY, Democrat of Montana, now serving his third term. Senator MURRAY is a Democratic leader on the Senate Labor and Public Welfare and Public Lands Committees. He is also the Democratic leader on the Senate Special Committee To Study the Problems of American Small Business. The Senator was also delegate to the United Nations Educational, Scientific, and Cultural Organization meetings in London and Paris in 1945 and 1946.

Now, Senator MURRAY, we want you to advise us. We wish to know, Senator MURRAY, what is the way out of inflation?

Senator MURRAY. Well, Mr. Parmer, that is a real $64 question. I could tell you very easily the way into inflation, but the way out is a much more perplexing problem. When inflation once takes hold, it is difficult to restore any semblance of economic balance until the storm runs its course, leaving wrecks and ruins strewn along the highway of business.

Unfortunately, we always find some who are willing to profit by the hardships of the many. In this group, we may include those misguided Members of Congress who last year thought they saw a political advantage in the destruction of price control. The reckless and indecent haste in which they removed all wartime controls which the Democratic administration had set up to protect the American people from inflation is now paying dividends in the demoralization of our economy. Also, we find in the country a small but powerful minority in industry and business wielding concentrated economic power, who appear to look upon a depression as an opportunity to concentrate their power still further through the forced liquidation and pillage of smaller and weaker business competitors—that is to say, the average American businessman. There are also a few who seem to welcome a depression because it creates a surplus labor supply, thus enabling them to reestablish lower standards of wages and enriching themselves at the expense of the whole American economy.

Since the lifting of price controls last fall, we have had a sharp rise in prices and in the cost of living, which has gradually led into inflation. We were told at the time that immediate release from wartime restrictions and controls would cause only a momentary rise in prices; that production would rise rapidly; competition would then take hold and prices would quickly level off. They told us that by their action in destroying price controls they were just restoring free enterprise and we would soon enjoy normal prices and peacetime conditions. These were the claims of that reactionary group in the Congress who last year destroyed all controls and then went before the people in the elections claiming to be great benefactors of the Nation and genuine apostles of free enterprise.

Some of us sought to counsel them otherwise, but they turned a deaf ear to all advice. They refused to heed the warnings of the President and the Council of Economic Advisers to the President which Congress had set up for the very purpose of guiding the Nation through the dangerous postwar period.

Well, the result is that the Congress, led by these false prophets, failed to protect the public interest and the people are now suffering for that deplorable mistake. The question now is, What can we do to combat these high prices and inflation and prevent the country from experiencing a serious collapse and deflation which will mean unemployment, bankruptcy, and ruin for thousands.

Mr. PARMER. Well, Senator MURRAY, that is the question we want you to answer. Can we get out of inflation by acting ourselves—or by legislation which will restore long-needed rights to the people?

Senator MURRAY. Yes; there are several courses we can take: First, we must promptly extend, without crippling qualifications, rent controls for at least another year; rent is the largest single element in the cost of living.

Secondly, we must bring prices down as rapidly as possible. It is true that industry cannot operate without profit but most big corporation are earning huge profits and can easily reduce prices, despite wage increases which have been granted. Many farsighted businessmen are following this course—all must follow suit. It will fail to work unless it becomes a universal program. Third, we must avoid tax reduction programs that provide windfall profits for the wealthy, and insignificant results to the mass of consumers. We need a tax program to give relief to the small-income earners—the farmer and the small businessman. The tax-reduction program proposed by the House of Representatives gives advantage to the high-income earner and would merely fan the flames of the present inflationary boom and make inevitable the final bust. Fourth, we must seek to develop better cooperation between management and labor through wise and well-considered measures which will bring harmony, high production, and prosperity. The ill-conceived labor legislation now before the Congress, designed to weaken labor, restore the use of injunctions, and encourage destructive litigation, if enacted, can only result in fomenting widespread industrial strife and endanger our whole economic system.

These four steps are the immediate steps to be taken. In addition, there are many long-range programs which should be considered if we are to have a balanced economy and full employment. Among these, the most important are the establishment of river-valley authorities, patterned on the TVA, to develop our great water, land, and power resources, providing new opportunities for investments, expanding industrial and business growth, and opening up new homes for our crowded populations. We must also have improvement of our agricultural-support programs, expansion of our social-security system, including a national-health program and rigid control of monopoly and monopolistic practices. These are long-range programs which will contribute greatly to a balanced national economy and general prosperity.

But the first step to be taken is to find a way out of the present dangerous price inflation. If we could bring about a general lowering of prices all along the line in all industries, and especially in the construction industry, as recommended by the President, we would then release a large volume of consumer purchasing power and prevent the further expansion of inflation. Failure to take this course which the President has recommended will surely result in a serious decline in new business, a reduction of incomes and purchasing power, followed by unemployment and finally a serious depression.

We must not fail to recognize the effect of a serious depression in this country such as we had following World War I. Daily, we are hearing ominous warnings of the consequences of another American depression. Our free enterprise system is in a final struggle against the rival systems of totalitarianism and socialism and the stalling tactics of Russia at the Moscow Conference, which ended without results, may be attributed to a Soviet desire to await what happens in the threatened depression here.

As I have already pointed out, many farseeing businessmen are following the course recommended by the President. Montgomery Ward & Co., for example, has been doing a lot of price-cutting, as well as many concerns both large and small which are acting on the assumption that prices are so high they endanger our economy. They are wisely taking steps to prepare for the certain storms ahead instead of seeking cover after the deluge.

These conclusions which I have expressed are not my conclusions alone—they are the conclusions of many farsighted businessmen

who are cooperating with the President, and leading economists of the Nation.

It is now high time for the Republican leaders of the Congress to stop playing politics with the fortunes and livelihood of the American people. They should drop their theory of the desirability of a short recession. They should promptly begin to cooperate with the Democratic administration in working out a practical program for preventing a serious economic collapse and depression.

If the Republican leaders will not cooperate in this manner, there can be no cure for the present inflationary trend except through a serious prolonged depression and unemployment.

If, however, the Republicans in Congress will cooperate with the Democrats on these matters—rent control, price reduction, sound tax measures to stimulate small independent enterprise and purchasing power, fair and sound labor legislation, as well as the long-range programs of reclamation and resource development, social security, and enforcement of antimonopoly laws, then we can cure the economic fever which has developed without killing the patient.

The Democrats have already met the Republicans in an effort to pull them out of the hole in which they have put themselves. It is now up to the people back home to let the reactionary Republican leadership in the Congress know that the overwhelming majority of the American people want an economy of abundance and stability—a strong system of genuine free enterprise and will insist upon the Congress devoting itself honestly to those ends.

Treaty Obligations to China

EXTENSION OF REMARKS
OF
HON. HOMER R. JONES
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Friday, May 9, 1947

Mr. JONES of Washington. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include herewith a copy of a letter to Hon. WALTER JUDD, written by Mr. Fred H. Lysons, a well-known Seattle lawyer, and for many years a close student of the political, economic, and social problems of China. The very timely and cogent suggestions contained in this letter are worthy of careful consideration.

APRIL 6, 1947.

Hon. WALTER H. JUDD,
Representative in Congress.

MY DEAR MR. JUDD: In 1939, you and I were among the many Americans converged in Washington in a movement to halt our shipments to Japan of material in aid of her then war on China—which we foresaw as a prelude to world war.

On August 2, 1939, Senator Schwellenbach, in a Senate address on his bill to end those shipments, made this statement:

"When the Committee on Foreign Relations had heard a number of witnesses it was the unanimous opinion that the testimony of Dr. JUDD had been so outstanding, and had so clearly and exhaustively outlined the situation in the Far East, that there was no need to call any other witnesses upon the Chinese-Japanese problem."

Your testimony emphasized the boycott's crushing effect on Japan, but I am not sure that you, at the time, knew that China's abatement of her boycott was at our request and was in exchange for the nine power treaty, the effect of which treaty, had it been observed by us, would have been a guaranty to China of her sovereignty and national integrity.

The treaty thus became clothed with the element of a bargain for a consideration, in supplement and in addition to its element as an obligation based upon the honor of the United States.

But what happened? All through the 1930's and down to the day of Pearl Harbor, in complete disregard of this obligation of honor, in affirmative repudiation of this bargain of consideration, we supplied Japan with the munitions, the material, and the equipment for her destruction of China, the facts today recognized by us, to our shame, with effect known to the world. While that is past history which cannot be recalled, its lessons are present with us and should be our guide for the future.

Russia is today the threat to us, to China, and to the world—of infinitely greater danger than Japan could ever have become.

With the nine power treaty-bargain obligations still resting upon us, we seem disposed to give succor in every direction except that of China. In a program to stop infiltration of communism, we are giving aid to Europe, where we have no obligation, and are lessening, if not repudiating, our aid to China, with every boo from Russia. Whatever may be the result in Europe, our policy gives Russia assurances of Asia as its vast empire of communism.

The remedy and the preventative are in our hands: A policy of honor and righteousness in fulfillment of our nine power treaty-bargain obligation to China, both in direct affirmative aid to that country and in negatively denying aid to Russia, which directly, indirectly, or remotely may be a hindrance to China and thus in violation of our treaty obligation to her.

From Communists, including Americans, and through avenues of honesty but misinformation, our attention is called to the dissension in China, which we are told makes aid to the central government impractical or ineffective.

Whence came this dissension? There is no better recognized truism than that disaster breeds dissension. The disaster in the central government of China is due directly to our violation of America's obligation (of honor and consideration) to that hapless country, and to its central government; for it was that government to which our obligation ran and which paid us the consideration. This consideration of boycott abatement was based upon the finding of a congressional committee that this boycott had brought distress to America, particularly to our agricultural economy.

Nor may we excuse our past and continuing betrayal of China on the ground that we are but one of several signatories to the nine power treaty. That treaty, drafted by Elihu Root at the Washington Conference, was defined by him as the individual obligation of each signatory. He even went so far in that definition as to say that the treaty obligation "did not import interference by one country with another; that it did import what each one of the countries would do". Truly a document of peace.

Baron Tanaka, Premier of Japan, on a trip to Europe, in the hope of finding some relief from the obligations of the nine power treaty, makes this statement, in his famed "Tanaka Memorial" of 1927: "I was sent to Europe and America to ascertain secretly the attitude of the important statesmen toward it. They were all agreed that the nine power treaty was initiated by the United States. The other powers who signed it were willing to see our influence increase in Manchuria and Mongolia."

America's course is plain and simple, and should be emphatic: The course of righteousness in fulfillment of these treaty obligations.

Let us take unto ourselves the Biblical admonition, "Righteousness exalteth a nation", and avoid the application of the correlative scripture, "but sin is a reproach to any people."

Such course of conduct would bring to America the plaudits of the world and would set an example which no nation would dare disregard for at least a long, long time in the future.

Official record authority is available in support of every feature of such campaign.

Very truly yours,

FRED H. LYSONS.

Elbert S. Brigham, of Vermont, Master Breeder of Jersey Cattle

EXTENSION OF REMARKS
OF
HON. CHARLES A. PLUMLEY
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1947

Mr. PLUMLEY. Mr. Speaker, the American Jersey Cattle Club, recognizing the outstanding and remarkable record made by former Representative Elbert S. Brigham, of Vermont, as a breeder of Jersey cattle, recently accorded him their "Oscar," the master breeder award. He is the fourth person to be so honored.

From the Jersey Bulletin of March 25, 1947, under permission heretofore granted, I quote the following editorial:

MASTER BREEDER—ELBERT S. BRIGHAM, OF VERMONT, BECOMES THE FOURTH TO BE SO HONORED BY DIRECTORS ON THE BASIS OF HIS CONTRIBUTION TO THE BREED

In according the master breeder award to Elbert S. Brigham, owner of Brigham Farm, St. Albans, Vt., the American Jersey Cattle Club directors, in recent session at Columbus, picked a man whose record warrants the choice and will be unanimously approved by Jerseydom.

Mr. Brigham is a real veteran in the industry, and from the first to last he has striven for production, with due attention to type. Time and again his big herd has broken national records, and if you have been watching the Herd Improvement Registry monthly reports in the Bulletin you have seen continuing evidence of his accomplishments. In the January report in this issue his herd of 118 head leads the list of herds of 100 or more with the astonishing average of 41 pounds fat. It take a lot of good cows to do that.

Furthermore, turn to March 10 issue and consider more carefully his page advertisement which lists the Ton of Gold cows in the herd, 63 of them. Not another herd in the world has such a record in this category. And it is well to remember that this herd is handled as a farmer's herd, on two times milking.

In April 10 issue, 1946, we published report of his fifth amazing year's average of over 500 pounds fat, that with 143 cows. His previous four records, starting in 1941, were 124 cows, 512 pounds fat; 112 cows, 517 pounds fat; 127 cows, 529 pounds fat; 141 cows, 520 pounds fat. It is a Gold Star herd, which again means a top producing aggregation. At its present rate of production it will again exceed 500 pounds.

Mr. Brigham, a constructive breeder, has achieved his remarkable record without any fancy stuff. He is a strong advocate of home-grown feeds and treating his cattle as a practical working herd on two times milking.

Because of this, breeders all over America have studied with deep interest his feeding methods. Breeding plans are carefully laid for production capacity, but considered equally important is an abundance of nutritious feeds. The farm produces legumes, grasses, and clover. Corn, oats, clover, and timothy are rotated, and there is always alfalfa pasture and succulent silage.

In 1941 the Bulletin published an article by Mr. Brigham on his pasture, feeding, and breeding methods, showing progressive diminishing costs, which attracted world-wide attention; for what he had done could be done by others with less operational magnitude. The herd is nearly 50 years old, and always the effort has been toward efficient, economical production.

In 1918 the first bull with demonstrated production in upper and lower lines of his pedigree was secured, and from that day to this bulls have been a major project. How well Mr. Brigham has chosen his succession of bulls is amply demonstrated by herd sires for the past 25 years. Starting then and leading up to today, all proven sires, they are:

Lucille's Golden Owl, 251625, tested sire, 47 daughters, 485 pounds fat, 6 Ton of Gold.

Killingly Torono Lass' Lad, 291790, tested sire, 47 daughters, 512 pounds fat, 10 Ton of Gold.

Floss Duke's Model, 369058, tested sire, 39 daughters, 545 pounds fat, 9 Ton of Gold.

Josephine's Royal King, 250214, tested sire, 101 daughters, 573 pounds fat, 30 Ton of Gold.

Lilac Remus Unrivaled, 409293, junior sire, superior sire, 11 daughters, 582 pounds fat, 18 classify 83.61 percent.

Sybil Ashburn Baronet Owl, 396681, senior superior sire, 23 daughters, 604 pounds fat, 23 classify 83.15 percent, 5 Ton of Gold.

This is unquestioned proof that his search for production bulls has succeeded. And this type of bulls coupled with the production ability of his cows has created a Nation-wide demand for his bull calves. From them he selects some for his own use, but he does not hesitate to go far afield to secure young bulls of promise, as when he bought a John Lindow calf out in Oregon and is growing him up.

Mr. Brigham is a great believer in the right kind of a dam of every bull he buys or breeds for his own use, and a study of his herd reveals that this demand has paid him big dividends in building one of the greatest Jersey herds in the world.

While Mr. Brigham won the Master Breeder award strictly on a Jersey basis, he also has achieved notably in other fields, including as Congressman from his district, and president of a life-insurance company, with upward of a billion dollars in policies.

The fact that he has won the Constructive Breeder award is convincing proof that he has made good use of the various breed-improvement programs established by the American Jersey Cattle Club. He, of course, is a long-time member of the club, and is regarded as one of its soundest advisers in breeding and business matters.

This is not the first master award conferred on Mr. Brigham. Late in 1944 the Vermont Dairy Plant Operators and Managers Association named him "A master dairyman," and termed him "honor student, learned scholar, farmer, cattle breeder, organizer, administrator, legislator, and public servant." A large certificate was presented to him, and with pardonable appreciation of the honor, it hangs on his office wall. His whole record as a Jersey breeder and dairyman fully justify this recognition accorded him by the directors of the American Jersey Cattle Club.

Curtailment of Postal Services Is Not the Fault of Congress

REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1947

Mr. REES. Mr. Speaker, I am receiving complaints from all parts of the country relative to an alleged denial by the Congress of funds to maintain essential postal services. This is just another indication of the confusion that has arisen as to where the responsibility lies for the curtailment of postal services throughout the country.

Releases have been made by local postmasters which have implied that Congress has been holding up funds with which to pay personnel of the postal service during the next 2 months of the fiscal year.

During the past number of years the departments have made it a general practice to rely on deficiency appropriations to carry them over the last few months of the fiscal year. The pattern of their strategy has been to accentuate a crisis in essential services, and thus attempt to place Congress in the position of denying these essential services to the people. I would like to emphasize that it is a basic responsibility of the departments to adjust their expenditures during the fiscal year so that the appropriations will last without a complete break-down of functions in the final months.

I have checked the situation as it relates to the Post Office Department's request for a deficiency appropriation. I find the releases made throughout the country by the postmasters were issued before the request for a deficiency appropriation even reached the Congress. Secondly, I have found the request for funds came so late that it was not submitted in time to be included in a deficiency bill that passed the House of Representatives last week. In this connection, it might be pointed out that Postmaster General Hannegan appeared before the House Committee on Appropriations in February, only 2 months before the request for deficiency funds was made and said nothing of this impending crisis.

The Post Office Department originated its request for a deficiency and sent it to the Bureau of the Budget as required by the President. The Bureau of the Budget did not take action until last Thursday, May 8, 1947. This was after the Post Office Department had sent its notice to the postmasters throughout the country that services must be curtailed because they had spent their appropriated funds. It would appear that if the funds are of such an urgent nature, they should have been given a priority by the Bureau of the Budget, Office of the President, and there the responsibilities lie.

This situation points up three serious deficiencies in our present procedures. First, the tactics of the Bureau of the Budget not only delay deficiency appropriations but, as well, hold up departmental reports on legislation pending before the Congress. I emphasize that action on legislation is delayed at this bottleneck and if the Congressional Reorganization Act as it relates to shorter congressional sessions is to work, we must insist on the Executive streamlining administrative procedure as it concerns legislative reports. Second, when departments send out information which will be the subject matter of newspaper releases throughout th ecountry, they should be required to frankly state the circumstances relating to their activities. Third, there must be more responsibility on the part of the departments for living within their established budget and for instituting controls which will keep them informed in advance as to their fiscal situation.

Communism and Publicity

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1947

Mr. BYRNES of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Green Bay (Wis.) Press-Gazette of May 5, 1947:

WE PUBLISH THE COMMUNIST ADVERTISEMENT

Despite the newsprint shortage, we make way in tonight's issue for an advertisement of the Communist Party.

We do this because we insist upon a hearing for all people, however much we may despise their philosophy or their methods.

We hope our subscribers all read this advertisement.

Unless they have been asleep during the last 7 years, they will recognize that the advertisement is studded with untruths.

They will not fail to observe how the Communists seek the shelter of the respectable Progressive name.

They will also see the Communist arm affectionately around the neck of the labor unions. But most union men know that when that arm is unrestrained it strangulates those whom its owner once smiled upon.

In the proposal to outlaw the Communists, America faces a new and unique problem. Never before have we had a political party that was openly operated for the sole benefit of a foreign nation.

In the campaign of 1936, when Mr. Browder was shut off the radio down in Indiana, this newspaper protested. It argued that any person had a right to preach any philosophy of government. It added that if the American people by secret ballot and in conformity to our laws and traditions wanted communism or monarchy or tribal relations or anarchy, they had a right to have it.

But the scenes have altered since that time. The sole reason urged to outlaw the Communist Party relates to their trickery. Once the Nation slips and communism gets its Jack the Ripper fingers upon the national throat, the story of America is told for a long time to come.

The Reds use ruse and blind, decoy, and birdlime. They have everything in the way of deceit from a sliding panel to a false bottom, from a spring gun to a booby trap. In their hearts is nothing but a mockery of government and altogether they constitute a painted sepulchre.

But shall they be outlawed?

Instead of outlawry, we should prefer a preliminary law. It would bar Reds from touching the throttle of power, whether in unions, schools, government, or other spheres of activity, from which vantage point they might spew their poison effectively upon the country. Unremitting exposure of these Reds, who they are and what they do, their aims, methods, and activities, the number of them who have served prison terms, and all other material facts should be kept before the people through a nonpartisan congressional committee that makes its investigation by the aid of the FBI.

We suggest this method instead of outlawry solely to keep the American coat of arms unblemished. In the 6,000 years of known human history nothing has developed more precious to humanity than America. It must be guided by those fundamental principles to which Jefferson adverted as the price of liberty.

The claim that outlawry will drive the Reds underground does not move us. They are already underground and as far down as the deepest caverns of the inferno.

We have an educated people and they are going to become more educated as time passes. They are not the dull clods of clay that grew up under czarism.

In other words, we do not think that outlawry is necessary. But if it eventually is needed, there is no reason why it should not be used. Free speech does not permit slander. A free press does not condone libel. Free religion does not support a sham to cover crime. And the free movement of political parties cannot be used to give us a sloppy Judas kiss made possible through the approach of a stealthy rogue.

We prefer to preserve the right of the American people to elect whom they please but protect them from being slugged in the back of the head with a baseball bat.

Veterans' Program

REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1947

Mrs. ROGERS of Massachusetts. Mr. Speaker, many of the Members have read, I am sure, the editorial in the Washington Post regarding General Bradley's unequivocal promise that he will stay at the helm of the Veterans' Administration. It says, in part:

The general's job is, of course, by no means finished. It will not be finished until the management of veterans' affairs is consolidated along the lines of the efficient regard for the human needs of the veterans.

It goes on to say that the appropriation for veterans should not be cut.

The editorial is as follows:

VETERANS' PROGRAM

Gen. Omar N. Bradley's unequivocal promise that he will stay at the helm of the Veterans' Administration is immensely heartening—not alone to veterans but equally to all Americans desiring fair and generous treatment of the men who wore their country's uniform in war. In a letter to his assistant and deputy administrators, General Bradley declared: "Many of you have probably been reading in the newspapers that I am tired and discouraged and want to quit. I am no more tired than many of you. Certainly I am not discouraged. I mean to do my best, and I shall not quit of my own accord until my job is finished." Here is the language of a soldier. The general's job is, of course, by no means finished. It will not be finished until the management of veterans' affairs is consolidated along the lines of the efficient regard for the human needs of the veteran which he has designated as the keynote of his policy. For this task General Bradley is, in an almost literal sense, the indispensable man.

The letter to his staff, published by the Veterans' Administrator on Tuesday, is an analysis and a defense of the $7,000,000,000 appropriation he will request of Congress next week. It is a huge sum, which, as he observes, "can too easily create false hopes for large-scale savings." About 75 percent of this sum will be expended in the form of direct cash benefits to veterans and their families and cannot be reduced without changes in the law. Six percent of the budget is allotted to administrative expenses, and it may be doubted that this allows much margin for pruning. The temptation to economize in connection with the Veterans' Administration is likely to come in respect of the remaining 19 percent, devoted to indirect benefits, including medical care, hospital construction, and educational assistance.

It is precisely in this field, however, that the Veterans' Administration is doing its most effective work for veterans and has achieved its most distinguished success. General Bradley and his chief medical aide, Dr. Paul R. Hawley, have succeeded in enlisting the cooperation of the medical profession by locating new veterans' hospitals in the vicinity of major medical schools and instituting an extensive teaching and training program. As a result, the Veterans' Administration hospitals, once generally scorned by the medical fraternity, are now universally acknowledged to be in the vanguard of American medicine. Any impairment of the quality of this medical care accorded veterans would be, we think, at once a blunder and a tragedy.

General Bradley is understandably concerned about congressional "economy" in respect of his medical program. "I cannot countenance," his letter declares, "any reduction that might imperil our medical program and endanger the results we have obtained. * * * I shall not be party to any retrenchment that might threaten to drag this agency into the backwaters of American medicine." Congress ought not to make itself party to any such retrenchment, either. Limits should be set, we believe, on new hospital construction and the extension of medical care to non-service-connected cases. This sort of economy would affect the quantity of medical care provided by the Veterans' Administration. But there should be no economy impairing the quality of that care.

I hope, Mr. Speaker, that the Committee on Rules will grant a rule on several bills which have regard to the human needs of the veterans. Some of them are for very small amounts. In fact, they are all for small amounts. One is the Kearney bill, H. R. 246, for on-the-job training, which lifts the ceilings in that program. I hope it will go through immediately because many veterans are obliged to give up on-the-job training because the management will not continue it unless the ceiling is raised and veterans cannot afford to continue with their on-the-job training.

Mr. COX. Mr. Speaker, will the gentlewoman yield?

Mrs. ROGERS of Massachusetts. I am very glad to yield.

Mr. COX. While I am not authorized to speak for the Committee on Rules, I think I am safe in saying that the committee wishes to cooperate with the gentlewoman and her committee as far as possible.

Letter From James L. Smith Relative to His Dismissal From TVA

EXTENSION OF REMARKS
OF
HON. KENNETH McKELLAR
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Tuesday, May 6 (legislative day of Monday, April 21), 1947

Mr. McKELLAR. Mr. President, a few days ago I received a letter from Mr. James L. Smith, of Knoxville, Tenn., one of the witnesses in the Lilienthal hearing and one of those who were tried and dismissed by the TVA. His dismissal and trial were by Communists in the TVA, and was one of the most outrageous miscarriages of justice that ever took place in any Government organization. The testimony of the various witnesses in the Smith case alone, in my judgment, made it a blot upon the good name of the Senate to have confirmed to other offices Lilienthal and Clapp.

I hope that Senators will read this letter, and I ask unanimous consent to have it published in the RECORD.

An estimate from the Government Printing Office advises me that the manuscript in this instance will exceed the two pages of the RECORD allowed under the rule to be printed without an estimate, and that the cost will be $284.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

KNOXVILLE, TENN., *April 22, 1947.*

DEAR SENATOR: When I left Washington I was aware that you were studying the transcript as recorded by TVA of the circumstances and testimony given at the trial and dismissal of James L. Smith. I believe that with your familiarity with the official record, coupled with the fact that you heard not only my testimony, but the rebuttal by Gordon R. Clapp as well, that you are the person to whom this letter ought to be addressed.

Gordon R. Clapp, in all, gave about 30 minutes testimony before the Public Works Committee regarding my case. Never were 30 minutes spent packed with so much deception. Mr. Clapp took full advantage of the fact that I would not be back to answer him and has literally filled the RECORD with the grossest misrepresentation. His testimony is an insult to the dignity of the Senate and, if you will bear with me and read the remainder of this letter, I will prove it beyond the shadow of doubt by written records. Any man who would deliberately falsify the facts must not be confirmed for a position of high trust in these United States.

First, let me review briefly the salient facts of my testimony: (1) I was not represented by counsel when placed on trial before the TVA personnel department at the request of certain radical employees under my supervision. (2) The case was tried before the personnel department rather than before my supervisor as the TVA employee relationship policy requires. (3) I was denied the right to cross-examine my accusers. The record of the case before the Public Works Committee will reveal that over two-thirds of the employees who purportedly testified against me did not appear in person, instead typewritten copies of what, it is alleged, they would have said was introduced by their counsel. (4) Mr. Clapp had one man hear the case, Mr. Arthur Jandrey. Mr. Jandrey was named in the Dies committee hearings of 1940 as the TVA official who said that none would lose his job in the Authority simply because he was a Communist. Assisting Mr. Jandrey in an advisory capacity was E. B. Schultz, Gordon Clapp's director of personnel relations, who is named in the Dies committee hearings of 1940 as the TVA official who said that the Communist Party could meet in his office if they experienced difficulty in finding another meeting place.

I testified that my dismissal was communistically inspired and the Public Works Committee sought to ascertain from Mr. Clapp his version of my termination. Mr. Clapp was uneasy and uncertain as the committee continued to probe for the real reason. Remember, it was Mr. Clapp, and Mr. Clapp alone, who wrote the decision to dismiss me from TVA, not some underling or another department head. His knowledge of the circumstances is complete. His answer ought to have been complete and specific.

In the original effort to explain, Mr. Clapp got off to a bad start:

"Mr. CLAPP. It was not until he became supervisor of those files and the employees under him that he began to get into difficulty" (R. 446).

This was a remarkable allegation in view of the fact that in length of service I was one of the oldest supervisors in the Authority, having been made assistant in 1933 and supervisor in 1934. I was, therefore, unsatisfactory for some 5 years, or for almost the entire length of service in TVA.

Yet, under examination the incredible Mr. Clapp testified:

"Senator OVERTON. Was Smith as a supervisor rated periodically?

"Mr. CLAPP. Yes.

"Senator OVERTON. What were his ratings?

"Mr. CLAPP. His ratings were satisfactory or better up until the time this situation began to develop" (R. 447).

Please recall that Mr. Clapp had just testified that my difficulties began in 1934. Here he fixes the date of the difficulties late in 1938, or when the union situation developed. Then he goes on:

"Senator OVERTON. Up to the time of the complaint (late in 1938) of these employees Smith had a good rating as a supervisor?

"Mr. CLAPP. That is right" (R. 447).

And later:

"Senator MCKELLAR. You said that Smith was discharged because he was not fit to be a supervisor. Did you ever promote him while he was a supervisor?

"Mr. CLAPP. He had promotions while he was supervisor" (R. 449).

And I add, not one but many promotions, each acccompanied by glowing praise in writing.

Failing in the above, Mr. Clapp tried another approach:

"Mr. CLAPP. It was perfectly clear, and no contention was made to the contrary, that he [Smith] had a knowledge of office procedure and of filing procedures, but that is quite different from an ability to supervise the work of other workers and to keep the work of others in good order" (R. 446).

The work of everyone in my section was in such good order that TVA felt impelled to record, at considerable expense, the procedures of my section on sound films. Those films were sent out over the country so that others might know how orderly and efficient the TVA really was. A sample of TVA's printed publicity is attached. Excerpts read:

"Another new short film * * * lacks * * * popular appeal, but big business men and State and Federal agencies probably will clamor for bookings. It shows what the scientific approach has done in the filing room, the before and after procedure of filing the 100,000 pieces of mail a month in the TVA central files * * *. The new scientific method eliminates 35,000 motions per typist, per day and gives a net production increase of 803 percent per typist. If the old system were still in use 35 instead of 4 typists would be needed."

This is the record from which Gordon Clapp testified that "the efficiency in that unit was going down" (R. 39).

In addition, Allen H. Mogensen, best known office procedure and motion study man in the United States, was so impressed by the order of work in that unit as reflected by the film he wrote and TVA printed the following:

"I believe the film did more to sell these men on the possibilities of the application of motion study to banking work than anything I have said myself as yet * * *. Also, do you object to my telling others about the film and have them write to you for it?"

Again the record stands clearly in opposition to Mr. Clapp's testimony.

Still undaunted, Mr. Clapp tried again:

"Mr. CLAPP. Mr. Smith simply could not handle the employees working with him" (R. 446).

I quote from TVA records:

"He has a pleasing personality and is very successful in his contact work with the various division and section heads. He handles the personnel of the files exceptionally well and they are very loyal to him and consequently work diligently and faithfully." (Exhibit B–1 Smith trial. Official job description of James L. Smith.)

And—

"One of his outstanding qualities is his practical ability in handling the personnel problems of a unit employing 60–70 people." (TVA Form 78, Employee status, signed by six officials, three in Mr. Clapp's department. Photostat attached.)

Subsequently, in what appears to be desperation, this unusual man relates:

"Mr. CLAPP. This committee has heard from his own testimony about the laxity, the break-down of discipline under his own supervision.

"They have heard him complain of two or three instances where employees were irregular in their office hours and that he could not control them. It was his responsibility, not mine, to see to it that those employees did their work."

Indeed, the committee did hear me complain that employees left their work to solicit funds to aid the Spanish Loyalists, North American League, and other Red-front organizations, or to promote strikes in private industry in Knoxville, and so did Mr. Clapp. Now, let the official TVA record of my dismissal tell what Gordon R. Clapp thought of my activity in bringing such business to sudden halt, particularly after a Knoxville businessman wrote in that one of my employees and a TVA lawyer had interfered with the normal conduct of his business by coming to him during office hours to argue against his method of handling his employees. (Exhibit A–1, Smith trial.)

"Considerable evidence was introduced (against Smith) under the designation of 'factory methods' tending to show unduly harsh regulations, including fines imposed for tardiness, posting of names for latecomers, use of buzzer system to maintain promptness, etc.

"The shop committee in 1938, at which time the employees' approach to the problem made clear a desire for responsible freedom.

"The evidence here suggests that Mr. Smith's failure to respond to these proposals and his expression of lack of confidence represented the continuation of long-standing conceptions of necessary employee discipline, quite consistent with the evidence supporting the view that he has denied employees the opportunity to participate in a responsible way in the determination of the matters affecting them." (Dismissal of James L. Smith, pp. 27–28.)

And again:

"Morale was further affected by certain strict regulations." (Dismissal of James L. Smith, p. 4.)

I was dismissed for doing exactly what Mr. Clapp ought to have done with all employees and now testifies that I failed to do.

Mr. Clapp must have sensed he was fighting a losing battle against his own records, so, finally, he introduced what seemed an airtight reason for my dismissal. Yes; here was the reaon—the only reason. Mr. Clapp says so himself. It was "the specific point on which the whole case hung" (R. 447).

All the other flights of fancy are to be disregarded.

"It was a charge of bad faith, or violating an agreement entered into by the department head, not the personnel department, but an agreement between the department in which Mr. Smith was a supervisor and the employees who, through that union, had made the agreement with Mr. Pierce, head of the department" (R. 448).

The agreement is vague in Mr. Clapp's mind. Twice he testified that I made the agreement (pp. 38–39) and twice that Mr. John F. Pierce, head of the office-service department, made the agreement (pp. 447–448). The hearing officer at my trial decided, "On the matter of discontinuing transcripts, the understanding which he (Smith) had with his supervisor was vague * * *" (p. 13) and calls it a "mitigating circumstance" deserving of consideration.

The understanding, however, was this: I was to furnish typewritten copies of shop-committee discussions to the union, provided there was stenographic assistance available. The time came when no such assistance was available, and on August 25, 1938, I explained in detail to the union three points. (See transcript August 25, 1938, shop committee.)

1. That no stenographer was available to me;

2. That my supervisor, with whom the agreement had been made, ordered the discontinuance of free stenographic service to the union, and for the reason stated; and

3. That a transcript of the current August 25 meeting would be furnished so that no element of surprise could be claimed, and that there was ample time to arrive at some other solution.

A day or so later I offered voluntarily to pay half the stenographic cost of future meetings if the union would bear the additional expense. I wanted no transcripts for myself and frankly, I cannot justify in my own mind why Mr. Clapp thought and still thinks that the Federal Government ought to be called upon to bear such an expense solely on demand of a group of employees not recognized by Mr. Clapp or TVA, as he specifically testified, as a legitimate bargaining agent (R. 447). The Comptroller General would never recognize such an expense. However, I did not air my views, but, instead, explained fully that my supervisor would no longer permit such a procedure due to the shortage of stenographic help. That is in the record of the meetings, which were submitted by Mr. Clapp at the trial.

It was not John F. Pierce, my supervisor, whose agreement I am charged with having

broken, who was selected to bring charges against me—it was a then obscure clerk of mine named John F. Frantz.

Frantz is identified as follows in the record:

1. A former TVA attorney appearing in behalf of Mr. Lilienthal describes Frantz's Communistic "mouthings" while the witness was employed by TVA (p. 320–321 A. E. C.).

2. Another TVA attorney had this to say: "John Frantz was an avowed Communist. I knew John personally and I can say that he was the fanatical type. In fact, one day I asked him if he believed in it seriously enough to give his life, and he said he could not think of a finer death than to lead a revolution" (R. 323).

3. An admitted and proved Communist testified that John Frantz was a member of the Communist Party while employed by TVA, and that he attended meetings with her (R. 613).

Certainly no normal person will comprehend that this Communist clerk was allowed to prosecute his employer while both were in the service of the United States Government, but look at the record:

"Senator McKellar. You assisted in the prosecution of the case against Mr. Smith, did you not?

"Mr. Frantz. I assisted, sir, in both the preparation of the petition and in the presentation of the evidence in connection with it at the hearing" (R. 678 A. E. C.).

Again from Kenneth Cameron, a voluntary witness in behalf of Messrs. Clapp and Lilienthal:

"The statement that Frantz was selected to bring the charges is correct, in that Frantz was present at the hearing, and the statement that I and Urban aided Frantz could be considered correct, depending upon who did the major work" (R. 728 A. E. C.).

Compare Cameron's testimony with the Hart report to the Secretary of the Communist Party at Birmingham, Ala., on January 31, 1939, which includes the statement:

"Comrade John Frantz, who was selected to bring the charges, and was aided magnificently by Comrades Cameron, Miller, Urban, and another comrade whose name will not be mentioned here because of the high position he occupies" (R. 71).

Remember that it was not John F. Pierce, the supervisor and the drawer of an agreement, which Mr. Clapp now believes to have been violated, who brought the charges, but the gentleman just described. Every word uttered in every shop committee meeting was transcribed and sent to Mr. Pierce and to the personnel department. Neither of them ever found a single discrepancy or offered a criticism. In fact, the personnel department said nothing, while Mr. Pierce was voluble in his praise of the manner in which I conducted the meetings. So much so, in fact, that the petitioners realized that Mr. Pierce would scoff at the charge that his own agreement had been violated by me, therefore it was imperative that Mr. Pierce not sit in judgment even though the TVA Personnel Policy handbook instructs that grievances must be heard by the official in charge of the Department involved. That would have been John F. Pierce, and he did, in fact, prepare to hear the case. Who would be in better position to judge?

Since this was the sole basis for complaint, as Mr. Clapp testified, I wanted Mr. Pierce to judge the case, but the petitioners would not permit it.

The union introduced subtle controversies over procedure. Mr. Pierce thought I should have counsel, the union did not think so. Mr. Pierce thought I should have the right to face my accusers, the union did not agree. And so on, until the union accomplished its original purpose—to have the trial before their friends in Mr. Clapp's department.

How does Mr. Clapp explain this departure from established TVA law? By the simple innuendo that I had allowed the morale in the files to become so low that Mr. Pierce washed his hands and turned me over to Clapp for crucifixion.

This is sheer fantasy, conjured up by Mr. Clapp to dazzle the Senators, who, he fondly believes, like to deal in folklore and old-wives' tales.

Here is the record—Mr. Clapp's own permanent TVA record of the trial. Since the committee had it in hand at the time, Mr. Clapp's audacity seems all the more incredible:

"I. Review of procedure followed * * *. A number of such conferences were held between management of the Office Service Department and representatives of the petitioners in preparation for the holding of a hearing in that Department in accordance to the regular procedure. In view of procedural disagreements or misunderstandings, the intervention of the personnel department was requested by letter of November 5, 1938, from Mr. Hugh Urban, president of the petitioner's local." (Dismissal of James L. Smith, p. 1.)

Now study Mr. Clapp's interpretation of the above facts:

"Mr. Clapp. I should add that the petition which was brought by the employees in this organization against Mr. Smith was referred to Mr. Smith's supervisor, the head of that department, and he ordinarily would have heard this case and would have decided it, that being his primary responsibility.

"The circumstances were such and the morale in the files was so upset that he (John F. Pierce) asked the personnel department, which ordinarily would take it only on appeal from the department head, to take the case and hold the hearing in the first instance. That is how it came to the personnel department" (R. 447).

The Senate is entitled to believe either Mr. Clapp's convenient explanation or the record.

Mr. Clapp, in an effort to make the charge of agreement violation stick, testified as follows:

"Mr. Clapp. Mr. Smith then began to hold those meetings and they were held from time to time over a period of several months from March until along about September, when the union filed this petition.

"The point the union and the employees were making was that Mr. Smith, not only by his actions and his attitude and the position he took on every question they raised, was uncooperative with the employees throughout the discussion" (R. 448).

The first official shop-committee meeting was held April 13, the last one in August. There were only a half dozen or more meetings all told.

At the risk of becoming tedious I refer you again to the unfriendly TVA record of the findings of Gordon Clapp's assistant, Arthur Jandrey, judge at my trial (pp. 9, 10, and 11).

"In the meetings of April 13 and April 29 there was a creditable discussion and explanation of the industrial-hygiene plans for the files. A request for the showing of a technical-files picture during working hours because it would develop interest and responsibility in the work was granted by Mr. Smith * * *."

"In the meeting of June 15 the committee presented employee suggestions relating to the Files classification system, which were subsequently analyzed in a comprehensive memorandum written by one of Mr. Smith's subordinate supervisors.

"The meetings of June 28 and July 20 proceeded satisfactorily; the latter including a satisfactory discussion of personnel policies by Mr. Smith.

"The final meeting of August 25 was critical for the constructive continuation of the committee. Mr. Smith decided without agreement of the committee that no further meetings would be held on working time though he was agreeable to meeting after hours. There was arbitrary decision to discontinue supplying transcripts although this was expressly part of the original agreement with the Director of the Department. (This stands in contrast to the subsequent reasonable proposal to reconsider the matter in a meeting with the Director of the Department on August 30.)"

Remember Gordon Clapp testified "on every question they raised, (Smith) was uncooperative with the employees throughout the discussion." Again either Mr. Clapp or his own TVA records are proved false.

I do not consider it important that the decision to discontinue furnishing union transcripts on TVA time and TVA money was ordered by this same John F. Pierce who made the agreement. I explained it to the union in the transcript, which is a part of the committee's record, that I was so ordered because there was simply no stenographer at my disposal to do this work. I acted on every major point on strictest orders from Mr. Pierce, a fact which Mr. Jandrey recognized:

"A number of mitigating circumstances appear in the shop-committee transcripts and in the record of testimony which deserve consideration. On a number of points arbitrarily handled, Mr. Smith referred to discussions with his own superiors" (p. 13, Smith dismissal).

Mr. John F. Pierce was loud in his denial that I had broken any agreement except on his specific orders, and, in his absence, sent his assistant, now Commander J. Gordon Reid, to testify in my behalf at the subsequent trial. It is a matter of written record that Commander Reid's testimony so completely broke the back of Union's case that Mr. Jandrey was forced to all but ignore it in his findings.

Neither do I consider it all-important that my dismissal was communistically inspired, but I do deem it of the greatest importance that the Senate is now forced to resolve whether any man who would discharge an admittedly able employee on such flimsy pretense and without warning or without giving that employee an opportunity to correct the error, if indeed, there was an error, is capable enough an administrator to govern one of the greatest Federal projects of all time.

The record is eloquent on this point:

"Senator McKellar (reading from my statement): 'At the trial, TVA could not produce one iota of evidence that I had received any warning, any criticism or suggestion of unsatisfactory service. On the other hand my TVA file contains no less than nine promotion forms, many of which contain most laudatory remarks as to my merit and efficiency, loyalty to the Authority, ability to get along with my personnel, etc.'

"Is that true?

"Mr. Clapp. I suspect it is, Senator."

After my trial, Mr. John F. Pierce, whose agreement I am supposed to have broken, sought to take advantage of the skill I had acquired, and which the TVA had advertised on paper and on film, by offering me a technical job requiring no supervision. Gordon R. Clapp refused personally to permit this arrangement and ordered me to resign or be fired. That I was offered another job is substantiated by the record:

"Mr. Clapp. With respect to the second question, no other kind of job was offered him until after the case was decided" (R. 446).

Compare Mr. Clapp's actions to his glib rejoiner to the committee:

"We try to give a man a chance to learn responsibilities and grow into them" (R. 446).

Again the choice lies between Mr. Clapp's word or the written record.

Gordon Clapp testified that he handled both the Smith case and the Henry Hart case personally. Henry Hart and I represented different ideologies. Contrast the decisions. I, an avowed anti-Communist, was terminated on the flimsiest pretext. Henry

Hart, an admitted Communist, was defended, comforted, and kept by TVA on Mr. Clapp's personal instruction. Gordon Clapp believes, up to the present moment, and testified as much, that such actions conform to his philosophy.

The Senate must decide what act of mine surpassed that of Hart, who entered into a plot to destroy our constitutional form of government. Then the Senate must consider the case of Bradford A. Wignot, a 42-year-old important official in Mr. Clapp's department, who, it was proved in chancery court, was a Communist. He wasn't terminated for communism. Nor was Muriel Williams, another employee of Gordon Clapp's. Nor David Stone Martin. Nor Catherine Buckles. None of them were fired by Gordon Clapp. All were admitted or proved Communists. Gordon Clapp never discovered a Communist on the pay roll, and when they were revealed by others, he never fired one. How can he ever terminate another employee for any cause?

With the committee, Gordon Clapp dealt in double-talk and inanities. Pressed for an explanation about Bernard Borah, well-known Communist and then husband of Muriel Williams, who testified before the committee that she was a Communist while employed by TVA, Mr. Clapp bypassed the inquiry by saying that whatever Mr. Borah had been the stigma was removed when that employee died in the service of this country (R. 307). Mr. Levron Howard, a competent supervisor, rated Mr. Borah as unsatisfactory, only to have Gordon Clapp rescue him. Would Mr. Clapp have the Senate believe that in supporting and saving this known Communist he was so doing with the full knowledge that he would, years later, die of an illness in a Government hospital?

The final outcome of my trial was never in doubt. Denial of counsel, saddled by an unfriendly CIO spokesman, CIO prosecutor and judge, denial of opportunity to examine witnesses, the departure from TVA standard hearing procedure, and the emphatic denial of appeal all combined to make the verdict a foregone conclusion.

Perhaps this is the proper place to comment on the denial of appeal. Attached is a photostat of my resignation; which sets forth that my forced resignation is done only on the grounds that I may appeal the case in keeping with TVA policy. Also attached is Gordon Clapp's reply accepting the resignation as made.

I sought the appeal as a medium to express myself on the subject of communism. I had requested my spokesman, Mr. Krainock, to introduce the subject at the trial, but he refused (R. 39).

I had been able to introduce communism in only two ways—both exhibits. One a letter from R. M. Perrin, a private citizen, protesting interference by two TVA employees in the matter of his firing V. V. Pauls, a Communist exposed by the Dies Committee in 1940 (exhibit Y). The second was this introduction of a book of Communist propaganda entitled "From Spanish Trenches." The flyleaf was signed "Comrade Alber." Mr. Alber was an employee of mine.

Next, I contacted Jack Comer, president of A. F. of L., to solicit his help. Mr. Comer testified before the committee that he explained to Mr. Clapp that evidence on communism was in my possession and that I wanted to present it. Gordon Clapp refused (R. 270 A. E. C.).

I employed Judge James Meek, now United States district attorney general, to attempt to gain an appeal. Gordon Clapp refused (R. 270, A. E. C.).

Finally, Lt. Comdr. Walter S. Smith, my brother and an attorney, testified that he sought to reopen the case. The request was brusquely denied (R. 346).

It is almost unbelievable that Gordon Clapp now chides me for not introducing communism at the trial. He knew more about it than I did.

As a matter of fact, Gordon Clapp knew personally the employees of TVA who either admitted or were charged with being Communists. Does it not seem significant that out of 239,000 appointments in TVA (record, p. 123), of whom Mr. Clapp could have known only an infinitesimal number, that this man was friendly with the rank and file of Communists—ranging from division heads to stenographers? On direct examination, Mr. Clapp admitted knowing Hart, Cameron, Siegel, Mandell, Urban, Frantz, Niehoff, Ruth Martin, Schultz, Borah, Abercrombie, and Williams. All were TVA employees.

This, however, is the clincher: Two paid Communist organizers were moving surreptitiously in Knoxville for a brief period of time in 1938. Their names were Ted Wellman, State Communist Party secretary, and an assistant by the name of Kenneth Malcolm. So well did they conceal their identity that Henry C. Hart, admitted Communist ringleader, did not know Wellman (R. p. 532). Certainly, no one would have suspected that Gordon Clapp, who was seen by appointment only during the day, and who retired to his home in Norris, Tenn., at night, would know these gentlemen, but look at the record:

"Senator MCKELLAR. Now, it has this in it: We assume you heard from Comrades Ted Wellman and Kenneth Malcolm. You knew both of them were Communists, did you not?

"Mr. CLAPP. I did not know it at the time" (R. p. 308).

I knew only the unimportant Red party members. One might refer to Mr. Clapp to learn about the big shots.

Later, in an effort to prove himself ignorant of the charges I made, Gordon Clapp testified:

"Mr. CLAPP. He [Smith] now says that they were absent from duty because of activities connected with their interest in communism and he mentions his immediate assistant and former roommate as an outstanding offender" (R. p. 445).

My immediate assistant and roommate was Harry F. Alber.

Mr. Clapp is again impaled by the record of the Smith trial, for it was brought out that Mr. Alber took part in a local taxicab strike and actually advocated the dynamiting of cabs, page 197, Mr. Alber suggested to the picketers that it made no difference if the cabs contained passengers.

In addition, I introduced a letter from R. M. Perrin, Knoxville real estate man, which complained of Mr. Alber's activities during working hours. In part the letter reads:

"About 9 o'clock Monday, June 27, my office was contacted over the telephone by a man who represented himself as being connected with the Tennessee Valley Authority and by the name of Harry F. Alber. Mr. Alber requested an interview in my office within 30 minutes. * * *

"Alber was a member of the grievance committee and was calling on the writer to ascertain and find the true facts as to why one V. V. Paul, a Negro elevator operator in the Union Building, and on a private pay roll and having no connection with the Tennessee Valley Authority, was not working.

"I wish to state that we will continue to operate the buildings under our management as in the past, and under no condition will we allow any member of the Tennessee Valley Authority to interfere with the operations of such properties unless that interference is a legal one." (Exhibit Y, Smith dismissal.)

The V. V. Paul mentioned in Mr. Perrin's letter was exposed as a Communist in the Dies committee hearings of 1940.

And later from the committee's record:

"Mr. CLAPP. He (Smith) says that his subordinates read the Daily Worker in office hours. He did not report it at the time" (R. 444).

I did report it to my supervisor, I did not report it to Mr. Clapp because the Daily Worker was read openly in his department (R. 230). An investigator for a congressional committee saw 25 to 28 copies of the Daily Worker going into the TVA building of only two floors for distribution. This building housed Mr. Clapp's staff (R. 283). Kenneth Cameron, a witness for Mr. Clapp and Mr. Lilienthal, admitted seeing copies of the Daily Worker in my section (R. 730 A. E. C.).

Gordon Clapp's whole approach has been one of evasion and misrepresentation. The case of Lucille Thornburgh, whom he so eloquently defended, is as good an illustration as any other.

I testified that Thornburgh was taken off a picket line at a spinning mill and forced on me as an employee in November 1934. That there was no application nor interview. I was ordered to hire her to the exclusion of other applicants whose qualifications were stronger (R. 232).

Mr. Clapp testified that I was not a supervisor, and could not have been consulted on the matter of employing her since "he (Smith) was only a file clerk himself" (R. 422).

Later to back up this statement, Mr. Clapp agreed to submit for the record the actual date of my becoming supervisor. He consulted the record and actually wrote a misrepresentation into the record (R. 446). He fixed the date as November 1, 1936, to conform to his repeated statements that I had been a supervisor only about 2 years prior to 1938.

TVA record countersigned by six officials reads: "On November 1, 1934, Smith became supervisor over a large central file unit."

Thornburgh testified that I was the supervisor when she was employed (R. 203, Smith trial).

I further testified before the committee that Thornburgh's actions were those of a Communist. I listed certain strikes in which she participated while in TVA, and enumerated Red-front activities. (R. 233.) Further, I stated that she was the star witness for the CIO group which dismissed me (R. 237).

Mr. Clapp answered:

"Mr. CLAPP. No reasonable person could ever have suspected Miss Thornburgh of being a sympathizer with Communists or with the CIO" (R. 442).

As for her sympathy to Communists, I quote a witness, before the committee, who knew her well:

"Lucille Thornburgh was a strong Communist member, and she told me at one time that there was no need to reopen the Jimmy Smith case because Clapp was a strong member, and there was no need to reopen" (R. 364).

And from a member of her own family. I quote from S. J. Thornburgh, Knoxville attorney. Both local papers carried his statements:

"I know that the TVA encouraged and assisted in the organization of communistic groups in Knoxville. They were organizing what they called a cell. My niece, Lucille Thornburgh, who was an employee in the TVA, was one of them. I have been to some of the meetings of the group. I attended a meeting in the TVA-operated Arnstein building. I heard a speaker denounce our flag and I resented it, as they can tell you." (Knoxville Journal, February 11, 1947. Copy attached.)

So much for the Communist sympathy; now for the CIO. Mr. Clapp repeatedly scoffed at the idea that Thornburgh would assist the CIO:

"Mr. CLAPP. I just want to take one glaring example in the way Mr. Smith's recollection failed to check with the facts of record.

"In his testimony here the other day, the committee will remember that he mentioned a Miss Lucille Thornburgh. He identified her as the star witness who appeared against him

in this case involving Mr. Smith's dismissal and in identifying her as the star witness against him, he used the phrase, 'The CIO, or the Communist group, or the radical element, whatever you want to call them,' and he definitely linked Lucille Thornburgh up with that group" (R. 442).

Suddenly Mr. Clapp reversed his field:

"Mr. CLAPP. The star witness in that proceeding was this Miss Lucille Thornburgh.

"The record of the Smith case in the TVA hearing makes it perfectly clear that her testimony (Thornburgh's) and her knowledge of how labor relations of supervisors ought to be handled and were handled in other parts of the TVA was what made the case really stand against Smith" (R. 493-494).

This is the same Gordon Clapp in both instances, difficult as it may be to believe.

I testified that eventually Thornburgh succeeded to my job.

Mr. Clapp denies this by the statement: "Nor did she succeed to his job" (R. 443) [Smith] "added that she succeeded him, hinting that such succession was Miss Thornburgh's share of the fruits of victory when the so-called plot to oust him was successful" (R. 442).

TVA records reveal that Miss Thornburgh did become Chief of Files in May 1942, following G. A. Hall, who entered into service.

Again the truth stands against the testimony of Gordon Clapp.

This is Gordon Clapp's record. It is more than a record; it is the real Gordon Clapp. It demonstrates the man as we know him, better than argument or words.

All this testimony pushed together consumed approximately one-half hour of Gordon Clapp's time. All this miserable failure to face the issues, the malicious innuendoes and bald misrepresentations are the product of so small a period of time. I am convinced if the Senate approves Gordon Clapp it will be only to gratify an overwhelming curiosity to see what the same man, unrestrained by the cautions imposed by Senate scrutiny as was his testimony, could do to a valley and a people in 9 long years.

JAMES L. SMITH.

Advertisement of American Federation of Labor

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, May 12 (legislative day of Monday, April 21), 1947

Mr. MARTIN. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD an editorial entitled "Hit Dogs Always Howl," published in the Pittsburgh Press of April 29, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HIT DOGS ALWAYS HOWL

Once again "the hour of decision is here."

"The next few days will decide the destiny of America."

"Your future and that of your children is at stake."

We face "an open invitation to national disaster."

"The first step toward totalitarianism" confronts us.

"The enslavement of the working man" is about to "bring chaos, disorder and oppression to America."

"Powerful reactionary interests" are attempting "to destroy free enterprise by destroying labor."

"Dangerous experiments with totalitarian controls" threaten us. They would "turn back the clock of social progress."

"Reactionary Fascists" are trying to "wreck our Nation's position as the defender of democracy."

"Will labor's reward be the shackles of slavery?"

If you are not too greatly shaken by these quotations, and have an assuredly strong heart, then you might want to read the rest of the advertisement of the American Federation of Labor in today's Press.

It is, in its way, a masterpiece. For it gathers together, in brief space, an anthology of the classical cries of alarm and forebodings of disaster which have rung out through history whenever a major reform was attempted.

It is a sort of Bartlett's Familiar Quotations for prophets of doom and Jeremiahs of lamentation.

Never have we seen in so few words such complete employment of the more spectacular and exaggerated warnings with which the beneficiaries of the old order always have greeted any effort to change it.

Of course, if you are interested in some details of the specific legislation that prompts this advertisement, you will read in vain. There isn't a word about what the bills provide.

We haven't been too enthusiastic about some provisions of the drastic Hartley bill to regulate labor unions, or the somewhat milder Taft version.

But if either became law, we doubt that chaos, disorder, and depression, or even slavery, and regimentation, would follow.

This on the basis of past experience. For all this old hokum has been used before. And the things which were about to bring destruction became law and are accepted, while the grim prophecies that greeted them are almost forgotten.

It was so in the case of pure food and drug regulation. Many living Americans recall how it was aimed at destroying our businesses and starving our people.

Free enterprise stood at the crossroads when both the public post office and the parcel post were proposed.

Regulation of railroads and utilities menaced our system of enterprise.

Women's suffrage threatened the degradation of our noble womanhood.

There were plenty of statesmen and even preachers who pictured slavery as an institution ordained by God for the uplifting of inferior races.

Securities and exchange regulation imperiled our economy and the jobs of our workers.

Pasteurized milk was an assault on the freedom and existence of our dairy farmers.

Laws against child labor would deprive parents of the direction of their children and wipe out the income of widowed mothers.

Only recently the National Association of Manufacturers saw in atomic-energy control a dark plot to socialize all our patents and stifle invention.

Hit dogs always howl.

Beneficiaries of special privilege always cry out in the name of the masses against regulation of their own private grafts.

So it is now.

These warnings come not from union memberships, not from the great ranks of working people, but from the labor politicians—the ones who have waxed fat at the expense of both the public and their own memberships.

It's all old. There isn't a single new technique in the tactics of the union bosses in behalf of their personal privileges.

The one bright feature connected with this new America-at-the-crossroads crisis is the splendid job which the American Federation of Labor did in collecting all the best of the old bromides in a single piercing shriek.

Prophecy of Former President Hoover of 28 Years Ago

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1947

Mr. DONDERO. Mr. Speaker, with clear foresight former President Hoover pointed out 28 years ago the very problems now facing Europe and their impact on the economic life of the United States. With demands, ever increasing, for support from the United States by European governments, America is faced with the question whether or not it can continue to nurse the entire world. There is great danger that economic collapse may be the fate of the once rich United States.

[From the Washington Sunday Star of May 11, 1947]

HOOVER'S 1919 REPORT WARNED UNITED STATES COULDN'T AID EUROPE FOREVER

A 28-year-old statement by Herbert Hoover that the Western Hemisphere could not meet Europe's economic needs indefinitely was published last night by the State Department in the latest of a series of historical documents.

Mr. Hoover, then relief director, gave his estimate of the European economic situation in the wake of World War I in a report to the Supreme Economic Council of the Allied and Associated Powers.

"During some short period, it may be possible for the Western Hemisphere, which has retained and even increased its productivity, to supply the deficiencies of Europe," Mr. Hoover advised on July 3, 1919.

"Such deficiencies would have to be supplied in large degree upon credits, but, aside from this the entire surplus productivity of the Western Hemisphere is totally incapable of meeting the present deficiency in European production if it is long continued.

"CREDITS MUST BE TEMPORARY

"Nor, as a practical fact, could credits be mobilized for this purpose for more than a short period, because all credits must necessarily be simply an advance against the return of commodities in exchange, and credits will break down the instant that the return of commodities becomes improbable.

"Further, if such credits be obtained in more than temporary purposes, it would result in economic slavery of Europe to the Western Hemisphere, and the ultimate end would be war again.

"The solution, therefore, of the problem, except in purely temporary aspects, does not lie in a stream of commodities on credit from the Western Hemisphere, but lies in a vigorous realization of the actual situation in each country of Europe and a resolute statesmanship based on such a realization.

"The populations of Europe must be brought to a realization that productivity must be instantly increased."

NO ROOM FOR EXPERIMENTS

Mr. Hoover said further that "whatever the economic theory or political cry, it must embrace the maximum individual effort, for there is no margin of surplus productivity in Europe to risk revolutionary experimentation."

"No economic policy will bring food to those stomachs or fuel to those hearths that does not secure the maximum production," he added.

Mr. Hoover's report was contained in a volume on foreign relations of the United States covering the 1919 peace conference.

Republicans, Beware! Truman Foreign Policy Will Be an Issue in 1948

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, the Republican economy program has gone overboard. It was scuttled by the new Truman foreign policy which was made possible by so-called bipartisan support. It must be perfectly obvious to the Appropriations and Ways and Means Committees that taxes cannot be reduced and appropriations cut and still follow the Truman policy. Nor can the budget be balanced. Within the next year, or before, demands upon the United States Treasury will amaze the American people. When they call a halt to this dizzy program the Republican Party will be charged with sabotaging the Truman program. The American people will wake up soon and their voices will be heard in the Congress.

Mr. Speaker, Joseph Alsop calls the turn. As part of my remarks, I include his article which appeared in the Washington Sunday Post yesterday.

FOREIGN POLICY A LIKELY '48 ISSUE

(By Joseph Alsop)

Making book on politics is a chancy business. Even so, it has now become a good money bet that foreign policy, rather than the labor issue or any other aspect of the domestic situation, will dominate the 1948 campaign.

People in a hurricane rarely pause to argue about what to have for dinner. Their thoughts are concentrated on keeping the storm shutters closed. And by next year the monetary crisis recently described in this space, as well as other obvious factors, will almost inevitably produce a sense of involvement in a hurricane.

The fortunes of every political camp will be thereby affected in a most radical manner. If President Truman continues to lead the country with the same boldness he has shown in the past 6 months, the country's preoccupation with foreign policy will further assist his improving chances. But to the Republicans it will present an acutely uncomfortable choice between openly disavowing the postwar slogans of their more conservative leaders or choosing a standard bearer after the hearts of Colonel McCormick, Mr. Pew, and Senator Wherry.

This is true because the simple magnitude of the problems ahead is their most striking characteristic. They cannot be dealt with on the scale of the Greek-Turkish aid bill. One estimate of the authorization of funds needed, over a 3- to 5-year period, to prevent the world-wide dollar shortage from halting all postwar reconstruction, runs as high as $20,000,000,000. But when it is considered that we are spending half this amount or more in annual defense appropriations, the sum is placed in its correct proportion as a cheap price for a peaceful world.

Furthermore, the monetary crisis is only half the story. The Communist Party line is plainly changing in Europe. At Moscow, the change was first announced by the extraordinary rudeness shown to French Foreign Minister Bidault by Soviet Foreign Minister Molotov. (At one official dinner, Molotov first toasted Secretaries Bevin and Marshall, and then, a few minutes later, offered a toast to Bidault with the remark that he did not want to "leave anyone out.") The rudeness was, of course, merely an outward sign of inner discontent with the system by which Communists all over Europe, and especially in France, have participated in national governments and worked for national reconstruction.

The French Communists have now left the Government. Leaders like Jacques Duclos continue to assert that although no longer taking part in the Government, the Communists will support Government policies. But in Washington, London and, according to report, even in Paris, it is generally expected that this will prove to be nonsense.

If the Republicans are to respond to the emergency abroad by emphasizing national unity, is is essential that the bipartisan foreign policy be measurably strengthened. Prior to Secretary Marshall's return from Moscow, it was repeatedly reported here that bipartisanship was weakening. It must now be added that the situation has lately grown worse.

The Republican symbol of bipartisanship at Moscow was John Foster Dulles, and he came back in a mood to criticize Marshall. Since he has made no secret of his feeling that Marshall, although a very great man, is also a very rigid one, it may be assumed that he has communicated his discontent to the Republican leaders in Congress. And it may be further assumed that his criticisms aroused no great horror, since Secretary Marshall's worst failure—indeed his only failure—has been his neglect to establish relations of genuine confidence with leading congressional Republicans.

Under the circumstances, it is therefore difficult to imagine bipartisan sponsorship of a vast program which would make nonsense of the whole right-wing Republican program of cheese-paring economy, semi-isolationist foreign economic policy and general "back to normalcy."

On the other hand, while Governor Dewey has broken all records for political mumness, he is known to advocate a strong foreign policy. He would certainly not fight a campaign, at this juncture, on the kind of isolationist platform he favored in 1940. And the majority of the most astute political observers in Congress think that Dewey's nomination is a foregone conclusion, as of today.

That's sums up the Republican dilemma. The country had best hope that a wise way out is discovered.

Sugar Plenty

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1947

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Wall Street Journal:

SUGAR PLENTY—SOARING PRODUCTION BRINGS END NEAR FOR 6-YEAR-OLD SHORTAGE—RATIONING, PRICE CEILINGS MAY PASS THIS SUMMER; WAREHOUSES ARE BULGING—CUBAN CROP CHIEF FACTOR

(By William Parker)

WASHINGTON—Put it down as possible you can have an inch-high icing on your Fourth of July cake. Make the odds even greater that you can sweeten your Labor Day lemonade with unrationed, price-freed sugar.

Government sugar experts are about ready to concede that America's 6-year-old sweet-shortage is nearing an end. The next 6 weeks will tell the story. If present crop conditions remain unchanged, housewives and industrial users of sugar seem certain to be released from sugar restrictions sooner than expected.

Warehouses in this country and in other sugar-making areas are already bulging with bags of raw and refined sugar. Cuba, biggest sugar producer in the world, is looking for a bumper 1947 crop. Prospects are at least normal in other cane-growing territories supplying the United States market. Sugar beet farmers in the United States expect a near record harvest.

NOT COUNTING ANY CHICKENS

Department of Agriculture economists, who don't subscribe to the theory of counting chickens before they are hatched, are waiting for another look at all these production estimates. But word has been passed along that Secretary Anderson will sanction a quick end to allocation and price controls if things turn out favorably.

At the same time, the Department is reported favorably disposed toward permitting trading in sugar futures to be resumed on the New York Coffee & Sugar Exchange on July 1 if the present rosy prospects materialize. Such a move would officially herald marked improvement in the supply picture. Sugar trading was suspended early in the war when ration controls were established.

Federal restrictions on sugar are slated to expire anyway on October 31, when the authority Congress granted for such regulation runs out. Meantime, the Government is keeping a weather eye on production prospects all over the world. Assuming sugar-making sections get a meteorological break, here is what the authorities forecast:

HUGE CUBAN CROP

Cuban production will probably range between 5,800,000 and 6,000,000 tons. Official estimates as of May 1 place the production up to that time at slightly over 5,000,000 tons. For an idea as to possible cane grindings for the remainder of the season, agricultural authorities leaf back their records to the bumper year of 1925. In that season some 900,000 tons of sugar was produced after May 1. The situation has changed somewhat in the intervening years; there are fewer mills, but the capacity is greater. Unless the Cuban cane fields are bogged by early rains it should be possible to equal or beat the late 1925 production, say the crop forecasters.

A Cuban crop of 6,000,000 tons would be some 1,500,000 tons greater than that for 1946, and almost a half million tons greater than was counted on when world sugar allocations were made last February by the International Emergency Food Council.

The United States, as purchasing agent for itself and 13 other countries, has contracted to buy all the sugar Cuba makes this year, with the exception of 600,000 tons. Of the latter amount Cuba can keep 300,000 tons for her own use and sell the other 300,000 on the world market.

Other areas important to the United States sugar bowl are Puerto Rico, the Virgin Islands, and Hawaii. Before the war the Philippines, too, used to send up to a million

tons, but the cane fields have not yet recovered from the effects of war and the islands must import sugar this season for their own needs.

BIG TONNAGE FROM PUERTO RICO

Puerto Rico and the Virgin Islands are scheduled to furnish the United States with 894,000 tons of their one-million-ton crop. Last year they sent 750,000 tons here. Hawaii is on the books to supply 800,000 tons, but some experts think this sum can be increased if weather continues favorable. Hawaii's contribution in 1946 was 633,000 tons.

Sugarcane areas in Louisiana and Florida vary little from year to year in the quantity of cane grown. Experts look for some 450,000 to 500,000 tons of sugar from these fields in 1947.

The domestic sugar-beet crop this summer will be one of the largest in history if growers live up to their plans. Beet plantings are expected to total 1,000,000 acres, or some 11 percent greater than last year's large acreage. With normal yields, sugar production from beets should amount to 1,750,000 tons, compared with 1,523,000 tons last year.

Taken all together, the United States may, by the end of the year, find itself in control of as much as 9,300,000 tons of both domestic and imported sugar. (In average prewar years, United States consumption averaged 6,700,000 to 6,800,000 tons annually.)

FOREIGN LANDS GET SOME

However, not all this 9,300,000 tons will go to sweeten American food. Of the 5,400,000 tons which may come from Cuba, 1,600,000 have been promised to 13 other countries. The largest portion—989,000 tons—have been allocated to a pool from which Canada and the United Kingdom draw supplies. France and French possessions are down for 273,000 tons, Switzerland is to get 68,000 tons, and other nations have been promised lesser amounts.

Another possible drain on the United States stock pile may come from a category in the world allocation schedule listed as "undesignated sources." Under this heading, the IEFC allotted 736,000 tons of sugar to 15 nations in the hope that such an amount of sweetening would materialize somewhere in world sugar-growing areas. While it's possible a good part of this "paper sugar" may be grown in the countries to which it has been assigned, some nations may look to the United States to make up the difference.

As things look now, the United States appears to have its finger on almost 7,700,000 tons of beet and cane sugar it can keep primarily for its own use. Some new foreign demands may be made on this stock pile for the paper allocations or for additional foreign allotments. However, these added requests may be offset, partially at least, by the failure of some countries to buy all the sugar actually allocated to them.

HEROIC EFFORTS IN EUROPE

Reports to the Department of Agriculture suggest that European countries are making heroic efforts to boost their own sugar-beet production this summer. The winter has been tough and production may be somewhat smaller than was hoped because of delayed plantings in some areas. Still sugar production in Europe is expected to show a major improvement over last year. Countries with a good beet crop in prospect may decide to save scarce dollars and neglect to take up their share of the Cuban crop for which the United States is acting as broker.

Another uncounted source of supply may be the 300,000 tons of sugar which Cuba is permitted to peddle on the world market. The original idea was that this would be sold to South American countries; but some sugar experts are betting that the bulk of it will wind up in United States sugar bins as soon as controls are lifted. Cuba is reportedly asking about 8.5 cents per pound for these 300,000 tons, but is finding few takers.

Not all this avalanche of sugar is going to descend on the United States at one time. The domestic cane and beet harvest, for instance, won't get started until early fall, and the sugar won't be eaten until next winter. But the mere fact that a definite supply can be counted on, plus the bulging stock pile of Cuban sugar already on hand, could bring an official decision to remove controls earlier than the October 31 legal deadline.

Until such a decision is reached, Agriculture Department officials can be expected publicly to throw cold water on any suggestion of an early end to controls. Should advance word leak out that decontrol is set for a given day, the Department fears that speculators might make a killing.

So expect to be surprised when the papers herald the end of sugar rationing and price controls.

New Government Controls Under Truman Policy

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, during the debate on the Greek-Turkish bill last Friday, I called attention to a speech delivered by Mr. Dean Acheson, Under Secretary of State, the night before, at Cleveland, Miss.

It was a frank and forthright statement by him, in which he clearly pointed out the real and true implications behind the announced Truman foreign policy. When the public in this country realizes what it faces in the next decade or more it will be shocked beyond description.

Mr. Speaker, the President will soon call upon the Congress to implement this new Greek-Turkish policy by asking permission to extend Government controls over our entire economic life. We will be asked to approve another OPA, but this time it will be on a global basis—bigger, better, and more binding. Did the people elect a Republican Congress last November to do this kind of thing? I do not believe so.

Mr. Speaker, as part of my remarks I am including an article that appeared in the Washington Post on May 9:

ACHESON ASSERTS UNITED STATES MUST START REBUILDING GERMANY AND JAPAN—PLAN TO RECONSTRUCT "WORKSHOPS" OF ASIA, EUROPE HELD VITAL TO TRUMAN DOCTRINE

(By Frank L. Dennis)

Reconstruction of Germany and Japan, even without full Four Power Agreement, is an immediate objective of United States foreign policy, Dean Acheson, Under Secretary of State, asserted yesterday.

To carry out an effective policy of relief and reconstruction implementing the Truman doctrine first promulgated in the plan to assist Greece and Turkey, he declared that there must be an extension of Government control over domestic sale, transportation, and export of such commodities as wheat, coal, and steel.

Acheson's disclosures were made in an address before the Delta Council, an economic organization, at Cleveland, Miss.

POINTS IN FOREIGN POLICY

After pointing out in detail the economic exhaustion of the world apart from the United States, including the fact that this country is exporting goods and services in 1947 totaling $16,000,000,000, against $8,000,000,000 of imports, the Under Secretary made these points relating to foreign policy:

1. The United States must take as large a volume of imports as possible from abroad in order that the financial gap between what the world needs and what it can pay for can be narrowed.

2. The United States is going to have to undertake further emergency financing of foreign purchases if foreign countries are to continue to buy in 1948 and 1949 the commodities which they need to sustain life and at the same time rebuild their economies.

3. The United States is going to have to concentrate its emergency assistance in areas where it will be most effective in building world political and economic stability, in promoting human freedom and democratic institutions, in fostering liberal trading policies, and in strengthening the authority of the United Nations.

4. The United States "must push ahead with the reconstruction of those two great workshops of Europe and Asia—Germany and Japan—upon which the ultimate recovery of the two continents so largely depends. This is what Secretary Marshall meant when he reported to the Nation on April 28 that action on behalf of European recovery cannot await compromise through exhaustion, and that we must take whatever action is possible immediately, even without full Four Power agreement, to effect a larger measure of European, including German, recovery."

5. In order to carry out an economical and effective policy of relief and reconstruction, the United States is going to need the extension by Congress of certain executive powers over the domestic sale, transportation, and exportation of certain commodities over which presidential war powers control is due to expire June 30.

"It is wheat and coal and steel that are urgently required to stave off economic collapse, not just dollar credits," Acheson said.

Power to assign priorities on transportation is needed, including legislation to insure "efficient use of shipping," he said.

Pointing up the urgency of the situation, the Under Secretary said, "It is of the greatest importance to the foreign economic policy of this country, and thus to the security and well-being of the Nation, that these powers be granted."

In this connection, and related particularly to Point No. 1, he said "There can never be any stability or security in the world for any of us until foreign countries are able to pay in commodities and services for what they need to import and to finance their equipment needs from more normal sources of investment."

GENEVA PARLEY VITAL

Pointing out that our negotiators are meeting in Geneva now with representatives of 17 other countries with Russia not participating to negotiate reduction in trade barriers and agreement on fair rules to govern international trade, he said the Geneva conference must succeed.

"When the process of reconversion at home is completed, we are going to find ourselves far more dependent upon exports than before the war to maintain levels of business activity to which our economy has become accustomed," he said.

Frankly tying this foreign economic program with the political pictures, Acheson said top priority for American reconstruction aid will go to "free peoples who are seeking to preserve their independence

against totalitarian pressures, either internal or external."

This ties in directly with President Truman's message to Congress March 12 calling for help for Greece and Turkey, a matter still before the legislators.

BACKGROUND OF POLICY

In establishing the background for the five-point policy on aid abroad, Acheson said "the extreme need of foreign countries for American products is likely * * * to continue undiminished in 1948, while the capacity of foreign countries to pay in commodities will probably be only slightly increased."

He said that great as is America's aid in commodities, it is still far short of what the people of the world need if they "are to eat enough to maintain their physical strength and at the same time carry on essential measures of reconstruction and become self-supporting."

He said the commodity exports now being shipped from eastern and Gulf ports are twice the volume of those moved from those ports during the war for our armies and for lend-lease.

Production in this country today is at the annual rate of 210 billions of dollars, he said.

"The war will not be over until the people of the world can again feed and cloth themselves and face the future with some degree of confidence," Acheson asserted.

Postal Service Politics

EXTENSION OF REMARKS

OF

HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1947

Mr. ROBERTSON. Mr. Speaker, as the Appropriations Committee and Congress proceed to reduce expenses and balance the budget, even in accordance with the budget requested by the President, we are discovering the costs of having one administration in power for many consecutive years. The various Government agencies have arrived at the place where they feel themselves almost invincible and when Congress attempts to conform to the demands of the people, and make reductions, these entrenched agencies invoke a program of protest attempting to produce a reaction with the people at large that that action of the Committee on Appropriations and Congress is ill-considered and not for the public welfare.

We had a glaring example of this in the case of the appropriation for the Treasury and Post Office Departments. Particularly was this true of the Bureau of Customs in the Treasury Department. Immediately following the reduction made by the committee and passed by the House, by the way, unanimously, the Customs Bureau sent out dismissal notices to a great number of employees of the border patrol. There was no cut in the budget that necessitated this at all. It was simply a political act on the part of the Bureau and in effect was saying to Congress: "We don't take orders from you. We take them from the people, directly." Before this reached the Senate, it became necessary for the Secretary of the Treasury, Mr. Snyder, to dismiss the gentleman who has been the head of the Bureau of Customs and had engaged in this contemptible practice.

Speaking of the postal services, it is the opinion of the committee that they are rendering a great service to the Nation. They are using equipment that today should be replaced in many instances. My personal observations are that they are doing an excellent job. Their cut, if my memory serves me correctly, was less than 1 percent, and still in the face of this rather decent treatment, we find that even the Postal Department is engaging in some of the same practices.

Chairman BRIDGES, of the Senate Appropriations Committee, said word apparently has gone out from Washington to postmasters all over the country instructing them to cut down mail deliveries because of Congress' failure to appropriate funds. The funds in question are contained in a deficiency item which is still in the hands of the Budget Bureau and has never been submitted to Congress, Senator BRIDGES said.

Under unanimous consent to extend my remarks I include herewith an article from the Long Beach Press-Telegram, dated May 9, 1947, which treats this postal situation under the title "Postal Service Politics":

POSTAL SERVICE POLITICS

Fifty-eight substitute postal clerks and 34 substitute carriers have been dropped from service in Long Beach.

Working hours of 80 clerks have been reduced from 8 to 4 daily.

The post office will be closed Saturday, and there will be no Saturday mail deliveries.

A population of more than a quarter of a million is deprived of adequate postal service. The clerks and carriers laid off were needed to handle efficiently the enormously increased volume of Long Beach mail, up 30 percent above the estimates for this year.

The local curtailment of postal service followed the Post Office Department's reply to the request for an additional $30,000 to maintain full service here that the Long Beach office must operate on funds already allotted. The postmaster here had no alternative. Other cities of the country are similarly affected.

When the public asks why it is deprived of the service to which it is entitled by the failure to retain a sufficient postal force in Long Beach, the answer given is "politics."

It is politics.

But whose politics?

An effort is being made to pin on the Republican Congress the responsibility for cutting down the postal service. The propaganda is that the GOP majority in Congress forced the curtailment by failing to appropriate enough money to run the post office properly.

Congressman BRADLEY, of Long Beach, makes known the facts of the case. The deficiency appropriation needs for postal service had not been submitted to Congress prior to reduction of the postal force here, although the President yesterday did ask for an additional $10,924,000 to operate the Post Office Department until June 30.

Neither Post Office Department nor Budget Bureau, an agency working under the President, had made requests for deficiency post-office appropriations in time to prevent the cutting down of service in Long Beach.

The Post Office Department at Washington is responsible for the partial break-down of local postal service. Apparently it preferred to wait for the exhaustion of the fund, in order to play politics with the situation by charging Congress with false economy, rather than to take whatever action was necessary to carry on efficient service.

It is pertinent to remark that Postmaster General Hannegan also is chairman of the Democratic National Committee.

Immunity Against Unlawful Searches and Seizures

EXTENSION OF REMARKS

OF

HON. CECIL R. KING

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1947

Mr. KING. Mr. Speaker, last week, a majority of five members of the Supreme Court struck a serious blow at the civil rights of the American people, when they rendered their decision in the case of Harris against the United States. Gone with the whip of a pen is the immunity guaranteed the American people under the fourth amendment of the Constitution against unlawful searches and seizures.

The editorial of the Washington Evening Star of May 7, 1947, and the article of Gerard D. Reilly, appearing in the Washington Sunday Star of May 11, 1947, graphically describe the situation brought about by the Supreme Court in this case, which I am setting forth below in full.

I have today introduced a resolution amending the rules of the House which would impose the following additional duty upon the Judiciary Committee, namely:

(A) Examining, from time to time, the decisions of the Supreme Court of the United States to determine whether any of such decisions infringes upon any right guaranteed to the people of the United States by the Constitution or any amendment thereto.

(B) Reporting to the House at least once a year the results of such examinations.

(C) Recommending to the House, from time to time, such proposals for legislation or amendments to the Constitution as it deems necessary to protect such fundamental rights of the people of the United States.

If adopted, it will be incumbent upon the House of Representatives to report from year to year to the people the extent to which their constitutional guaranties have been removed or infringed upon, and take appropriate action in view thereof.

COURT RULING RAISES CIVIL-RIGHTS ISSUE—BLOW AT FOURTH AMENDMENT SEEN IN HARRIS CASE DECISION

(By Gerard D. Reilly)

Probably no decision of the Supreme Court in recent years has caused more concern to defenders of civil rights than the majority opinion rendered this week in *Harris* v. *United States*. One of the most cherished heritages of the common law is the principle that "a man's home is his castle." It is embodied in the Constitution by the immunities guaranteed in the fourth amendment against unlawful searches and seizures. The eloquent dissents of four of the justices indicate that in its latest decision the court has done violence to this historic immunity.

Since the prohibition era, when the lawlessness of law-enforcement officers created many controversies with respect to the viola-

tion of consitutional rights, the number of fourth-amendment cases which have come before our highest court has been relatively small. At that time, with one deviation, the court was fairly steadfast in holding that convictions for violations of the Volstead Act would be set aside where the evidence in support of the conviction had been obtained by ransacking the premises without a search warrant. The language of the argument itself is quite explicit in this respect.

Last June a fourth-amendment case, involving the seizure of some gasoline ration coupons, provoked a bitter controversy within the court. This was the Davis case. It involved the conviction of a filling-station proprietor for the illegal possession of gasoline ration documents. In that case two OPA agents after buying gas above the ceiling price and without coupons arrested the defendant for that specific offense. The agents then accompanied him into his office, where he was told to turn over any coupon books in his possession. Under protest he unlocked his filing cabinet and handed over these documents.

It subsequently appeared that he improperly obtained these documents, and he was tried and convicted of unlawful possession of these coupons. The conviction was sustained by the Supreme Court on the ground that his constitutional rights had not been invaded since the documents in question technically remained the property of OPA and were, therefore, in the view of a majority of the court, public documents which the officers had a right to inspect at any time. Mr. Justice Frankfurter wrote a dissent in which he was joined by Mr. Justice Murphy and Mr. Justice Rutledge, in which the literal language of the fourth amendment was emphasized:

"The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no warrants shall issue, but upon probable cause, supported by oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized."

Despite the vigor of the dissenting opinion, little significance was attached to the case for the grounds on which the arrest was made did not differ substantially from the charge on which the conviction rested. Moreover, the lower court had not believed the defendant's testimony that the documents were taken from him under duress, and Mr. Justice Douglas in the majority opinion has stressed not only the public document point but also the fact that the incriminating papers were kept at the place of business rather than in defendant's private residence.

It is against the background of the Davis case, however, that the full import of the latest decision must be appraised. In the case of Harris two FBI agents had obtained warrants for his arrest charging him with violation of the mail-fraud statute and the National Stolen Property Act. These officers suspected that Harris was involved in a scheme to defraud an oil company by negotiating and cashing a forged check in the sum of $25,000. The defendant was arrested in the living room of his apartment and handcuffed. The agents then conducted a systematic ransacking of all four rooms in the apartment and later stated that they were looking for two canceled checks which it was believed Harris had stolen. Neither these checks nor anything bearing upon the suspected forgery was brought to light and the defendant has never been prosecuted for the crime charged in the warrants for arrest. The agents did find in a bureau drawer 11 draft registration certificates and 8 notices of draft classification. The crime for which he was convicted related solely to the unlawful possession, concealment and alteration of these documents.

When the Davis case had been decided the previous term only seven members of the Court were sitting, as Mr. Justice Jackson was in Nuremberg and Chief Justice Stone's place had not been filled. The appeal from the conviction therefore gave the full Court for the first time an opportunity to pass squarely upon some of the issues which the Frankfurter dissent had raised in the Davis case. Indeed the facts in the two cases were sufficiently different so that even the majority of the Justices in the Davis opinion might have distinguished the Harris case on any of the following grounds: (a) the seizure of the documents was undertaken without the consent of the defendant; (b) the search occurred in a private residence, and (c) was entirely unrelated to the transaction upon which the arrest was made.

It should therefore be noted that the majority, in holding that the absence of a search warrant is immaterial so long as it was made in connection with an arrest, not only approved the Davis case as one controlling precedent but went considerably beyond it. It is true that the majority opinion did not specifically overrule the Volstead Act cases in which it held that evidence obtained at the time of an arrest by general search of a home or office without a search warrant was improperly admitted, but it distinguished those cases on the ground that the draft certificates were not private papers. The Chief Justice said:

"In keeping the draft cards in his custody petitioner was guilty of a serious and continuing offense against the laws of the United States. A crime was thus being committed in the very presence of the agents conducting the search."

In his dissenting opinion Mr. Justice Frankfurter disposed of this attempt at distinction by pointing to history to show that "it was for contraband goods that search warrants, carefully hedged about, were first authorized by Congress." He and the other dissenting Justices, Murphy, Rutledge, and Jackson, also stated that to the extent that the right of search incident to an arrest, which has been regarded as an exception to the requirement for a search warrant, has always been confined either to things found on the arrested person or visible and accessible in his immediate custody.

One unfortunate effect of the latitude which the decision apparently gives to arresting officers is that it may discourage the resort to search warrants. If the FBI agents in the Harris case had obtained a warrant to search for the missing checks and had they discovered the draft certificates in the process, the defendant would have been able to reclaim them since they were outside the scope of the warrant. Reclamation of articles not specified in a warrant is authorized by motion under the new rules of criminal procedure. As the Frankfurter opinion points out, "the Court's decision achieves the novel and startling result of making the scope of search without warrant broader than an authorized search."

[Editorial, Washington Evening Star]

SEARCH AND SEIZURE

The Supreme Court for some years has outlawed the use of evidence obtained by tapping a telephone line leading into a man's home. Yet now the Court says that a police agent lawfully arresting a man in his home may proceed to ransack his house from top to bottom and prosecute him on the basis of evidence that is turned up, even though that evidence is in no way related to the offense for which the arrest was made and the search begun.

To the layman, the distinction is one which tortures reason. For at best, or perhaps one should say at worst, wire tapping is a restricted form of search. But the sort of thing which the Court has sanctioned in this latest decision would seem to raise possibilities of search and seizure which, by comparison, would make of the wire tapper an inoffensive creature intent upon minding his own business.

The case before the Court involved one George Harris, under suspicion in a mail-fraud complaint. Five agents of the Federal Bureau of Investigation, with a warrant for Harris' arrest but without a search warrant, went to the man's apartment and found him in the living room. For 5 hours the agents searched the apartment, seeking some stolen checks and other items which they hoped would have a bearing on the mail-fraud case. They did not find them. But as the search was nearing its end, they did find in a bureau drawer a sealed envelope marked "George Harris—personal papers." When opened it was found to contain certain notice of (selective service) classification cards and registration certificates. Harris, over his protest that the search and seizure were illegal, was indicted and convicted of the unlawful possession, concealment and alteration of the cards and certificates.

There is no doubt that Harris was guilty. The question is whether the FBI agents operating without a search warrant violated the fourth amendment's guarantee of "the right of the people to be secure in their persons, houses, papers, and effects against unreasonable searches and seizures." In other words, at what point does a search and seizure become unreasonable?

The Supreme Court Justices divided five to four on this question. The majority, upholding the conviction, decreed that under all the circumstances there had not been such an unreasonable search and seizure as to violate the Constitution. The minority, while not seeing eye to eye on all points, were in emphatic disagreement with this main contention of the majority.

The four dissenters raise interesting points and possibilities. For example, if the agents had secured a search warrant in the selective service case, they would have had to describe the cards and certificates of which they had never heard. Had Harris been arrested on the street, his place of residence could not have been searched. The majority decision, in Justice Frankfurter's view, "achieves the novel and startling result of making the scope of search without warrant broader than an authorized search." And, according to Justice Murphy, the decision means that "a search warrant is not only unnecessary; it is a hindrance."

The practical effect of all this is to leave the layman trapped between learned lines of fire. He can hardly be expected to know who is right and who is wrong. And it is of small comfort for him to discover that a high court of distinguished judges gives visible evidence of the same uncertainty.

Truman Foreign Policy No Crusade Against Communism

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, the suspicion that many Members had during the debate on the Greece-Turkey aid bill that it was designed for purposes other than a fight to destroy communism is now finding support in the public press.

Mr. R. H. Shackford, UP staff correspondent, writing in the Washington

News, last Saturday, said that Mr. Truman and his administration are now embarked on an attempt to shift the emphasis "from an ideological crusade against communism to an economic program for rebuilding western Europe and the Far East into healthy democratic areas."

Mr. Speaker, our fears are now greatly intensified. Under the pretext of stopping communism we find ample evidence that we are now embarked upon a global policy of rebuilding the world a la New Deal. It is a preposterous business and signs are rapidly appearing that the people are becoming alarmed over the trend of events.

Mr. Speaker, under leave granted, I include as part of my remarks, the article by Mr. Shackford:

(By R. H. Shackford, United Press staff correspondent)

The administration embarked today on an attempt to shift the emphasis in the Truman doctrine from an ideological crusade against communism to an economic program for rebuilding western Europe and the Far East into healthy, democratic areas.

High administration officials are frankly worried about the trend of the last 2 months' debate in and out of Congress. Some privately admit mistakes of handling the program probably have been made. They fear:

That Congress will consider its duty done once it has approved the Greek-Turkish aid bill, whereas it is only a small beginning in the over-all strategy.

That it will be difficult, if not impossible in Congress' present frame of mind, to persuade Congressmen Greece and Turkey are but a relatively small part—even if the most critical—of the battle against Soviet expansion and influence. All of western Europe and a good portion of the Far East, they feel, are crying for the same kind of aid.

That the current public wave of excitement about communism and Russia will be difficult to deflect into support for dull but vital economic steps to be taken if communism is to be halted in western Europe and Asia.

These officials view the Truman doctrine as a global policy—equally applicable to France and western Germany and Britain as to the temporarily strategic eastern Mediterranean. They believe—especially since failure of the Moscow Conference—if western Europe is to be saved from communism a long-range economic program is the weapon for doing the job.

They want to build the program into a truly peacetime lend-lease measure.

The chief administration worry now is how to keep western Europe from economic collapse in the wake of failure at Moscow to get four-power agreement on German problems.

There is no thought of abandoning the policy that military aid, to such nations as Greece and Turkey, may be necessary. But high officials are convinced the surest and most important way of diluting Soviet and Communist influence in western Europe is to get those nations back on their feet economically.

State Undersecretary Dean Acheson started the real campaign for the change in a speech at Cleveland, Miss., Thursday. He called for immediate economic reconstruction of Germany and Japan and a series of economic measures, including extension of wartime controls over exports, to implement the Truman doctrine.

Last night General Marshall, in a letter to the United States associates regretting his absence from a New York dinner earlier this week, plugged the new line. He emphasized the more he dealt with political negotiations, the more convinced he was enduring political harmony rests heavily upon economic stability—and that only through creating healthy economic conditions can we create an economic and social environment free from the unrest in which political instability is bred.

This is the beginning of what may be a high-level administration campaign to sell the country on the need to help economic reconstruction of that part of the world which may still be saved from Soviet influence.

One administration official put it: "Bread and jobs at the right time are the most effective weapons against communism."

The Pulpit—Fares Please

EXTENSION OF REMARKS
OF
HON. DWIGHT L. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1947

Mr. ROGERS of Florida. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include herein the following sermon delivered by Rev. Frederick Brown Harris, who was formerly Chaplain of the United States Senate and now minister at the Foundry Methodist Church, on April 27, 1947:

THE PULPIT—FARES PLEASE

Text: To whom much has been given much shall be required.

That is as sure as death and taxes. As a matter of fact, it has to do with taxes. This is not just a euphonious motto; it is a law with teeth in it. No camouflaged selfishness can escape its judgment. What we have constantly presents its bill to us. Every talent, every ability, every possession calls for payment. There is the responsibility of ability. It is the most solemn fact of life: The more we have the more we owe; to whom much has been given much shall be required.

We are only stewards of property not our own. Really, we do not own anything. There is not a thing that has any value upon it that we do not hold in trust. A heritage, national or individual, is not something to exhibit, something to boast about like a coat of arms; it is like a coin which we are to invest. On all our treasures there is a high income tax which we owe to humanity.

Strength of any kind is not something to be hoarded. It is never to be stored but poured. Strength that does not serve weakness is itself doomed.

No blessing is really owned until it is universally shared. Service to "one of the least of these, my brethren," far from being a superfluous ideal, is an eradicable law of life. Self-preservation in the last analysis depends upon it. This inevitable sharing of the strong in the ills of the weakest and most helpless people with whom they deal has now been stretched to take in all mankind. Every day in this one world the interlocked, intermeshed relationships grow more intimate and unescapable. We either pay the price of making our democracy possible to all who desire it, in every part of the world, or the springs of that democracy will gradually dry up at home. We either export our Christianity—or, rather, take the world's Christ to the uttermost parts of the earth—or make our own Christian profession but sounding brass and tinkling cymbal.

Riding across the isthmus of life from the cradle to the grave, we travel in a comfortable car we did not build, on tracks we did not lay, a car propelled by power that we do not furnish. But always there is a conductor representing our common humanity coming our way. He disturbs our complacency by extending his hand in our direction and shouting "Fares, please." To some people the art of living largely consists in evading the fare.

What an irresistible force the church would be did it not have to carry so many who merely ride and do nothing else. A preacher was speaking of a man he knows well in a Midwestern city. He said of him: "He is a keen businessman, of high probity, one of the largest factors in the commercial life of his town. But he does not realize that the qualities that have won him success, the aggressive will, the alert mind, even his honesty, are the unearned increment and free gift of six generations of God-fearing New England ancestors." This man prattles in a half-witted manner about being a self-made man. For the church and the welfare movements in his city he has no time; he is too busy. In plain language he is stealing a ride without paying his fare.

Here is another man in whose life the Sunday school has played an immeasurable part. It took the clay of his early years and helped to shape it into something fine. That Sunday school made him into a responsible and upright man. But now, in the institution to which he owes infinite things, he takes only a most nominal interest. He cheerfully leaves to others the real work of training the youth of tomorrow. He is trying to ride on a half-fare ticket.

And what shall we say of the multitude who owe the peace and purity of their homes, the whole core of their life's happiness and security, to the gospel and the church, and who think to cancel the obligation by a few patronizing words or, perhaps, by reluctantly subscribing a few dollars to keep the church going. To avoid paying is not as clever as it seems. It is not just cheating; it is suicide. That is what the Master of Life meant when He declared, in words that go to the very heart of life, if you try to save your life you will lose it; if you lose it for My sake—that is, for mankind's sake—you will find it.

Not long before men were saying that he had died, a glorious friend of mine declared, "I want to put the contribution of my dedicated life in some vital institution that would come on down the years and concentrate forever about it the diviner ideals of city and country; an institution that would maintain open doors to an altar where men and women and little children could kneel in holy communion and consecration; an institution that would furnish an ever-available calm and sure retreat for souls pursued by care, sorrow, and sin, that would make permanent a pulpit where the message of God's love could be proclaimed down the years, that would unstop the uplifting melodies of great hymns and sing to drooping souls in discouragement the eternal optimism of Christian hope. Always, when we think of that kind of contribution we think of the church of Jesus Christ and declare, I would rather have my whole life invested in its ever great and increasing service than in any other, or all other investments, this world has to offer.

Jook Joints, But No Churches

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1947

Mr. WILLIAMS. Mr. Speaker, under leave to extend my remarks in the Ap-

pendix of the RECORD, I include herewith an editorial taken from the Jackson (Miss.) Clarion-Ledger under date of April 8, 1947, which registers a complaint that is so typical of the so-called efficiency of the present bureaucratic system that I thought it worthy of publication here:

SUNDAY SCHOOL HOUSE BLOCKED WHILE JOOK JOINTS GO UP

Builders of recreational centers, jook joints, and night spots all over Mississippi do not seem to have any trouble in obtaining construction materials, regardless of Federal Government efforts to channel such materials into construction of homes. But up in Greenville, the Civilian Production Administration reportedly is blocking construction of a badly needed Sunday school building, and the Delta Democrat-Times rightly protests it.

"Anyone driving through Mississippi is amazed at the construction in progress in every town and county," the Delta paper says. "Stores, homes, office buildings, recreational centers. And jook joints.

"Greenville is proud of her more than average contribution to the State's building boom. We are proud of the new store buildings, the recreation center, the little and medium-sized homes that are going up all around us. Despite costs, building has been going ahead.

"The churches at Greenville have a building program too. At least four of them plan new places of worship or of Sunday school or daily instruction. The Episcopalians, the Methodists, the Presbyterians, the Catholics, the Baptists, all have building programs. And the First Baptist Church has progressed so far that it has razed its Sunday school annex, the old Pollock home, preparatory to erecting a $228,000 Sunday school building.

"But permission for construction has been denied by the Civilian Production Administration. We presume that the reason for the denial is the urgent need of homes.

"We have no quarrel with the Civilian Production Administration's desire to accelerate the home-building program. But we'd like to take its director around the county and the State and show him the buildings that have gone up and are going up. One Sunday school building in Greenville is infinitesimal compared with the total amount of nonhome building in the county and State.

"Perhaps, at Easter, it is appropriate to remind the Civilian Production Administration that there are spiritual needs as well as material costs."

The CPA may need the reminder. Similar conditions are reported in other counties, and other States. Drew Pearson has several times exposed the diversion of hundreds of thousands of dollars worth of critical materials needed for homes to race-track plants and other gambling establishments. If Editor Carter needs any additional examples of nonhome construction to show the CPA Director, he can find them around Jackson.

We hope his protest proves effective, and that the needed Sunday school building goes up soon.

The Duty of America

EXTENSION OF REMARKS
OF
HON. EDWIN ARTHUR HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1947

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered over the radio:

Dear friends of the Triple Cities and my congressional district: There is a struggle going on all over the world today. This is the struggle of people everywhere against fear and oppression.

It is not a new struggle. It has existed ever since the dawn of civilization. In one form or another, the feeling of insecurity has gripped the hearts of nations and individuals for centuries.

I believe an escape from that fear can be had through our American form of government. To me, Americanism is the greatest positive force in the world today.

Other "isms" are of no use or interest to me. I cannot see how they solve anything that hasn't already been taken care of by our way of life.

As the symbol of what America represents, the Stars and Stripes inspire America's millions to resist the fear and oppression we see about us throughout the world. Americanism cannot stand idly by while people are downtrodden and crushed. We always do something about it.

The recent war was a good example of that. As much opposed to war as the majority of Americans were, they rallied to the side of right and refused to permit the forward march of fascism to proceed unchallenged.

In recent months our flag has been desecrated in several capital cities of the Old World. Our flag was flaunted by a few of the very people we had rehabilitated and helped.

What has prompted such a misunderstanding? Is it propaganda against the United States being spread by ingrates? Is it misrepresentation of our objectives and our ambitions?

I, for one, endorse no imperialistic policy to be pursued by an America setting out to impress all nations of our greatness with force of arms. Rather, I would like to see our procedure one of friendly exchange of human relationships, and I honestly believe that is what it is.

Therefore we are being misunderstood abroad. We go forth to help. Hidden forces try to make other countries think we are being aggressive. Such lies must be overcome by truth.

Our destiny, then, is not imperialism, but Americanism. We must convince the world that our destiny is their hope of escape from the tyranny, the fear, and the desolation which the ruthlessness of the opponents of Americanism are exhibiting to all who come under their power.

The founder of the Republican Party was Abraham Lincoln. He was the first Republican President, and succeeded in mapping a program for his party which has appealed to the majority of American citizens through many years since the Civil War.

I have always prided myself in being an Abraham Lincoln Republican. I believe in the ideals Lincoln believed in. My convictions that freedom and liberty are necessary privileges of all our citizens are patterned after the Lincoln desire for tolerance. I do not believe we can afford to stand for anything less.

My duty, as I see it, is to fight to see the Lincoln principles retained by our Republican Party. Lincoln freed the slaves. Our responsibility is to unshackle any chains which may bind any part of our citizenry to economic slavery.

I am positive that by recognizing Lincoln as our greatest Republican we will inspire the American people in this hour of destiny.

Is Marshall Losing Britain?

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1947

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Bristol (Pa.) Courier:

MARSHALL LOSING BRITAIN?

You won't be hearing it out of the Washington publicists for the White House—but there are grave signs that new Truman-Marshall foreign policy which has strained our relations with Russia is also driving a deep wedge between the United States of America and Great Britain.

The reason why Washington dispatches, radio addresses and statements will probably ignore this, for the time being, is that the United States State Department, biggest press agent office on earth, has succeeded in dominating Washington news sources and in coaxing them to view all White House programs through rose-tinted glasses.

This interference with information and opinion already has caused complications. Two years ago, when the United Nations program was in the making, a sort of conspiracy of optimism prevented any realistic appraisal of commitments, secret deals, and blemishes such as the veto-clause, which we now know were insuperable barriers to "a just and lasting peace"—if not indeed to "peace within our times."

The clues to the British state of mind about President Truman's demand that Uncle Sam interfere directly in Greece and Turkey, with both money and armies, are not to be found in the reports of men like Secretary Marshall nor in disclosures of either the White House or the State Department.

The fact should be given by these sources. Certainly it is wrong for them to withhold information of vital concern to the American people.

The place to look for the signs in the wind is the news columns of such newspapers as have correspondents around the world and print innumerable foreign dispatches which haven't been "slanted" by Washington.

Reconstructng the picture, like a jigsaw puzzle, from dozens of scattered pieces, we can make certain surmises which are strongly plausible, if not yet established beyond question.

The picture which emerges is that the Labor Party Parliament of Great Britain is very much alarmed at the Truman assumption that the Britsh nation will be willing to join the United States of America in a crusade to keep Russia from expanding.

A formal demand already has been made that Parliament "repudiate President Truman's proposals for 'collective security' against communism." (Quoted from a pamphlet offered to Parliament entitled "Keep Left.")

Foreign Secretary Bevin's position is still more complicated, and very interesting. Apparently Bevin was quite as surprised as were Congress and the American people by the Truman address a few weeks ago making our intervention into the Greek situation a first order of business, and calling for us to send both military and financial aid to that land as a means of keeping the Russians out.

It may be surmised that Bevin's request to President Truman for us to backstop England in Greece, where her financial resources did not permit her to continue on her previous scale, contemplated principally financial aid, coupled with shipments of commodities and

equipment urgently needed to keep the people fed and get them back to work.

If this is what he had in mind, he had every reason for surprise that his request was answered with a promise of military aid, coupled with a United States plan to build up a powerful Greek Army; and still more so that the troubled problem of Communistic against Democratic government was brought into the matter at all.

The alarm and unrest beginning to show up in British official circles appears to be reflected in the rank and file of British people. At any rate, a survey conducted by Mass-Observation, which is a sort of British equivalent of the Gallup poll, shows a rapid increase in the unfavorable attitude of British citizens to Americans.

The straw-vote report shows, as its findings about the current opinion in England of the American character, the following representing one widespread attitude:

"The American is immature emotionally and intellectually. He is boastful and flamboyant, bad-mannered and full of intolerance of any minority group, etc."

Even the fact that so unflattering a survey should have been released at all, at the present time, and in a land where publicity is being geared closer and closer to national policy, is in itself a strong indication that Anglo-American friendship is deteriorating.

Secretary Marshall's responsibility in this matter is a very serious one, and any further estrangement with Britain cannot fail to put his own leadership, ability, and program to the acid test.

Unless one goes on the assumption that the Greek speech of President Truman was another of those famous "off-the-cuff" decisions, made rashly and suddenly without prior discussion, then it is inescapable that the new program outlined in connection with the Greek emergency is the first great change in American policy dictated by the new Secretary.

It was a daring step, one bound to be brought under fire sooner or later in this country. Coming as it did, after 15 years of deliberate appeasement of Russia as a fixed New Deal policy, and being made at the very moment the President is entering the political arena for reelection, politics alone would raise many questions.

Secretary Marshall is the first professional soldier to occupy the United States Secretaryship of State at a critical moment in world history. He has been elevated to the next in line for succession to the Presidency if anything were to happen to President Truman.

The Secretary comes to the high office from the so-called brass-hat school of thought which has preached militarism in America for years. He is a believer in peacetime conscription. He is a strong advocate of the proposed Army-Navy merger which would give the military group great new powers over manpower, industry, national finances, and publicity.

Automatically, this background is bound to create uneasiness over radical new proposals such as our direct interference with internal affairs of Greece. Suspicion that the whole matter may be merely an artificial war scare to aid Truman's reelection is bound to arise. So is the suspicion that the crisis was drummed up to strengthen the brass-hat control over the American people.

For the threat to arise that, having wilfully offended Russia, this Marshall policy is about to drive Great Britain, not into an alliance with us but into the arms of Russia, would be catastrophic.

Great Britain would like to remain neutral. Her desire has been to be friendly, on the one hand with Russia in Europe, and on the other with America in the Western Hemisphere.

This she expected to do as one of a family of nations under the United Nations programs. But a collateral of the new Truman-Marshall foreign policy is that Uncle Sam proposes to deal directly whenever he wishes—that is, to bypass the United Nations. And of course this will be fatal to the U. N. program.

Secretary Marshall came back from the Moscow Conference with a great air of urgency, saying that action was mandatory, and that we must take certain unspecified steps—in effect that we must prepare to follow wherever he and President Truman decide to go.

Nothing shows more clearly the great divergence in our new foreign policy and that desired by the British Nation than the Bevin comments on the identical Moscow deadlock about which Marshall says we can't afford to wait.

What does Bevin advise? Patience.

And just in case anyone didn't understand that this advice was deliberate, calculated, and international, he later elaborated:

"It may after all be better to take a little longer this time and do it well, than come back with a peace that is not a peace after all."

Alcoholic Beverage Advertising

EXTENSION OF REMARKS

OF

HON. JOHN JENNINGS, JR.

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1947

Mr. JENNINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following petition:

To Our Senators and Representatives in Congress:

We respectfully request that you use your influence and vote for the passage of S. 265, a bill to prohibit the transportation of alcoholic-beverage advertising in interstate commerce and the broadcasting of alcoholic-beverage advertising over the radio. The most pernicious effect of this advertising is the constant invitation and enticement to drink.

The American people spent $7,770,000,000 for alcoholic beverages in 1946, as compared with $3,770,000,000 in 1942. During the same period there was a corresponding increase in crime. There is every reason why this expenditure should not be increased but be decreased.

Mrs. R. E. Murphy, Mrs. W. B. Varner, Mrs. M. H. Wood, Mrs. Floyd Varner, Mrs. J. L. Eslinger, Mrs. B. R. Ainoff, Mrs. Paul Severs, Mrs. C. W. Satterfield, Mrs. G. C. Sanderson, Mrs. J. W. Satterfield, Mrs. Jewell Waggoner, Miss Juanita Varner, Mrs. Earl Varner, Mrs. G. C. Kirby, Mrs. R. A. Stooksbury, Walter J. Toppins, J. L. Eslinger, Rex Wilson, Maynard Wilson, J. W. Satterfield, Mrs. Bertha Underwood, F. Earl Wood, Violo Wise, Aubrey Satterfield, Mrs. Ermalee Satterfield, Mrs. J. B. Sanderson, Nick White, Tressie White, Frazier Warwick, Beatrice Violet, Mrs. Clarence Rutherford, T. C. Sanderson, N. D. Wilson, J. O. Neal, Ollie Toppins, Dara Braden, George Runions, Earl Varner, Thomas McCreary, O. L. Weaver, Mrs. R. L. Templin, R. L. Templin, O. H. Varner, Mrs. Oscar L. Weaver, Mrs. F. Earl Wood, Mrs. Elizabeth Newcomb, Mack Holcomb, Mrs. Mack Holcomb, M. H. Wood, Mrs. John H. Price, Charles B. Woodward, Mrs. J. L. Henderson, J. L. Henderson, Mrs. Hellen King, Mrs. Aileene Laughon, Mrs. Neva Everett, Mrs. Helen Allred, Mrs. George Henry, Roy L. Connaton, Jimmy Patterson, James L. Patterson, T. C. McCarty, F. H. Davis, Mrs. F. H. Davis, Mrs. L. C. McCarty, Mrs. John Learn, Mrs. Linda Sharp, Mrs. Clarence McKelvey, Mrs. Maude Hodges, Martha Smith, Mrs. Glenn Cruze, Mrs. James Tinsley, Mrs. Rudolph Burnette, Mrs. Lula Dunlap, S. L. Sherrod, J. R. Lawson, Elizabeth Burkhat, Ethel McGhee, Massie Harding, Mrs. R. J. Branks, Mrs. Clifford Burkhart, Mrs. Joseph H. McKenzie, W. A. Hammack, Mrs. W. A. Hammack, Mrs. Deadrick L. Dunlap, Mrs. Aubrey Underwood, Cas H. Cox, Mrs. J. Ralph Lawson, Charles A. Lusby.

Washington Chief of Police

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1947

Mr. SPRINGER. Mr. Speaker, much comment has developed regarding the appointment of a chief of police for the city of Washington. A very enlightening editorial appeared in the Washington Daily News upon this very important subject, of date Friday, May 9, 1947. In order that all may read this editorial, Mr. Speaker, under leave to extend my remarks, I include herewith the editorial to which I have referred, as follows:

INSPECTOR BARRETT

Last week the News published a story containing in some detail a portion of the record of Inspector Robert Barrett, chief of the detective bureau of the Metropolitan Police Department.

Inspector Barrett's record contains no guilty verdict against his name.

But it does show, for instance, that—

In 1931 the then Sergeant Barrett was indicted for the brutal beating of a suspect in a slaying who was, as it happens, innocent. A jury found Barrett guilty of the beating, but the Court of Appeals ordered a new trial on a technical point of law. Eighteen months after the beating a second jury could not agree and the charge was nolle prossed. Sergeant Barrett returned to duty after a 2-year suspension.

For years he has been known as a rough, tough cop.

Our present police chief, Maj. Harvey Callahan, is quoted as saying that Inspector Barrett, in his younger days, had a tendency to "throw his hands around," but Callahan claims that Barrett has outgrown it.

The News printed Inspector Barrett's record because of indications that he may be appointed Washington's chief of police after Major Callahan.

Inspector Barrett's record, in addition to various charges of brutality, lists more than 100 commendations—some of them for undoubtedly able performances of duty in solving crimes, some of them signed by certain citizens for his graciousness in acting as their guide while they were "touring" police headquarters under more or less compulsory auspices. All these items should be considered pro and con.

After carefully considering them, the News believes that Inspector Barrett should not be Washington's chief of police.

Our opposition to such an appointment does not follow from any casual discounting of Inspector Barrett's ability as a tough, bare-knuckle kind of police officer.

Few men remain long in any police department without "throwing their hands around" a bit, to use Major Callahan's phrase.

But men who rise high in a police department usually develop a less primitive conception of police work. It is in a sense analogous to the development, say, that leading physicians attain in their field, or leading lawyers in the legal profession.

Everyone knows that, for a doctor to lead in the medical field, it is not enough if he is simply a good general practitioner. Nor is it enough that if a lawyer is to be a leader of the bar, he is to be merely a good trial lawyer. Both may have these qualities, of course.

But, in addition, they must be familiar with, interested in, and must be able to deal intelligently with the larger policies of their professions and with the ways their professions impinge and affect society.

For instance, they must know and be aware of the importance of public and preventive medicine or of the broader social and welfare aspects and implications of constantly changing laws.

In just such fashion a police chief must have an intelligent and sympathetic approach to, say, juvenile delinquency, racial relations, criminal rehabilitation—what might be called the preventive medicine of police work—and all the other kindred developments that are constantly changing and improving modern police work.

This was true to some definite extent of Inspector Barrett's uncle and patron, the late Col. Edward J. Kelly, who preceded Major Callahan as chief of police here. In his younger days, Colonel Kelly was as rough-and-tumble as the next man. But as he progressed upward in the department he became an administrator of some thoughtfulness and judgment, and Washington was proud of him as a representative of its municipal government.

This, then, is the question The News has in mind relative to Inspector Barrett: Does the record show that he has the necessary qualities for the job?

The News believes it does not.

We hope that Commissioner J. Russell Young will reconsider his plan to try to shove through Inspector Barrett when the time comes. The News believes that unless Commissioner Young does reconsider, and make other arrangements, he will be trying to do Washington a great disservice.

Congressman Stevenson Reports From Washington

EXTENSION OF REMARKS
OF
HON. WILLIAM H. STEVENSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1947

Mr. STEVENSON. Mr. Speaker, by overwhelming majorities of nearly three to one, Congress passed the bill to provide aid and assistance to Greece and Turkey. As you know, Greece is being overrun by Communist guerrillas, with the active support and collaboration on the part of Communist Russia. President Truman and Secretary of State Marshall told Members of Congress the present government in Greece is about to fall, which will result in complete domination of Greece by the Communists. Then Turkey will be the next to come within the sphere of communism. This will mean domination of the Dardanelles, the Mediterranean, and the Suez Canal by the Communists. Russia will then control all of Europe, Asia and North Africa. The President and General Marshall warned Congress that the bill for aid to Greece and Turkey must be passed.

Moscow, Stalin, Molotov, the Red Star, Pravda, and the Communists of Soviet Russia and the Community Party in the United States and its press were against this bill. During the debate on the bill in the House the Communist Party held its convention in Washington. Such notorious Communists as William Z. Foster and Eugene Dennis and some from Wisconsin were here. Hundreds of Communists paraded the Halls and corridors of the Capitol and sat in the galleries of the House of Representatives and harangued Members of Congress in the corridors and in their offices, demanding that we vote against this bill. Some of these Communists, when asked whether they would fight for Russia or the United States, defiantly stated they would fight on the side of Russia in case of war. Is there any wonder the bill passed by such overwhelming majorities in both Houses of Congress?

When the people went to the polls last November to elect their Representatives in Congress they indicated by overwhelming majorities they wanted more efficiency in Government and Government economy as against deficit spending. The House of Representatives has kept its pledge to the people by cutting the budget submitted by the administration by billions of dollars.

The people demanded relief from taxes that have mounted higher and higher every year for the past 16 years. The House of Representatives has passed a tax bill that will reduce your income taxes as much as 30 percent. This is the first real tax relief the people have received in 16 years.

The people demanded reductions in governmental expenses and curtailed pay rolls in Government departments. The House of Representatives has passed several appropriation bills within the 4 months since Congress convened, cutting and reducing expenses of government and wiping out Federal bureaus, saving the people hundreds of millions of tax dollars. The House is not through cutting expenses of Government departments. We expect to save billions of dollars for the people before we adjourn, even in the face of tremendous opposition and a concerted effort by Government department heads to prevent such savings to the people.

There has been considerable sniping against Congress in its efforts to carry out the demands of the people who elected us. Anyone who attempts to undermine Congress is undermining our representative form of government, and thus aiding communism and its fellow travelers in this country to wreck our ship of state.

The people also demanded that fair and equitable labor legislation be passed by their Representatives to prevent the destruction of American economy. In spite of the opposition of Communist Russia and the dominated Russian press, Congress passed legislation outlawing portal-to-portal pay suits against American industry, amounting to more than $6,000,000,000. Our American economy might have been completely destroyed had such lawsuits not been outlawed by Congress. The people demanded that their elected Representatives pass legislation giving the country and the people relief from industrial strife between employer and employee which had caused the loss of many millions of dollars in wages to employees and almost wrecked the country. The Congress has given the people such relief.

Congress has also passed an act to limit the tenure of office of the President of the United States to two terms, thus preventing any President and his administration from building up bureaucratic exploitation and regimentation of the people and political control of our Federal courts.

Thus you see the House of Representatives and Congress have carried out and are continuing to carry out the mandate of the people as expressed in the last election.

Aid to Greece and Turkey

EXTENSION OF REMARKS
OF
HON. CHESTER H. GROSS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Friday, May 9, 1947

Mr. GROSS. Mr. Speaker, I am very much disturbed as to the outcome of our actions here today. I have listened to this matter concerning the loan to Greece and Turkey ever since the President appeared here and declared that an emergency existed. I have also sat here and listened to the matter being debated on the floor for several days. The absurdity and the inconsistency connected with the program make it practically impossible to arrive at a justifiable conclusion.

The President has declared that an emergency exists; that it must be dealt with immediately by this House; it cannot go to the United Nations conference as people believe it should. So he asks for a $400,000,000 blank check which carries no restrictions whatsoever, except that United States officials shall be permitted to observe whether the money is being utilized as per contract, and that United States press and radio representatives shall be permitted to follow up and report freely regarding use of the assistance provided.

The only other restriction is that no part of the millions loaned or given to Greece or Turkey may be used by those countries to pay any foreign debt.

The moneys authorized by this bill will be loaned or given to these countries upon request and upon terms to be made by the President. This is living 1940 all over again. In 1940 similar action led

us to war. Is it any wonder that the country and Congress are confused? We should be informed as to how the money is to be used. The President states it is to stop communism. Some authorities say it is for relief. But Herbert Hoover, returning recently from Greece, declared that Greece needed only $60,000,000 for economic relief and that Turkey needed none.

I am wondering if this is just the beginning of a series of appropriations that will never end, and finally lead to bankruptcy for us under the guise that we must stop communism. We should be assured that this authorization can serve a good purpose.

Now if it is true, and I think we are reliably informed, that there are 20 divisions of armed Russian troops on the borders of Greece and Turkey, and since our fleet is lying in Mediterranean waters, it is altogether possible that if Russia feels as strong as she talks then hostilities may be expected at most any time. Apparently we are not trying to stop communism, we are trying to stop a great Russian Army.

Now the administration has not been quite fair in presenting this matter. This emergency, if there is one, did not come about overnight. England notified us last October that she was getting out of Greece in March. If the withdrawal was because the Greek credits in England were exhausted, we should be told. Russia's action now is the same as Hitler's was in 1937 and 1938. Russia is waging undeclared war under the guise of liberating minorities in other countries. It used to be called aggression. Now it is called liberation.

It might be a case of England wanting us to once more pull her chestnuts out of the fire. It may be a case that American exporters want to continue business with bankrupt countries whether or not it bankrupts our own country.

Now I am informed that Greece expects to use $150,000,000 of this money to equip her army. That definitely makes, so far as Russia is concerned, the granting of this money by us an act of war. Greece is confident that with this expenditure she can conquer the Communist enemies. She is going to spend $80,000,000 for consumer goods for civilians, $50,000,000 for heavy equipment to restore production, and $20,000,000 to restore devastated farms.

Turkey stood neutral and grew fat from the recent war. Her preference is for planes and tanks and funds to permit road and railroad building.

Greece is to get an additional $50,000,000 beyond her share in the joint appropriation.

Communism Grows Under Democrats

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, President Truman's foreign policy is wholly inconsistent with his policy at home. He wants to stop communism in Greece and Turkey, so he says, but his acts belie his words. Surely, the spread of communism is more dangerous at home than it is abroad.

In the Washington News Digest for May 1947, Mr. John J. O'Connor points out very clearly just what is going on in the United States to promote the cause of communism. Under leave to extend my remarks, I include the article written by Mr. O'Connor. It is a most important contribution to our thinking on this subject.

HOW THEY BUILD A COMMUNIST FIFTH COLUMN IN WASHINGTON

(By John J. O'Connor)

There is a strong move underway to strengthen the Communist fifth column throughout the world, particularly in the United States. President Truman's firm stand against Soviet aggression abroad and Communist infiltration at home has apparently convinced the Comintern that the job must be done quickly and efficiently before the doors are closed.

The planting of Red agents in America has been done so skillfully that it has escaped public attention. Diplomatic missions from Soviet satellite nations are being used as the fronts for Communist representatives. The plan works something like this. A Communist-dominated country will obtain permission to establish a diplomatic mission in the United States. The first group of representatives will consist of a number of citizens who are respected in their own country and, if possible, over here. At least one of them will be a faithful adherent of the Communist Party, although he may not be known as such. This man will be the actual directing force behind the mission. Once firmly established, the non-Communist members of the staff are replaced by Communists or dismissed outright.

THE BULGARIAN COMMUNIST FIFTH COLUMN

Such a shift now seems to be in progress at the Bulgarian Political Mission in Washington. Bulgaria does not have a regular minister in the United States, since the Bulgarian Communist regime has not yet been officially recognized by our Government. Diplomatic recognition was refused on the ground that the Communist Fatherland Front coalition that now rules the tiny Balkan nation has come to power by force and terrorism.

The Communist reign of terror has no parallel in Balkan history since the Ottoman occupation centuries ago. From the day they overthrew the democratic Muravieff government, the Communists began a systematic extermination of everyone who might possibly be expected to oppose them. Personal vengence brought about the death of hundreds of guiltless Bulgarians. As a means of legalizing their mass murders, the Fatherland Front leaders forced through parliament a special law for the purpose of trying "collaborationists." The new law provided for the establishment of special "People's Courts" which were to try offenders for all crimes committed against the state and the people during the Nazi occupation. The law places the constitution of the courts and the management of the trial entirely in the hands of the Communist-controlled Justice Ministry.

In order to expedite the trials, two sections of the People's Courts were established in Sofia. Judges, prosecutors, and defense attorneys were appointed by the Communist Minister of the Interior and, on December 20, 1944, 3 Regents, 38 Cabinet ministers, and 130 parliamentary deputies went on trial. Because of the stacked courts, the entire country expected that the major defendants would finally be executed. The prosecution asked for 80 death sentences, which was considered an unusually large number. Actually, they expected to get no more than 50 or 60 capital convictions.

ORDERS FROM MOSCOW

By strange coincidence, both sections of the People's Courts terminated the proceedings on the same day. A few hours before the verdicts were to be handed down, word came from Moscow that the courts were to show absolutely no lenience and that at least 100 convictions were to be ordered. Thus, the judges were placed in the anomalous position of ordering more death sentences than were demanded by the prosecution. But orders are orders, and, 24 hours after the judges' decisions were delivered, 100 men died before Communist firing squads.

Lying dead in a prison courtyard was ex-minister Ivan Bagrianoff who replaced the Nazi government of Premier Bagdan Filoff and then withdrew Bulgaria from the tripartite pact. Bagrianoff deserves the credit for forcing withdrawal of the German Army from Bulgarian soil. Several members of the Bagrianoff cabinet were also killed.

Unusually heavy sentences were meted out to most of the remaining defendants. Two royal secretaries who were participating in the trials largely as prosecution witnesses received life sentences. Former Premier Konstantin Muravieff, who declared war on Germany after he replaced Bagrianoff, was also sentenced for life. Noteworthy is the fact that when Muravieff's government fell before the Communist partisans, there was no armed German soldier in Bulgaria. Nikola Mushanov, Dimiter Gichev, and Atanas Burov, the three venerable leaders of the Bulgarian democratic movement, were given 1-year terms and were sentenced to 2 years' loss of civil rights.

Mushanov, the 72-year-old head of the Democratic Party, was the most outspoken anti-Nazi during the period of the German occupation. He took every opportunity—whether at funerals or banquets—to speak against the Nazi rule of Filoff. His crime was that he was equally opposed to the brand of Red fascism practiced in the Soviet Union. Mushanov was considered by the United States as one of the most promising men to head the Bulgarian Government during the reconstruction period. His imprisonment effectively removed him from the political picture.

THE BLOOD BATH

The unreasonable verdicts of the People's Courts stunned the entire Bulgarian Nation and the people came to the inevitable conclusion that the Communists were determined to remove anyone who might oppose their dictatorship. The blood bath was continued for several more months both in Sofia and the provinces. At the same time, partisan bands were carrying out an execution campaign of their own. Thousands of innocent citizens lost their lives.

The Bulgarian people were violently opposed to this wave of brutality and open revolt was threatened, despite the imposing presence of the Red Army and of innumerable armed Communist bands. As a result of both internal and foreign resentment against the mass murders, the People's Courts were dissolved and the remaining defendants were handed over to the regular courts for trial.

In view of the widespread anti-Communist feeling the Fatherland Front decided to establish itself in power by legal means and ordered the holding of elections. The election date was set so that opposition parties would not have enough time to select their list of candidates. Furthermore, the reign of terror was still so fresh in the minds of the people that no fair election was possible. The United States protested this arbitrary decision and forced the Bulgarian Government to postpone the election date. As a gesture of good will, the American repre-

sentative invited the Bulgarians to send a political representative to Washington.

HOW THE COMMUNISTS WIN AN ELECTION

Despite this promising interlude, the Communists made certain of winning the elections by prohibiting virtually all opposition campaigning and by faking the election results. Both the United States and British Governments protested, but to no avail. The Fatherland Front entrenched its dictatorship.

A second election was scheduled in 1946 and the Fatherland Front attempted to force all opposition parties into the coalition. The leaders of the democratic parties refused to be swallowed up by the Communist machine and the Fatherland Front again resorted to force and forgery. Opposition papers were suppressed on the slightest pretext, their public meetings were virtually banned, they were denied access to the government-owned radio. Nonetheless, as election day approached, the Communists realized that they would be decisively beaten. The Communists thereupon rigged the election a second time. One of their devices was to use ballots of a different color for each party. Opposition groups were denied the right to have watchers at the polls or at the counting of the ballots.

To the surprise of no one, the five-party Fatherland Front coalition announced that it had received an overwhelming majority of the votes. The Communists alone received 2,225,000 votes out of a total of some 4,000,000. At that time, the Communist Party was claiming only 400,000 members out of a population of 6,000,000, yet they claimed 59 percent of the votes. The sweeping election victory of the Reds became a standard joke in Bulgaria for those who had the courage.

DIMITROV

The Communists named Georgi Dimitrov as premier. Dimitrov is the head of the Bulgarian Communist Party and a long-time member of the Comintern. He held the post of secretary-general of the Comintern for several years and thus ranked only next to Stalin in the international Communist hierarchy. Like so many of his comrades—notably deserter Maurice Thorez of France—Dimitrov spent the war years in the U. S. S. R.

Dimitrov rules strictly according to the line laid down in Moscow. As in his neighboring country of Yugoslavia, the Communist secret police maintains a constant watch to prevent any resurgence of the democratic forces in Bulgaria. Although most of the democratic leaders have been executed or jailed, the spirit of freedom is still kept alive by the Bulgarian people.

THE BULGARIAN MISSION TO THE UNITED STATES

The men appointed by Foreign Minister Petko Stainoff to staff the mission in the United States, are Gen. Vladimir Stoycheff, Boyan Athanasoff, Boyan Choukanoff, Marin Pundeff, and Peter Radoyeff. The original list of five included one well-known Communist whose name was quietly withdrawn when the American representative in Sofia, Maynard Barnes, made it clear that this man was not acceptable. Athanasoff was named in his place.

STOYCHEFF

General Stoycheff has a record of prodemocratic sympathies and a good military record. During the war the western democracies considered him as a likely candidate for an important postwar assignment. He had served as military attaché in Paris and is a member of the Legion of Honor. Stoycheff led the Bulgarian Armies which liberated Yugoslavia from the German Army, at a time when Dictator Tito was still busy trying to murder the leader of the real Yugoslav resistance movement, Gen. Draja Mihailovich.

The key railway junction of Nish and the strategic military center of Skoplje were captured by General Stoycheff's army and turned over to representatives of Dictator Tito. The loud victory howls set up by Tito's propaganda agents can still be heard. As a matter of fact, the Bulgarian troops advanced across Yugoslavia into Hungary and Austria, and Tito—despite his long-winded claims—cannot be credited with one single important victory against the Reichswehr. He was more interested in wiping out the democratic resistance movement than in fighting the Nazis.

ATHANASOFF

Athanasoff was second in command of the mission but apparently was the man who actually directed its affairs. He had been a minor diplomatic official under the Nazi government and served in Berlin and Portugal. He was trusted by the Nazi foreign office, otherwise he would not have even retained his post, much less be stationed in the German capital. When the Communists took over, Athanasoff underwent a convenient change of allegiance and came into the good graces of the Fatherland Front. His reward came when he was appointed to serve in the mission to the United States.

CHOUKANOFF

Choukanoff has an unbroken anti-Nazi record. He was the Associated Press correspondent in Sofia and became a close friend to United States Minister George Earle. When the war started in 1939, Choukanoff was placed on the official German black list and pressure was put on the Bulgarian Government to have him jailed. Because of his association with Earle, his high reputation, and his high standing as a foreign correspondent, the foreign office resisted the German demands. When the Nazis occupied the country, the government finally had to submit and for most of the occupation period, Choukanoff was jailed or interned. During his short periods of freedom, he was constantly hounded by the police. When the Filoff cabinet fell, he aligned himself with the democratic movement and there is no evidence that he joined the Communists or any other Fatherland Front Party.

RADOYEFF

Radoyeff was a merchant without a significant political record. He was a close friend of General Stoycheff and came along as the general's personal secretary.

Pundeff was a promising young law student. His father had been a prominent journalist who was assassinated in a political feud. Young Pundeff received his appointment because of the integrity of his family and he is not known to be sympathetic to the Red terror.

NOW THE SWITCH

Despite the high hopes held for the attitude of General Stoycheff the State Department soon found out that he had definitely gone over into the Communist camp. As a result, relations between him and our own officials soon cooled. Stoycheff was guilty of a bad breach of diplomatic behavior when he made an open attack on the American Government in a letter to the Washington Evening Star. He was recalled at his own request, and Athanasoff took over control of the Bulgarian Political Mission. Radoyeff was also recalled, but his stay has been extended, possibly at the request of the general.

COMMUNISTS NOW IN CONTROL

Not long after Stoycheff's departure, orders came from Sofia for the dismissal of the two non-Communists in the station, Choukanoff and Pundeff. Their services were terminated on March 31. Now that the Communists are in complete control, it can be expected that men approved by the Comintern will be sent to replace the discharged staff members.

An indication of the type of Bulgarian representative that will be assigned to the Washington post was given last fall in connection with the American-Slav Congress meetings in New York. The delegate sent by the Fatherland Front to the Slav Congress was none other than Tsola Dragoicheva, the leading woman Communist in the Balkans. She is secretary general of the Bulgarian Communist Party and a high-ranking members of the Comintern.

Thus by the simple expedient of changing the members of their mission, the Bulgarians can plant Comintern agents in the United States. A close examination of the movements of the other Soviet-controlled diplomats will reveal a similar situation.

It has been many years since the Soviet Union has domesticated the Trojan Horse. He is now galloping rampant in our midst.

The Marines' Last Beachhead?

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1947

Mr. MANSFIELD of Montana. Mr. Speaker, I am disturbed that in all congressional consideration of the merging of the armed forces so little attention is being given to the status of the Marine Corps. Personally, I shall question the value of such a merger if it contemplates subordinating the position of the corps. I feel it is imperative that the duties of the corps should be spelled out in detail, its functions specified, and none of its duties left to the personal whim of whoever may become Secretary of National Defense. The Marine Corp's brilliant record of the past 172 years must not be lost sight of and I will do my very best to see that the marines, first to fight, are not the first to be liquidated.

Mr. Speaker, under unanimous consent, I am inserting some articles and editorials covering this very important question. These are taken from the News, of Elmira, N. Y., and the Christian Science Monitor.

THE MARINES' LAST BEACHHEAD?

"From the Halls of Montezuma" is the opening line of the gallant marine hymn. And the closing line may soon be written, "To the Steps on Capitol Hill," citing a pathetic finis to the famous corps.

The marines are now engaged in a desperate battle for survival. Ironically, the struggle for existence is being waged in the very Halls of their own Congress, for which they fought so brilliantly to preserve. It looks as though the Army has booby-trapped the leathernecks into their first, and possibly, their last defeat.

There isn't much doubt about the Army's sabotage of the historic corps. Drew Pearson recently reported Brig. Gen. Frank Armstrong as saying: "As for the marines, you know what the marines are. They are a small fouled-up army talking Navy lingo. We're going to put those marines in the Regular Army, and make efficient soldiers out of them. The Navy is going to end up by only supplying the requirements of the Army Air and Ground Forces."

We haven't seen a denial to the above statement yet, nor have we heard of any reprimand to the general, either. Perhaps they will reduce the marines to a handful of bootblacks for the Army.

The Shores of Tripoli, the Boxer Rebellion, Belleau Woods, Tarawa and Iwo Jima may have been tough, but the Marine Corps will

find the battle on Capitol Hill the toughest of their honorable career, with the malevolent Army brass stacked up against it.

Gen. A. A. Vandegrift has asked that the status of the Marine Corps be spelled out in the merger bill, and not be left to the whim or fancy of the single secretary of defense. Their strength and missions should be clearly delineated. Incidentally, the marines were amphibious troops long before the Army learned how to spell the word.

Where are those certain top secret papers on this subject that were mentioned in last year's hearings on the merger act? General Vandegrift said then that they could be found in the 1478 file of the Joint Chiefs of Staff—in papers all marked "Top Secret." These documents will show that there was a determined effort on the part of the War Deparment to abolish or reduce the Marine Corps to a shameful ineffectuality.

Anyone will grant that sentiment has no place in deciding what military structure will most effectively protect the Nation. Pride in heroic achievement should not be the ruling factor. But the Marine Corps has fought too long and too gallantly to be garroted in the corner of a committee room, without the public being fully aware of the facts.

The best argument for the retention of the corps is not only in their brilliant record for the past 172 years, but rather in their immensely valuable sphere in this atomic age of specialization in warfare. This highly important seagoing and flying corps of top-grade fighting men is a mighty cog in our Nation's defense. And the marines have already launched their atomic-warfare program.

The Marine Corps League cannot be gagged. It is the civilian organization of all-marine veterans, representing over one-half million marines and their families, chartered by Congress in 1937. They will continue to vociferously defend their comrades in service. And they are being backed by 3,500,000 American Legion members and 2,000,000 Veterans of Foreign Wars, as well as many other veteran and civic groups.

But against public indifference, an uninformed Congress, and the heavy artillery of Army brass, this may well be the last beachhead for the marines.

[From the News of Elmira, N. Y.]

GENERAL VANDEGRIFT SHOULD BE HEEDED

The Marine Corps, famed in song, story, and history for its fighting ability, now has its most important fight on its hands. It is literally fighting for its life, as the high brass of the Army and, in some cases, the Navy seek the power to emasculate the Marine Corps and leave it in a position where it can only be assigned inferior tasks in the event of future hostilities.

The unification merger plan for the armed forces threatens the Marine Corps as no Japs or Germans ever did. As the Senate Armed Services Committee pondered this week the question of whether to recommend President Truman's unification plan for passage by Congress, General A. A. Vandegrift, commandant of the Marine Corps, and the most brilliant general in corps history, gave his testimony on the merger.

General Vandegrift did not oppose the main idea of the merger, but he stoutly insisted that the Marine Corps' role and missions be written into the bill and thus make them into law, rather than left to be defined by Executive order of the President. The bill as it now stands, he declared, would leave the Marine Corps "stripped of everything but name—reduce it to a role of military impotence."

"The failure of the bill to assign specific functions to the Marine Corps," said General Vandegrift, "is a source of grave concern to me, for it allows the corps to be stripped of everything but name."

The marines have a hard-won glory and fame. Thousands of them have died on the field of battle. Their ability to overcome almost insuperable odds time and again have won them the respect and admiration of the country and the world. No other fighting outfit occupies the high place in world opinion, a place that approaches reverence in many cases, such as the Marine Corps enjoys.

Army generals have envied since time immemorial the high estate of the Marine Corps in the eyes of the public, and a few Navy admirals are not above suspicion of jealousy. The merger plan is dangerous to the Marine Corps, not as something it can fight and vanquish as it has so many enemies on land, at sea and in the air, but through Washington politics, and the danger is very real.

The fact that interested persons are trying to push the bill through in its present form, and that they are fighting to keep from specifying in exact language the Marine Corps' place in the new arrangement, but insist instead that the Marine Corps be at the mercy of the whim of the President, himself an ex-Army man, is indicative of the deadly danger inherent to the corps in the merger bill as it is now written.

In company with General Vandegrift, the News has no fear of the ultimate fate of the Marine Corps, if left to any representative body or to the public at large. The gratitude and pride which Americans take in the corps is second only to the famous esprit de corps of its own members and former members. But like the general we are apprehensive of a bill that might be loosely drawn in such a way and would make possible a large degree of interpretation of its meaning. Should the bill be thus loosely drawn and should an Army man be appointed to the post of Secretary of National Defense, a post which the unification bill creates, the corps might well become the victim of the fate the general has pointed out.

This newspaper cannot urge too strongly upon our legislators that they listen and give heed to General Vandegrift. There may very well come a time in the future—perhaps in the near future—when this country may again have desperate need of the kind of services rendered to it by the Marine Corps at Belleau Wood, Chateau Thierry, Guadalcanal, Tarawa, Bloody Nose Ridge, and Iwo Jima, to mention but a few of the battles that are responsible for its illustrious fame.

[From the Christian Science Monitor]

MARINE CORPS IN DANGER?

The American people have a right to expect that the several branches of the armed forces will adapt themselves in strategy, tactics, and matériel to the demands of a new era in warfare. They apparently desire a practicable merger of these branches. But they do not mean that any one of these branches shall be obliterated or undermined by the jealousy or the ambitions of any other. Traditions, esprit de corps, may be intangibles. But they are priceless. And they cannot be mass-produced like tanks and planes.

The Marine Corps is deeply concerned lest the merger bill, as now written, will mean the reduction of that fraternity of amphibious commandos to the role of ships' detachments and naval base guards. Gen. A. A. Vandegrift has said just that to the Senate Armed Forces Committee.

The Secretaries of War and Navy and the President have agreed that the general functions of the several branches should be defined by an Executive order to be issued when the merger bill becomes law. Mr. Truman's definition of such functions is satisfactory to the Marine Corps. But, the Corps points out, without statutory safeguards any subsequent President by a stroke of his pen could wipe the Marine Corps off the map. The merger bill, furthermore, fails to specify Marine Corps representation on important boards. It omits the long-standing 5-to-1 personnel ratio between the marines and the Navy.

If there were not good historical reasons, the marines might be accused of conjuring up bogy men. But there are. The marines have had to fight extinction more than once from other than foreign enemies. In 1932 a Presidential order to dissolve the Corps into the Army was withheld at the last minute. And the Army, throughout the recent merger controversy, argued for elimination of the Fleet Marine Force. The marines suspect that Army intentions really go much beyond that.

The Army insists vehemently that its purposes are wholly honorable and friendly. If this be true—and we are not passing judgment—the Army, of course, can hardly object to writing safeguards for the Marine Corps into the merger bill itself.

Federated Europe

EXTENSION OF REMARKS

OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1947

Mr. BOGGS of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper articles and editorials:

[From the Fort Worth (Tex.) Star-Telegram of May 1, 1947]

FEDERATED EUROPE MAY BE KEY TO PEACE

A little more than 6 months ago, in a speech at Zurich, Switzerland, Winston Churchill revived and strongly urged the idea of a United States of Europe, terming it the only road to economic salvation and permanent peace for the war-weakened smaller nations of the continent. The word "revived" is used because the idea of a federation of European countries is far from new. It was foreseen by George Washington and by Victor Hugo, the latter looking forward to the day when "two huge unions, the United States of America and the United States of Europe, will face and greet each other across the Atlantic."

When Mr. Churchill advanced the proposal anew, it was greeted either as a dream impossible of fulfillment or with the objection that it was designed to build up a western anti-Soviet bloc in Europe and therefore was nothing more than an intended instrument of traditional power politics. The latter view, of course, was the one taken by Russia.

That objection, at least so far as this country is concerned, now has been wiped out by the United States' open avowal of active resistance to Russian expansionism and the spread of communism in Europe. A revived and stable economy in western Europe would form the most effective barrier to communism, and without the necessity for a continuous funneling of funds into the area from this country.

Recent experience has given weight to Mr. Churchill's assertion that federalization is the key to stability in western Europe. A higher level of postwar industry than previously contemplated will be necessary if Germany ever is to become self-sustaining, and certainly if it is to pay reparations on

any such scale as is demanded by Russia. The foreign ministers at Moscow were confronted with the problem posed by the dependence of Europe upon a strong German industry and the danger that an industrially revived Germany again will become a menace to the peace of the world. It seems clear that as a member of a European confederation, Germany could do more to sustain and less to endanger neighboring countries than if allowed to go its separate way.

From first-hand observation, Clayton Fritchey, editor of the New Orleans Item, is convinced that federation offers the only promise of permanent solution of the problem of Germany and western Europe. Recently returned from a tour of Europe, he writes:

"It goes without saying that to rescue Europe by federation will be difficult, but to save it without federation is impossible. The nations of western Europe have reached the same crisis that once faced the 13 original American States—they can hang together or they can hang separately."

This statement and the realities in Europe argue strongly for adoption of a joint resolution introduced by Senator FULBRIGHT, of Arkansas, and Congresssman BOGGS, of Louisiana, which reads that "the Congress hereby expresses itself as favoring the creation of a United States of Europe within the framework of the United Nations."

[From the Dallas (Tex.) News of May 4, 1947]

UNITE OR PERISH?

Henry Sowerby, assistant foreign editor of the Christian Science Monitor, notes that several important movements toward creation of a United States of Europe have been under way for sometime. One is sponsored by Winston Churchill; another by Prof. A. Brugmans, Dutch savant; with another former Premier Paul von Zeeland, of Belgium, is associated; and the president of the Pan-American Union, Richard Coudenhove-Kalergi, recently issued an appeal for American support of a European federation—a United States of Europe within the framework of the United Nations.

We must unite or perish, some of the most outspoken advocates of federation in Europe say. They point to the example of the United States of America, where millions of citizens of many racial stocks have been able to live in amity these many years, to share such prosperity as modern Europeans have never known. They argue that unity in Europe, with trade barriers removed and commerce moving freely, would insure economic restoration and lasting peace.

The inability of the foreign ministers to reach agreement thus far on major problems born of the war will lend new strength to these several movements toward federation. The chief obstacle, admittedly, is Russian fear that any organization is designed to create a western bloc against her. It is the urgent task of statesmanship to convince the Soviet leaders that efforts to insure unity through agreement are designed solely to promote and maintain peace in Europe and throughout the world.

[From the New Orleans Item]

THE PROBLEM OF GERMANY—FEDERATION: AN END TO MILITARISM

(By Dr. Nicholas Murray Butler)

(Nobel peace prize winner and president of Columbia University, Dr. Butler made the following remarks during a recent address before the Pilgrims of the United States:)

The time has come to consider how the German people can be organized and put back upon the field of contemporary history in order to resume the accomplishments which they were making 50 and 60 years ago, before the militaristic impulse took possession of them.

In my judgment, this reorganization must take the form of federalism. It must resemble the organization of the American Government and the American people if we are to accomplish what awaits us.

I have reference to the federal system of government, which, as American experience shows, is in fact the most effective possible for a nation which like our own, like Great Britain, or like Germany, covers a wide area, a large population, and has many points of contact with the economic and intellectual life of the moment.

We have had the federal form of government from the adoption of our Constitution. But it is not generally known that England adopted what is really the federal form of government in succession to the British Empire, by the Great Statute of Westminster, enacted in 1931. At that time, the British Empire passed into history as a phase and the British Commonwealth of Nations came into existence as descriptive of the organization of what had been the British Empire.

The story of how that happened is not generally known. In 1921, while making my usual annual visit to England, I received a confidential telephone message from the Prime Minister, Mr. Lloyd George, asking me to come to Downing Street at once.

I went at once to Downing Street, and Mr. Lloyd George, taking me aside and speaking in entire confidence, told me that he was to have at the week end at Chequers, the country home of the Prime Minister, a group of Prime Ministers of the Dominions. They were going to discuss questions of political organization and international relations. They would like me to be present in order to answer questions which might arise relative to the experience of the United States.

On Friday afternoon I drove down to Chequers and I found that the distinguished guests had already arrived. There were the Prime Minister of Canada, the Prime Minister of Australia, the Prime Minister of New Zealand, and two distinguished representatives of the people of India. The only absentee was the Prime Minister of South Africa.

On Saturday morning the Prime Minister introduced a subject which he desired to have discussed. He told us all that the three Prime Ministers who were there had told him that unless some new arrangement were made their countries were prepared to withdraw from the British Empire and to set up independent existence, through revolution, if necessary. Canada, Australia, and New Zealand were not willing to remain members of the British Empire. They desired to be in a position to maintain their devoted loyalty to the Crown and to accept the principles of democracy as worked out by Great Britain since Magna Carta, but they were not willing to accept the control of the British Parliament or the Foreign Office.

Therefore, the question was, "What could be done?" I listened with great interest, because I saw that I was present at the crossroads in the history of Great Britain, and possibly in the history of the modern world. They were searching for a name to substitute for "empire." After listening for an hour or two, I called their attention to the fact that we in the American Colonies had had three Commonwealths. We had the Commonwealth of Massachusetts, the Commonwealth of Pennsylvania, and the Commonwealth of Virginia, among three of the Original Thirteen Colonies. And I suggested that they consider the word "Commonwealth."

But what else could be done to show the relationship between these colonies and Great Britain and how could it be phrased without bringing them under the control of Parliament again?

Finally, the word "nations" was suggested, the British Commonwealth of Nations, and after 2 or 3 hours of discussion, they agreed unanimously to accept British Commonwealth of Nations as a substitute for the existing title, British Empire.

Then the question came, what was to be done about it? Lloyd George asserted definitely that none of those present should mention what had been said or done, that no one should mention the conference or the fact that it had been held, that the matter should be left to him to see what could be done.

The consequence was, that after 10 years, the British Parliament passed the famous Statute of Westminster, in 1931, recognizing the British Commonwealth of Nations, and then the British Empire passed into history.

When that statute went into effect, Canada, Australia, New Zealand, and the Union of South Africa became independent nations, directly related to the Crown, but wholly free from authority of Parliament. That has worked so well, that they are in better relations with the Mother Country today than they were before. The have their independent foreign parliaments and their independent foreign relations. No act of Parliament of Great Britain affects any one of them, unless their national parliament, so to speak, accepts the act and applies it to itself.

Therefore, they have become, as you see, a federal organization, of a very ingenious and very remarkable kind, not concrete and definite and specific, like the Federal organization established by our own Constitution, but still, a most constructive form of federalism.

Now that has suggested the fact that in facing the question before the world today, which is perhaps of outstanding importance, the organization of Germany, we should be guided by the experience of Great Britain and the United States, and should use the federal principle under which to restate and reorganize Germany.

It was a Sunday evening in December 1884, while still a student at the University of Berlin, that I asked a question of Prince Bismarck. I said to Prince Bismarck, "I often wondered, Your Excellency, why in building the German Reich you did not follow the American federal system, which has worked so well in the United States."

Bismarck took his pipe from his mouth and looking at me said, "Germany, for military reasons, requires a strong and highly organized government." He put the pipe back, and the subject was dropped.

That is a long time ago, but Bismarck stated the specific reason why we should not now reorganize Germany on that basis. We should reorganize Germany on a federal basis, and it can and should be done without delay.

We are living in an age when problems are so imperative and so pressing, that one cannot afford to wait. We should act and act quickly. The time has come to rebuild a peaceful and economic and intellectual Germany and to see to it that the militaristic elements which have so damaged that people and brought them to wrack and ruin during the past two generations are no longer allowed to be effective.

[From the Huntington (W. Va.) Herald-Dispatch of May 6, 1947]

DO WE HAVE A PLAN?

Europe is slipping into chaos while nothing is accomplished on the peace treaty with Germany, the American people were told by Secretary of State Marshall in his radio report after returning from the fruitless Moscow Conference. Yet at the same time Secretary Marshall gave only a counsel of "patience, patience." If the State Department

has any other proposal up its sleeve, none has been disclosed.

Yet many students of world problems, both in Europe and the United States, have a plan. It calls for a union of western European states, predominantly economic, but also to some extent political, into what has come to be known as a United States of Europe. Senator FULBRIGHT, Democrat of Arkansas, Senator THOMAS, Democrat of Utah, and Representative BOGGS, Democrat of Louisiana, have introduced in Congress a resolution reading in full:

"That the Congress favors the creation of a United States of Europe within the framework of the United Nations."

It is no new idea. Disregarding such early advocates as Henry IV, William Penn, Immanuel Kant, and Victor Hugo, the proposal was pushed after World War I by so practical a statesman as Aristide Briand, 10 times Premier of France, and is now supported by hard-bitten Winston Churchill.

In fact, under Briand's instigation, the 27 European states that were members of the League of Nations met in Geneva in 1930 to discuss ways and means of creating a United States of Europe. The conference got nowhere fast. The delegates praised the principle, disagreed violently on how to achieve it. Some objected that a body outside the League would weaken the League. Others disagreed with the Briand thesis that political should precede economic unification. Others saw an attempt at economic and financial rivalry with the United States.

It will be noted that the Soviet Union was not represented. Some of the delegates at Geneva in 1930 thought it futile to project a United States of Europe with the largest and most populous European state left outside. Others even saw in the 1930 conference another attempt to strengthen the existing cordon sanitaire against Moscow.

At all events, any move to create a United States of Europe in 1947 would in effect be an anti-Soviet move. The great difference would be that in 1930 the Soviet Union was on the defensive, in 1947 it is on the offensive. The move today would be an attempt to avert the chaos which is threatened by the Soviet tactics in international affairs and which the Soviet Union is widely suspected of actually desiring. If objection is raised that a union of western Europe now would create two worlds instead of the one world visualized by the United Nations Charter, the answer would be that in actuality Europe is already divided into two worlds.

Many Americans observe blithely: "If the Thirteen States could create a Federal Union in 1789, why can't the countries of Europe, at least of western Europe, create their own United States in 1947?" But the problem isn't so simple as that.

In 1789 the former British colonies had recently been united in war and had much the same attitude toward all foreign nations. In the war recently ended, Italy, Germany, and Austria were on the losing side; Spain was pro-Axis; Portugal, Switzerland, and Sweden remained neutral; and certain of the western European states harbor pro-Soviet minorities which are powerful both politically and economically.

[From the Herald Tribune of New York of May 10, 1947]

REPORTS AMERICANS SEEK UNITED EUROPE—COUDENHOVE-KALERGI SAYS PUBLIC OPINION IS FOR IT

PARIS, May 9.—American opinion, both public and official, strongly approves the formation of a United States of Europe, Count Richard Coudenhove-Kalergi, president of the Pan-European Union, said here today.

Count Coudenhove-Kalergi, who has just returned to Europe from the United States said "Americans simply can't understand why we on the Continent have tolerated anarchy and autarchy instead of uniting within the type of federal structure thas has made the United States the richest nation in the world."

The count predicted that the first step in achieving the ideal of a federalized Europe would be a union between England and France, and that Belgium and Holland would soon follow suit.

The Scandalous Housing Situation

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1947

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from PM for May 11, 1947:

THE SCANDALOUS HOUSING SITUATION

WASHINGTON.—If Wilson Wyatt wants to chortle an "I-told-you-so" about the collapse of the national housing program, he is entitled to the pleasure. But that would be a dubious substitute for the new home construction the Nation needs.

Five months ago, Wyatt was forced out of his job as Housing Expediter by the intense opposition of George Allen, then Reconstruction Finance Corporation Director; Secretary of the Treasury John W. Snyder, and the private real estate and construction lobbyists.

The lobbyists cheered. They had been saying for months that, if only the Government would get out of the way and take Wyatt out of their hair, private enterprise would build the housing the country—and especially war veterans—demanded.

A typical statement was made by the board of directors of the National Association of Home Builders—an organization which calls itself "small business"—in October 1946. Claiming that price ceilings and other regulations impeded production of building materials, the NAHB demanded "complete removal of controls."

This would "bring many benefits to veterans," said the NAHB, and would "speed home building by making possible a more balanced production of materials and greater output."

The NAHB and the other lobbying groups—the National Association of Real Estate Boards and the National Home and Property Owners Foundation—got what they wanted. Wyatt quit when President Truman refused to back him in a quarrel which, at the moment, centered around Wyatt's insistence on pushing industrialized (prefabricated) housing and George Allen's refusal to lend large amounts of RFC money to industrial housing.

Price controls on building materials and on completed new houses went out the window.

Here are the results:

Whereas under Wyatt's program 1,000,000 housing units were started in 1946 (including temporary units), some Government housing officials think we will be lucky to get half a million units started in 1947.

Privately financed nonrural new units started in March of this year totaled only 49,800 as against 60,449 in March 1946—a decrease of approximately 20 percent.

Privately financed new units started in April of this year fell even further behind April 1946 when 66,138 new units were started. Final reports on April 1947 are not yet compiled but the estimated decline is from 33⅓ to 40 percent.

Wholesale building materials costs have skyrocketed 25 percent in the 5 months since controls were lifted. Lumber costs are up 50 percent since July 1946, and paint costs up 80 percent.

Labor costs are starting to climb again (hourly wages in the housing-construction trades increased 16 percent between January 1945 and January 1946) but spotty unemployment is spreading. Demand for skilled laborers (carpenters, electricians, etc.) is still good, but the United States Employment Service, reporting that most of the 25,000 unemployed construction workers in New York are unskilled laborers, attributes the cause to the failure of building construction to expand as anticipated.

An investors' and buyers' strike has hit the housing market. The cause of the investors' strike is not only high prices—a small house now costs almost exactly twice as much to build as 10 years ago—but what is termed uncertainty. Investors, who normally finance 90 percent of the country's new housing, refuse to take a chance on further price increases and a subsequent collapse of the markets which would make it impossible for them to amortize their investments.

The lobbyists who forced out Wyatt and Government controls are now singing a different tune than they were last August and October.

Herbert U. Nelson, executive vice president of the National Association of Real Estate Boards, expresses skepticism about the need for new housing. Whereas the general estimate is that about 2,500,000 new housing units are urgently needed to care for families now living doubled up—with relatives or friends—Nelson says the only measure of need is what the housing industry can sell—and he means what the industry can sell at present price levels.

(What this means was shown last Wednesday when the New York Times reported that Manhattan builders and investors were on a buyers' strike against high construction costs. The Times survey said that projects totaling up to $100,000,000 were being shelved in the face of a minimum need for more than 75,000 to 100,000 apartment units.)

A Census Bureau survey in July 1946, showed that about 1,600,000 married World War II veterans were living doubled up, and housing production since then, according to Government officials, has not substantially reduced the number.

Nelson and NAREB do not accept the housing goals and needs officially recognized in the pending Taft-Ellender-Wagner bill—1,200,000 units a year for 10 years. They oppose the socialism of the Taft-Ellender-Wagner bill's public housing sections and the Federal intrusions of its sections to stimulate private construction.

"If we should have a recession," Nelson says, "we wouldn't hear any more about the housing shortage. People have always lived doubled up. That is normal."

Nelson and NAREB are backing the Wolcott bill, passed by the House, which would virtually force a 15-percent increase in rent levels and wipe out remaining Government controls by which building materials are channeled into residential rather than commercial and business construction.

The recession which, in Nelson's viewpoint, would end the housing shortage by forcing people to stop talking about it, is feared by many economists as a serious possibility, and they frankly fear that the slump in housing construction is a first symptom.

The National Housing Agency in its bulletin No. 4 points out that a construction slump followed World War I ahead of the general recession of that period, and events after World War II have followed the same general pattern.

Residential construction boomed quickly after the November 1918 armistice which ended World War I, reached its peak in the summer of 1919, and then dropped 67 percent until December 1920. Total construction—business and commercial as well as residential—dropped from February 1920 until the end of 1921.

Violent fluctuations in building-material prices were a major cause of the fluctuations in production. Wholesale prices went up 72 percent from April 1919 until April 1920.

The NHA comments dryly that this "boom and bust episode" robbed the country of "considerable momentum" in producing badly needed housing. It adds that after a second boom, lasting until through 1925, residential construction again went into a decline "long before the 'new era' ended in collapse" in 1929, and "then caved in along with the rest of the economy."

The present decline in residential construction is a major factor in calculations of Government experts who have recently indicated a "recession" may soon be expected. Whether the "recession" will again be followed by an even sharper "boom-and-bust" is a long-range question with which none of President Truman's administration spokesmen seems disposed to deal.

Frank Creedon, Wilson Wyatt's successor as Housing Expediter with particular responsibility for veterans' housing, has warned constructors, materials producers, and labor that they are pricing new housing out of the market. Creedon has granted market guaranties to 12 prefabricated-housing manufacturers to encourage production of nearly 100,000 units.

Other sources within and without the Government make several major recommendations for encouragement of new construction:

Prompt enactment of the TEW bill, which would grant low-interest rates and long-term loans to private builders and finance some public housing. This bill, approved by the Senate Banking Committee, has not been placed on the Republican priority list for action by its chief sponsor, Senator ROBERT A. TAFT, Republican, of Ohio.

Amendment of the TEW bill to insure private builders against major losses through a future economic lapse if they take a chance and construct rental housing promptly.

A vastly expanded program of market guaranties to prefabricated housing producers. This is necessary, advocates say, to break the vicious circle in which, at present, unit costs cannot be lowered except through mass production, and mass production cannot be started except with a mass demand.

An across-the-board cut in materials and labor costs. It is considered unlikely that the building-trades unions would accept a cut, at least unless steady work was assured. AFL officials say that building costs are 30 to 33 percent of total construction costs, a figure unchanged since before the war, and that charges of reduced labor efficiency are explained largely by lags in the flow of materials last year and poor scheduling of the materials flow.

WILLARD SHELTON.

Unification of the Armed Services

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1947

Mr. KEATING. Mr. Speaker, when I was back home recently I was disturbed to have two friends of mine who served with great distinction in both World War I and World War II tell me they had heard rumors that there was so much opposition to the bill for unification of the armed services that it had been decided to pigeonhole the measure for the time being.

I hastened to disabuse their minds and to explain that there are so many important matters vigorously competing for congressional attention that it is extremely difficult for the leadership to establish an agenda, and impossible to do it in such a way as to satisfy everyone. I assured them, however, that although the unification measure was in no sense a partisan issue, it would receive as early consideration by this Congress as legislative pressure permits.

It seems to me absolutely essential in the organization of our national defense that we solve this problem promptly. My only reservation regarding the legislation which is now pending is that it does not go far enough. If there is one lesson the last war taught us, it is the necessity for a unified command, not alone in the field, but also at the top level. We have one national defense problem: We have so many dollars, so many men, and so many materials which we can devote to national defense without pinching ourselves elsewhere. Common sense demands that those dollars, men, and materials be distributed over the entire defense program in accordance with a single master plan, in order that there be no unnecessary duplications and shortages.

In the past, hearings on War and Navy Department budgets were held before two congressional subcommittees, each of which was ignorant of what the other was doing. Moreover, it was repeatedly stated at those hearings that the Army estimates were prepared without knowledge of the Navy estimates, and vice versa.

It is true that some slight integration of the two budgets may have taken place when they were considered by the Bureau of the Budget and by the full Appropriations Committee. But even so, it is no exaggeration to say that in both the legislative and the executive departments of the Federal Government the problem of national defense was viewed for budgetary purposes not as a single problem but as two separate problems.

There is no justification for continuing to prepare our defense program in this fashion. To do so is to invite both danger and waste. Until defense planning is conducted by the services jointly, until some means has been devised whereby conflicts and duplications between the two are automatically resolved before legislation is enacted and appropriations made, until we know that differences in treatment and seeming duplications are due to planning and not to chance and lack of planning, not until that time can we be sure that we are getting full value for our defense dollars. I hope action on this matter will be taken promptly.

Nor, important as it is, does the saving of money furnish the principal reason for a program of unification. To provide an adequate defense for this country until that blessed time arrives, for which we should constantly work and ardently pray, when international disarmament and good will become enthroned, our armed services must play together as one team under a single captain to make final decisions. In that course alone lie the most important economies, of lives and resources, both of which it is imperative, at this challenging hour, should be utilized to the maximum of efficiency.

In this connection, pursuant to leave granted, I include a portion of an editorial from the New York Times, two editorials from the Washington Evening Star, and one from the Washington Post:

[From the New York Times]

The unification bill which the committee is studying was agreed to after months of conferences and compromises among the military forces. It is an attempt to translate into formal organization the better points of voluntary cooperation that were worked out during the war. It seeks to synthesize the costly lessons of the war and organize the best possible defensive military organization. The time it took to work out the compromise is an argument in itself for adoption of the bill.

It is gratifying to know that cooperation among the services on air organization, forced on them by circumstances, has resulted in a large saving to American taxpayers. We take this as an indication that even larger savings will be possible if the cooperation begins before appropriations are granted and not afterward. That is what the bill provides.

But saving money is not the basic reason for unification. The real necessity is to save us from another Pearl Harbor, to save us from the divided command that so hampered operations in the early days of the war, to save us from a revival of the old service jealousies that had such tragic consequences when carried over to the battlegrounds, to give us one quarterback to call the signals and not three the next time our team has to take the field.

If the men who were in command during the war were to continue in command indefinitely the present system of cooperation might work out almost as well as unification. But many of them already have retired. Many more are nearing retirement age. The lessons they learned through experience may not be so obvious to another generation of Army, Navy and Air Force officers. Fleet Admiral Halsey, in testifying during the war in favor of unification, predicted that if it wasn't pushed through in 6 months after the war ended it never would be. The Admiral misstated the time element, but he was basically right in his judgment that lessons are quickly unlearned unless they are translated into actualities.

[From the Washington Evening Star]

MERGER STALEMATE

Advocates of Army-Navy merger legislation have good reason to be worried over the painfully slow progress being made at the Capitol in reporting out a bill that can pass at this session of Congress. It is becoming increasingly evident that a virtual stalemate has developed in the Senate Armed Forces Committee over the administration bill, a stalemate which, unless broken very quickly, could mean the death of this important defense measure as far as the present session is concerned.

The differences which exist among committee members over the President's bill do not appear to be insurmountable. Most of the objections raised against the bill are

met in the proposed Executive order to be issued under the legislation. It would be a relatively simple matter to transfer to the bill some of the language of the order and thus eliminate much of the criticism which is delaying action.

For example, several influential members of the committee feel strongly that the powers of the supersecretary of national defense should be more clearly defined in the bill and that the integrity of naval aviation and the Marine Corps should be guaranteed not only in the Executive order, as is the case now, but also in the basic legislation. These members fear that unless the bill is made more explicit, an arbitrary secretary sometime in the future with Executive approval, could reduce naval aviation and the Marine Corps to a state of military impotence. But efforts to revise the bill so as to preclude such arbitrary action have been resisted by other committee members and by the War Department on the ground that the bill should not be cluttered up with "detail." Guaranteeing the preservation of naval aviation and the marines is something more than a detail to those vital branches of the Navy, however.

The really alarming aspect of the merger delay is the effect it is having on joint Army-Navy planning for national defense. Neither service feels free to go ahead with major undertakings deemed essential to the security of the United States until they know where they stand under the merger legislation. The planning, manning, maintenance, and operation of certain bases and installations are matters of uncertainty until Congress has acted finally, one way or the other.

In these circumstances, it behooves Congress to come to some decision expeditiously. It can be done if the task is approached on a give-and-take basis and with an eye to the dangers of interminable debate. Perhaps the best way to thresh matters out and come to an agreement would be around the conference table—at a meeting of committeemen, heads of the armed services and perhaps a representative of the President. There have been enough indications recently of a disposition to compromise to warrant the belief that such a round-table discussion might break the present deadlock and start the merger moving toward reality.

[From the Washington Evening Star]

BRING IT TO A VOTE

The national security is suffering from the adverse effects of continued congressional delay in coming to a final decision on Army-Navy merger legislation. After months of uncertainty, the War and Navy Departments find themselves facing the approach of another fiscal year without knowing whether they are to be two departments or one, whether they must plan and act independently or together, whether the things they do today will be approved or countermanded under the supersecretary set-up. It is inevitable that the administrative machinery of both departments should be slowed up by the exasperating state of indecision now prevailing.

It is true that there have been interminable delays in past years on the hotly debated question of armed forces unification, but, fortunately, the Nation in those days faced no crisis demanding prompt action. Numerous other merger bills have been argued and allowed to die in committee pigeonholes, without impairing the national defense. A far different situation confronts the Army and Navy in this troubled postwar era, however. The peace is not yet secure. An atomic race is reported to be under way, pending adoption of international compacts precluding possibility of another war.

This is no time for our armed forces to be holding in abeyance their vital preparations to strengthen themselves in a period of revolutionary changes in military equipment, tactics, and strategy. They cannot afford to relax in their planning and training for even a day. Yet they cannot push forward with the requisite determination and confidence when they do not know whether they are to travel separate, though closely parallel, paths, or one course as a consolidated unit.

It is time that Congress make up its mind, one way or the other, on the merger proposition. The subject is too important to be permitted to expire in a pigeonhole. Failure to take decisive action now, for or against unification, will only extend the demoralizing period of uncertainty for our defense planners and further weaken our military position. Congress will be doing a grave disservice to the Nation if it permits this to happen, for want of a vote on the merger issue.

[From the Washington Post]

STIMSON'S ADVICE

Henry L. Stimson's succinct comments on behalf of the armed-forces merger are entitled to the respect due the advice of an elder statesman. During two terms as Secretary of War and one as Secretary of State, Mr. Stimson had an opportunity accorded few Americans to see our national interests in long perspective. His personal integrity rules out any possibility of partisanship. When he stands unequivocally for prompt passage of the unification bill now before Congress, he does so because his long experience has convinced him that this unified approach to national security is organizationally necessary in a modern world.

Mr. Stimson uses the phrase "strategic economy" to describe one of the principal advantages he envisions in the merger. He refers, of course, to economy in lives and natural resources in any future war, and he notes that such an element might well be critical. He cautions that we cannot continue to operate with the wasteful opulence that has characterized our efforts in the past. In this connection the saving in dollars as well as resources cannot be ruled out, especially at a time when Congress has such a penchant for reducing expenditures. A recent report by Lt. Gen. Leroy Lutes, Army procurement director, adds weight to Mr. Stimson's argument. During the years 1942–45, the Lutes report charges, "duplication and lack of coordination in the supply activities of the Army and Navy" cost the staggering sum of $1,150,000,000. Regardless of other compelling considerations in the merger, the monetary saving alone should make Congressmen take the proposed integration seriously.

Mr. Stimson demolishes the fear expressed Tuesday by Admiral King that the powers of the proposed Secretary of National Defense would constitute a danger. A strong Secretary, Mr. Stimson points out, is essential to accomplish the job, but the Secretary of National Defense is only to be delegated some of the authority over the defense establishment that now rests upon the President. Nor is the bill now pending a partisan bill favoring one service over another. Mr. Stimson emphasizes the careful study and the basic compromises and agreements that went into the measure endorsed by leaders of both the Army and Navy. The crux is expressed by Mr. Stimson in this passage: "I would like to stress the importance of considering this organization of the armed forces from the standpoint of fundamentals rather than details. If the basic plan of centralization can be determined upon, hundreds of vexing problems will fall into proper perspective. They will lose much of their controversial aspect and be decided as a matter of specific planning rather than of primary policy." These words should be pondered deeply on Capitol Hill.

Russian Auto Factory Boasts of No Strikes and Certain Market

EXTENSION OF REMARKS

OF

HON. WILLIAM M. COLMER

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1947

Mr. COLMER. Mr. Speaker, under leave to extend my remarks, I enclose herewith an article by Russell Barnes entitled "Russian Auto Factory Boasts of No Strikes and Certain Market."

Because this is such an accurate description of the Russian automobile plant, I should like to place it in the RECORD. In fact, I visited this plant myself in the fall of 1945 and have frequently described it to my friends. The article follows:

RUSSIAN AUTO FACTORY BOASTS OF NO STRIKES AND CERTAIN MARKET

(By Russell Barnes)

Moscow, April 28.—The average American industrialist would consider himself well off if he could solve his problems as successfully as has Ivan Likhachev, director of the Stalin automobile works and still the largest producer in the Soviet Union.

Mr. Likhachev, a stocky Russian in a grey blouse, manager of the Stalin plant for 21 years, a member of the Communist Party, sat in his office beneath portraits of Lenin, Stalin, Molotov and Kaganovich and gave this report on his operation:

There have been no strikes in 21 years and he does not anticipate any.

PLANT HAS NO LABOR TROUBLES

The plant has no labor troubles. The Government fixes wages.

The plant works two 48-hour shifts.

Approximately 85 percent of all wages are paid on a piecework basis.

Labor is short but there are plenty of raw materials.

Sales are no problem because the Government takes the entire output.

The change-over for new 5-ton truck which is set for production later this year will require about two weeks. Mr. Likhachev's chief complaint is that it takes a year to 18 months to obtain tool deliveries from the United States, and he suspects politics may be involved.

LIMOUSINE LOOKS LIKE PACKARD

The Stalin plant, which was established in Czarist days, is primarily a truck producer. Mr. Likhachev said it produces a luxury limousine, which greatly resembles a Packard, at the rate of one daily. A new passenger car model is in the works but the director said its design is secret. Asked about the resemblance between the handsome limousine and American models, Mr. Likhachev replied:

"Some parts have been taken from various cars. It is not necessary to get something new when all parts of automobiles have been invented. We are only manufacturing one car a day of this class because we don't need any more."

Asked the size of his labor force, Mr. Likhachev replied it numbered several tens of thousands. But he was more communicative about labor conditions.

AVERAGE PAY 900 RUBLES

He said the average pay in his plant is 900 rubles a month, but it is possible for a skilled worker with bonuses to receive up to 2,500

rubles. It is impossible to translate those incomes into dollars, not only because the ruble has no fixed dollar equivalent, but also because a worker considers the quality of his housing, the amounts of his food and consumer goods, and other such factors as part of his remuneration.

Mr. Likhachev, in addition to the fact that the Government fixes wages, attributed his lack of labor trouble to the speed with which grievances are handled. He said every case is decided within 48 hours. The bulk of complaints, he declared, concerned job quotas, or norms as they are known in Russia.

WORKERS MAY LEAVE

The Stalin plant also operates 23 restaurants and 40 buffets in addition to theaters and vacation resorts for workers. When the plant is closed for retooling or men otherwise are forced to lay off, they receive three-fourths of their basic pay.

During the war men were frozen on their jobs, but now, with the permission of his factory manager, a worker is able to quit and take another job.

Asked about plant efficiency, Mr. Likhachev, who has visited America three times and seemed to be familiar with Michigan plants, declared:

"It is equivalent to American truck plants. We turn out a vehicle with 182 man-hours of work."

MACHINE TOOLS ARE AMERICAN

A partial trip through the Stalin plant revealed it to be a collection of old factory buildings plus some of modern type. All machine tools seen were American except for a few of German manufacture. Materials generally are moved by hand and by truck rather than with conveyors.

The truck production line, which clears from 120 to 200 trucks daily, resembles a Detroit line except for the absence of feeder lines. Parts are stored along the line. Because of the small production of limousines, there is no power line—models are pushed along from operation to operation. But because this job is practically custom-made throughout, the plant seemed more modern and contained the latest models of machine tools.

All told, there are three plants in Russia manufacturing passenger cars and five producing trucks. But plants also turn out other Government work. The Stalin works, for example, also is producing parts for tractors and agricultural machinery. Signs about the factory urged workers to speed the output of farm machinery to help collective farms increase the food supply.

The Stalin works at Moscow does not appear as efficient as Michigan plants but undoubtedly it is producing large numbers of simple, medium capacity trucks, and a trickle of handsome luxury passenger cars.

Housing Construction

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1947

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from PM for May 11, 1947:

UNIONS, DO YOUR HOUSING JOB
(By Fiorello H. LaGuardia)

Just as was to be expected, housing construction has come practically to a standstill. With the exception of very little public or institutional housing, highly subsidized in one way or another, there is no construction in sight. The lay-off in the building trades has not only commenced but is well on.

In this instance, I unhesitatingly state that the real estate interests are entirely justified in not venturing any new construction at present costs. I have never hesitated to blame real estate when it is in the wrong. It is simply impossible for any prudent investor to risk construction at present costs. But, what is more, it is impossible to estimate from one day to another the actual construction cost. This goes for material as well as labor. New housing, at present construction costs, would be beyond the rental reach of the average American family.

The building trades are making a most serious mistake. The present policy has brought about almost a complete stoppage of housing and a great reduction in nonhousing construction. Because of this policy, the lay-offs have started and widespread unemployment in the building trades is bound to follow.

What is most tragic is that another building year in housing has been lost. It is now the middle of May, and with the unsettled conditions as well as the failure of Congress to act, and the lack of initiative on the part of the administration in Washington, it is a foregone conclusion that there will be very little housing construction in 1947. Two hundred and fifty thousand families in New York City alone, living in crowded and in some instances unsanitary and in all instances unsatisfactory conditions, are clamoring for a home. At least 5,000,000 more dwelling units are immediately needed throughout the country. These should have been provided last year. At least 15,000,000 more units will be required by 1955.

There is nothing more important in the American way of living than the home itself. We take pride in claiming that our system is better than any other because of our general high standard of living. Yet, through preventable causes, the critical housing shortage is permitted to continue.

To be specific, the building trades have pursued a stubborn and unsound policy. It is not entirely the fault of the top level leadership. It is the fault of many of the various trades. Here, in New York City, a plan was formulated and agreed between the Building Trades Employers Association and the Building and Construction Trades Council, in March 1946, for a 40-hour week at $100 a week. Twenty dollars for an 8-hour day was not a bad settlement. What is more, it would have assured continued employment. This plan was repudiated by several of the trades. In addition to a variance in the hours of work, there are feather-bedding rules, gold-bricking and arbitrary restrictions constantly being invoked which make production uncertain and the cost undeterminable.

When building costs are prohibitive, employment is uncertain. Even highly subsidized Government housing must await stabilization of costs to provide low-rental apartments.

The price of material also enters into present excessive cost. Here is where the Government could be helpful but, to date, either through timidity, lack of vision or downright helplessness, nothing has been done although Congress provided $300,000,000 to aid in the expansion of building material.

Money charges and interest rates continue to be too high. That is something that must be adjusted. The quicker the better. Here, too, Washington has failed to help.

I have been pleading for the passage of the Taft-Ellender-Wagner Act, which is the hope of the American family. The provisions of that bill, when enacted into law and with normal conditions, will provide millions of homes. What is more, it will give every American family an opportunity, with a small initial investment, to own its own little home. It will make possible financial institutions, savings banks and insurance companies investing in apartment buildings and multiple dwelling houses. It will provide all the building money that is necessary. The Senate passed the bill in 1946 but it was killed in Committee in the House. The Senate Banking and Currency Committee has again reported the bill, yet no action has been taken in the Senate.

It must be stated, however, that even though all the benefits, the aids, the subsidies, and the encouragement provided in this bill were the law today, it would be difficult if not impossible for much housing to start until the cost of construction is stabilized and at least approaches something within the range of reasonableness. It must be remembered that the cost of construction reflects in the rent.

Labor should take the initiative. It has more at stake than any one else. Unless it does, there will be a break in the ranks and all of the gains obtained through the years may well be lost to the organized building trades. I would hate to see this happen. Besides, a slump in construction may well be the lead to a depression and general unemployment.

The thing to do is to start right here in New York; other cities will follow. Agree on a 40-hour week; accept the $100 a week wage; remove artificial restrictions and feather-bedding rules; take advantage of all improvements in the art and the use of prefabricated material and equipment; demonstrate a willingness to do a good day's work for a good day's wages.

Production must be increased, not curtailed. Employment creates employment. The use of improved and processed building materials, along with prefabricated parts and equipment, means just that much more employment for organized labor. Antiquated methods and restrictions reduce employment and limit construction.

There is so much work available. Once the present obstacles are removed and there is cooperation between all interested groups, employment in construction will be resumed and it will be plentiful, not only for months but for years and years to come.

I am sorry it is necessary to talk in this strain. The facts, however, demand some pretty plain talking at this time.

Attack on Farm Prices

EXTENSION OF REMARKS
OF
HON. KARL STEFAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1947

Mr. STEFAN. Mr. Speaker, Mr. Bruce McCulloch, editor of the Omaha Daily Journal-Stockman, has written an editorial regarding farm-product prices. I include it in the extension of remarks in order that other Members of the House of Representatives may read it:

ATTACK ON FARM PRICES

In price discussions, which are very much in vogue just now, it is the popular thing to point to farm product prices as the problem of first importance. In fact, some of the

"experts" leave with the reader the impression that other prices pose no problem at all. Well, it is asserted, maybe they do, in general, but not to compare with food prices.

As the record is read, food prices have advanced more than anything else since the war, and figures are presented to prove it. And the problem—how to get food prices down when Government supports them? The implication is that farmers are rolling in wealth, exacting a defenseless toll on consumers, and threatening the American people with ruinous inflation.

Trying to point the blame on the farmer is not only unfair, it is just plain silly. Consider that farm production, not only last year, but for some years, has been at a record level. If, with this record production, prices are still high, what would prices be under conditions of ordinary production; or, further, under conditions of below-normal production? The farmers don't set prices of their products. It is the buyers who set prices, and in their operations they merely reflect demand. And it may be noted in this connection that Government itself continues a big buyer of foods.

These profound economists who so roundly berate food prices as the arch demon in the inflation picture might stop to consider what happened to food prices during the war years. As every farmer knows, food prices were held down by law. They were not permitted to go up much during the war. So a comparison now with advances since the war is obviously unfair to farm products. And when it comes to wages, not basic pay, but what labor actually costs, these price wizards are strangely silent.

We are not aiming to defend high prices for farm products or for anything else. We do say, up together and down together. It is not fair to single out farm prices for attack, and that is what is being done.

Friendly Relations Between the United States and Canada

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1947

Mr. KEATING. Mr. Speaker, in connection with the consideration of House Concurrent Resolution 48, which I introduced, declaring it to be the sense of this Congress that an invitation be extended to the Dominion of Canada to become a member of the Pan American Union, I include an editorial from the Brighton-Pittsford Post bearing on the friendly and cordial relations existing between the United States and Canada.

We cannot stress too much or refer too often to this unparalleled example of good will and amity between neighboring nations, so much needed in these troubled days.

The editorial follows:

FROM THE SEEDS OF INTERNATIONAL GOOD WILL

The recognition of Good Will Week between this country and Canada is an annual custom, which, as the years pass, grows more and more in importance.

Especially is this true when across the world at large internal and external strife continues, and man meets his fellow man in mortal combat daily. What can be done between two countries can be accomplished between other countries. Of course, the common tongue which exists between the United States and Canada offers a channel of discussion in which no interpreters are necessary, and it is easier to talk over problems affecting the two countries in languages, inflections, and inferences which are common and understood by both nationals.

There is the pride of citizenship which goes with every country's citizens, which is just and proper. There is no idea that Canada would want to adopt the United States any more than the latter country would want to adopt Canada. Individuals sometimes talk in such terms, but the rank and file in both countries have an independence and pride in their own country which would not brook easily the absorption of the one by the other.

This same attitude is found within our own borders, and towns have the same pride in their own boundaries as countries maintain on a larger scale. This is carried down to individual families in our form of society, and it would be unthinkable that two families could be integrated into one common family.

However, more important is the fact that there can be peace between two neighboring families, between two neighboring towns, counties, States, and even between two neighboring countries as evidenced in the latter case by the long border between this country and Canada, still undefended and unguarded, because of the fundamental belief in the integrity of each country.

What a world this will be to live in, when at some future date, men can lay down their arms forever on all borders, as has been witnessed between Canada and the United States. Then will all effort be turned to making production for the enjoyment of all mankind. The savings alone would bring up a standard of living over the world which would fairly overwhelm people. Imagine the money spent by this country alone in World War II going into merchandise of every nature. Its potential possibilities for comfort and luxury, its potential for services to the world are unimaginable.

Under no condition should the effort stop to bring about a form of world union, no matter how imperfect in its beginning, nor how many times it may fail at the outset. A steady attempt down through the ages must some day succeed.

Recurrent pledges of faith between Canada and the United States is another way to raise the flag of peace above a sordid world and point to at least one permanent oasis where trust and affection have supplanted guns and ammunition.

From this seed yet may grow the oak of peace which will spread its branches to cover the world.

Some Are Indiscreet

EXTENSION OF REMARKS
OF
HON. WILLIAM M. COLMER
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1947

Mr. COLMER. Mr. Speaker, under leave to extend my remarks, I enclose herewith a short editorial from the Gulfport-Biloxi Daily Herald under the title "Some Are Indiscreet."

I think the editorial is very timely and wish our military authorities would do something about it.

SOME ARE INDISCREET

We have been utterly unable to understand why Government armed forces officials give out their plans to the world at large—which includes actual and potential enemies. Why do they not keep their secrets, plans, naval information, and projected operations secret? What possible good in letting publicity agents tell all about it? We think it ought to be manifestly obvious to the simplest mind that it is indiscreet and dangerous—at least an unnecessary risk.

We refer to the Washington AP dispatch last week about submarine preparations for operation in the polar region, constructed to detect airplanes passing over that area. Even a child knows what that means. What nation will fly planes (bombers, jet planes, and rocket bombs) over the Arctic? We know, and the armed forces leaders know why these plans, operations, and maneuvers are being provided for—but we shall be more discreet than the official who gave out the information and the man of the news agency who put it on the wires for all the world to know of it.

Has Congress Forgotten?

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1947

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Pittsburgh Press of May 10, 1947:

HAS CONGRESS FORGOTTEN?

The bituminous coal industry has reason to wonder what Congress is trying to do to it, and why.

Four years ago, Congress wiped out the soft coal stabilization program. That was in the midst of the war and didn't make too much difference at the time.

But during its existence, this program helped the industry work out of the competitive jungle in which it long had been struggling and made possible stabilized prices and standard wage scales.

And, if and when slack markets again develop, another round of ruinous competition may hit the coal industry, put it right back where it was in 1937.

Now Congress strikes another blow at the soft coal industry.

When the stabilization program was eliminated, one valuable function was retained. The Government continued to collect statistics on production, marketing and transportation. This information was tremendously useful to the Government, to the consumers and to the industry itself.

Bituminous operators want this work continued. They are willing to pay for it, but they can't do it themselves—because they immediately get into complications with the antitrust laws. Only the Federal Government can do the job legally.

The Bureau of Mines asked $350,000 to continue compiling these statistics. The Budget Bureau approved the request.

But the House Appropriations Committee struck out the whole appropriation, with the comment that private industry should do the job.

The committee went even farther. It specifically provided that no Bureau of Mines funds may be used to compile economic data on soft coal. But the hard coal industry gets $105,000 for technological research, and an appropriation of $579,000 is allowed for a similar undertaking in the oil and gas industries.

What's the reason for this discrimination? If the need for economy is so urgent, why pick on soft coal alone?

True, the soft coal industry is doing well—right now. But the ravages of the industry's long sickness still are discernible. And if Congress doesn't pay attention, King Coal shortly may become an invalid again.

Permanent Program for American Agriculture

EXTENSION OF REMARKS
OF
HON. JAMES I. DOLLIVER
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1947

Mr. DOLLIVER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me before the Committee on Agriculture, United States House of Representatives, on permanent program for American agriculture:

Mr. Chairman, because I represent a congressional district which is predominantly agricultural, I am deeply interested in these hearings, which have for their purpose the development of a permanent policy for agriculture in this country. The Sixth Iowa District consists of 15 counties, located in the heart of the Corn Belt, with a high percentage of cultivated land, and a tremendous production of grain and livestock. Not only our farm people, but also those who live in cities and towns, are absolutely dependent economically upon the prosperity of agriculture. If the farmer suffers in Iowa, then our townspeople likewise suffer. Conversely, a prosperous farming population means prosperity in the centers of population.

I am one of those who believe that this principle applies not only to our agricultural States, but also to our entire economy. Others have appeared before this committee who have gone into technical background of this principle. For my own part, I am impressed by the concept that the farmer, season after season, produces new wealth that never was in existence before. Manufacturing and industry, on the other hand are engaged in processing of products already in existence—changing their form or improving the structure of the material wrought upon. Not so the farmer. He deals with the miracle of new life produced year after year by the bounty of nature.

By this token, and also because the farmer produces the very essential for human existence, food, he occupies a key position in our whole national conomy.

It seems to me there are at least three elements to this problem, to which I wish to allude briefly. They are interdependent, and my presentation does not present a complete analysis. But these elements do represent one man's thinking, who has given serious and careful thought to the vital importance of agriculture.

First, it seems to me that agricultural prices should never be allowed to sink to a point where they will not support the reasonable capital investment in our agricultural structure, plus a decent living for those who till the soil. Having lived in Iowa during the agricultural depression of the 1920's and also the 1930's, I know that the debacle in prices in those two periods was nothing short of disastrous to our people. Many thousands of our farm families lost all savings of a lifetime, and such losses had violent repercussions throughout our entire economy. Such a series of disasters should never again be permitted in this country.

The means and methods of securing an adequate price for farm products, I leave to the wisdom, discretion, and acknowledged ability of this committee. I only suggest that prices for farm products should never reach a point of impending danger for the agricultural producer.

Second, we who live in agricultural areas are more conscious than ever of the utter necessity for soil conservation. That broad term encompasses a wide range of activities, differing in emphasis in various parts of the country. It is certainly true that among all the natural assets given by the Creator to the American people, none is greater or of more value than the fertile soil of our country, so widespread and so abundant in its production.

Already by wasteful and profligate methods, we have wantonly destroyed many of the material blessings of providence. Our American economy is certainly sufficiently mature that we must save and not waste the irreplaceable soil, the one essential and necessary ingredient of any civilization, and indeed the basis of human life on this continent. Already a program of soil conservation is receiving support from the Congress and from the farmers. It should be extended and strengthened.

Finally, I am convinced that all appropriate methods ought to be employed to make life on the farm as attractive and enjoyable as possible. Too often, our farmers have lived a life of unremitting toil and even drudgery, without those amenities of life which we all enjoy and deem desirable. Furthermore, many times rural people do not have the advantages of health and sanitary safeguards, to say nothing of the ordinary comforts of modern life such as electricity and running water. The development of rural electrification has gone a considerable distance in helping this situation. The Extension Service of the Department of Agriculture also has contributed greatly, and should receive our continued support. But we ought not to be satisfied with anything less than a constant effort to lift the level of human comfort and living in our rural areas in the United States.

These suggestions are made to this committee for the purpose of recording my beliefs on those matters of such vital importance to my district, my State, and my country. Yours is the continuing responsibility of grappling with these important and difficult issues.

Jim Eastland Loses One Round in a Fight Against "Stupidity"

EXTENSION OF REMARKS
OF
HON. WILLIAM M. COLMER
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1947

Mr. COLMER. Mr. Speaker, I submit herewith an editorial which appeared in the Jackson (Miss.) Daily Clarion-Ledger. This editorial is very timely and is in line with the recommendations of the Postwar Economic Policy Committee to the Congress in December of 1945.

So long as this foolish policy of denuding Germany of all industries, regardless of their nature, is followed, just so long will this country be called upon to furnish billions of dollars' worth of relief to keep the Germans from starving. The editorial follows:

JIM EASTLAND LOSES ONE ROUND IN A FIGHT AGAINST "STUPIDITY"

Senator JIM EASTLAND lost a fight in the Senate Thursday, an effort which would have vastly benefited American farmers and taxpayers had it succeeded, but the manner in which he raised the issue and pressed the fight won for Mississippi's Senator additional recognition by his colleagues as an able and intelligent champion of American agriculture, and an opponent of Government "stupidity."

He headed the move to stop the United States Army from blowing up German nitrogen-fertilizer plants. He tried to do this by offering an amendment to the deficiency bill which carries a $300,000,000 appropriation for food for Europe. The amendment would have forbidden proposed destruction of the German nitrogen fertilizer plants.

Senator EASTLAND contended that the $300,000,000 appropriation for food for Europe would not be necessary if German fertilizer plants were allowed to produce. He contended that this country's serious fertilizer shortage is due mainly to the shipping of thousands of tons of nitrogen fertilizer to Japan and to war-devasted European countries.

"Blowing up these German nitrogen plants is dumb and stupid on the face of it," Mississippi's Senator argued. "It will cause a nitrogen-fertilizer shortage here for years to come. If the German plants were put into operation, they could produce sufficient fertilizer to supply the needs of all Europe."

Senator EASTLAND'S amendment was blocked by a point of order insisted on by Senator KNOWLAND, California Republican. The Commercial Appeal's Washington correspondent reported:

"The move, in the form of an amendment offered by Senator EASTLAND to the deficiency bill, threw that body into an uproar with more than a dozen Senators being on their feet at one time, all attempting to speak, although a point of order is not debatable.

"Support of the amendment came from both Democrats and Republicans with Senator WHERRY, Republican whip, vainly appealing to Senator KNOWLAND to withdraw his point of order that the amendment was an attempt to write general legislation into an appropriation bill.

"President pro tempore VANDENBERG upheld the point of order after announcing he had allowed the debate for his illumination."

That point of order defeated Senator EASTLAND'S move, but, as the news story adds, "The Senator said he was not giving up the fight and the amendment will be tacked onto some other bill where it cannot be killed by a point of order."

Maybe by then enough others, besides Senator VANDENBERG, will have been illuminated regarding this stupidity to enable adoption of the Eastland amendment.

Compulsory Sickness Insurance

EXTENSION OF REMARKS
OF
HON. WAT ARNOLD
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1947

Mr. ARNOLD. Mr. Speaker, as a stanch supporter of free enterprise, unhampered by governmental regimentation, I wish to call attention to the following editorial which appeared in the

Christian Science Monitor, revealing efforts to revive a program of Government-sponsored sickness insurance. In my estimation, such a program would not solve the problem of medical aid to the needy, and would at the same time destroy the incentive and initiative to individual progress in many fields:

ON THE WRONG TRACK

By a surprising turn in politics, a stepping-stone to a national system of compulsory sickness insurance is apparently being fashioned in Washington by Republicans. During the last session of Congress, Senators TAFT, SMITH, of New Jersey, and BALL introduced a bill providing for Government financing of medical-care insurance for families and individuals of low income. Many thought this simply a political maneuver to offset the Wagner-Murray-Dingell bill, which was then being played up by Democratic sponsors of socialized medicine.

However, the three Senators have lately been holding conferences at Washington with medical leaders to revise their measure for early reintroduction. Their new plan would have the Federal and State Governments furnish medical care and hospital insurance through private voluntary agencies to a section of the population numbering many millions. Start would be made with a Federal appropriation of $200,000,000 a year for 5 years. This would be turned over in subsidies to the States on the basis of $1 for every $2 a State furnished. The States would manage the experiment.

Obviously, for the Federal Government to promote sickness insurance for a substantial section of the population can easily lead to the Government taking over the coverage for the entire population. After the last election, which seemed to have given socialized medicine a sharp set-back, ardent advocates of Government insurance could ask for nothing better than a plan which elsewhere has proved an entering wedge for compulsion. A number of outstanding medical authorities feel that these Republican Senators are mistaken in pushing a Government-sponsored sickness-insurance program.

Better ways of providing medical care for the low-wage and indigent group should and can be found without venturing toward a system of Government insurance that in practice has proved typically bureaucratic and unprogressive.

The Lookout

EXTENSION OF REMARKS

OF

HON. DONALD L. JACKSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1947

Mr. JACKSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Santa Monica (Calif.) Evening Outlook:

THE LOOKOUT

So the people may know, including those who arrived in Santa Monica this morning and rushed around this afternoon hunting a place to sleep, we take this occasion to say the birth of the BlockHead Club was not as miraculous as that of a Congressman but came about as a sequence visible to the naked eye.

Santa Monica was buried many layers deep in organizations, yet no one seemed satisfied. The organizers kept organizing. The past presidents formed a club.

To do something to stem the tide and prevent the past vice presidents and the past secretaries and even the past outer guards from banding together and meeting and overeating at banquets, we formed the BlockHead Club. This also gratified our desire to be president of something.

For years we had joined up with everything in town and promptly had been nominated and elected press chairman, though we yearned to wield the presiding officer's gavel and put the previous question.

Only one condition is made for admission to the club. A desire to come in and laugh, coupled with the realization that what one knows is no more than a shadow of what one ought to know and could know with the proper exertion, spells the whole requirement of membership.

Cyrus D. McCarron, president of the chamber of commerce, edged in at the first opportunity and became first vice president. In all there are 57 vice presidents, as well as 100 commissioners, not all of them yet appointed.

Among the outstanding members are Dr. Ernest C. Sandmeyer, president of the Santa Monica City College; Bishop Bertrand Stevens of the Los Angeles Episcopal diocese, who has talked of it on his radio programs; Wyndham Martyn, a mystery novel writer, whose wit convulses audiences wherever he speaks; Nelson Eddy, whose singing delights the Nation; Jefferson Machamer, who is chased by magazines for more illustrations; Mayor Mark T. Gates of Santa Monica, and Representative Donald L. Jackson, who joined before he went to war as a marine. Members from any quarter of the earth are welcome if they can qualify.

Many prominent women of Santa Monica, including members of the Writers' Club, belong. Among them is Jean Leslie, who fills the posts of four vice presidents. Her fourth mystery novel is now on sale.

Some of these women want to make the club slogan "If at first you don't succeed, cry, cry again," but the club president has ruled against it. The argument is that St. Monica brought her son into the kingdom on a tide of tears for his sins. But she also prayed. The club encourages prayer but never a washout of weeping.

The observer will note that the name "BlockHead" is spelled with a capital. This is after the manner of the great Dr. Rufus Von KleinSmid, president of the University of Southern California.

Thus far the club has held no meetings, though there have been clamors for them. Its first banquet will be held whenever the members of the other 278 organizations in Santa Monica (we speak from memory; the figure may be too low) have no other engagement.

CHARLES S. WARREN.

Aid to Greece and Turkey

EXTENSION OF REMARKS

OF

HON. HERBERT A. MEYER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1947

Mr. MEYER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address made by me over three stations in Kansas following the passage by the House of the Greece-Turkey loan bill on May 9, 1947:

This evening I would like to consider with you some of the many complexing angles bearing on the proposal of President Truman for a $400,000,000 loan to Greece and Turkey.

President Truman in laying down this new world expansion doctrine says in substance that the United States Government commits itself to help defend and protect any nation in the world from being overthrown either by aggression or infiltration by another power. This new-world doctrine, committing our Government to the defense of other nations throughout the world which are so threatened, is a thousand times more important than the consideration of the $400,000,000 involved. The President says this move is necessary to stop the spread of communism and the possible overthrow of these two governments leading into the Middle East.

Two questions, as I see it, arise which we should seriously consider. Will this amount of money and what we do for Greece and Turkey under the plan likely stop the spread of communism into the Middle East? The next question arising is how much money and manpower will it take to stop communism in Italy, France, China, and a half dozen other countries in Europe which are on the verge of being thrown over by Communist organizations at the present time? Personally, I seriously doubt whether the money we are called upon to expend and the effort we intend to make in Greece and Turkey will be sufficient to stop the expansion of communism if Russia really desires to go into the Middle East. You can find able men in Washington and throughout the Nation whose judgment is respected on military matters who will tell you that most countries on the European Continent are in such a state of chaos and financial insolvency that Russia, if she so desires, could occupy and conquer the continent of Europe within 8 weeks' time.

Much as I detest the ideology of communism—and let me say here that I yield to no one in our desire to stop communism, for it is a diabolic ideology; it is un-Christian and would set up a police state to govern men—we must not let our hatred of her policies influence our judgment and mislead us in our thinking on so grave a problem as this expansion of foreign policy.

And let me ask at this point, is it not wholly inconsistent to stop communism in Turkey and Greece, at an original investment of $400,000,000, while communism is rampant in these United States? And how much money would the President invest to stamp out communism in this country? He has suggested that it would cost $50,000,000. What kind of consistency is this—four hundred million abroad and fifty million at home?

Another question I want to raise is, with a $273,000,000,000 national debt to start with, can we afford to commit our Government to such a policy that may cost us many billions of dollars, for we will doubtless find that this $400,000,000 is only a first small down payment on the commitment of the American taxpayers to finance and pay out countless billions of dollars to defend and protect the rest of the world.

Let me point out to you that such a move may well wreck our Nation financially, dragging the American people down into abject poverty where we cannot take care of our own people and cannot render further aid to the world. If we, the only great Nation, believing ourselves solvent today, step into this trap and become involved in financing the rest of the world, all Stalin has to do is to threaten a little here, and a little there on starting war on any boundary in Europe till he bleeds this Nation white financially, causing us to finance other threatened Nations with millions of dollars each in their turn, till we wreck our Nation financially.

Nothing is so important to the American people, and to the contribution in leadership it can make to the world for peace in the future, than for us to make certain we keep this country sound financially. Unless

we keep this country sound financially, unemployment, want, and chaos will envelop this Nation as it has other nations under similar conditions. Such a condition will give the Communists in this country who want to overthrow it the very opportunity for which they and Communist Russia are hoping may ultimately happen. We cannot support our Army and our Navy for the defense of this country unless we remain sound financially.

We have expended $3,000,000 in China and we haven't stopped or retarded communism there. We expended over six hundred million on Yugoslavia, millions on Poland, millions on Rumania and Bulgaria, and they are all Communist today and not one of their rulers is friendly to the United States. We have expended over five hundred million on Italy and she is tottering on the brink of communism now.

I submit to you that if this Government wanted to do something in a substantial and in a sensible way to stop world expansion of communism it should have suggested to the other peace-loving members of the United Nations organization that this Greece-Turkish problem be brought with all the force and power before the United Nations organization demanding that Russia and her satellite nations cease and desist putting this pressure on Greece and Turkey. You answer that the United Nations is not completed to the point where it has the power. My answer is that we don't know because we haven't tried it. The United Nations was set up for this purpose and almost a year ago when a like and serious situation arose where Russia would not take her military forces out of Iran, that feeble nation came before the United Nations organization and demanded that it act. It did act, and Russia took her military forces out of Iran.

The only way to call Russia's bluff is to call it before the United Nations, representing 51 nations of the world. In addition to taking this matter to the United Nations, I think that the United States should take the leadership asking other nations to join with her; first, to immediately amend the United Nations Charter, doing away with the veto power; and second, another amendment should be passed that would provide for fixing military armament quotas for nations world-wide. This can be done and should be done without further delay. If these two bold moves were made, Russia would be put on notice before the world and it is the judgment of many of the best minds of this country that the United Nations organization does have the moral power, suasion, and force to stop this expansion in Greece and Turkey by Russia as it did in Iran.

If these amendments were rapidly driven through under the leadership of the United States and Great Britain, millions of subjugated people in Poland who want liberty, millions in Rumania, millions in Czechoslovakia, millions in Greece, millions in Austria, millions in France, Italy, and other nations could then look with hope to the United Nations as a great, powerful living force for liberty, freedom, and peace.

You may answer, if these amendments are made to the United Nations organization Russia may walk out. Well, on her past record, the sooner she walks out the better. This will call her bluff and maybe make her dictatorial leaders think. She should be invited to stay in with the door left wide open, with a standing invitation for her to come back, which no doubt within a short period of time she would do, because she would be given one choice to line up in full, honest, fellowship with the rest of the world for peace, or become an aggressor nation against which 70 percent of the world could be legally hurled, through the United Nations organization. She can join with the rest of the world for peace, or commit national suicide.

Since VJ-day our Nation has contributed over $7,000,000,000 to help feed, clothe, and rehabilitate the European nations and China. We are committed to $1,500,000,000 in relief to other nations this coming year. There are requests for billions of dollars through the Export-Import Bank and a great amount of money will go out through that organization. All of this money must come from the American taxpayers.

While I am willing to go as far as we can to help world humanity, and while I am anxious to oppose the spread of communism anywhere and everywhere, I cannot bring myself to believe that the Truman doctrine is the only approach to these vexing problems.

I submit to you, ladies and gentlemen of the Third Congressional District, that we cannot have world peace unless we cast the burden of keeping the peace of the world on the United Nations organization and back that one organization. We can have peace, world peace, in my judgment, if those who are leading us would reverse their position and join their forces behind the United Nations organization through which, in my judgment, world peace can only ultimately be achieved.

Well, my time's up and I must close. So, once again, thanks for listening, and goodnight all.

National Security

EXTENSION OF REMARKS
OF
HON. E. H. HEDRICK
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1947

Mr. HEDRICK. Mr. Speaker, the matter of maintaining our national security is of vital interest to every citizen of our land. It is imperative that a method of systematic and specialized training of our manpower be adopted for the protection of our country, yet at the same time preserving the constitutional rights of the individual.

Although I have received some letters from my constituents in support of peacetime military training, I have received many more letters from women's organizations, religious denominations, and mothers, protesting any plan whereby young men would be sent to military installations, coming in contact with older men, and the dangers of a life for which they are unprepared.

For this reason, I have introduced H. R. 3329, providing for regular and specialized training of our young men for a period of 3 years, and their assignment to a reserve component of the land or naval forces for a period of 2 years. The entire training, with the exception of a 2-month period of field or sea training for each year of the 3-year period, will allow these young men to remain at their homes and under the guidance of their parents.

Mr. Speaker, I feel that such training as provided in my bill, H. R. 3329, will not only provide adequate training of our manpower, for the defense of our country, but will be a proper expenditure of funds. It will be a great saving to our taxpayers, and at the same time provide regular defense training for young men of our Nation.

Columnists and Politics

EXTENSION OF REMARKS
OF
HON. FRANK M. KARSTEN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1947

Mr. KARSTEN of Missouri. Mr. Speaker, under leave to extend my remarks, I include the following newspaper article by Marquis Childs from the Washington Post for May 12, 1947:

COLUMNISTS AND POLITICS

(By Marquis Childs)

"Apparently, the Republican idea was that when the New Dealers were repudiated at the polls, automatically their propaganda facilities would disappear and their public effectiveness be curtailed. But that notion turned out all wrong. There are today more New Deal left-wingers astride the channels of communication than before."

That is Frank R. Kent in his syndicated column. This same theme has been sounded, by an interesting coincidence, by Arthur Krock of the New York Times, by Mark Sullivan in the New York Herald Tribune, and by others. It is echoed in a national magazine which editorialized about "lame-duck columnists."

Now Messrs. Krock, Kent, and Sullivan are eminent and important men who have been writing in the press for many, many years. The latter two are widely syndicated. When they join in chorus in an opinion, it has the weight of experience and erudition behind it.

The opinion they express in this instance is that New-Deal writers, whatever that may mean, are preventing the Republicans from carrying out their program in an orderly and effective way by spreading propaganda against the virtues of the Republican objective. It may be presumptuous of me, a comparative newcomer in this business, to raise a doubt.

Yet it does seem that these eminent men put a little too much weight on the influence of writers and commentators—even writers as eminent as they are. Surely they must recall that, for the 12 years Franklin Roosevelt was in the White House, they were almost without exception opposed to his policies. Particularly Messrs. Kent and Sullivan followed an unfailing line of opposition. They delivered frequent jeremiads on the evils of Roosevelt and all his works. In this, of course, they coincided with the editorial opinion of a large proportion of the press.

They were especially vehement in their criticism on the three occasions when Roosevelt was running for reelection. Yet it seems difficult to discover any effect that these and similar strictures may have had on the course of political events in those years.

Perhaps it is nearer the truth to say that commentators may inform their readers—and there are those who honestly try to perform that function. They may flatten them or irritate them by expressing a point of view. But as to exerting a positive influence on the course of political events, there is a great deal of room for doubt.

To use the phrase "lame-duck columnist" seems a little odd, for these three men themselves were for nearly 12 years lame ducks under that criterion. So was the magazine that coined the phrase.

Actually it seems to me to suggest a curious attitude of mind. It suggests that we are to vote our thought and opinion in accord with the election returns. If that is how far we have gone in accepting the totalitarian philosophy, then we are in a bad

way. Thought and opinion are not subject to the veto of a majority. Or they should not be, in any informed democracy.

Within Republican national headquarters here, there are some who take the line that Messrs. Krock, Sullivan, and Kent have expressed. It has come also from Senator ROBERT A. TAFT, who speaks invidiously of New Deal writers.

The natural instinct of the politician is, of course, to look for an alibi. President Roosevelt frequently showed his irritation at the insistent attacks on his policy. If things are not going too well, the politician wants to aim a shotgun at some convenient victim.

In this case, the aim is poor. It is obvious, by mathematical demonstration, not only that the majority of American newspapers are conservative but that the majority of comment which is syndicated is also in that vein.

If one may disagree with so eminent an authority, it sounds a little silly to talk about New Deal left-wingers athwart the channels of communication. It sounds particularly odd in view of the fact that several radio commentators who took a liberal or prolabor tone have now been replaced on the networks by men who are more cautions or more conservative.

The Soviet press is, of course, happily free of opposition opinion. It is one continual chorus of praise and perfection. But that scarcely seems a worthy ideal.

Reduction of Interior Department Appropriations

EXTENSION OF REMARKS

OF

HON. CHARLES B. DEANE

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1947

Mr. DEANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article entitled "West Feels GOP Has Put It Back on Pablum Diet," which appeared in the Washington (D. C.) Post on May 11, 1947:

WEST FEELS GOP HAS PUT IT BACK ON PABLUM DIET

(By Roscoe Fleming)

DENVER, May 10.—"Sixteen years for the 'winning of the West'—and 16 weeks to lose it," groaned one western Republican as the full impact of the House's slashing of the Interior Department appropriation bill hit him.

It is no mere political protest the Republican Congress is hearing from the 17 States west of the Missouri. It is a deep-throated roar in which old-line Republican organs are joining as heartily as Democratic ones. Nor did Chairman TABER (Republican, New York), of the Appropriations Committee, help his party out here by referring to the thunder as "only the squeal of a stuck pig."

But it is necessary to recapitulate.

RICH SERVING MAID

The West has traditionally felt like a national stepchild, a hewer of wood and a drawer of water in the national household, handicapped in the building of a rounded economy by distance and a late start, and (so most westerners believe) by eastern industrial-financial-political domination which prefers to keep the West as a raw-materials supplier and as a market for eastern manufactured goods.

Yet westerners are aware that the Nation's future lies largely in the vast treasure of resources around them—roaring rivers full of water power, millions of dusty acres that need only water to bloom, trillions of tons of coal, billions of tons of phosphates.

The West is also proudly conscious that its federally developed power plants supplied billions of kilowatt-hours without which the atomics program, the airplane program, etc., might have been fatally delayed; and that more than a billion dollars' worth of food and fiber flowed from Federal irrigation projects during the war.

The West relied on the war impetus, and on national recognition that it could do an industrial job, to push it far along the road toward an integrated, high-income economy after the war. It relied above all upon the national necessity to decentralize in face of the atomic threat.

Further, the West does not forget that it was six western States electing Republican Senators (California, Washington, Montana, Utah, Idaho, Nevada) which capped the Republican congressional victory.

Ever since the election, however, there had been some uneasiness in the West at persistent news references to the intention of the resurgent Republicans to cut off anything that would, to quote one story, "mean luring industries away from the Northeast." But the last thing that anyone out here really expected was that Interior, the Department of the West, would, under pretense of a close shave, be cut right above the chin.

Through its Bureau of Reclamation (irrigation and power), Bureau of Mines and Geological Survey (natural resources), the Fish and Wildlife Service, the National Park Service, etc., Interior is the Government for many westerners, and Uncle Sam has successively been the face of the Old Curmudgeon and the massive countenance of Mr. Krug.

Yet most of Interior's expenditures have been national investments that have paid off tremendously in increased wealth, productivity, and tax income.

BLOW UPON BLOW

Interior took a savage slashing from the Budget Bureau before its estimates ever reached the House. Then followed the almost 50-percent committee cut, of which only about $5,000,000 was restored on the House floor.

The nature of the cuts was significant: If you want to kill something, you slash at its heart and brain. The heart of Interior's western program was its mighty hydroelectric plants plus the transmission lines to take away the power they generate. The brain was the various planning activities—for such big projects must be planned minutely a decade in advance.

Almost all transmission-line appropriations were cut deeply, or cut out. That would force the Department to sell its power to private companies at the dam, an old goal of the private-utility lobby.

Many a western campaign oration, 15 months from now, will be based on the charge that this shows, rather than a true desire for economy, that eastern Republican leaders are playing footie with the power lobby, now in its fullest flush since the Insull days.

THE "LONG" VIEW

Further along this line the planning activities of the Bureau of Reclamation, which have to do with water storage for new acreage as well as for new power, were cut from $5,000,000 to $125,000. In other words they were eliminated.

This would mean the discharge of 1,000 engineers in Denver alone, and the virtual breaking up of a planning and engineering group that has been called the finest in the world. Similar devastation would be wreaked upon the bureau's seven regional offices, each of which is working on big projects.

At the rate of appropriations left in the bill, it would take from 20 to 50 years to complete various large irrigation-power projects now under way. All the while the Government would be paying the usual construction overhead.

This in face of a severe power shortage in the Columbia Basin, an impending one in California and indications that power elsewhere will be snapped up as soon as it is available.

The Republicans cut off absolutely, the appropriation for Interior's Power Division, which has in charge the biggest nonintegrated power generation business in the world.

GREAT INDUSTRY NIPPED

But power and reclamation aren't the only aspects. The bill virtually cuts off Bureau of Mines research on western coals, which are so different from eastern ones as to demand different conditions of burning and utilization. Some of these researches were far advanced. For example, the high-temperature conversion of lignite coals to gas, gasoline, oxygen, etc., was almost at the industrial stage.

Upon such researches have been based some great hopes, such as that of using western lignite, available by the trillions of tons, to provide cheap gas to beneficiate iron range iron ores now unusable because they are under commercial grade. (At the same time the West notes that researches for utilization of eastern coals, favored by John L. Lewis, were little affected.)

The bill would greatly reduce funds for western nonferrous mineral investigations in the face of growing shortages and of military requests for such investigations.

It would slash the helium program. The West produces a world monopoly of this wonder gas, and, as a result of war development, it is so plentiful that an intensive search for new uses was being carried on, with good results.

POLITICAL REPERCUSSIONS

These are only high lights—but they give you an idea why the West feels it is not true economy to throttle the development of natural resources, and that the slash, in year II of the atomic age, is a blow at the Nation rather than merely at the West.

They are also enough to show why western Republican House Members who glumly obeyed orders and voted against recommitment of the bill, are gnawing their nails; and why western Republican leaders at home feel that a western Democratic upsurge will be difficult to head off in 1948.

Resolutions of Izaak Walton League of America

EXTENSION OF REMARKS

OF

HON. ROBERT F. JONES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1947

Mr. JONES of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolutions passed by the twenty-fifth annual conference of the Izaak Walton League of America, Inc., Chicago, Ill., March 27–29, 1947:

Resolution 4

Whereas Congress has, through various omnibus river bills, authorized so many river projects that no one knows what they all are

or what their ultimate cost or effect will be; and

Whereas the Seventy-ninth Congress wisely made a start in analyzing the merits and demerits of such dams and other river projects with the passage of Public Law 732, requiring the assembling and consideration of all vital facts and values through comprehensive biological surveys in advance of authorizations; and

Whereas it will require several years for the required biological surveys to begin to catch up with the engineering surveys already made: Therefore be it

Resolved, That Congress be urged to declare a moratorium on any further surveys for new river projects until this present imbalance of surveys is corrected; and be it further

Resolved, That Congress and the President be requested, in the interest both of sound conservation of natural resources and sound economy, to bring out for reexamination in line with the intent of Public Law 732, the vast back-log of projects, reported to total more than $6,500,000,000, already authorized.

Resolution 6

Whereas our national parks, national monuments, and wilderness areas of the Forest Service are dedicated to the use and enjoyment of all the people and comprise the bulk of the unspoiled lands that now are, or in the future may be, available to satisfy the constantly increasing demand for such areas; and

Whereas with few exceptions these areas are marred by the existence of interior private land holdings over which the governmental administrative agency has no control, and both their nuisance value to the public and the administration and the ultimate cost of their acquisition increases the longer this obvious job is delayed; and

Whereas the Izaak Walton League of America, other organizations, and individuals have attempted to protect the public interest until Congress shall act in this matter, by purchasing to the limit of their means critical parcels of interior private lands to be held undeveloped until eventually repurchased by the Government: Therefore be it
